2. **The soul.**—The Turks of the Altaian Black Mountains (Chern) consider the soul of a man to be composed of several parts or of several independent souls. Each of these performs a special function—*e.g.*, the *tyn*, from *tynip*, 'I breathe.' One can hear the *tyn's* sound when it leaves the body. *Tyn* and another soul, the *suzy*, are man's vitality. The *suzy* (from *su*, 'water,' and *uzak*, 'long,' *i.e.* 'long-lived') can leave the body for a while, but, if it is absent too long, the *tyn* perishes. The *kut* is another kind of vitality (*kutup*, 'I vanish'). Its absence causes disease. The *tula* is a soul implying wisdom which differentiates man from animals, who do not possess it. The *sur* is a man's shadow (*surmet*, 'picture'). After a man's death the *sur* continues to dwell in the house for about forty days, but it keeps its independent existence even when it goes to another place; this soul, and one called the *sune* (*su nep*, 'I advise'), seem to survive man and are ultimately reincarnated.¹

3. **Ceremonies.**—Sacrifice to the sky is one of the most persistent ceremonies found among the old and modern Turks. It is called *tigir* (*tayi* among the Minusinsk Turks) and is performed every third summer. No women are allowed to

assist at the ceremony, which is held on the top of a mountain in a sacred birch spinney. The old fire (*ulug ot*) is made, and after many incantations a new fire is lighted from the old one. It is protected by the shamans lest it should go out, which would mean a catastrophe for the tribe. A he-goat or a ram is sacrificed, but no blood must be shed and no cry heard from the sacrificial animal.

During the sacrifice to Yulgen among the Altaians similar precautions are taken, and the whole fore-quarters of a horse are boiled on the 'old fire,' while the hind-quarters are boiled on the new fire. During both ceremonies each head of a family attaches a thread of flax to the sacred birches—that is the path for their wishes to go to the high being—and eagle feathers attached to the threads carry them farther up. The meat boiled on the old fire is then taken round in the direction of the sun and burnt on the same fire. If the smoke goes up in a straight line, the sacrifice is accepted. Then only a feast is held, and the choicest meat is offered to the *kam* shaman, or medicine-man. Among the Kirgiz he is called *baksa* if belonging to the same clan, or *duana* if belonging to another clan. The meat prepared on the new fire is consumed, while remnants of the feast together with the implements used are burnt again on the old fire.

The birch plays a very important rôle in all Turkic ceremonies, and, whether the Turks live in steppes or tundras, birches are either brought from the forest regions or are symbolized by driftwood poles. This as well as veneration of forest animals and birds (and not steppe or tundra animals) seems to point again to the forest origin of the race.

The summer sacrifice to Yulgen (called also Bai-Yulgen) lasts for two or more days, and it is usually on the second day that the shamanistic performances are held. The *kam* is preparing for a journey to the various spirits and gods living in the skies above. He ceremonially feels various spirits represented on his drum. While the company eats the offered meat, the *kam* sings:

'Accept this, O Kaira Khan!
Master of the drum with six horns
Draw near with the sound of the bell!
When I cry "Chokk!" make obeisance,
When I cry "Me!" accept this!'

Then he offers a garment to Yulgen with a song:

'Gifts that no horse can carry—
Alas! Alas! Alas!
Gifts that no man can lift—
Alas! Alas! Alas!
Garments with triple collar
Turn them thrice before thine eyes,
Let them be a cover for the steed,
Alas! Alas! Alas!
Prince Yulgen, full of gladness,
Alas! Alas! Alas!'

Then only the shaman summons all the spirit assistants represented on the drum to enter it. He sings and then is silent for a while, and a noise of various birds and animals, whom he is imitating, is heard. Then he begins to beat his drum and to dance round the people, touching them occasionally with his drum or drumstick. The fire is extinct, the shaman's voice becomes weaker, and the sound of the crackling of the birch in the middle of the room indicates that the shaman has fled to the skies. Sometimes the *kam* gives an account of what he sees while he travels, sometimes only after coming back. In the sixth sky he encounters the moon, in the seventh the sun, and from the highest sky he can reach—only a few *kams* reach the ninth sky—he prays to Yulgen:

'Lord, to whom three stairways lead,
Bai-Yulgen, possessor of three flocks,
The blue vault which has appeared,
The blue sky that shows itself,
The blue cloud that whirls along,

¹ V. L. Wierbicki, *The Natives of the Altai*, Tomsk, 1893, pp. 73-78.

The blue sky so hard to reach,
Land a year's journey distant from water,
Father Yulgen thrice exalted,
Shunned by the edge of the moon's axe,
Thou who usest the hoof of the horse;
O Yulgen, thou hast created all men
Who are stirring round about us.
Thou, Yulgen, hast bestowed all cattle upon us,
Let us not fall into sorrow!
Grant that we may withstand the evil one!
Let us not behold Kermes,
Deliver us not into his hands.¹

TUSHES AND OTHER PAGAN TRIBES OF THE CAUCASUS.—The Caucasus presents, as is well known, one of the most remarkable ethnological and linguistic regions in the world.² The reason is not far to seek: this narrow neck of land between the Black Sea and the Caspian has formed for centuries a bridge between S.E. Europe and Asia Minor. Armenians and Iranians (Tāts) press up from the south; Slavs and Tatars descend from the north; at least one Iranian people, the Ossetes,³ has forced its way into the very centre of the region. In the midst of these intruders are the Caucasians proper, guarded by the mountain-system of the Caucasus.

The religious history of the Caucasian peoples is analogous to their political and ethnological records; only linguistically and (for the most part) racially have they maintained their independence. Of their ancient paganism but one fragment of any value has been preserved. Regarding the 'Albani,' who occupied the eastern portion of the country between the Terek and the Kura,⁴ Strabo writes thus:

'The gods they worship are the Sun, Jupiter, and the Moon, but the Moon above the rest. She has a temple near Iberia. The priest is a person who, next to the king, receives the highest honours. He has the government of the sacred land, which is extensive and populous, and authority over the

¹ M. A. Czaplicka, *Aboriginal Siberia*, London, 1914, pp. 298-303.

² The best ethnological maps of this region are by N. von Seidlitz, in *Petermanns Mitteilungen*, xxvi. [1880] Taf. 15; R. von Erckert, *Der Kaukasus und seine Völker*, Leipzig, 1887; *Dorožnaya karta kavkazago kraja*, Tiflis, 1903; *Ethnografieskaya karta kavkazago kraja*, Tiflis, 1909 (cf. the review by A. Durr, in *Petermanns Mitteilungen*, lvii. [1911] pt. 2, p. 94 f.); and, for the Kartvelian region only, by H. Schuchardt, in *Petermanns Mitteilungen*, xliii. [1897] Taf. 6. For the Tushes, Pshavs, and Khevsurs see also the special map by G. Haddie, in *Izvestiya kavkazago otdela imp. russ. geograf. obsčestva*, xi. [1880]. For an ethnographic map in the 1st cent. B.C., see J. de Morgan, *Mission scientifique au Caucase*, ii. pl. xiv., and for the distribution of the various tribes according to the classical authors, see the map by B. Latyshev, in his *Scythica et Caucasia*, ii.

³ See art. OSSETIC RELIGION.

⁴ De Morgan, ii. 191-196.

sacred attendants, many of whom are divinely inspired and prophesy. Whoever of these persons, being violently possessed, wanders alone in the woods, is seized by the priest, who, having bound him with sacred fetters, maintains him sumptuously during that year. Afterward he is brought forth at the sacrifice performed in honour of the goddess, is anointed with fragrant ointment, and is sacrificed together with other victims. The sacrifice is performed in the following manner. A person, having in his hand a sacred lance with which it is the custom to sacrifice human victims, advances from the crowd and pierces the heart through the side, which he does from experience in this office. When the man has fallen, certain prognostications are indicated by the manner of the fall, and these are publicly declared. The body is carried away to a certain spot, and then they all trample upon it, performing this action as a mode of purification of themselves.

The Albanians pay the greatest respect to old age, which is not confined to their parents, but is extended to old persons in general. It is regarded as impious to show any concern for the dead or to mention their names. Their money is buried with them; hence they live in poverty, having no patrimony.¹

He also states,² on the somewhat dubious authority of Megasthenes, that the Caucasians practised coition in public and ate the corpses of their dead relatives.

The religious history of the Caucasus is as varied as its other records. Central Caucasia was not converted to Christianity until the 4th cent., and the gospel first penetrated E. Transcaucasia after the defeat of Khusrau (Chosroës) I. by Justinian in the middle of the 6th century. Mazdaism, on the other hand, was introduced into E. Caucasia in the Arsacid period (186-265), and in E. Transcaucasia it had superseded Christianity by the time of the rise of Islām in 646. In consequence many Caucasian peoples possessed a religion which was an undigested mass of primitive paganism, Mazdaism, Christianity, and Muhammadanism. Among certain tribes, notably the closely kindred and geographically contiguous Tushes, Pshavs, and Khevsurs, this state of affairs still obtains, as was also the case among the Dadianic Svanetians until their nominal conversion (or, rather, reconversion) to Christianity in 1865.

So far as present conditions are concerned, the religions professed by the Caucasian peoples are as follows:

(1) Georgians (Karthvelians): Lazes, Ajars, Yengiloi, Kabardinians, and Cherkess, Muhammadan (the two latter relatively recent converts from Christianity); Tushes, Pshavs, Khevsurs, Svanetians, and Abkhases, pagan (or semi-pagan); Mingrelians, Imereians, Gurians, and Grusinians, Georgian Christians.³

(2) Eastern Caucasians (Chechens, Avars, Kazikumyks, Kyrins, etc.), Muhammadans.

(3) Turko-Tatars (Kumyks, Kirgis, Kakmyks, etc.), Muhammadans or Lamaists.

(4) Iranians: Tāts, Muhammadans; Ossetes, semi-Christians or semi-Muhammadans, with numerous pagan survivals.

(5) Armenians, Christians.

The present article is restricted to the pagan or semi-pagan peoples of the Caucasus, especially the Khevsurs, with whose religion that of the Pshavs and Tushes is practically identical.⁴ These peoples possess an interest greater than their numbers seem to warrant. Like so many Oriental religious systems, such as Manichæism (*q.v.*) and the religions of the Mandeans, Nusairis, Kizil Bash, Yezidis (*qq.v.*), etc., they present a syncretism analogous to late classical developments or to the Græco-Egyptian system.⁵

1. Tushes, Pshavs, and Khevsurs.—The Tushes, Pshavs, and Khevsurs are three small, contiguous tribes of Karthvelian stock, numbering, in 1912, 6600, 11,000, and 7700 respectively;⁶ and their religious systems are so similar that they need not be discussed separately.

(a) Sanctuaries.—The *khati*, or place of prayer and sacrifice,⁷ is synonymous with the community

¹ xl. iv. 7 f. (= p. 503 C). ² xv. i. 56 (= p. 710 C).

³ Cf. W. F. Adeney, *The Greek and Eastern Churches*, London, 1908, pp. 344-348.

⁴ For the Ossetes see art. OSSETIC RELIGION.

⁵ See artl. AYTIS, CYRENE, GRÆCO-EGYPTIAN RELIGION, etc.

⁶ A. Durr, in *Petermanns Mitteilungen*, lviii. [1912] pt. 1, p. 138.

⁷ The word *khati* properly means 'idol,' 'image'; it is also used to denote an 'angel,' or personification of heaven or nature, possibly as being an 'image' of the Supreme God (cf. Merzbacher, *Aus den Hochregionen des Kaukasus*, ii. 75, 90 f.).

itself; and so completely has *khati* lost its primary meaning of 'image' that prayer is made to it quite as earnestly as to its divinity, the *batoni-khati* ('image-lord'). The *khati* usually stands on a hill, in a grove of trees (planes, oaks, etc.) which are considered holy, which no axe may touch, and beneath which no wild animal may be killed. The sanctuary always consists of more than one building, surrounded by a rude stone wall. A small chapel, artlessly constructed of irregular slabs, contains the 'image,' the *drosha* (banner of the clan, borne in battle, and regarded with awe),¹ and the costly silver vessels from which the sacred beer, brewed in the *khati*, is drunk, etc. Near the *khati*, but within a hedge of its own, is a small, dark building to house the brewing apparatus, drinking-cups, and the like; and close by, under the shade of a great tree decked with rags, etc., is an altar, about 1½ m. high, which is adorned with humble offerings, while over it is a bowl with an aspergillum, and behind it frequently stands a stone idol. By the altar is a stone-paved pit into which the blood of the sacrificial victim flows through a quadrangular opening; and feet and bones of sheep, kine, etc., bear witness to the zeal of the worshippers. Near this usually stands another altar-shaped column resting on a square base; and on it are piled horns of wild animals, brought as offerings to the sanctuary. A special hut is erected for brewing the beer, which only the proper servants of the *khati* may prepare; and *darbasi*-dwellings and assembly-places are provided for the ministers of the shrine. The sacred vessels (mostly of silver and often bearing Christian symbols) are jealously guarded against profanation or theft; and at high festivals the worshippers drink from them the sacred beer.²

As the terrestrial home of the celestial *khati*, the *khati*, in its aspect of place of prayer and sacrifice, serves as means of communication between heaven and earth, so that in each crisis of life it is visited for prayer to the divinity dwelling there. While almost every village has its own *khati*, three, all dedicated to St. George (see below [d]), possess special sanctity—those in the villages of Gudani and Khakhmati, and the *khati* of Karatisjvari in Likoki. The two former are the oldest in Khevsuria, and all three enjoy large estates.

The *khati* of Gudani is called 'leader of God's hosts' and contains the chief *drosha* of the Khevsurs. It possesses great power against theft (hence it is invoked when a raid is to be undertaken) and against disease, insanity, and sterility. The *khati* Sameba-Zrolis-Zteri, in the village of Ukan-Khalo, is the special patron of hunters and thieves, and has peculiar power over the clouds. The *khati* of Karatisjvari is particularly potent against all evil spirits, which appear in the form of hedgehogs, swine, etc.; and his sacrifice, in case of misfortune, is a goat, which, it should be noted, is offered only to evil spirits. In the village of Atabe is a *khati* dedicated to St. Kvirik, lord of the mainland, whom all angels obey, and who has his throne next to God.

(b) *Priests*.—Some uncertainty prevails concerning the various orders of the priesthood. The lowest rank is that of the *shulta*, of whom each *khati* has three, chosen annually from the community by the *khuzi* and the *dekanossi*. The *shulta's* duties are to guard the property of the sanctuary, to supervise and assist the agricultural work on the land belonging to the *khati*, and to see the harvest safely garnered. Like the other ministers of the *khati*, they must lead a blameless life, and for several weeks before each feast intercourse with women is forbidden. They may not enter the *darbasi*, this privilege being reserved for the higher functionaries.

The next in ascending rank are the *dasturi*,

¹ Cf. art. BANNERS.

² The emphasis laid on the sacred beer may be a reminiscence of the Indo-Iranian *soma-haoma* rite (see artt. HAOMA, SOMA), despite the wide-spread custom of drinking intoxicants in connexion with sacred ceremonies (see *ERE* v. 79).

chosen by the *khuzi* from the community, either for a definite period or for an individual feast. Their name is of Persian origin (Pahlavi-Pers. *dastūr*), but in the Iranian priesthood the *dastūrs* occupy the highest rank.¹ The duties of the Khevsur *dasturi* are to receive the barley from the *shulta*, prepare the firewood, obtain the wild hops (cultivated hops may not be used), and brew the sacred beer. During this process they must be barefooted, bareheaded, and ungirdled, may not leave the sanctuary, and are forbidden to speak.² At the festivals they must prepare and serve the food of the *khuzi* and *dekanossi*, and perform a like service for the attendant worshippers. When the *khuzi* slays the sacrificial offering (*svaraki*), the *dasturi* and *dekanossi* hold its feet, and they sprinkle the sacrificant and his family with its blood. During four weeks previous to a feast the *dasturi* must refrain from conjugal relations and may not go near a *boseli* (menstruation-hut). While the *shulta* are all equal in rank, there are various degrees among the *dasturi* according to the periods for which they are chosen; and, together with the *shulta*, they administer the finances of the *khati*.

The real priest of the *khati* is the *khuzi*, who is chosen, not by the community, but by the soothsayer (*kadagi*) or seeress (*mkitkhavi*). A future *khuzi* is usually a man of standing, favourably known for shrewdness and eloquence; and the sign by which he is elected is normally illness of himself or of one of his relatives (failure to recover from such illness, however, means that he has been rejected by the *khati*). Once chosen, the *khuzi* cannot be removed against his will; he is deemed holy, and no one dares insult him by word or deed. On the other hand, a man selected by *kadagi* or *mkitkhavi* cannot refuse to accept the dignity of *khuzi*, under penalty of divine anger. The *khuzi's* duties are the performance of religious rites (some of which, in much distorted form, are of Christian origin, as shown by their invocation of the Trinity) and the offering of prayers, which—for material blessings alone—are addressed to the *batoni-khati* (as the mediator of the divine will) rather than to the supreme deity. The *khuzi* also slaughters the *svaraki* by cutting its throat, and he and the *dekanossi* receive its skin and half of its flesh. He performs marriages, conducts festivals for the dead, blesses the people at the great feasts, and foretells the outcome of illness by placing the cap and girdle of the afflicted person under his pillow and dreaming over them.³ He is likewise the guardian of the sacred *drosha*, before which the people kneel when it is shown them on high festivals; and at such times he solemnly curses any who may possibly prove traitors, holding high a bowl of beer and pouring it on the ground with the words, 'So may the house, the family, the fortune of the faithless be emptied!' Like the *dasturi*, he must observe the utmost purity before festivals, even an erotic dream sufficing to defile him.

The *khuzi* is assisted by several *dekanossi*, likewise chosen by the *kadagi* or *mkitkhavi*, and bound by the same rules as govern him. With the *dasturi* they hold the sacrificial victim while he cuts its throat; with him (or for him, if he is prevented from taking part in the festival) they repeat the prayers and bless the people; and they light the candles in the *khati*.⁴

¹ See art. PRIEST, PRIESTHOOD (Iranian).

² The prohibition of speech (cf. also below, p. 487) looks very like a survival of Zoroastrianism (see *SBE* v. [1880] 109, 290-292, xviii. [1882] 135, xxiv. [1885] 283 f.); but, on the other hand, to go barefoot and ungirdled are heinous sins in Mazdaism (*SBE* v. 106 f., 287).

³ Cf. art. INCUBATION, of which this dreaming is really a form.

⁴ The *khuzi*, *dekanossi*, *dasturi*, and *shulta* roughly correspond respectively to the fourfold hierarchy of bishop, priest,

A somewhat problematical figure in the hierarchy¹ is the *khevis-beri* ('valley-elder'). It seems, on the whole, that he was originally the political or administrative head of the valley, and as such was the bearer of the *drosha* and the leader of the army. In this manner he naturally became protector of the *khati*, and so developed by degrees into a religious leader, particularly as his older political importance steadily diminished. Traces of this, however, yet remain. He is still the one who uplifts the *drosha* at certain feasts; and, unlike the *khuzi*, *dekanossi*, *dasturi*, and *shulta*, he inherits his dignity; and it is only in the case of extinction of a family in which the office of *khevis-beri* is hereditary that he is chosen by the *khuzi*. He is the faithful transmitter of ancient ritual; but his precise relation to the *khuzi* is uncertain.

(c) *Sorcerers*.—Among the Khevsurs sorcerers and priests co-operate. The *kadagi* is chosen at New Year by *khuzi* and *dekanossi*. Usually he is neurotic, and he delivers his messages in the characteristic manner of shamans.² He is the mouth-piece of the *khati* and is consulted in all important events of life, especially in cases of illness, when he designates the particular offering necessary to propitiate the deity whose anger has caused the affliction. In certain *khatis*, as in Khakhabo, the *kadagi* even has the right to carry the *drosha*. The female counterpart of the *kadagi* is the *mkikkhavi*, who is often a hysteric. Despite the restrictions imposed on all other Khevsur women, the *mkikkhavi* holds rank equal to that of the *kadagi*. The *mkikkhavis* divine by means of water, grains of corn, etc.; and, if they declare that the cause of an illness is a deity's desire to obtain the person afflicted, the latter is clad in white, and a vow is taken that his hair shall be uncut for three years, etc.

There is another class of sorceresses, the *mesulta*—women and girls who sustain a peculiarly close relation to the supernatural world. To approach the spirits of the departed, the *mesulta* lies upon the ground, grows pale, and falls into deep slumber, often broken by a gentle murmuring, which is regarded as converse with the dead. Since, however, too much speech regarding the other world is dangerous, the *mesulta*, on awakening, uses language which is intentionally obscure. If a child falls ill before reaching the age of two years, the *mesulta* is consulted. She tells from what departed spirit the illness comes; and the child's name is changed to that of the deceased in question (in similar illness of an older child the aid of the *kadagi*, not the *mesulta*, is sought).

(d) *Deities*.—Reminiscences of Christianity are so numerous that it is not always easy to say exactly what is essentially the religion of the Khevsurs and kindred tribes. The supreme deity is Morigi, creator and omnipotent, who dwells in the seventh heaven and is the god of the living, whereas Christ is the divinity of the dead.³ The Trinity, occasionally invoked in prayers, is regarded as three angels; the Blessed Virgin receives honour as one of the chief angels; and SS. Peter and Paul are the angels of wealth and abundance. Morigi leaves the actual administration of the world to his delegates, the *khatis*, each of whom has his special function and is aided by two

deacon, and subdeacon of the Orthodox, Roman, and Anglican Churches, and this may indeed be their origin; it is less likely that they are reminiscences of the *zarathushtrötema*, *andarzpal*, *ratu*, and *möbed* of Zoroastrianism (for whom see art. PRIEST, PRIESTHOOD [Iranian]).

¹ Cf. the divergent opinions cited by Merzbacher, ii. 85.

² See art. SHAMANISM.

³ The seven heavens represent Jewish Talmudic tradition (see *JE* i. 591, vi. 295); for Morigi as god of the living cf. Mt 22:32; and the concept of Christ as god of the dead is probably borrowed from the doctrine of His descent into Hades (1 P 3:19).

messengers (*esauls*), one good and the other evil, through whom the *khati* rewards or punishes mankind. The *esauls* united form the heavenly host (*lashkari*; Arab. *laškar*, 'army'), to which the 'sisters' of the *khati* also belong. A special shrine is erected to these 'sisters' in the *khati* of Khakhmati, and there three maidens from Kajeti (the land of the demons) dwell—Ashe, Simen, and Samsimari—who are represented as children and who, when sent by the *khati*, cause the children of the guilty to fall ill.¹

The principal deity, for all practical purposes, is the patron saint of the Caucasian region, St. George of Cappadocia, from whom the land of Georgia is popularly supposed to have received its name.² The majority of churches in Georgia are dedicated to him, as are the three chief *khatis* of the Khevsurs—Gudani, Khakhmati, and Karatis-Jvari. He not only causes the herds to multiply, but he heals animals and men and protects his worshippers in time of peril. He is, furthermore, a storm-god and solar deity, and his throne is on a lofty mountain,³ whence he sends upon the fields of the wicked the hail which his servants, the *divs* (Av. *daēva*, 'demon'), bring from the sea at his bidding. To avert his wrath, no work is done in the fields on Mondays, Fridays, and Saturdays from June till harvest, special watchers being appointed to see that this tabu is not violated. Chapels are erected in his honour on hill-tops, to which pilgrimage is made annually; and at Khakhmati sacrifices are made to his dog, a wind-demon, for having once protected the Khevsur herds against a band of devils.

(e) *Festivals*.—The chief Khevsur festivals fall about Easter, Ascension Day, and New Year's Day. The most important is celebrated in the *khati* of Gudani, beginning on Good Friday and lasting four days; but in memory of our Saviour's thirst (Jn 19:28) bread and salt alone are eaten, and only a little beer may be drunk. Twelve weeks later the great national festival, said to commemorate the liberation of the land from foreign invasion, is celebrated at the *khatis* of Khakhmati and Karatis-Jvari, and also throughout Pshavia and Tushetia. At these festivals the number of sacrificial victims is very large, from 500 to 600 sheep and 20 to 40 cattle being offered at Khakhmati alone, and the quota of each family being at least five sheep. The priests receive the skin and half of the flesh, which is salted to keep, the remainder being cooked by the *dasturi* and eaten by the assembly, together with bread and abundant beer. This beer is solemnly blessed by *khuzi* and *dekanossi*, after which the *dasturi* presents it first in the sacred silver vessels to these priests and then to the laity;⁴ but it is consumed so generously that the festival frequently degenerates into a drunken revel. Women are not admitted to the feasts and may not pass beyond a certain line in the *khati*,⁵ where they receive their share of beer and viands. Near a *khati* on a hill in the village of Arkhoti is a special *nishi* (place where a saint has performed a miracle) for children, and to this are brought loaves baked expressly for them.

¹ This explains the function of the *mesulta* in healing infants.

² Stemmer, in Wetzler and Welte, *Kirchenlexikon*², Freiburg, 1882-1901, v. 330; cf. also *AS*, April, iii. 101 ff. In reality, however, 'Georgia' is probably derived from Pers. *Gurj*(istān), the name of the land in question (Adeney, p. 344, note).

³ Cf. the mystic awe associated with the mountains Kasbek in Ossetia (Merzbacher, i. 348-353) and Elburz, the latter being called *Orū Itub* ('Abode of the Blest') by the Abkhases, Ashka Makhua ('Mountain of the Gods') or Nash Hamakho ('Holy Height') by the Cherkess, and Jinn Pādīshāh ('Lord of Spirits') by the Turkish-speaking tribes (*ib.* i. 599-601); its name is derived from the Persian *Albūrz* (Av. Hara Berezaiti), itself a famous abode of *divs* (cf. *ERE* viii. 507*).

⁴ Apparently a reminiscence of celebration of the Eucharist.

⁵ Probably reminiscent of the narthex of early Christian churches.

(f) *Status of women.*—Until a daughter-in-law has entered the household, a Khevsur woman's life is one of toil. She not only aids her husband in working in the fields and tending the cattle, but must also mow and thresh, bring wood and water, cook food, make clothing, etc. When her son brings home his bride, however, the mother-in-law becomes the administrative head of the house, and nothing may be done without her approval.

(g) *Marriage and divorce.*—Betrothal frequently takes place while the future bride and groom are still children; and in such a case the boy's father is obliged, until the girl reaches maturity, to send annual presents to the bride's father, while at New Year a brother or sister of the groom takes to the bride a 'luck-loaf' (*bedis-kveri*), which she is bound to eat. The marriages are always arranged by a female marriage-broker, who takes some small present from the parents of the groom to the father of the bride. After betrothal the girl may seek no other alliance, and theft of her by another man entails severe consequences on him and her, besides being a deep disgrace to the intended groom and his family. Marriage between persons even remotely akin is strictly forbidden, with the result that, since all the inhabitants of a village belong to a single family, men and women of the same community very seldom wed.

On the marriage day the father of the groom sends to the bride's father, by two men of standing, two sheep, one of which is killed at the *khati*, the other in the bride's house. The girl's mother bakes two large festival loaves (*kada*), and all the maidens of the village escort the bride, with her parents and kinsfolk, to the end of the village, where one of the *kadas* is eaten. The bride's escort now return home, while the bride, with some of her more distant relatives, follows the two men sent by the groom's father, all but the girl being mounted on horseback. During this journey the second *kada* is eaten, and when she reaches the village which is to be her future home the bride is met by all its inhabitants, the distance which they come to greet her being proportionate to the respect shown her. Arrived at the groom's house, the bride is entertained in a separate room by the women of the family, while her escort are feasted. Meanwhile the groom hides till summoned by the feasters; and he then receives the place of honour, but may share in neither banquet, song, nor dance, being permitted to drink only a single glass of brandy. The women likewise are debarred from the men's feast and dance, this being probably a Muhammadan survival, since no such restriction exists among the Christian Karthvelians. This revelry usually lasts three days, during which the groom may not come near his bride; and bride, groom, and escort then return to her home, where a similar feast is given. The groom now goes back to his own village, where he remains an entire year, forbidden to visit even the village of the bride, the only exception being when the groom has no parents, in which case his bride remains with him from the first to manage his household. When the year has expired, the groom sends his nearest kinsmen to fetch the bride, who is again escorted by some of her own relatives. The *dekanossi* and *khevis-beri* are now summoned, and the former sews together the garments of the bridal pair in token of their union, while the girl's mother prepares the nuptial bed, to which she leads the wedded pair. After the first three nights, the groom no longer shares this bed, but seeks his bride only by stealth; and it is not until the birth of their first child that the pair live together openly. The conjugal act involves ritual defilement for three days.

Despite the absence of outward manifestations of affection, and notwithstanding the life of toil imposed upon the married woman, she occupies a position of great respect. Except for very rare instances, she guards her fidelity to her husband with extreme care; and if convicted of adultery, she takes her life. Her symbol of wifehood is her kerchief (*mandili*); and if she throws this between two men who are fighting, they must at once desist from their quarrel.

The older form of wedding among these tribes was marriage by capture, which is still frequent, usually with the connivance of the girl. This is regarded as an insult to the kinsmen of the man to whom she was betrothed, and the robber's relatives must pay them a fine of 16-30 cows and make rich presents to the girl's father. In addition to this, the brothers and cousins of the girl insult the robber by 'jumping on the roof' (*banse*

shekhtoma) of his house until he slaughters a sheep and gives them a young ox and a copper kettle. If, however, the girl is carried off against her will, a deadly feud arises between the kinsmen of the robber and those of the intended bride and groom, often resulting in destruction of property and life, while the girl seeks an opportunity to escape to her chosen husband.

Polygamy is permitted, but is rare unless the wife is sickly, ages prematurely, or bears only girls; but if a second wife is taken, the husband must give five cows to the family of the first.

The bride brings a dowry with her, but the groom has no claim upon it, whereas the wife has the right to make herself a new dress annually at her husband's expense. The property of husband and wife is kept separate, and neither may be the other's heir. Sons alone may inherit; if the marriage is childless, or only girls are born, the village is the heir.

Divorce is rare, for, even if a wife is thus dismissed for laziness, barrenness, or sickness, her husband must pay her 16 cows for the marriage and one cow for her work during each year of wedded life except the first and the last. A divorced wife may marry again, and is still entitled to a new dress each year at her first husband's expense. On the other hand, any children of the first marriage belong to their father; and though a temporary exception is made in the case of an unweaned infant, this child also goes to its father as soon as it is grown. A man is deeply disgraced if his wife leaves him; and in such a case she must promise never to marry another man, a violation of this pledge formerly involving the death both of the woman and of her second husband.

Under no circumstances may a man ill-treat his wife—a rule which is enforced by the entire community. Since the family (*ojakhi*) is strictly subordinated to the community (*tamoba*), so that ostracism involves entire forfeiture of communal protection, rights to communal pasturage, etc., the ruling of the *tamoba* is one of much effect in all departments of life in the individual household.

(h) *Death and disposal of the dead.*—Death being believed to defile the house, the moribund are carried into the open air, and there breathe their last, surrounded by the members of their household. Since the corpse is deemed a source of uncleanness, its preparation for its final resting-place is the duty of young, unmarried persons (*lads* for males, and girls for females) called *narevebi* ('defiled'),¹ who shear the head of the corpse (if it be male), clothe it in a shroud of white and red,² and dig for it a long, narrow, shallow, stone-lined grave, in which it is laid uncoffined.³ Contact with *narevebi* entails defilement; and they may not enter their own homes until (after five or six days) they have taken repeated cleansing baths. For a year the kinsmen of the deceased let their beards grow, wear old clothes turned inside out (thus hiding the usual adornments of dress), and carry no weapons. The departed (unless a child, who is unwept) is formally beavilled, the men lamenting silently, the women aloud; and one of the latter recites or sings laudations of the deceased, the others joining in the refrain. A funeral feast is prepared and blessed by the *khuzi*, who also recites an ancient prayer containing reminiscences of the Old and New Testaments.

The corpse is borne to the grave by the *narevebi*, while the kinsmen and other male residents of the community stand weeping softly at the boundary of the village. Of the family only the widow accompanies the body to its final resting-place, and she leads the dead man's completely caparisoned horse,

¹ Cf. the Iranian *nasá-sálars* (see *ERE* iv. 503 L).

² For minor variations see Merzbacher, ii. 97, note 3.

³ In certain regions wooden coffins are coming into use.

which bears his clothes and weapons, as well as food and drink for his journey to the other world. Arrived at the grave, she strikes the horse thrice, saying, 'Serve thy master in the future life as faithfully as thou hast served him here below.'¹ The widow is escorted by wailing women, eulogizing the departed, and when the corpse is laid in the ground, one of them falls into ecstasy, describing the arrival of the soul in the abode of the blest. At most only a few loaves are buried with the corpse, or, in the case of a child, some apples or the like. The horse is given to the nearest or dearest kinsman (usually the maternal uncle), and is carefully tended throughout its life. It may carry neither man nor burden, and to sell it is to disgrace its late owner, who still needs it to ride before his departed kinsmen in the other world. If, however, certain specified conditions permit its sale, the purchaser pays only half its actual value, and the seller must provide a substitute; for it is, in reality, the property of the dead.

While burial is now practised by the Caucasian tribes under consideration, the older form of disposal of the dead was to lay them in small house-like structures above ground. The characteristic form of this corpse-house is thus described by M. Kovalevsky:²

They are, 'as a rule, situated on the summit of hills. In shape they are like a prolonged quadrangle; they are constructed of stones put together without cement, and have two entrances, one on the southern and one on the northern side.' Within, 'on both sides of a passageway which is left free, stone ledges at a certain level from the earth are to be seen with the nummified bodies of the deceased either sitting or lying on them. Different objects, belonging to everyday life, but no armour, are found in these burial places, where the wind freely enters and birds are likely to come.'³

Immediately after the return from the grave, an ox is killed; and the relatives and *narevebi* thrice take a piece of its roasted liver into their mouths and spit it out, this being called 'the re-opening of the mouth' (*sapiris khsno*), since, until this rite is performed, they are denied both meat and milk. Meanwhile the other mourners are entertained with bread and cheese; and on the following day the flesh of the roasted ox is eaten by the relatives and the *narevebi*.

The 'keeping of silence' (*piris abshera*)⁴ is likewise a noteworthy mourning rite. On the day of burial the nearest relatives of the deceased choose two men and one woman from his kinsfolk and shut them in a room where a fire is burning. After partaking of a large milk-loaf, they may not utter a word until the 'khuzi of souls' comes at evening and blesses the loaf, which they turn about themselves thrice. They then go silently home, and each lays a piece of wood at the window of the dead man's house, after which speech is permitted, and they may share the general meal.

A second festival in honour of the deceased is held a few days after his burial; and at this time there is a horse-race⁵ in which the victor receives the weapons, etc., of the departed, although they are not actually given him until a year has elapsed. Throughout this year the soul of the dead is supposed to visit his earthly home and to protect it, so that on the second Saturday of Great Lent a special meal (*sulta-kreba*, 'assembly of

¹ Formerly the horse was doubtless sacrificed at the grave.

² *Archaeological Review*, i. [1888] 321.

³ This form of superterrene disposal of the dead, to which the Avesta distinctly refers (*Vend.* v. 10; cf., further, D. Menant, *Les Parsis*, Paris, 1898, pp. 183 f., 213 f.), is fairly wide-spread, being found not only among Tushes, Pshavs, and Khevsurs, but also in Osssetia (Merzbacher, l. 690, 815-818), Seistan (G. P. Tate, *Seistan*, Calcutta, 1910-12, p. 276), Baluchistan (*JG* vi. 233), and the Hindu-Kush (G. S. Robertson, *The Kafirs of the Hindu-Kush*, London, 1896, p. 641 ff.). A highly developed form is probably to be seen in the so-called 'Tomb of Cyrus' (for a description of which see A. V. W. Jackson, *Persia Past and Present*, New York, 1906, pp. 280-293). A somewhat similar idea is found in the rock-tombs of the Achaemenian kings, the entrances to which imitate the portals of a palace; and these have analogues in Asia Minor (R. Leonhard, *Paphlagonia*, Berlin, 1915, pp. 242-237) and in Judaea (*JE* iii. 436 f., vii. 145 f.). In the light of his further studies, the present writer believes that his note on ancient Persian burial rites (*ERE* iv. 505) requires considerable revision; and the connexion between this superterrene disposal and primitive Persian and Caucasian dolmen-burial (J. de Morgan, *Mission scientifique en Perse*, Paris, 1894-1905, iv. 15-58, and *Mission scientifique au Caucase*, i. 41-82), cliff-burial or rock-burial (for examples at Pandran, in Baluchistan, see *IA* xxxii. [1903] 342 f.), and the Zoroastrian *dakhmas* (*ERE* iv. 504) also requires consideration.

⁴ Cf. above, p. 434^b, note 2.

⁵ The Ossettes have a similar custom (Merzbacher, i. 819).

souls') is prepared for him. Various gifts are laid near loaves of bread placed on the ground, and these become the property of any one who hits them with arrow or bullet; the men then visit the *khati* to drink beer brewed at the expense of the community, while the women, gathered in the house of mourning, lament the dead and drink to the repose of his soul.

The great memorial feast (*tsel taveri*) is held at the expiry of the year. The mourners now cut their hair and beards, don new clothing, and feast so bountifully that excessive potations frequently lead to confusion and quarrels. This feast may also be given by a bachelor or childless widower in his lifetime for the weal of his soul in the future world; but he may not partake of it himself, although, as he hides from the feasters, he may listen to their laudations of him, thus playing the rôle of the dead and securing the benefits of the other world which his lack of posterity would otherwise deny him.

(i) *Heaven and hell*.—Heaven is a huge fortress, many storeys in height, reaching to the sky. It is illumined by the sun, and on its edge is a great spring, from which the blest drink joyfully.¹ The righteous are graded according to merit as regards the storeys in which they dwell, and each Sunday they receive from God their celestial food, the very sight of which assuages their hunger. Hell, on the contrary, is a dark,² square abode to which devils take the damned. Between this world and the next is a perilous bridge, at whose farther end the judges of the dead are seated.³ Sinners fall into a shoreless river of tar, where they swim in eternal agony, tormented by terrible thirst, while special sins have special punishments, liars and slanderers, e.g., having boiling water poured over them.

(j) *Miscellaneous*.—The blood-feud (*g.v.*) flourishes among the Khevsurs, but presents no noteworthy features, although it may be observed that the maternal uncle is especially prominent, either as the avenger of the murdered or as the first to be attacked by the avengers of the slain. Only compensation may be claimed for the murder of women and children; and for non-fatal injuries to men a regular tariff of much minuteness is in force, even murder itself being commutable by a *vergeld*.⁴

In a case of mere suspicion the accused may clear himself by a solemn oath, taken in the *khati* at night. Here an interesting survival of Iranianism is seen in the fact that, while taking oath, the accused holds a live cat, which is deemed the most unclean of all animals,⁵ and prays that the corpse of the real murderer, and the corpses of all who might have proved his innocence, but failed to do so, may be followed by a cat in the future world. Or, after food has been placed on the grave of the murdered, one of the latter's kinsmen draws a drop of blood from an ear of the accused and of his kinsmen, cursing the suspected person, if he be guilty, to be the servant of his victim in the life to come. After this both parties share the food, and reconciliation is complete.⁶ If, after condemnation, the guilty man refuses to pay the fine imposed upon him, the creditor may demand such payment from some third person whom he chooses without the knowledge of that person. This man, called *mzevali*, may transfer the debt to a fourth, doubling the amount; and the fourth to a fifth, again doubling the sum, and so on, until the debt, enormously enlarged, finally devolves again on the original debtor, who must pay the whole. No one may refuse to be a *mzevali* under penalty of having erected, near his house, a stone image smeared with human excrement, and with a cat or dog⁷ hung on a stick thrust into it, the whole being accompanied by a curse. Such disgrace results in ostracism.

¹ Evidently a reminiscence of Rev 22.

² This idea is probably Iranian in origin (cf. *Arta Viraf*, ed. and tr. M. Haug and E. W. West, Bombay, 1872, chs. xviii, liv., and *SBE* v. 114, xviii. 57, 75).

³ This may be either Iranian or Muhammadan (see *ERE* ii. 352).

⁴ For details see Merzbacher, ii. 50-56.

⁵ See *SBE* xviii. 419.

⁶ For details see Merzbacher, ii. 56-58.

⁷ Probably Muhammadan in origin, since Islam, unlike Zoroastrianism, abhors the dog (*ERE* i. 512; T. P. Hughes, *DI*, London, 1896, p. 91*).

cism of the *mzevali*, who can avert it only by paying the amount demanded, killing a sheep, and sharing it with his opponent and with invited witnesses, after which 'the souls are set free.'

2. **Svanetians.**—The Svanetians, numbering about 16,500 in 1912, are the modern representatives of the Soanes or Suani of Strabo and Pliny.¹ Their religion is by no means so interesting as that of the Khevsurs, etc., and primitive elements are far less prominent.² From Iranianism they retained a sort of prayer to the sun and moon; from Christianity a form of anointing a child by its mother in lieu of baptism, and a veneration for Christ, the Virgin, and St. George; from Judaism a reverence for Elijah; and they still abstain from work on the three Sabbaths—Friday of the Muhammadans, Saturday of the Jews, and Sunday of the Christians. They practise the strictest endogamy, only residents of the same village being permitted to wed—possibly (though by no means certainly) an Iranian survival.³ Superfluous female children were formerly smothered as soon as born. Burial might take place only in clear weather, rain (in view of the great precipitation) being regarded as ill-omened; and food was laid on the grave for the soul's journey to the other world.

3. **Importance of Caucasian religion.**—The rather scanty fragments of paganism found in the Caucasus are of more interest than appears on the surface. The Karthvelian stock seems to have had its original home much farther to the south in Asia Minor and to have been driven steadily northward by the invaders who established their empires in Mesopotamia.⁴ Thus they found an abode in eastern Cappadocia, Pontus, Armenia, and the Caucasus; but under pressure of Armenians from the west, and of Iranians from the south,⁵ they had reached, by the time of Strabo,⁶ a territory extending from the lower course of the Kelkid Irmaik to that of the Kura, and thence to Lenkoran on the Caspian, the northern boundary being the Caucasus range. The Karthvelian group thus represents the descendants of the ancient Colchidians, Soanes, Iberi, and Albani,⁷ the latter corresponding to the Khevsurs, Pshavs, Tushes, and kindred tribes.

If this theory is correct, from the modern paganism of these three Karthvelian tribes we may infer the general character of the religion of a once considerable part of eastern Asia Minor. But perhaps we may go a step farther. We then have a knowledge that in Asia Minor there were at least three zones of religion: one represented by an orgiastic nature-cult, shown by the worship of Cybele and Attis (*q.v.*) in the west and north; the second exemplified by the developed polytheism of the Hittites (*q.v.*) in the centre and south; and the third characterized by a primitive type of religion, mixed with shamanism, in the east. The enthusiasm of the orgy appealed to the decaying faiths of Greece and Rome; the polytheism, with a high degree of civilization, yielded only slowly

¹ Strabo, xi. ii. 19 (=p. 499 C); Pliny, *HN* vi. 4; see especially de Morgan, ii. 182 f., 188 f.

² For a summary see Merzbacher, i. 372-375, and for a description of a Svanetian funeral see *ib.* pp. 447-450. A like statement holds good for the Abkhases, who numbered about 60,000 in 1912 (see especially Zanašvili, in *Izvėstiya kavkazskogo otdėla imp. russ. geograf. obsėcėstva*, xvi. [1894] 1-64).

³ Cf. *ERE* viii. 456-458.

⁴ For an outline of this history see de Morgan, i. 27 f., 197, ii. 121-129, 274-280.

⁵ See de Morgan, ii. pl. xi. ('Les Colonies aryennes dans le Caucase et l'Armėnie'), for the course of these migrations. His suggestion (ii. 278; cf. i. 22, ii. 105 f.) that the Karthvelian group corresponds to the ancient Vannic is scarcely supported by what little we know of Vannic religion (see art. ARMENIA [Vannic]). It is equally doubtful whether the Hittites (*q.v.*) can be regarded as akin to the modern non-Aryan Caucasians, despite his arguments (i. 23, 26, 197, ii. 64).

⁶ De Morgan, ii. pl. xiv. ('Carte ethnographique du Caucase au 1^{er} siėcle de notre ėre').

⁷ See above, p. 483.

to its foes; but the primitive savagery, with a low grade of civilization, was driven by invaders of higher type to the recesses of the Caucasus, where it still lingers, commingled with reminiscences and influences of the nobler religions of Zoroastrianism, Christianity, and Muhammadanism.

LITERATURE.—The principal literature on the paganism of the Caucasian tribes (chiefly in Russian) has been summarized by G. Merzbacher, *Aus den Hochregionen des Kaukasus*, 2 vols., Leipzig, 1901 (esp. ch. xiii. for the Svanetians, and ch. xxvii. for the Khevsurs, Pshavs, and Tushes). Nothing of importance on this subject has appeared since; of earlier literature not specified by Merzbacher, mention may be made of M. Kovalevsky, 'Om dyrkan af förfädrn hos de kaukasiska folken,' in *Ymer*, 1888, pp. 111-122. For the scanty classical accounts of the Caucasus and its inhabitants see B. Latyshev, *Seythica et Caucasia e veteribus scriptoribus Graecis et Latinis*, 2 vols., Petrograd, 1893-1906. For ethnology and ancient history see esp. E. Chantre, *Recherches anthropologiques dans le Caucase*, 4 vols., Paris, 1885-87; J. de Morgan, *Mission scientifique au Caucase*, 2 vols., do. 1890; S. Zaborowski, 'Le Caucase et les Caucasiens,' in *Revue anthropologique*, xxiv. [1914] 121-133. LOUIS H. GRAY.

TUTELARY GODS AND SPIRITS.—The conception of a tutelary guardian genius or guiding spirit believed to protect and watch over certain persons and objects appears to arise as soon as the powers of observation and generalization are sufficiently developed to bring about a systematized scheme by which natural phenomena come to be divided into classes and assigned to particular departmental deities and spirits. In some cases high gods are associated with special functions—*e.g.*, in Mexico, where Tlaloc is regarded as the god of rain and water, and therefore has the special office of fertilizing the earth.¹ But more frequently it is the numerous spirits by which primitive man supposes himself to be surrounded that become the patrons or guardians of individual men. Any extraordinary event that demands the help of an intervening agent provides the impetus to penetrate more deeply into the nature of the supernatural powers and to establish a more intimate alliance with them. Thus, to the primitive mind, the constant motion of water is controlled not by natural law but by some supernatural agency resident within the stream. At first it appears simply as a mystic impersonal force, but, as the mind becomes capable of more definite ideas, the conception of a spiritual being having personality is evolved.

The Trojans, *e.g.*, originally regarded a sacred river as containing *mana* (*q.v.*) and, in consequence, they sacrificed a bull to the stream by throwing the animal into the water whole and entire. 'In later times, when they had reached the animistic stage, an altar was erected by the side of the river on which a bull was offered, the belief being that the spirit in the water came out and consumed the essence of the sacrifice.'²

As soon as the notion of a local spirit allied to a natural object is developed, the desire to seek the aid of the supernatural being speedily follows. The Iroquois at their festivals thank the good spirits and every object that ministers to their wants for the assistance rendered by them.³ In process of time a tutelary guardian genius is assigned to every individual, whose special function it is to guide, protect, and warn the man under his care. This guardian spirit may be acquired in various ways and take different forms. It may reveal itself at birth, or may await the 'crisis' reached at puberty. It may be the spirit of some ancestor or great chief or mighty magician; or it may belong to a deity whose dwelling is not with men. From these spirits the personal name and even the nature of an individual are frequently received, and to them man naturally looks for guidance and protection.

¹ H. H. Bancroft, *NR* iii. 324.

² E. O. James, *Primitive Ritual and Belief*, London, 1917, p. 226.

³ E. B. Tylor, *PC* iii. 205.

I. Forms of guardian spirits.—(a) *Placenta*.—

Among the Kooboos, a primitive tribe of Sumatra, the navel-string and afterbirth 'are the good spirits, a sort of guardian angels of the man who enters into the world with them and who lives on earth; they are said to guard him from all evil. Hence it is that the Kooboo always thinks of his navel-string and afterbirth before he goes to sleep or to work, or undertakes a journey.'¹ If he were not to think of them, he would deprive himself of their care. The Battas, another tribe of Sumatra, believe that each man, in addition to his external soul, has 'two invisible guardian spirits (his *kaka* and *agi*) whose help he invokes in great danger; one is the seed by which he was begotten, the other is the afterbirth, and these he calls respectively his elder and his younger brother.'²

Among the northern tribes of Central Australia the navel-string is frequently cut off with a stone knife and, with the afterbirth, hidden in a hole in the ground or some other concealed spot, the belief being that, were it not preserved, the child would die, since it is thought to contain its spirit.³ Here we find the germ of the belief which, in its more developed form, attributes to the placenta, etc., the function of a tutelary genius.

In Iceland it is an ancient belief that 'the child's guardian spirit or a part of its soul has its seat in the chorion or fetal membrane, which usually forms part of the afterbirth, but is known as the caul when the child happens to be born with it. Hence the chorion was itself known as the *fyrgia* or guardian spirit. It might not be thrown away under the open sky, lest demons should get hold of it and work the child harm thereby.' If it were buried under the threshold where the mother stepped over it when she rose from bed, the child in after life had a guardian spirit in the shape of a bear, eagle, wolf, ox, or boar.⁴

(b) *Animals*.—Not infrequently a man's guardian spirit is thought to manifest itself under the form of an animal.

Among the Ibans or Sea Dayaks of Borneo the *ngarong*, or spirit-helper, after having in a dream appeared in human form, makes himself known in the likeness of an animal. 'On the day after such a dream the Iban wanders through the jungle looking for signs by which he may recognize his "Nyarong," and if an animal behaves in a manner at all unusual, if a startled deer stops a moment to gaze at him before bounding away, if a gibbon gambols about persistently in the trees near him, if he comes upon a bright quartz-crystal or a strangely contorted root or creeper, that animal or object is for him full of a mysterious significance and is the abode of his "Nyarong."⁵ It does not, however, follow that every Iban has a *ngarong*. Many a young man goes out to sleep on the grave of some distinguished person or in some wild and lonely spot and lives for some days on a very restricted diet, hoping that a *ngarong* will come to him in his dreams, but only one in 50 or 100 men is fortunate enough to have his wish gratified. When the *ngarong* takes on an animal form, all individuals of that species become objects of special regard to the Iban, and he will not, of course, kill or eat any such animal. Even if the *ngarong* changes its form, he will continue to respect the species in which it first appeared. The cult may spread through the whole family, the children and grandchildren being under an obligation to respect the animal-form to which the *ngarong* belongs.

Among the Omaha Indians an animal as a guardian spirit is assigned to every man at puberty, and so close is the bond uniting them that the man is supposed to acquire the qualities of the creature that is his guardian. If, in the vision which determines his tutelary genius, he sees an eagle, he will have a keen and piercing foresight; if, on the other hand, it is a bear that appears to him, he will be slow and clumsy and therefore likely to be killed in battle.⁶ This belief, that a man acquires the nature of the animal that is his guardian, has led the Thompson Indians of British Columbia to perform a mimic battle before setting out on the warpath, in which each man portrays on his body and imitates the sounds of his guardian animal.⁷ Similarly in W. Africa, when a man is initiated into a secret society, the animal that he sees in his dream during his 'magic sleep' becomes his guardian spirit or patron.⁸

In Central America nagualism⁹ is one of the ancient forms of worship which still flourish. It 'consists in choosing an animal as the tutelary divinity of a child, whose existence will be so closely connected with it, that the life of one depends on that of the other.' The animal is selected in one of three ways—(1) by priestly divination; (2) by the father and friends drawing animal figures on the floor of a hut at the mother's confinement, the figure that remains at the moment of delivery being the guardian; (3) by noticing the bird or beast first seen by the watchers after the confinement.¹⁰ Sometimes a child's *nagual*

is discovered by means of a calendar, in which all the names, places, and provinces of beasts, birds, fish, stars, etc., are recorded. Some of these horoscopes have a wheel painted on them; others portray a lake surrounded by the *naguals* in the form of various animals.¹ This method—employing astrological calculations based on a written document—is obviously a later development of nagualism.

Among the Algonquins of N. America the tutelary genius is known as a *manitu*, or supernatural being, associated with streams, cataracts, rocks, mountains, and forests. In nearly every case it manifests itself under the form of a beast, bird, or reptile of uncanny appearance, although occasionally it assumes human proportions. At the age of puberty youths are made to retire to a solitary place to undergo a period of fasting. The first thing that appears in a dream to the novice is regarded as his guardian spirit, to whom he looks in after life for guidance and protection. The man destined to be a warrior will have a vision of an eagle or a bear, a serpent will appear to the future medicine-man, a wolf to the hunter. To complete the bond, a portion of the guardian is worn about the person, which is regarded rather as an embodiment than as a representative of a supernatural power. It therefore seems that the guardian spirit is only one of a large class of spirits to which the common name of *manitu* is given.² The same belief is found among the Iroquois and Hurons, the genii being called *okies* or *otkons* instead of *manitu*.

2. Functions of guardian spirits.—(a) *The relation of guardian spirits to totems*.—Among some of the Algonquin tribes a man's guardian is identical with his clan totem, but, since the former belongs solely to an individual, while the latter is the inherited possession of every member of the clan, the tutelary genius cannot be explained in terms of totemism.³ The similarity between the clan totem and the guardian spirit has led several anthropologists to derive the one from the other.⁴ On this hypothesis the clan totem is simply the guardian spirit of an ancestor, who acquired it for himself in a dream at puberty, and through his influence and credit succeeded in transmitting it by inheritance to his descendants, who form a clan, and regard as their totem the animal in which the tutelary genius manifested itself.

Thus, in the case of the Iban, Huse and McDougall think that 'it seems difficult to deny the name "individual totem" to the species' comprehended under the name of *ngarong*. Similarly when 'all the members of a man's family and all his descendants, and, if he be a chief, all the members of the community over which he rules, come to share in the benefits conferred by his *ngarong*, and in the feeling of respect for it and in the performance of rites in honour of the species of animal in one individual of which it is supposed to reside. In such cases the species approaches very closely the clan-totem in some of its varieties.'⁵ Unfortunately, however, for this theory, on the authors' own evidence there are no signs of clan totemism in Borneo.⁶

For support of this view of the origin of totemism (*q.v.*) its advocates are driven to various American theories such as those of F. Boas, who thinks that the totems of the Indians of British Columbia have been developed from the personal *manitu*; and of Alice C. Fletcher, who is led to a similar conclusion by a study of the totems of the Omaha tribe. In this connexion, however, it should be remembered that, while it is perfectly true that guardian spirits are occasionally inherited among certain N. American tribes, and not acquired for each individual separately,⁷ and therefore in process of time may become the totems of the clans, yet, since inherited guardian spirits are usually regarded as less powerful than those acquired by individuals,⁸ they are hardly likely to be taken over as the protectors of the clan. Moreover, there is no evidence forthcoming that a totemic

clan has actually grown up in this way either in America or elsewhere. Where the original conditions are supposed to be typically manifested—*e.g.*, in the Banks Islands¹—no trace remains of the existence of clan totemism, except perhaps in a few very doubtful survivals in secret societies. Again, we must not lose sight of the fact that in America and the Pacific, as compared with Australia, we are dealing with a relatively advanced, not to say degenerate, form of totemism,² and that this 'American theory,' as we may call it, of the origin of the institution rests entirely upon a few cases derived from the N. American Indians. In Australia, where the custom is seen in a much more primitive form, there is no evidence of guardian spirits becoming clan totems, while in Africa examples are also wanting. We therefore conclude that the theory which seeks the origin of totemism in the personal guardian spirits of individuals is devoid of proof, at any rate in the present state of our knowledge.

(b) *Guardian spirits of houses and villages.*—

In most of the W. African tribes there is a class of ancestral spirits called 'the well disposed ones,' whose function is to protect and benefit their particular village or family, acting in conjunction with the village or family fetish. It is supposed that the spirit of a man lingers about a house some time after his death, and, although it is able to injure the children and others by embracing them, it performs the office of a guardian to the family by keeping off evil spirits.³

The Kenyans recognize a minor deity called Bali Atap, who 'protects the house against sickness and attack, and is called upon in cases of madness to expel the evil spirit possessing the patient. A rude wooden image of him stands beside the gangway leading to the house from the river's brink; it holds a spear in the right hand, a shield in the left; it carries about its neck a fringed collar made of knotted strips of rattan; the head of each room ties on one such strip, making on it a knot for each member of his household.' Another god, Bali Utong, brings prosperity to the house.⁴

In Tonquin every village chooses its guardian spirit, often in the form of an animal, as a dog, tiger, cat, or serpent,⁵ although occasionally a human being is selected.⁶ The Khonds have tutelary deities of house, village, groves, etc., which survive in the later Hinduism. The *Rigveda* recognizes Vāstoshpati, the 'lord of the house,' to whom the law⁷ orders oblations to be made. This Vedic divinity is associated by W. Windisch with Vesta and Hestia, and compared to the Celtic *vassus*, *vassallus*, originally 'house-man,' and thus associated with the 'king of the house-men.'⁸ In Hinduism, however, a female deity, Jara, is assigned to the guardianship of the house. Although she is represented as a demoniac power, she is friendly towards her votaries, provided that she is worshipped with incense, food, flowers, and so forth.

The Ainu have a fetish called Inao, invested with life, whose function is to look after the health and general well-being of the family. His special dwelling-place is in the northeast corner of the hut, at the back of the family hearthrooms. Occasionally, in times of trouble, he is brought out from his corner, stuck in the hearth, and there prayed to by the head of the family. He is supposed to have been sent down from heaven to be the husband of the goddess of fire, and to help her to attend to the wants of men, and therefore he is called 'the ancestral governor of the house.'⁹

3. Offerings to guardian spirits.—Since guardian spirits exercise such a powerful influence over the lives and destinies of men, it is not surprising that they are frequently the recipients of offerings to appease their wrath or secure their favour and beneficence.

The Thai of Indo-China, *e.g.*, offer firstfruits of rice at harvest to the guardian spirit of the family before the household partake of the new crop. Besides the firstfruits at harvest, the guardian spirit receives some of the parched grain in spring¹⁰ at the time when the first thunder of the season is heard. 'When all is ready, the rice is served up together with fish, which have been caught for the purpose, on a table set in a corner which is sacred to the guardian spirit. A priest drones out a long invitation to the spirit to come and feast with his children; then the family sits down to the table and consumes the offer-

ings. At the close of the banquet the daughter-in-law of the deceased ancestor (*i.e.* the guardian) hangs up a basket containing rice and fish for his use in the corner, after which she closes the shrine for another year.¹¹ The same people believe that large animals of the forest—wild oxen, buffaloes, rhinoceroses, elephants, etc.—have their guardian spirits, and, in consequence, the prudent hunter is careful to exorcize the invisible guardians so that they may not harm him when he eats the flesh of the animals killed in the chase. Spirits are also supposed to guard the clearings to which the deer come by night to drink, and the hunter must sacrifice a fowl to them from time to time in order to secure his prey.¹² A similar custom prevails among the Indian tribes about Green Bay, Lake Michigan. Every creature is regarded as having a particular guardian spirit, and therefore, when a young girl seized a mouse to eat it, her father first fondled it tenderly to appease the *genie* who has charge of mice, in order that his daughter might not suffer from her meal.¹³

Among the Ewe-speaking natives of Togoland (W. Africa), before the new yams are eaten, 'every house-father takes a raw piece of yam and goes with it to his loom (*aglati*) and prays: "May the Artificers take this yam and eat! When they practise their art, may it prosper!" Again he takes a raw yam and goes with it under the house-door and prays: "O my guardian spirit (*aklama*) and all ye gods who pay heed to this house, come and eat yams! When I also eat of them, may I remain healthy and nowhere feel pain. May my housemates all remain healthy!" After he has invoked their protection on his family, he takes a cooked yam, crumbles it on a stone, and mixes it with red oil. With this mixture he goes again to his loom and prays as before.' Again he crumbles a cooked yam and prays first at the entrance of the homestead, then under the house-door: 'He of my guardian gods and he of the watchers of the house who likes not yams mixed with oil, let him come and take the white yam from my hand and eat it!'¹⁴

Among the Kayans of Borneo and several of the African tribes it is customary at sowing a rice-field to reserve a certain portion at the entrance for the guardian spirits, who at harvest are invited to come and take their share. It is supposed that they will content themselves with eating the grain in their private preserves and not poach on the crops destined for the use of man.¹⁵

In the Tenimber and Timor-laut Islands, East Indies, the first-fruits of the paddy, along with live fowls and pigs, are offered to the *matmale*, or spirits of ancestors, 'which are worshipped as guardian spirits or household gods.'¹⁶ The Yorubas of the Slave Coast sacrifice fowls to their guardian spirit (*olori*), which is supposed to dwell in the head, by mixing some of the blood of the animal with palm-oil and rubbing it on the forehead.¹⁷ The *tinidalo* in Florida, one of the Solomon Islands, are also approached by sacrifice on certain occasions—*e.g.*, before a planting, a voyage, or a fight.¹⁸ The N. American Indians offer dogs and horses to the 'medicine bag,' to which they look for safety and protection through life.¹⁹

Among some of the Algonquin tribes, when a man's guardian spirit is identical with his clan totem, should he be compelled to kill the sacrosanct animal, due apology would be paid to it before destroying it, certain portions of the flesh being preserved as an offering to the *man'ido* (guardian).²⁰ Herein again lies an important distinction between a tutelary genius and a totem, even when the two are inseparable. The former is regarded as so intimately associated with an individual that prayers and sacrifices may with impunity be offered to it, but the latter is more closely concerned with the food group or clan and therefore is seldom the recipient of offerings from individuals. Apart from the evidence of Carl Strehlow, that the hymn which is sung at the *intichiuma* of the kangaroo describes the offering of a morsel of kangaroo fat to make the fat of the kangaroos increase,²¹ the act of oblation can hardly be said to form a part of the totemic rites in Australia—the home of the most elementary form of totemism.²² We therefore conclude that tutelary gods and spirits have arisen out of animistic and theistic conceptions rather than from ideas connected with totemism, although it is undoubtedly

true that in America the doctrine of the clan totem has developed side by side with that of the guardian spirit conceived as an animal. Elsewhere, however, the patron spirit is much more closely allied to animism and theism. Wherever animistic conceptions prevail, there the notion of a tutelary genius will be found in some form or other. As spirits give place to gods, the spiritual guide and protector of individual men has his place in the pantheon, till in the Christian Church the doctrine of a guardian angel watching over, succouring, and defending the faithful on earth is raised to a higher and more spiritual level. 'Are they not all ministering spirits, sent forth to do service for the sake of them that shall inherit salvation?' (He 1¹⁴). This is the function of the guardian angels in the NT; they are to lead men safely to the kingdom of heaven by helping them to attain salvation.

It is not the Biblical conception that angels are the personification of nature powers, or merely the means of securing the favour and help of supernatural beings. They are consistently represented as a body of created spiritual beings intermediate between God and man (Ps 8⁵), whose function it is to act as messengers to mankind or attendants upon God's throne (Dn 7⁹⁶, Ps 91¹¹ 103²⁰, Is 6, Gn 16, Jg 13, Lk 1¹¹⁻²⁶). Jerome thinks that every individual, whether baptized or not, has from his birth an angel commissioned to guard him,¹ while Chrysostom² and Basil hold that only the baptized enjoy the privileges of having a tutelary angel. Thomas Aquinas teaches that only the lowest orders of angels are sent to men, and therefore they alone are guardians.³ No doubt the Biblical account of the ministry of angels was inherited from the world-wide doctrine of tutelary gods and spirits, and to an extent influenced by it, but at the same time it is evident that the line of development has been on a higher and more spiritual level.

TUTORISM.—See RIGORISM, PROBABILISM.

TWINS.—The birth of twins in the human species is an event so unusual that it has almost everywhere drawn popular attention and evoked expressions of emotion, varying from extreme terror through the whole gamut of fear, repugnance, suspicion, anxiety, perplexity, hope, and joy. The first impulse seems to be to regard twins as unnatural and monstrous, and therefore as portending evil. The unfortunate babes and their mother have been looked upon as guilty of a serious crime—a crime calculated to call down the vengeance of the higher powers. Accordingly they must be at once put to death, and the offence repudiated and cleared from the land. Or their birth has been taken to be a message from the divinity conveying a warning of impending evil, only to be thrust aside by their immediate slaughter or by a variety of superstitious observances, intended by abstinence and humiliation to avert the threatened calamity.

1. Tabu of twins: its mitigation, ceremonies, and superstitions.—Among the peoples by whom this view of the birth of twins has been taken are those of Australia, the East Indian Archipelago, nearly the whole of Africa, the greater part of the aboriginal population of America, the population of the north-east of Asia, the non-Aryan tribes of India, and the backward classes and populations of Europe. In ancient times similar beliefs are reported of the Assyrians and Babylonians, the

Aryan population of India, and the Egyptians. Where the superstition has the fullest power both mother and children are at once put to death.

A typical illustration of this proceeding is found among the Negro population of the Niger Delta. Even when the mother is allowed to live, she becomes an outcast and must pass the rest of her days in the forest. If she ventures near a town or village, any paths that she may use will be defiled and unfit for the inhabitants. 'She must not drink from the same spring or water-supply as her own people; she must not touch anything belonging to them. The consequence is that the mothers of twins simply die from hunger and exposure, or they take their own lives.' A slave-woman is the professional killer of twins. She takes each child by the feet and the neck and breaks its back across her knees. 'The bodies are then placed in an earthen pot and taken into a dense part of the bush and there left to be devoured by wild animals and insects. In some parts of this district the children are not killed, but simply thrown into the bush to be devoured.' It is no wonder that 'May you become the mother of twins!' is reckoned a frightful curse, and quarrelling women do not need to utter it in words: it is sufficient to hold up the fist, raising the index and middle finger in a V form, and the gesture is understood.¹

The Negro peoples of W. Africa are very severe against the offence of giving birth to twins.

Among the Ibo such an event defiles the whole quarter, the inhabitants of which 'are obliged to throw away all the half-burnt firewood, the food cooked and the water brought in the previous night—everything, in a word, in the shape of nourishment, solid or liquid.'²

Mitigation of the law has, however, taken place. The mother is not always put to death or driven into the forest to die of hunger and exposure. At Arebo in Benin, if her husband be a man of wealth, he may redeem her with another victim.³ More generally there are provided 'twin-towns'—cities of refuge, to which these unfortunate women may escape, or to which they can go when expelled from their own homes. There they must reside for a time to undergo purification. The period is stated by Mrs. D. Amaury Talbot,⁴ speaking of the Ibibios, near the mouth of the Cross River, to be twelve moons. This, we may be sure, is the least penance that can be imposed on them.

Leonard writes that 'the women, looked on as unclean for the rest of their lives, are obliged to reside in villages, which are known as Twin-towns, or the habitations of defiled women, appointed for that particular purpose. From this time forth the husband, whether he be head of the house or not, is obliged to maintain a wife who has been so defiled; although at the same time he is strictly forbidden to cohabit or to have any dealings with her, being, as he is in every religious and personal sense, human and spiritual, divorced from her. But in spite of the fact that to him, as well as to all the members of his or her community, the woman is unclean and therefore tabu, the penalty of death being inflicted on both in the event of their breaking the law in this direction, she is allowed to form connections, but on no account to marry with strangers, or men belonging to outside communities, and the offspring resulting from such intercourse becomes, as a matter of course, the property of her husband, or the head of the house. . . . But in the event of the defiled woman herself bearing twins again, these must be destroyed unknown to any one. For, if known, the probabilities are that the death of the mother would be demanded by the household and the community as well. Or if not killed, she would be driven into the bush and left to die, although, if discovered by a stranger, he is at liberty to claim her as his own property,—that is at least if he feels inclined to run the risk of a venture so truly provocative of offence.'⁵

In Ibani, westward of the Ibibio country, the mother was, and perhaps is still, quarantined in an out-of-the-way hut for sixteen days, after which she went through a ceremony of purification by the priests. The father, or head of the house, was required to offer certain sacrifices. The threatened evils were thus averted, and the purified mother was then received back into the family circle.⁶ Among the Ibibios, however, if the mother die in childbirth of twins, she may not be carried to burial by the ordinary door of the hut or along the ordinary paths of the village; she is borne through a hole broken for the purpose in the wall of the hut and along a path specially cut through the bush.⁷

⁷ Mrs. Amaury Talbot, p. 215.

The lot of the children in Nigeria and adjacent countries has also been mitigated, to the extent that one only of them is now in most places put to death.

The Bassari of Togoland, e.g., preserve the boy if the twins are of different sexes, or the stronger of the two if of the same sex, and bury the other alive in a big pot. A fowl is offered and cut in two. Half of it is buried with the condemned twin as a reminder to the latter of its close relationship with the surviving twin, so that the spirit of the buried child may not avenge itself on the survivor. Subsequently-born twins are both buried alive. Women who have borne twins, though apparently not driven away, are not allowed to take part in the agricultural labour (a woman's special work) of sowing and harvest, until the dead twin has reappeared as a subsequent child.¹

A similar modification of the children's fate is found among the Bantu tribes. On the Lower Congo one of the twins is often neglected and starved to death. The reason given for this is that the mother does not like the extra trouble involved in caring for the two; but it is doubtful whether this is a sufficient explanation. When a twin dies, or is thus starved, it is buried at cross-roads, like a suicide or a man struck by lightning. A piece of wood is carved into an image of a child and put with the live twin, that the latter may not be lonely; and if the second child die, the image is buried with it.² The custom of giving the survivor a wooden figure in place of the twin that dies is also found among the Negro Yorubas and other W. African tribes, both Negroes and Bantu. It is said to keep the survivor from pining for the deceased, and to give the spirit of the deceased a habitation.³ This arises from the special sympathy alleged to exist between twins, of which we shall find illustrations elsewhere.

Twins are regarded by the Kafirs of the south-west as scarcely human, and their mother is taunted with the disgrace. Yet, until Chaka stopped the custom, a twin was specially sought out, as being fearless and wild, to lead an attacking army in war. Among the Zulus twins are not counted in the number of children. One of the twins is always killed, remaining of course nameless. Nor is the survivor given a name until he is about sixteen years old, but before he is circumcised. If the survivor die, he is not allowed to be mourned, for fear of angering the *amatongo* (the ancestral spirits). If both twins are hidden, and so preserved, it is deemed they are united by sympathy as one flesh; and, if one die afterwards, he must not be mourned, lest the other should suffer.⁴ To the Basukuma, or Bagwi, south of Lake Victoria Nyanza, the birth of twins is a great calamity, foretelling as it does a prolonged drought and great suffering among men and cattle. Consequently, when other means fail to produce rain, twins, if they can be found, are put to death.⁵

In British E. Africa the Akikuyu and the Akamba also regard the birth of twins as very unlucky; and the babes are, or perhaps one of them is, killed and thrown into the bush. Among the Akikuyu, however, the ban is limited to a first parturition; in such a case the twins are believed to prevent their mother from bearing again. But, among both the Akikuyu and their ethnically allied neighbours the Akamba, the birth of twins to a cow is deemed still more disastrous. Accordingly the calves are, or at least one of them is, always slaughtered, and among the Akamba the cow also, while the Akikuyu content themselves with putting a necklace of cowries, doubtless by way of amulet, round her neck. What is no doubt a modern alleviation permits one of the twin children to be given to a family of a different clan, becoming thus the child of that family, all relationship with its natural parents being severed. Another alternative among the Akamba, as likewise among the Nilotic Negro Dinkas, prescribes the substitution of goats for the sacrifice of the babes.⁶

The neighbouring Nandi, a Nilotic Negro tribe, look upon the birth of twins as an inauspicious event, and the mother is unclean for the rest of her life. Doubtless in earlier days she was put to death or expelled from the community. Even now her life must be a burden to her. 'She is given her own cow, and may not touch the milk or blood of any other animal. She may enter nobody's house until she has sprinkled a calabashful of water on the ground; and she may never cross the threshold of a cattle kraal again.' Special names, as is often the case, are given to the children.⁷ The El Konyi, a branch of the Nandi, in the Elgon district, have rendered her lot a little less intolerable. But even there she is shut up for a while in the hut, and elaborate purificatory ceremonies must be performed with

a medicine-man's assistance before she is released. Even if a cow produce twin calves, ceremonies are performed, and they are redeemed with the slaughter of a sheep.¹

In both N. and S. America the custom of putting twins, or at least one of them, to death seems to have been universal.

The aborigines of the northern part of the upper basin of the River Amazons allege a curious reason for their dislike of twins. To give birth to twins is to descend to the level of the beasts—a thing to be avoided at all costs. The unfortunate mother therefore will leave the second child (or, if of different sexes, the girl) in the lonely spot in the bush whither she has, in accordance with custom, retired alone to be delivered.² The Salivas on the Orinoco call the mother nicknames, saying she is a rodent. Their objections, however, seem to go deeper than this; for the Saliva husband believes that the second twin is the offspring of adultery. A chief has in fact been known to give one of his wives a whipping in public for having dared to bring forth twins, and to threaten the others with similar consequences if they did the same.³ From a pastoral letter by the archbishop of Lima in the year 1649, quoted by von Tschudi, it appears that the Peruvians of that date offered twins and children born feet first to some *huaca*, or supernatural being, and preserved their bodies or buried them in their houses.⁴ Other records show that the birth of twins was regarded as unnatural and unlucky and demanding sacrifices and ceremonies lasting many days.⁵ The North-Eastern Maidu of California who inhabited the foothills and western slopes of the sierra regarded the birth of twins as an exceptionally bad omen. The mother, it is said, was often killed and the newly-born children were either buried alive with her body or burned.⁶ Among the Seri of the Californian Gulf 'triplets are deemed evil monsters and their production a capital crime.'⁷

In Australia the usual reason assigned for killing one or both twins is the economic reason that the mother has not enough milk for them, and moreover cannot rear them and also get her food. This is of a piece with the prevalent custom of infanticide, even of a single child, when the mother already has one dependent upon her. But among some tribes at least it does not appear to be the only reason.

Among the Euahlayi the husband suspects his wife of infidelity. Among the Arunta, where twins are reported as of extremely rare occurrence, they are attributed to two spirit-individuals entering the mother's body at one and the same time. By the northern tribes they are destroyed as something uncanny.⁸

On the island of Nias twins are universally disliked and dreaded.

In the province of West Nias it is believed that they will grow up evil doers; if a boy and girl, they are specially evil, the one will become a murderer and the other a poisoner. Formerly the younger used to be hung on a tree in a sack, there miserably to perish. The Dutch government and missionaries, it seems, have put an end to this cruelty. But the natives are still shy even of the parents. The father gets a priest to make a magical image of a board roughly cut in human shape, which is put up in the house as an amulet to prevent a second such misfortune. Until it is ready, the parents dare not speak to any other persons, lest they make them sick and give them jaundice; nor will their neighbours of the same *kampung* enter the house where the birth has taken place until the image is put up. At Lolowua in East Nias both children are thrust alive into a sack, taken far from the *kampung* and hung up in the bush, together with the after-birth. The house in which they have been born is avoided by other women, lest they incur the same misfortune. At Lahewa in North Nias the birth of twins is feared because it is held that, if they are allowed to live, some other members of the family must die. It is thus a matter of self-defence to put them to death. Their birth is moreover a sign of evil, such as failure of harvest, fire, epidemics, cattle-disease, and the like, threatening the whole *kampung*.⁹

Among the Kayan of Borneo, the motive alleged for exposing one of the twins in the jungle is to preserve the life of the other; for it is believed that a sympathetic bond exists between twins 'which renders each of them liable to all the ills and misfortunes that befall the other.'¹

In Madagascar also twins were put to death.

Among the Antambahoaka the excuse for this treatment was that they would in any case die, or if not they would go mad or would sooner or later attempt the life of their parents. In the province of Imerina it was apparently the custom formerly to kill the twins. More recently, though this custom was abandoned, the parents were required to hand one of them over to a relative; and, if a woman belonging to the royal family gave birth to twins, both they and the mother were sent away and lost their rank.²

Exposure or murder by violence is in fact a common fate of one or both twins—a fate they share with other children deemed unlucky, such as misshapen babes or, as in Madagascar, those born on certain days which are subject to tabu.³ Gradually, however, this untoward fate has, among many peoples, been lightened. The twins are still regarded as uncanny or even dangerous, but ceremonies are performed to ward off the evil.

The Ewe of Togoland, W. African Negroes, hold them to be fetish-children: in that capacity they must not be put to death, but they will not live long; they will die and go back to the fetish. Meanwhile, as a mark of distinction they wear special beads; and their parents set up in the corner of the house a fetish of a pair of buffalo-horns and in some districts a carved wooden doll or puppet. If any of their kin fall sick, presents are brought to the twins or to the fetish, and the twins propitiate the fetish. In the former German administrative district of Anecho the birth of twins is the occasion for a feast of eggs and beans boiled with the leaves of certain shrubs to all women who have already borne twins—a feast repeated every year afterwards. In the same district the twin-fetish is also invoked at a funeral feast on setting up two posts with a dog's skull bound upon them as a 'medicine.' At Great Be in the district of Lome-land, on the day when twins are born, an old woman who has herself borne twins comes and leads the father and mother out of the door, the one to the right, the other to the left in reverse directions round the house and then back into the house, in order that the twins may not die. Four months later the twins are taken, preceded by two young people playing on the flute, to the so-called twin-market, where some women who have already borne twins are found offering goods for sale (though this is not a regular market); and an old woman formally buys a few things for the twins. The object of this ceremony is to be able to say that the twins have been to market, for, until this is accomplished, the mother cannot leave the house. On their return they receive their names, and the father prepares the name-giving feast for the relatives, and also for those women of the village who have borne twins. Sometimes an unborn child is promised as wife to a man conditionally on its proving a girl. If one of the twins be a girl thus betrothed before her birth, the wooer performs a curious ceremony. On the day of the birth, after the circumambulation of the hut by the parents, he performs the same march seven times with some grass in his mouth, a hat of palm-bast, and leaves on his arm. Many spectators witness this ceremony by which he ratifies the compact and expresses his intention of marrying the girl. But he must take care not to laugh, otherwise he will go out of his mind. It is deemed more favourable that both children should be of the same sex. It is said that, if one of the twins die, the survivor carries about for the rest of his life a small wooden figure as a memento of his dead twin.⁴ In another district, among the Konkomba, it is reported that a wedding gives occasion for no feast, except when a twin marries; then a great feast takes place, because twins are fetish-children.⁵ The various peoples of Togoland, indeed, attach much importance to the birth of twins. Among the Ho, a tribe of Ewe, when twins, a boy and girl, are born, neither of the parents may eat or speak until an elaborate series of purificatory ceremonies, accompanied by feasting and the drinking of palm-wine, has been performed over them by others who are also parents of twins and who are paid for the rites. If these customs were omitted, the twins would become cripples. To the twins and their parents the flesh of hussar-apes and rats is forbidden. If any one shoot a hussar-ape, the parents of twins are expected to beat him with a stick.⁶ The exact relation between the hussar-ape and twins is difficult to determine. It has been claimed that the hussar-ape and the long-tailed monkey (*Meerkatze*, a species of *Cercopithecus*) are 'individual totems' of twins, and that twins may never

kill or eat the latter, whereas they may kill, but may not eat, the former. Twins while asleep are said to go in the shape of these animals into the fields to eat maize; and if one such creature be killed, the corresponding twin will die. When the parents cultivate land, they sow a patch with maize for the special behoof of the twins thus changed, that they may be able to eat the grain; and the patch in question is never harvested. When one of the twins dies, a long-tailed monkey is sought in the forest and called by the name of the deceased child into a calabash, which is closed as if it were within and brought home to be honoured.⁷ These are not exactly totemic superstitions; but they disclose a belief in the identity of, or at least an intimate personal connexion between, twins and these apes, such as we shall find in British Columbia between twins and salmon.

The Akovieve, another Ewe tribe, have somewhat similar superstitions. The father of twins is forbidden to eat the flesh of hussar-apes; nor may he eat the remains of fruits eaten by these creatures. When the midwife sees that twins are about to be born, she relinquishes her place as soon as one is born lest she be afflicted with consumption, or at least a cough which will last the rest of her life. Certain vegetables and fruits are laid in the water wherewith the mother and children are bathed. A special feast with drinking of palm-wine is provided for the people of the surrounding villages. No presents must be made to one of the twins only, but both must be treated alike.² Among another tribe, the Kpenoe, neither parent must leave the house until the twin-customs have been performed. These consist, as among the Akovieve, in the drinking of palm-wine, which is provided for all who give the twins cowries, and in a feast for all who come together from the outlying villages. The parents of twins already born come together to perform the customs and to dance, and the twins are carried on the neck that every one may see that the customs are carried out for them. These customs are very expensive. Twins must be clad alike so long as they are children.³ They must eat yams a month earlier than other people, otherwise they will die.⁴

Notwithstanding the practices and beliefs just mentioned, the Ewe are said to look upon twins with favour.

For the Ho the birth of twins is a very great joy; it is regarded as better than riches. Among the Fo, another tribe of Ewe, such births are frequent. The children are regarded as children of Ohoho, a supernatural being with whom indeed they seem to be identified. Not only twins, but three children at a birth are favoured. A prayer for twins and triplets is even offered on certain occasions. The last-born is looked upon as the highest in rank. Special names are appropriated to children thus born. Special customs even in eating are prescribed to the mother. A woman who has borne twins wears round the neck a chain or string of beads as evidence of the honourable fact. Whatever the relation of Ohoho to the twins, he receives a cult, and in case of their danger or serious illness sacrifices are offered. A bank of clay is made just outside the entrance of the hut, where the cult is performed. If one of the twins is a girl, and she dies before the other, a wooden figure is made and stuck beside the clay-bank, to prevent the death of the boy—a custom disregarded if the boy happens to die first.⁵

It must be obvious, from these elaborate regulations, that, if the Ewe and their immediate neighbours favour the birth of twins and triplets, their joy is not without trembling. Such births are not in the order of nature; they are uncanny, equivocal; and, though they may be a blessing, if the proper precautions be not strictly observed they may be quite the reverse. Twins are credited with special connexions with the spirit-world: they are fetish-children; they are more or less identified with a supernatural being, or with certain of the lower animals whose shape they have power to take. Another observer in fact says that every unusual or remarkable event places the Ewe in an extraordinary situation with regard to his divinities, so that he must seek by special performances to re-enter into harmony with the upper world; consequently the birth of twins, as one such event, is not a joyous fact, but an evil omen.

The parents, he says, are kept in the hut for twenty-five days or longer, that they may not look on the heavens before the twin-customs have been carried out, else either in parents or in the children an unnatural change would take place: they would become like iron bars—possibly by the act of the lightning-god, whose badge or emblem is an iron bar. The account he gives of the customs is not identical in all particulars with those already mentioned; but their effect appears to be the same, and he notes that the details vary from district to district.⁶

Turning from the Negroes to the Bantu, we find that the ambiguous position of twins is well exemplified by the Thonga.

Among them the customs vary, as among the Ewe, in different districts. Formerly one at least of twins was put to death. In some places this custom continues; elsewhere their advent is a cause of rejoicing, and women even wish for twins and beg from the happy mothers a portion of the fat wherewith they smeared their bodies, in the hope by the same means to obtain a similar result. Yet in some groups (tribes or 'clans') which do not put twins to death their birth is considered a special defilement. The mother is at once removed from the hut, which is burnt together with its contents. She is placed in a shelter behind the village. All the women assemble and start out in all directions to draw water in old calabashes from all the wells and pools of the neighbourhood. As they go, they sing an invocation to the rain, and on returning they throw the water over the mother and babes, who are further purified by the medicine-man with a drug which he has prepared. The details of their purification vary to some extent; but, until it is accomplished, no one in the village is allowed to eat, and the following day work in the fields is forbidden, for it would prevent the fall of rain. The mother in her shelter outside the village is allowed no communication with the other inhabitants, except possibly one girl who helps her in nursing the twins. To remove the defilement, she must pass it on, like that of a widow, by means of incomplete sexual intercourse, to four men successively. The first three of these victims at least will die in consequence. After each sexual act the medicine-man prepares a vapour-bath for her. When all four acts are accomplished, she returns to her parents' house, and there entertains a lover whose relations with her result in another child. She thus completes her purification, and her husband fetches her home. But in some places she is not admitted through the doorway: she crawls through a hole made in the back of the wall; and the husband is subjected to certain rites. The twins themselves are treated in many respects differently from ordinary children. Usual ceremonies are omitted; they are weaned earlier; and there is a general antipathy to them. Special precautions to protect them and their mother are also taken on the occasion of a ceremonial mourning visit.¹

On the other side of S. Africa, in what was German territory, the Herero consider the birth of twins as 'the greatest and most fortunate event which can happen to a mortal Omuherero.'

Both father and children are specially privileged. Yet the parents are immediately placed under a tabu; they may not speak or be spoken to, nor have any contact or intercourse with any one except those who wait on them, who are known, as well as the children and their parents, by the epithet of 'twins' (*epaha*); they are ejected from the village; all clothes and ornaments are taken off them; and they receive in exchange a few old worthless skins. Messengers call together the whole 'tribe,' and every one must appear with all his cattle, else he will be bewitched and die. The father goes to meet his guests and is received, as if he were an enemy, with all sorts of missiles, while the women raise a terrible lamentation. This, however, is only ceremonial. He with the other *epaha* meets them at the village, where each of the visitors brings him an offering, and, if male, is 'consecrated' in return by him, if female, by the mother. A hut is then built for the parents, and an ox is slaughtered, which all the people must taste, beginning with the parents, and a small piece of the meat is held to the toes of both twins. The remaining meat is taken to the parents' newly-built hut, of which they then take possession. During the following days the father goes in procession round the village, visiting two or three houses each day. At every house the ceremonies are repeated: the offerings are made to him, the 'consecration' by him, the slaughter of an ox, the cooking and ritual tasting of his flesh are repeated, and the remainder is carried to his house. When he has finished the circuit of his own village, he commences that of the neighbouring villages. If the meat becomes too plentiful, he asks for living cattle instead of slaughtered, and adds them to his own herd. No one will dare to refuse him. Every father of twins has the right to represent the chief of the village, when the latter is absent, in his priestly functions. A twin boy also possesses all the priestly privileges: for him there is no meat, no milk forbidden, and nobody would dare to curse him. When the chief of the village dies, he inherits the priestly dignity associated with the chieftainship.²

It would seem, therefore, that the tabu encircles the twins and their parents not as accursed but as sacred; the curse rests on the community, and the of other Negro peoples (L. Desplagnes, *Le Plateau central nigérien*, Paris, 1907, p. 233; *Journ. Afr. Soc.* ix. [1910] 179, x. [1911] 31, xvi. [1917] 43; *ZfRW* xxx. 95; Leonard, *Lower Niger*, p. 462; *L'Anthropologie*, xiv. [1900] 90).

² E. Dannert, [South African] *Folk-Lore Journal*, ii. [Cape Town, 1880] 104 ff., also his *Zum Rechte der Herero*, Berlin, 1906, p. 20; F. Meyer, *Wirtschaft und Recht der Herero*, do. 1905, p. 61.

offerings made to the father and the 'consecration' he bestows are intended to avert it and restore and redintegrate the ordinary life.

The Baganda regarded twins as due to the direct intervention of Mukasa, the god of Lake Victoria Nyanza, who was said to show his esteem for certain women in this manner; and great care and numbers of tabus were necessary to retain his favour. The position was evidently one of great delicacy; for any mistake on the part of the parents, or any sickness that befell the twins, was looked upon as the result of the god's anger, which might extend to the whole clan. The word 'twins' might not be mentioned until the rites were at an end. The persons of the parents were sacred. They wore a distinctive dress, and no one might touch them. The mother could not go out of doors by day without covering her head. No one was allowed to enter the house except the husband and wife, and a few relatives. The men and the women were required to enter through a separate opening cut for each sex in the back of the house. The doorway was blocked up. The nails and hair of both parents were not cut until the ceremonies had all been completed, save that at one point in the rites the father's hair was shaved in a particular fashion. The ceremonies were lengthy. They included the beating of special drums, a round of visits to the father's and mother's parents and to the members of both clans, at which there were feasts and dancing, a curious rite referred to below, and a final ceremonial dance by women. The father during the ceremonies wears on his ankles a number of small bells, to give notice of his coming and prevent molestation. He is privileged to enter any one's garden and take what produce he pleases to feast his guests. In fact, being under the god's protection, he may do almost anything he likes. When the ceremonies are completed, his tabu is not yet over. For this he must wait until he has taken part in the next war. He must then take the bundle of hair and nails of which he has been shorn in his purification and cram it into the mouth, or tie it round the neck, of the first enemy he kills. It is only after this that he ceases to wear a distinctive dress and returns to ordinary life. The twins themselves remain sacred all their lives. A special ceremony was performed when a twin went to war for the first time and killed a man. If twins died in infancy, their deaths were announced with a euphemism and they were embalmed, placed in a new cooking pot, and buried in waste land. Women avoided their graves lest the ghost should enter them and be born again of them. There was no mourning for them, but, if the ceremonies were incomplete, they were continued as though they were still alive.¹ The neighbours of the Baganda, the Bahima or Banyankole, possess a Twin totem-clan. Yet among them, even in the Twin clan, twins are the subject of tabu. They must not, however, be spoken of disparagingly, lest an ancestral ghost overhear and be angry.²

It is needless to detail the ceremonies to which the birth of twins gives occasion among other Bantu peoples. Though differing among the various tribes, they are all founded upon the feeling that the birth is an uncanny event, often expressly ascribed to divine intervention. Fortunately it may be for the parents; to the community in general it is a source of peril and ill omen, which must be bought off by gifts and ceremonies; and, until those ceremonies are completed, the twins and their parents are as a rule secluded from intercourse with the world. Sometimes, but rarely, as among the Bushongo of the Upper Congo, the birth of twins is frankly welcomed as a very happy occurrence.³ Even where general rejoicing takes place, it is a joy with trembling. The tabu is enforced; and special rites must be performed to restore the normal relations of the people.

Among the Masai, a Hamitic tribe of E. Africa, the birth of twins, which is not very rare, causes the greatest pleasure, especially if both be boys.

To mark their parents' pride, a thong of leather adorned with cowries is hung round the neck of each; and, while the elder is retained by the mother, the younger is often nursed by one of her fellow-wives. No tabu and no ceremonies are reported.⁴

It may be noted here that, wherever the birth of twins, as among the Masai, is stated to be comparatively frequent, they are received with more or less favour.

The Latuka, a Nilotic Negro tribe of the Sudan, among whom twins are rare, while apparently not regarding them per-

¹ J. Roscoe, *The Baganda*, London, 1911, pp. 64 ff., 81, 124, 258, *JAI* xxxii. [1902] 32-35, 49, 53, 60, *Man*, x. [1910] 42 f.; cf. Frazer, *GEF*, pt. ii., *Taboo and the Perils of the Soul*, London, 1911, p. 384, *Totemism and Exogamy*, ii. 482.

⁴ M. Merker, *Die Masai*, Berlin, 1904, p. 51.

sonally with disfavour, hold that they threaten misfortune to their father. If he went hunting buffaloes, he would be killed or wounded; and, if he wounded an antelope, it would escape him. He therefore takes precautions by not leaving the village until the spell is broken by another woman bearing twins, or his wife another child.¹

In India and adjacent countries twins are generally held to be inauspicious, though there are differences in this respect. All the peoples, however, seem to be agreed that the birth of twins of different sexes is serious. It is held that their connexion in the womb has been too close: it has been sinful, amounting to prenatal incest.²

Among the inhabitants of the Siamese Malay States, while twins (a rare occurrence there) are considered lucky, it is otherwise with triplets: they are accursed.³ In any case, it is considered by the Kurmi and Kawar of the Central Provinces that the sympathy between twins is dangerously close, and various rites are adopted to break their connexion, else, if misfortune or death happens to the one, the other also will suffer or die.⁴ The Tang Khul Nagas of Assam are divided in opinion. Some villages welcome twins; others object to having among them a woman who gives birth to more than one child at a time, looking (like some of the S. American tribes) upon her as a lower animal. At Ukhrul, if both are boys, their father is regarded as a descendant of some cannibal line like the tigers, and he ought to be carefully watched. It is interesting to note that the villages where they are welcomed connect them with fruitfulness of the crops.⁵

On the island of Celebes it is held by the Macassars and Buginese that one of twins is often a crocodile. The same curious belief is found in Java, where it is said that on such occasions a double offering is brought to the crocodile for his 'humanity'; and at Windesi, New Guinea, a story is told of a woman who gave birth to twins, one of them an iguana.⁶ The Balinese, at least among the highest castes, call twins of different sexes 'betrotted'—a practice which Wilken traces to an origin from a time when no forbidden degrees were yet in existence, and when such twins at marriageable age used to be made to marry one another.⁷ The idea, persisting into a later stage, might account for the imputations of prenatal incest just referred to. In some of the Moluccas twins are not regarded with favour. In these they are often attributed to superfetation; and in the Bahar Archipelago one of them is sent to another village—in earlier days death was probably its doom.⁸ In other islands, on the contrary, they are desired, and are looked upon as the gift of the sky-god or male principle,⁹ though they are even then in some islands handed over to kinsmen to be brought up.¹⁰ In the Aaru Archipelago, where they are much desired, they are looked upon as an omen of a good tripartite and pearl harvest.¹¹ The Melanesian peoples of Eastern New Guinea regard twins with disfavour; among the Southern Massim the mother was formerly permitted to put one to death, while among the Northern Massim she is ridiculed as a pig.¹² Their kinsmen of the Banks Islands, on the other hand, favour them; but, if boy and girl, they are regarded as man and wife. Rivers thinks that in former days such twins were probably killed—an opinion supported by the practice and belief of the natives of the Duke of York Islands and New Britain.¹³ On the whole, in the neighbouring Solomon Islands twins are liked; in Florida Island only there is said to be a suspicion of double paternity; while in Lepers' Island they are conjectured to be the gift of a certain supernatural being named Tagaro.¹⁴ It may be further mentioned, to illustrate the opposite opinions that may be held by even the same race, that

in New Ireland, since to hcsPELL a woman might cause her to bear twins, it is to be inferred that they were not there desired.¹ On the Micronesian island of Yap, an outlier of the Pelew Archipelago, one of twins was given to a relative, else they would both die—an obvious attempt, as in the Moluccas and the Central Provinces of India, to break the connexion between them.² The Igorots of the Philippine Islands assign a different reason for the same custom: it is to avert the evil omen of their birth.³ The Amus allege that one of them would die.⁴

To the Gilyaks of the island of Sakhalin twins are a source of disquiet, if not of fear. Such births are said to be relatively common, and usually either both boys or both girls. One of the pair is believed to be offspring of the Mountain-man, a supernatural being haunting mountain and forest, with whom the people are careful to keep on good terms. This child ought to be returned to his formidable parent as soon as possible; but, since there is no means of identifying him with certainty, both twins must be treated alike. In consequence of this origin, twins after death are not cremated as other corpses are, for fear that the Mountain-man will punish all who take part in the funeral by loss of their eyesight. Even the parents have by the birth become related to the Mountain-man and must be buried also. Twins are believed to be endowed with superhuman powers, and are, so long as they live, regarded with terror. But those who die early are chiefly feared, for, having returned to the supernatural world before they had time to become accustomed to men and to feel themselves as their likes, they have special power to harm them. Their family therefore place a small model of a Gilyak yurtie either inside or outside the dwelling and put into it a carved wooden figure representing the deceased. To this figure they bring offerings every day of portions of their own food; and the practice is continued for three generations. At last the great-grandchildren take the figure from the dwelling to a neighbouring mountain with great ceremony and there leave it, and with it a final offering of food. Then for the first time the community feels safe in neglecting any further observances. On account of this fear of twins, women and girls are strictly forbidden to listen to tales of twins, nor may women even accept gifts of small household furniture from acquaintances who have given birth to twins, lest the misfortune of twins should in either case be communicated, though this liability does not attach so seriously to gifts of objects of metal. The names of twins once bestowed are retained; no other children are allowed to have the same; nor does a twin ever take the name of a deceased elder of the family, according to the usual custom.⁵

The ancient Assyrians held the birth of twins to be a calamity, except in the royal family.⁶ Modern Syrians, on the contrary, if the evidence of refugees at Boston may be trusted, regard it as bringing good luck.⁷ According to modern Egyptians about Karnak, one of twins may be a wild cat, whose soul goes out at night on the prowl, when the owner is asleep.⁸ To the Bulgarians twins are a misfortune, to avert which the mothers of bride and bridegroom at the wedding simultaneously drink brandy.⁹ Even in the north-east of Scotland twins are so far regarded as unlucky that one of them, even though married, will be childless.¹⁰

On the American continent also twins were regarded as mysterious.

The Shuswap, who occupy part of the Fraser River and Columbia River basins in British Columbia, expressly hold them to be 'great mystery.' Though the mother's husband is deemed to be their real father, the black bear generally, but sometimes the grisly bear, or the deer, is believed to have influenced their birth. Whichever animal it was, it appeared to the mother in dreams and became the *manitu*, or spirit-protector, of the children throughout their lives. They are deemed lucky on this account; but it does not prevent their tabu. At their birth their parents shift camp to the woods, even in midwinter; and they are not allowed near other people for four years. During this time the father or, if he dies, the mother washes and scours them every day with fir-branches—a common method of cleansing from pollution.¹¹ The southerly neighbours of the Shuswap, the Ntlakapanux of the lower Fraser River and Thompson River basins, say that the mother is usually apprised beforehand by the repeated appearance of the grisly bear in her dreams. The children are accordingly treated differently from other children, and are called 'grisly-bear-children' or 'hairy feet.' The grisly bear is their *manitu*. Their parents are under tabu like those of the Shuswap. Special ceremonies are performed at their birth, and they are during the first four years washed like Shuswap twins. It was held that a birth (especially of twins) immediately changes the weather.¹² Farther inland the Déné treat the bear when caught

¹ *Emin Pasha in Central Africa*, London, 1888, p. 237. Speaking generally, the Nilotic Negroes rejoice with trembling.

with the greatest consideration and respect, and propitiate it. Among their observances neither a dog nor a menstruating woman nor the father of twins, as long as both twins are alive, is allowed to touch it. The reason is that these are all legally impure, and it is feared that the fellows of the victim will be so irritated by unclean contact that they will henceforth stubbornly avoid the traps or snares of those guilty of such a slight. The father of twins is required to offer gifts to the community 'to wash out his shame.'¹ The Nez Percés in the north-west of the United States, on the other hand, welcome twins as lucky both to the family and to themselves.²

The Nutka of Vancouver Island and the Kwakiutl, who inhabit the northern end of the island and the opposite shore of the mainland, connect twins with salmon. The former, though not exactly identifying them with salmon, believe them to be in some way related to them. Hence the parents, whose banishment from the village extends only to two years, among their various tabus and rites, must avoid fresh food, particularly salmon. Wooden images and masks representing birds and fish are exhibited round the hut and near the adjacent river by way of invitation to birds and fish to visit the twins and be friendly to them; the father moreover sings certain songs with the same intention. It is believed that the salmon accordingly throng to see them, and the birth of twins is an omen of a good salmon year. If the omen be not fulfilled, it is a presage of their early death.³ The Kwakiutl regard twins as having in their previous existence been actually salmon. They therefore warn them against going near the water, lest they be retraversed into salmon. A stricter tabu than those of the tribes mentioned above rests on the parents; for they must separate for sixteen months and each pretend to be married to a log, with which they lie down every night. During this period they are required to perform certain ceremonies and conform to certain observances. Among others the father may not catch salmon, the mother may not dig clams, else both salmon and clams will disappear; and the parents may not borrow canoes or paddles, or their owners would have twins. The birth of twins causes permanent backache to the parents; to avert this each parent procures for intercourse with the other a person of the opposite sex, who will, it is believed, be attacked by the backache instead. On the other hand, young women who desire to bear children squat and lean over the pit above which twins have been born. At the death of a twin no one is allowed to wait for him; and among the observances the surviving twin is washed in the water used to wash the corpse.⁴ Traces of a similar belief to that of the Kwakiutl are found among the Skqomic, a Salishian tribe farther south, with reference to another kind of fish called *tsat anuk*; and, as everywhere else in British Columbia, the parents are subject to a strict tabu and purification.⁵ In Mexico the Tlaxcalans call twins snakes; and they are believed able to cure bites of serpents and other animals, as well as pain or inflammation of the tendons, especially of the feet and ankles. Triplets will be kings.⁶ It is believed by the Yuchi, formerly of Georgia and Alabama, that twins and deformed or abnormal children are sent by 'the supernatural beings to be guides to the people,' and they are accordingly taken great care of.⁷ There is some evidence that among the Cheyenne twins were a subject of tabu.⁸

2. Origin, parentage.—Many peoples entertain the belief that a human father can beget only one child at a time. This has led to the suspicion, as among the Saliva of the Orinoco and the Enahlayi of New South Wales already noted, that the second child is due to the mother's infidelity. The same belief is attributed to the Chibchas and to the Hottentots.⁹ It is held also by the peoples of the Warri District of Nigeria.¹⁰ It was formerly entertained in Europe. The father had the right of deciding on the birth of a child whether it should be brought up or destroyed; and, if he had any suspicion as to his wife's loyalty, the child was often put to death. On this ground definitely it was held excusable to expose or put to death twins and triplets. A number of medieval legends among the Germans and other Teutonic peoples are elaborations of this theme.¹¹ The belief in superfetation is almost a necessary corollary to

the belief that the twins are due to two fathers. Hence also the second-born child is commonly held to be the elder or higher in rank, as among the Negroes.

But there is another, and perhaps older, view, more widely held, that they are the result of divine impregnation.

In W. Africa we have seen that they are called 'fetish-children.' To the Fo of Togoland they are the children of Ohoho. The Efiks of Calabar, the Ikwes of the Upper Cross River, and the Ibibio pronounce one of them to be the offspring of an evil spirit.¹ So the Warundi of E. Africa attribute them to an 'incubus,' and regard their birth as a favour, which the jealous spirit is likely to recall, or to take the mother or her husband in payment for it. To obviate this, the important event is celebrated by a variety of ceremonies, including songs, dances, and gifts to the parents (nominally oblations for the spirit), which have a way of disappearing as by enchantment. Two entirely black sheep are bought for the twins; they must preserve and care for them as long as they live. The sheep in turn are said to be the children's guardians, the receptacle and symbol of their spirits, their fetish.² In Indonesia likewise the birth of twins is ascribed to a demon. One of them, according to belief in the island of Nias, is due to superfetation caused by such a being, as is also the birth of an albino. Other causes are recognized in the eastern province of the island, as roughness or anger on the mother's part towards her parents or sister, continued cohabitation during pregnancy, or the eating of a double fruit. To the last we shall recur. Like the Warundi, the North Niasese fear that some other members of the family will die if the twins are allowed to live; and they are therefore put to death. They are also held to be an omen of various kinds of calamity.³ The Bakawa of New Guinea think that 'evil spirits have had a hand in the game,' wherefore one of the twins is killed.⁴ According to the Bontoc Igorot of Luzon, one of the twins is the offspring of an *anito* (ghost of the dead). The quieter one, therefore, or the larger, is put in a pot and buried alive.⁵ The Buck of Demerara also regard twins as the offspring of an evil spirit named Pernowhari.⁶ In Essequibo a British commissioner reports that a native medicine-man not many years ago ascribed an outbreak of sickness to one of twins who had just been born. He said it was the child of a *kenaima*, a wizard or person of supernatural powers, because 'a woman could not naturally produce two children at a birth'; and the unfortunate child at his instigation was burnt alive.⁷ The Melanesians of Lepers' Island hold that twins may be the gift of a spirit called Tagaro; in Florida Island there is a suspicion of the mother's infidelity to her husband, but it is generally accepted that she has trespassed on the sacred place of a ghost 'whose power lies that way.'⁸ In the Moluccas twins are attributed to the sky-god, Upulero, probably as father.⁹ This belief may be compared with that of the Thonga tribes of S.E. Africa, who call twins 'children of heaven' and in this capacity ascribe to them special powers; and the mother is called Tilo, 'heaven.'¹⁰ The ancient Peruvians held that one of twins was the son of the lightning, to which they prayed as the lord and creator of rain, and the earthly parents were made to undergo divers tabus and ceremonies. There is some evidence that they offered the twins, probably to the lightning; at any rate, if they died young, the bodies were enclosed in pots and kept in the dwelling-house as sacred things.¹¹

As among the Gilyaks one of twins is taken to be the offspring of the Mountain-man, so their neighbours the Ainu of Sakhalin believe one of them to be that of a supernatural being, on the ground that one man can beget only one child at a time. This is a perpetual shame to the mother; and there is reason for believing that one is destroyed at birth, as indeed the oldest account expressly affirms. At all events the Ainu state that only one survives, and that one of human paternity. It is also said that, like the Japanese, they hold that, when twins are born, the younger is bold, strong, and lucky, while nothing distinguishes the elder from ordinary men. They, however, seek by means of sacrifice, prayer, and talismans to prevent such births. They avoid women who have given birth to twins; but, contrary to the Gilyaks, they hold that nothing is so likely to convey the infection as objects of metal.¹² Farther

north, on the mainland of Asia, the Kamchatkan tribes ascribe twins to 'the wolf in the forest.' The birth of twins is consequently not only a misfortune but also a sin (intensified if both are girls); every one promptly runs out of the house, leaving the mother and children alone. To prevent such an event, the Itâlmens (one of the tribes) set up a figure of a wolf, made of grass, pretending that it is the husband of the young women, and renewing it year by year.¹

The somewhat indefinite ascription by the various tribes of the north-western coasts of N. America to grisly bears and other land animals, or to salmon or other fish, indicates rather a belief that twins are a reincarnation of such creatures than that they are directly generated by them upon the mother, though these beliefs are by no means far apart.

The Lilloet considered that the twins were the real offspring of the grisly bear; but some held that he 'acted through' the husband. Twins were by many said to be 'grisly bears in human form,' and, when a twin died, his soul went back to the grisly bears and became one of them. When a twin died, his body was deposited in a fir-tree far from graves and human habitations, and the grisly bear was supposed to take it away.²

The belief in reincarnation is very wide-spread; it has been discussed by the present writer in his *Primitive Paternity*.³

The Semang, a Negrito tribe of Perak, hold that certain birds are the souls of human beings; they are born as children in consequence of being eaten by women; and, when a woman eats a soul-bird with its egg, the result is twins.⁴

Pregnancy caused by various kinds of food is a wide-spread superstition discussed in *Primitive Paternity*, ch. ii. Twins are attributed by many peoples to the eating of double fruits and similar things.

The belief on the island of Nias has already been referred to. It is shared in the E. Indies by the Malay populations of Sumatra, the Tagalas of the Philippines, and the Malagasy; in S. America by the Arawaks and the aborigines of Paraguay; in W. Africa by the Ibibio, in Europe by the Germans, the Magyars, and the French of Poitou.⁵ There is even a trace of it in England around Malvern, where it is said that nuts are a presage of the number of children to be born in the year, and 'double nuts presage a considerable number of twins.'⁶ Among the Zulus, it is said, other objects in pairs are not eaten, nor are two articles at once received from the hand of another, lest the birth of twins result.⁷ The Euahlayi, an Australian tribe, think that babies hang on trees ready to enter into any passing woman; and twins are attributed, as among the Arunta, mentioned above, to two baby-spirits hanging on one branch and dropping on the same woman. But it seems that the woman's husband is reluctant to acknowledge more than one of them.⁸ This points to the superstition of double paternity discussed above. On Mabuag, in Torres Straits, twins are ascribed to the act of a magician, or to the mother when pregnant touching or breaking a parasitic plant.⁹ Among the Maidu of California it was thought that, if the father wore two caps at the time of conception, twins would be produced.¹⁰ In some of the Molucca Islands the same result was caused by the mother lying on her back at the time of conception.¹¹

3. Powers.—Twins are believed to possess extraordinary powers.

An account is given in a Chinese narrative dating from the 14th cent. of a magician who procured the fetus from a woman pregnant of twins to use it for the purpose of divining; and it is remarked that special 'spiritual power' was attributed to the fetus of twins.¹² Among the Iroquois twins are believed able to foretell future events and perform other remarkable things; but they are said to lose the power if a menstruating woman prepares their food.¹³ So the Golaahs of Liberia hold that twins

have the privilege of learning things by means of dreams. They are thus able to see and identify bush-goats in which, according to native belief, human beings are reincarnated. They lose the privilege, however, if they eat of animals which they have so identified, for they would be eating men.¹ This power appears to extend into adult life. Twins among the Igarras of S. Nigeria are able to prognosticate with regard to the offspring of a pregnant woman, but only while children. They are ascribed to good spirits and looked upon with favour as among some other peoples. The younger of the two is regarded as the elder; but both must be treated exactly alike: any favouritism will lead to the death of one of them. They cannot be poisoned, for no poison will have any evil effect on them.² The Thonga about Delagoa Bay, who regard twins with hostility, utilize a twin girl, when the caterpillars of a beetle called *numu* swarm in December or January, to lead the procession of women who have been employed in collecting the insects from the bean-stalks to throw them into a neighbouring lake with a spell to get rid of the plague.³ On the occasion of the cattle-plague at Dobischwald, in Austrian Silesia, a bonfire is made to drive the cattle through; and twin brothers are necessary to fell the tree of which the fire is made.⁴ The Polish peasant, as a spell against 'the pest' (probably the cattle-plague), causes a furrow to be drawn around his field by a pair of twin oxen led by twin brothers.⁵ Twins are credited in Lower Nubia and Egypt with the power of shape-shifting, to the extent at least of becoming cats at night and stealing milk and food and eating chickens. This can be prevented only if the father, immediately after their birth, puts them in a cold oven for a short time.⁶ The Hausa suppose twins to have a special power of picking up scorpions without injury.⁷ The belief of the Tlaxcalans of Mexico in the curative powers of twins has been mentioned above. The Kwakiutl also attribute to them powers of curing disease. The British Columbian and other tribes of the north-west attribute to twins a variety of extraordinary powers. They influence, or at least prognosticate, success in hunting, and the plentiful supply of salmon and other fish, though among some tribes they may not themselves catch salmon. On the other hand, they are exposed to danger of various kinds and must be carefully protected by ceremonies and otherwise.⁸ Among the Negroes of the Sherbro in the colony of Sierra Leone there is a practice of resorting to twins for dealing with various complaints, most usually by women. 'Twin-houses,' or *sabo*, each consisting of a small rude framework covered with a thatch of grass, form a sort of shrine. Upon a wooden grid beneath the thatch is spread a white cloth, on which are put lumps of concretion from an ant-hill; and a white streamer floats from a rough pole in front of the structure. This little shrine is set up *ad hoc*, and is served by two persons who are of twin birth, but not necessarily of the same mother. Under their direction and to their profit, the two twin-houses are erected and a ceremonial dance is arranged. A fowl is then sacrificed and the patient is washed all over by these two priests of the *sabo* in medicine provided by them.⁹ The powers of twins are sometimes extended to their parents.

To cure a sprain, the mother of twins is in Ceylon made to trample the limb every evening for a couple of days.¹⁰ Among the Brahuus of Baluchistan, to cure the tertian fever, a twin is called on to knot a blue thread five or seven times, and this is hung round the patient's neck and is believed to drive the fever away.¹¹ In Maryland it is asserted that the mother of twins has power to drive whooping-cough from a child by giving it a piece of bread and butter.¹² Among the Baganda a ceremony apparently intended to communicate fertility to the plantains is performed by the father and mother, and an effigy of each child is made, partly consisting of a plantain-flower.¹³ Among the Basoga, on the north-east of Lake Victoria Nyanza, the birth of twins is a joyous event, though both the twins and their parents are subjected to tabu and ceremonies to render them innocuous. In the north-western district the persons of both father and mother are sacred; the former goes on a round of visits, and is believed to carry blessing wherever he goes. In the central district the children are held to be of divine origin. Their mother must sow her seed before any woman of her clan. The twins must be brought to the field of any clanswoman who is about to sow; and the sowing is performed in their presence.¹⁴ The Bateso, a Nilotic tribe bordering on Lake Kyoga, welcome the birth of twins, though they and their mother are secluded, as among the

Basoga, while the father pays visits to members of his own and his wife's clans, communicating the blessing of increase wherever he is received.¹

In fact, it is chiefly in the control of the weather and the promotion of fertility—two results closely connected with one another—that the powers possessed by twins are generally held to lie.

Power over the elements, especially over rain and snow, is almost universally attributed to them by the natives of British Columbia. The Shuswap hold that, if a twin bathe in a lake or stream, it will rain.² The Tsimshian think that whatever twins wish for is fulfilled—among other things the weather. Therefore they pray to wind and rain, 'Calm down, breath of the twins!'³ Among the Kwakiutl by swinging a ceremonial rattle they can cure disease and procure favourable winds and weather.⁴ Nutka twins produce rain by painting their faces black and then washing them, or by merely shaking their heads.⁵ In the Central Provinces of India one of twins will prevent injuries to crops from excessive rainfall or hailstorm by painting his right buttock black and the left any other colour and standing in the direction of the wind; at harvest-time husbandmen (apparently not necessarily twins) adopt this course for the abatement of a gale.⁶ In S. Africa twins are said to be able to foretell the weather by their feelings; this seems to be a relic of a belief in control of the weather, control having faded into prediction.⁷ A little farther north, the Bathonga, in case of drought, employ a ceremony to cause rain. The women, stripped or covered at most with a grass petticoat, go in procession led by a mother of twins to the grave of twins, or of an abortion, buried in a dry place, and pour water on it, or dig up the remains and bury them again in the mud near the water.⁸ Among the Wanyanwesi of what was German E. Africa a twin about to cross a river, stream, or lake, or in a storm on a lake over which he is sailing, fills his mouth with water and spurs it out, saying, 'I am a twin.' The object of this ceremony is to prevent harm befalling him or his companions.⁹ At Upoto on the Upper Congo, where rain is usually abundant, a twin is called in to make excessive rain cease. He puts some rain-saturated earth on the fire, and calls upon the rain to cease and the earth to dry up. Here twins also are credited with occult power which enables them by blessing or cursing to cause the success or failure of a hunting or fishing expedition.¹⁰ In Gabun, French Congo, the images of twins, preserved after ceremonies performed over them, are apparently held to ensure the continued fertility of their mothers.¹¹ From a consideration of the traditional disappearance of Romulus, the first of the legendary kings of Rome, who, it will be remembered, was one of twins, J. G. Frazer has made the ingenious conjecture that the ancient Romans 'shared the widespread superstition that twins have power over the weather in general and over rain and wind in particular.'¹² The superhuman powers of Gilyak twins and the posthumous cult of such as die have already been referred to.

4. Cult of divine twins.—So far, abundant reason has been given for the conclusion that twins, being out of the ordinary course of nature, are held by many peoples to be children of extraordinary powers, or of portentous and even dangerous birth, and consequently that they, or at least one of them, must be at once exposed or put to death, and, where this practice is abandoned or has not arisen, they and their mother (frequently their father also) must be surrounded with tabus; and they are invoked for various purposes, chiefly for rain and fertility. Rendel Harris, who has investigated the subject, has in a series of works established the existence, from a remote antiquity, in Mediterranean countries of a cult of divine twins, some indications of which are also found elsewhere. The twins of Greek legend, Castor and Polydeuces (called by the Romans Pollux), have of course long been known, and other twins of less renown have been recognized. But the wide range of the cult, and the number of cases in which twins have been worshipped, had not previously been understood. Castor and Polydeuces with their sister Helen were traditionally the children of Leda, born, in some versions,

out of an egg. Tyndareus, king of Sparta, the husband of Leda, though regarded by Homer as their father, was credited in some accounts with the paternity of Castor only, the other two being the children of Zeus. It has been mentioned above that this belief in a divided paternity of a multiple birth is not unusual among the lower races; it is therefore one of the marks of the archaic origin of the cult of Castor and Pollux. The former, being the son of a mortal father, was himself mortal. Pollux, however, obtained from Zeus the boon of sharing his immortality with his brother and living with him alternately a day under the earth and a day with the gods. Their legend attributed to them a number of adventures; and they were worshipped as *θεοὶ σωτήρες*, protectors of travellers by water, and thence of travellers in general, the guardians of hospitality and of oaths, and were represented as riding on magnificent white steeds. As twins they were connected with the sky, with thunder and storms; hence probably not only their patronage of travellers by sea, but also their character as Dioscuri, sons of Zeus, and their reputation as divine sparmen. By virtue of their descent from Tyndareus, they were special patrons of the kings of Sparta.¹ Other twins were also known in Greece—Herakles and Iphikles, Amphion and Zethus, and others male and female. Rendel Harris has also made out a good case for the existence of twin-sanctuaries in the peninsula and adjacent islands, leading to the inference that the twin superstition in Greece was not different from that found in other quarters of the globe.

The worship of the Dioscuri early passed to Italy, where it is attested on the coins of Magna Græcia and the mirrors of the Etruscans. It became firmly established at Rome after the well-known didymophany at the battle of Lake Regillus.² But from the very beginnings of the city the twin superstition seems to have been accepted. The tale of Romulus and Remus is conclusive on the point. They built Rome, as Amphion and Zethus built Thebes, one brother slew the other—neither of these incidents is by any means strange in legends of twins—and the surviving twin disappeared in a thunderstorm, doubtless another way of expressing his relation to the sky and the storm-cloud.

The Ásvins, perhaps originally divine horses before they became charioteers, are well-known figures in the *Rigveda*. They are rain-makers, probably connected with the lightning—certainly with the sky; they grant fertility to men as well as to the earth, and they aid the sailor and the traveller. In Asia Minor and Palestine the cult of the Twins appears from a very ancient date. Esau and Jacob and other twins found in the Hebrew Scriptures are personages whose pristine form and attributes it is no longer possible to recover from the attrition of time and the crasive energies successfully wielded by generations of pious editors. Traces, however, of the twin-cult linger in the names of various places, like Ibn Alraq, near Jaffa, which has been identified with a place called in the book of Joshua Bne Baraq, 'sons of lightning'; and the account in the second book of Maccabees of the defeat by Judas Maccabæus of Timotheus almost certainly contains a Dioscuric tradition. Barca in N. Africa, a colony of Cyrene, seems to be connected with lightning; and the *silphium* plant, which was sacred to the Twins, is the emblem of Cyrene upon its coins. The Pharos at Alexandria was dedicated to the saviour-gods. There is reason for suspecting legends, and perhaps the cult, of divine twins among both the Phœnicians and the Arabs.

² L. Preller, *Römische Mythologie*³, Berlin, 1881-83, ii. 300.

Farther north it is quite clear that Edessa was from ancient times a seat of the Twin-cult. The Twins were there known as Monim and Aziz. When Christianity superseded the old paganism, Jesus Christ and the apostle Thomas took their place. The Syriac *Acts of Thomas* shows that Thomas, or Judas Thomas, as he is called, was regarded as the twin of Christ. With his Lord's assistance he performs in the legend a number of deeds which are beyond doubt Dioscuric. Among the apostles James and John seem also to have been regarded as twins: whence probably their *sobriquet* Boanerges, 'sons of thunder.' In various countries of Europe there are vestiges of Dioscuric cult in historical writers like Tacitus and in popular tales. A pagan altar has been found at Notre Dame, Paris, with a dedication by the boatmen of the Seine to certain Celtic divinities, and among them the Heavenly Twins. The ancient gods all over Europe and the Christian East have been succeeded by saints who perform similar functions and are often called by similar names. Many of these are in pairs or triads, and some of them are explicitly reputed to be twins or triplets, not merely in Christian profession and martyrdom, but by birth. They have frequently assonant names, or names which are variants of one another, according to a wide-spread custom of calling twins by names specifically given to twins, or names which are echoes of each other. A few of these may be mentioned from Rendel Harris's list.

Such are Speusippus, Eleosippus and Meleosippus, martyrs, of Langres, whose cult spread westwards from Cappadocia; Florus and Laurus, builders (in Russia, patron saints of horses) and martyrs; Protasius and Gervasius, martyrs, whose relics Ambrose opportunely found at Milan for the confusion of the Arians; Cosmas and Damian, physicians and martyrs, whose cult seems to have been known from the Euphrates to Kent. Others might easily be enumerated.

The electrical phenomenon sometimes appearing on the masts and yards of vessels during a storm in the Mediterranean was anciently held to be a manifestation of Castor and Pollux; and it was a good omen when the light was double.¹ This same phenomenon is now credited to St. Elmo, a patron saint of sailors, whose name occurs in a variety of forms, and of whom nothing whatever is known. Rendel Harris has shown reason for believing that in some of its forms the name is connected with Remus, who with Romulus was commemorated at San Remo on the coast of Italy. Romulus and Remus preceded Castor and Pollux in the veneration of the Romans. They were exposed, according to the legend, in a rude boat on the Tiber; and from floating on the river they probably made their way, like other figures of the Twins, to sea as the patrons and protectors of seamen and voyagers.

Several pairs of mythical twins are found on the western continent. Of these the best known are the twins of Iroquoian tradition, Ioskeha and Tawiscara.

According to their legend, a woman named Ataensic fell down through a rift in the sky upon the primeval waters, for there was no land as yet. By the advice of the turtle the animals dived, brought up soil, put it on the turtle's back, and so formed the earth to receive the falling heroine, who was pregnant and promptly gave birth to a daughter. The daughter became in her turn pregnant of two boys, Ioskeha and Tawiscara. The latter was evil of nature; he refused to be born in the natural manner, and breaking his way out through his mother's side or armpit, ended her life with his own birth. The brothers grew up. Ioskeha went about providing the earth, until that time arid, with water. But the evil twin attempted to foil him by creating a gigantic frog to swallow all the water. A quarrel ensued, as in the case of Romulus and Remus and other twins in the Old World. Ioskeha, using the horns of a deer, vanquished Tawiscara, whose weapon was only a branch of the wild rose, and drove him away to the extreme west, his blood gushing from him at every step and turning into flint as it fell. The victor then established his lodge in the far east, opened a cave in the earth and brought forth all kinds

of land animals, formed men, instructed them in the art of making fire and in the growing of maize; and it is he who imparts fertility to the soil.¹ Ioskeha is therefore the culture-hero and divine helper of the Huron-Iroquois; and the deeds and combat of the Heavenly Twins are the foundation of their mythology.

Without pausing to consider any other N. American twins, we may turn to Peru.

From before the times of the Incas the Peruvians seem to have worshipped as creator a god whose name has come down to us as Ataguju, conjectured by Erinton to be properly Atachuchu, 'lord of the twins.' From him proceeded the man Guamansuri, who seduced the sister of certain Guachamines, 'rayless ones' or 'darklings.' She proved pregnant and produced two eggs, but died in putting them into the world. From these eggs emerged two brothers, Apocatequil and Piguerao, names which have also suffered some deformation. Apocatequil was the more powerful. By touching his mother's corpse, he brought her back to life; he slew the Guachamines, who had destroyed his father; he released the race of Indians from the soil by turning it up with a golden spade. The thunder and lightning were due to him; thunderbolts were his children. Stones held to be thunderbolts protected from lightning, gave fertility to the fields, and were esteemed as love-charms. 'In memory of these brothers, twins in Peru were deemed always sacred to the lightning; and when a woman or even a llama brought them forth, a fast was held and sacrifices offered to the two pristine brothers, with a chant commencing *A chuchu cachiñui*, "O Thou who causest twins," words mistaken by the Spaniards for the name of a deity.'²

The Bakairi, a Carib tribe in the northern part of the Amazon basin, have a legend of twins who were culture-heroes.

The Bakairi were then few and oppressed by the jaguars, who are indistinctly imagined with traits of both the lower animals and humanity. Their mother, captive to the jaguars, became pregnant by sucking two finger-bones of Bakairi killed by the jaguars. She died before giving birth to her children; and they were cut from her body by the Cæsarian operation. The boys, who are called Keri and Kame, were fostered by the jaguar, their mother's captor. They had not yet human form, but manipulated one another to complete it. They then avenged their mother's death on their foster-father. With the help of the vultures they procured the sun and moon. They stole fire from the fox (*canis vetulus*). From the Ochobi water-snake they obtained water and made the rivers. From various animals they got hammocks, sleep, stones to build houses, arrows, tobacco, manioc, and cotton. They invented flutes and dancing. They made various tribes of men; and Keri is honoured as the ancestor of the Bakairi. They quarrelled, but made the dispute up again. Finally they disappeared, nobody knows whither.³

There are other mythical twins in S. America, but the subject need not be pursued.⁴ In New Zealand, Melanesia, and Micronesia there are moreover legends of two brothers, or a band of brethren, who appear to be culture-heroes, though the opposition of beneficent and malicious or of wise and stupid brethren is also developed; but they are not specifically described as twins.

If we inquire into the origin of the cult, it seems clear that the Dioscuri, as the sons of Zeus, were regarded as divinities of light. It has been long ago pointed out that their appearances are represented as taking place in the middle of the summer about the first full moon after the solstice.⁵ So also there can be little doubt that the Ásvins in India were divinities of the dawn and possibly the evening twilight. From divinities of light they would naturally pass to wield, or personify, the lightning (Zeus's weapon) and the storm. They came to be looked upon as protectors from the violence of the elements, and thence of voyagers on river or sea, and, by extension of the idea, of travellers generally. Their powers would gradually grow until they covered a still larger area of human life. The same connexion with light and lightning is to be traced on the American

continent, where they further tended to become culture-heroes. But this does not account for their duality, except in so far as they may be held to represent the morning and evening, the dawn and the disappearance of light. It is perhaps due to an innate tendency in the human mind to repeat, to echo, to balance, or to contrast. This psychological quality constantly exhibits itself in every department—in philosophy, theology, mythology, literature, art, ethics. It is responsible for the dualism of the great religions, for the frequent reduplication of incident in a fairy-tale, for the symmetrical grouping of figures in a work of art, and for dramatic nemesis. In the domain of mythology and religion, whether pagan or Christian, it has doubtless been emphasized by the mystery attaching to the comparatively infrequent phenomenon of human twins. The beneficent and maleficent sides of their tabu are expressed in the opposition of characters and frequently in the double pedigree.¹

5. Afterbirth as twin.—The Baganda hold a curious belief that the afterbirth, or the navel-string (there is a variation as to this between the two accounts given by Roscoe, to whom we are indebted for the information), is the twin or double of the child to whom it belongs.

The afterbirth was enclosed in a broken cooking-pot, covered with leaves and placed at the root of a plantain-tree—if a boy, at the root of a plantain from which beer was made; if a girl, at the root of a plantain used as a vegetable. We are told that 'the afterbirth was called the second child, and was believed to have a spirit, which became at once a ghost.' On account of this ghost the plantain was guarded, to prevent any one not belonging to the clan from partaking of the beer made from it, or of the food cooked from it; else the beer or the food, by being consumed, would be lost to the clan, and the child would then die in order to follow the ghost of its twin. To obviate this catastrophe, the grandfather ate the food and drank the beer, so retaining the ghost of the afterbirth in the clan. More elaborate was the care taken of the king's umbilical cord, to which the ghost of the afterbirth attached, and which was always spoken of as if it were the afterbirth itself: hence probably the confusion between afterbirth and cord. A special officer, called the *kimbugwe*, who was second only to the *katikiro*, or prime minister, was appointed to the charge of it. He occupied an enclosure next to the king's, in which was a temple built for the 'twin.' Once a month at new moon he carried the 'twin,' wrapped as it always was in bark-cloth, into the presence of the king, who took it out of its wrappings, inspected it, and returned it to the *kimbugwe*. He then exposed it in the doorway of the temple for the moon to shine upon it, anointed it with butter, wrapped it up again, and restored it to its place in the temple. When the king died, the *kimbugwe* made way for a new *kimbugwe* to take charge of the new king's 'twin'; but it still remained his duty to care for the old king's 'twin,' and to provide for the upkeep of its temple and enclosure. In due time the dead king's jaw-bone, to which the king's own ghost was believed to adhere, would be added to his 'twin' and kept at the temple, where he would continue to be venerated.² Even the jaw-bone and umbilical cord of the god Kibuka were preserved in his temple on an island of Lake Victoria Nyanza; and they are now in the Ethnological Museum at Cambridge.³

To the south of Uganda and west of the great lake, in Kiziba, formerly in German territory, similar customs and beliefs prevail.

The afterbirth, we are told, is considered as a kind of human being, and on the birth of twins the children are spoken of as four, instead of two, each afterbirth being looked upon as a child.⁴

In ancient Egypt also there seem to be traces of the same idea.

Monuments of the earlier dynasties show an object which has been identified as the king's afterbirth carried upon a standard in procession, together with the usual symbolical standards of animals. Its use continued to the end of the Egyptian kingdom, though its shape was gradually conventionalized. The goddess represented as presiding at the birth of Queen Hatshepsut wears on her head an object remarkably like the reliquary containing the navel-string of Kibuka; and in other representations the same goddess wears a vase-like object

which may be intended for such a reliquary. Though there are not many texts referring to the afterbirth or navel-string, importance—not to say sanctity—does seem to have been attached to 'the umbilical cord of Osiris.' Horus is described as rescuing it from Seth and depositing it 'in its place in Herakleopolis,' or, as the Egyptians called the city, 'House-of-the-Child-of-the-King.' It has also been suggested that the object carried on his head by the moon-god Khons (and perhaps Khons himself) was evolved from the Pharaoh's afterbirth. There was some relation in Uganda between the moon and the royal 'twin.'¹

In this connexion the common Hamitic strain in the ancestry of the royal houses both of Egypt and of Uganda will be remembered. At present, however, the interpretation of the Egyptian evidence has hardly got beyond the conjectural stage.

LITERATURE.—The only writer who has made a special study of the subject is J. Rendel Harris, whose three volumes, *The Dioscuri in the Christian Legends*, London, 1903, *The Cult of the Heavenly Twins*, Cambridge, 1906, and *Boanerges*, do. 1913, are indispensable. The principal sources of information apart from these are to be found in works dealing with the customs or the myths of various peoples, as indicated in the references above.

E. SIDNEY HARTLAND.

TYPOLOGY.—1. Definition and scope.—

Typology is the science, or rather, only too often, the curious art, of discovering and expounding in the records of persons and events in the OT prophetic adumbrations of the Person of Christ or of the doctrine and practice of the Christian Church. It is thus a branch of that method of interpreting Scripture which is sometimes called 'spiritual' and sometimes 'mystical,' as opposed to the literal or grammatical interpretation. Origen, as is well known, spoke of several subdivisions of this 'spiritual' method, and highly favoured it. It was not his invention. Already both pagan and Jewish writers had found in it an admirable expedient for extracting edification from passages in their sacred books which seemed to be trivial, perplexing, or even of doubtful moral worth, if taken at their face value. It flourished particularly at Alexandria, and was much used by Philo. The practice of allegorizing the OT Scriptures became so popular, and the defining line between allegorizing and typology in the strict sense is so uncertain, that it is necessary at the outset to refer to the former; both branches of this mystical interpretation, as used by Christian writers, aimed at elucidating the latent principles of Christianity in the OT, but, if a definition between them is demanded, it is supplied by Herbert Marsh (bishop of Peterborough, 1819-39) in these terms:

'According to one mode [*i.e.* typology] facts and circumstances . . . have been applied to other facts and circumstances, of which they have been described as representative. According to the other mode [*i.e.* allegorizing] these facts and circumstances have been described as mere emblems'; or, again, 'An allegory is a fictitious narrative, a type is something real.'²

This last sentence requires some modification: allegorizing may accept the historical truth of the narrative treated, but does not depend upon it; typology, the bishop holds, demands its historical truth. Van Mildert brings us nearer to the true test when he says:

'It is, indeed, essential to a Type, in the Scriptural acceptance of the term, that there should be competent evidence of the Divine intention in the correspondence between it and the Antitype.'³

Again, Westcott says:

'A type presupposes a purpose in history wrought out from age to age. An allegory rests finally in the imagination, though the thoughts which it expresses may be justified by the harmonies which connect the many elements of life.'⁴

Any account, however, of the history of typology must take into consideration the fact that this

⁴ H. Rehe, *Kiziba, Land und Leute*, Stuttgart, 1910, p. 117.

distinction between type and allegory was not at all times recognized, and there must always be room for difference of opinion as to how far the interpretation offered of any passage 'rests finally in the imagination.' One characteristic feature of the history of typology is the divergence of opinion as to the limits of justifiable exposition of types.

The fundamental principle at the heart of this method of interpretation is that of the continuity of revelation and the divine unity of Scripture. In days when the historical sense and the recognition of progressive revelation were still inchoate it was the natural way of evidencing this unity of revelation. It is the product of the ages when history was regarded as a series of catastrophic events rather than as the unfolding of an age-long process, and it was therefore of immense value as a means of showing that history is not a mere series of accidental events, but the accomplishment of a divine purpose. Thus, though typology, as a branch of serious theological study, is now generally discredited and practically obsolete, surviving only for devotional and homiletic purposes, it is not deserving of the scorn to which not only its outworn usefulness but also the arbitrariness and fancifulness of some of its former champions expose it. In any case the place it holds in the NT itself deserves careful study. It is proposed in this article to discuss (1) the extent and character of typological references in the NT, (2) the general history of typology in later times, and (3) its strength and weakness as a method of interpretation.

2. In the New Testament.—From the first it was an integral and essential feature of the gospel of Jesus Christ to establish and maintain an unbroken connexion with the old covenant. Jesus was aware that His teaching was such as to precipitate a cleavage with the traditions of the Jews. He therefore emphasized the essential unity: 'I am not come to destroy but to fulfil.' In the synagogue at Nazareth He expounded Is 61 as a scripture that day fulfilled in the ears of His hearers. He saw in John Baptist the fulfilment of the 'Elijah' prophecy. After His resurrection He expounded to His disciples 'in all the scriptures the things concerning Himself.' He taught that they 'testified to' Himself. Further, He illustrated His message from OT parallels, as when He referred to Elijah at Zarephath, and Elisha and Naaman (Lk 4²⁵⁻²⁷). On two occasions He is recorded to have referred in particular terms to events of the old covenant, viz. the sign of the prophet Jonah, and the lifting up of the brazen serpent. At these we must look more closely.

Concerning the sign of the prophet Jonah, Matthew (12^{39f.}) interprets the sign as Jonah's confinement in the belly of the whale foreshadowing Christ's burial and rising. Luke (11^{29c.}) omits this application (though Plummer¹ contends that it is implied in *δοξάζονται*). Matthew and Luke agree in giving the application that the contrast between the penitence of the Ninevites and the impotence of the Jews at the preaching of a greater than Jonah is the warning sign. We have to inquire therefore whether Mt 12⁴⁰ is an interpolation by the evangelist, and also whether Jonah can be justly regarded as a type. The story is now generally accepted as an allegory of the experiences of Israel, and as such is typical of Christ, in so far as the whole history of Israel is prophetic, but, regarded as a personal history, the story of Jonah corresponds so little with the ministry of our Lord in principle, and offers so many difficulties in detail, that the suggestion worked out by Sanday,² that Mt 12⁴⁰ is not a saying of Jesus, is very attractive.

With regard to the reference to the brazen serpent, apart from the difficulty of treating the discourses in the Fourth Gospel as the actual words of Jesus, the case is clearer. But the treatment is markedly on broad lines of principle and suggestiveness rather than detailed and exhaustive. The incident referred to was already regarded as mysteriously embodying a spiritual principle (Wis 16^{6f.}), especially as it apparently contravened a divine law.³ Jesus intimates that

that principle will be revealed in His own ministry, and the terms in which He speaks of it are such as to express that principle in the broadest possible way, for the lifting up of the Son of Man is a conception not exhausted by reference to the manner of Christ's death. In a very similar way Jesus spoke of His Body in terms of the Temple, because the Temple 'as the seat of God's presence among His people'¹ exhibited a principle to be more perfectly fulfilled by the Body of Christ.

Our Lord's example in this matter of reference to the OT Scriptures may be summed up as a full recognition that the principles of truth enshrined in the OT were to receive in Himself a fuller and clearer explication, and that therefore the OT Scriptures are full of teaching concerning Him; His practice therefore encourages us to search the Scriptures for the revelation of such principles, but it may be questioned if we can derive from His teaching any justification for the exploitation of formal resemblances or for indulgence in the fascination of elaborate working out of details.

Throughout the NT the same reverence for the dignity and true spiritual value of the OT is marked. Even in those books which show the clearest leanings towards mystical interpretation, in instances where the correspondence seems most far-fetched (e.g., Mt 21^{5, 23}), or the argument most alien to our modern ways of thought (e.g., Gal 3⁶ or 1 Co 10⁴), the respect for the old covenant as a real revelation and the loftiness of purpose sharply distinguish the writers of the NT from even their immediate followers. Nothing in the NT can be compared with the peculiarities of such a work as the *Epistle of Barnabas*, which degrades the old covenant to 'a mere riddle of which Christianity is the answer,'² and which solemnly sees in Abraham's 318 men a foreshadowing of the Cross of Jesus, because the Greek numerals are T I H !³ Even in the Epistle to the Hebrews—a work clearly influenced by Alexandrian methods of thought—the OT is never merely allegorized, and the restrained treatment of the figure of Melchizedek and of the Tabernacle ritual in that book affords a marked contrast to the fanciful elaboration with which both have been treated by later writers. A recognition of typological methods of thought is essential for a true understanding of the NT.

The extent of possible typological references is remarkably small.

Patrick Fairbairn⁴ gives the following list. But he has to confess that even this would be regarded by some as too long a list.

Persons: Adam, Melchizedek, Sarah and Hagar, Ishmael and Isaac, and by implication Abraham, Moses, David, Solomon, Jonah, Zerubbabel, and Joshua.

Events: the preservation of Noah, the Passover, the Exodus, the passage of the Red Sea, the giving of manna, the veiling of Moses' face, the water flowing from the smitten rock, the serpent in the wilderness, and some other events (see 1 Co 10), besides the Tabernacle with its furniture and services.

At any rate it is important to note that all these references occur quite naturally and that nowhere is there any sign of a studied exploration of the OT for possible types.

3. History of typology.—This may for convenience be divided into three groups rather than periods, though each group corresponds roughly to a period in the history of the Church.

(a) The first is that of the apologetic use of types to prove as against Jewish or pagan objector the antiquity of the Christian faith or to refute heretics. The very purpose of the apologists exposed them to fancifulness. Whereas the author of the Epistle to the Hebrews would show his readers that what they valued in the old covenant was but a shadow preparing the world for better and enduring things to come, Justin had to show that what the Jew

³ Justin, *Dial.* xciv.

objected to in the Christian gospel lay hidden in the Jewish Scriptures. We can understand how he came to hold that the outstretched arms of Moses at Rephidim prefigured the cross of Christ, or even how the bells on the high priest's garment were a mystical foreshadowing of the apostolate.¹ Against heretics the aim was partly to refute the very fanciful interpretations of those false teachers who, as Hippolytus puts it, 'by seducing those ignorant of the holy Scriptures into such like fancies make fools of them.'² The Catholics met such errors, not by a rejection of typical or allegorical interpretations, but by the application of a canon of truth or tradition, which limited typological exploration to the treatment of narratives in the canonical books and to the illumination of truths revealed in Scripture—a limitation not always observed in later times. When we come to Origen, we find him using and extolling the allegorical method because so he could reply to Celsus's objection to some passages in the OT. Herein he simply took over the already long-established method of dealing with difficulties in Homer. His intellectual greatness saved him from the extreme rashness of his predecessor Clement, though he adopted his recognition of a manifold sense of Scripture (viz., on the one hand, the literal or grammatical; and, on the other, the allegorical, anagogical, and tropical). It must be remembered that, though Jerome accuses Origen of allegorizing to such an extent that 'historitatis auferat veritatem,' Origen recommended the retention of the literal sense where it was profitable, but the literal often failed to edify (πολλαχού γὰρ ἐλέγχεται, ἀδύνατον ἐν τὸ σωματικόν),³ and then the superiority of the spiritual over the carnal was made manifest, and again that Origen did not regard his interpretations in the least as 'resting finally in the imagination,' for he says:

καὶ ὅλον, ὅτι Μωσῆς ἑώρα τῷ νοί τὴν ἀλήθειαν τοῦ νόμου, καὶ τὰς κατὰ ἀναγωγὴν ἀλληγορίας τῶν ἀναγεγραμμένων παρ' αὐτῷ ἱστοριῶν.⁴

(b) The school of Alexandria, inheriting this tradition from so great a master, carried the discovery of mystical significance in the Scriptures to excess, finding in the method a vast field of opportunity for the edificatory use of the Bible. The school of Antioch resisted this use; Theodore of Mopsuestia entirely rejects allegorical interpretations. Time showed both how attractive and how dangerous the practice was. Arnobius points out how well the method meets the need of pagan writers, but calls attention to the fact that in the lack of any sound rule of interpretation anything can be proved from the Scriptures.⁵ Tyconius Afer endeavoured to establish rules for the proper surveying of the 'forest' of Scripture, and to systematize what he calls the 'reduplications' of the Bible. Being a Donatist, he fell under the condemnation of Augustine, who speaks slightly of his work.⁶ Augustine's own rule is thus summarized:

¹ Este omnino modus est, ut quicquid in sermone divino neque ad morum honestatem neque ad fidei veritatem proprie referri potest, figuratam esse cognoscas.⁷

On the whole the Latin writers were more restrained than the Greek, more tenacious of historicity, and therefore more inclined to typical interpretation proper than to what is merely allegorical; yet Jerome, for all his criticism of Origen's methods, is himself fairly free in dealing with Scripture. As time went on, the ignorance of the original Hebrew that fell upon the Church removed one of the surest restraints against unprofitable fancifulness.

(c) The third group or period is that in which typology took its place in constructive theology, and begins with the Schoolmen. Their task was to prove that the Christian faith is rational and to reconcile it with the doctrines of the current Aristotelianism. In the first stage of Scholasticism reason was subjected to faith. The example of the Fathers in admitting a threefold sense of Scripture was generally followed. Erigena indeed speaks of an 'infinite sense,' and was led by his mysticism to use the allegorizing method freely; the Scriptures to him were as a peacock's feather, every particle glittering with divers colours. Rabanus Maurus admits a fourfold sense. Others went farther, acknowledging a sevenfold or even an eightfold sense. In the later stages of Scholasticism, particularly after the rise of the theory of the twofold nature of truth, and the spread of mysticism, some schools practically scorned the literal interpretation of Scripture on the ground that 'litera occidit, spiritus vivificat,' and 'carried this often to such an extreme, as to leave scarcely a trace of the simple meaning.'¹ It must be acknowledged that some, like Hugo of St. Victor and St. Thomas Aquinas, tried to restrain such indulgence.²

The combined influences of the Revival of Learning and the establishment of the Bible as the sole *regula fidei* brought about in the writings of the Reformers a very much sounder attitude. Both Luther and Calvin are remarkable for the sanity and critical acumen of their commentaries. Reaction from Scholastic fancies and a new reverence for the plain teaching of Scripture produced this result; but soon the demand for popular expositions of Scripture (and perhaps the death of really scholarly teachers) brought typology into great favour, and it became a definite branch of hermeneutics. In this connexion the name of Cocceius of Leyden in the 17th cent. is prominent, although he adopted no definite system, and seems to have been content with a formal resemblance to justify typological interpretations. Others, however, did endeavour to systematize the method.

Salomon Glassius published at Jena in 1623-36 a work in five books called *Philologia Sacra*, of which one part is devoted to the study and classification of types. His work was incorporated in English in Benjamin Keach, *Tropologia: a Key to Open Scripture Metaphors and Types*, London, 1681, and is referred to as a principal authority by T. H. Horne, *An Intrad. to the Critical Study and Knowledge of the Holy Scriptures*, the first ed. of which (in 3 vols.) appeared in 1818-21, the tenth and last being issued (in 5 vols.) in 1856. Glassius divides types into two main classes—'innate,' or those specifically asserted to be such in Scripture, and 'inferred.' These are further subdivided, the first into those which Scripture 'expresses ostendit' or 'tacite insinuat,' the second into those which are 'oblati' or 'contorti.' The last are to be rejected. He adds nine canons for classifying or recognizing types. The canons are not particularly helpful, but they afford the author the (to him) valuable opportunity of refuting Bellarmine's recognition of a type of the Mass in the story of Melchizedek—a recognition, of course, far older than Bellarmine. The fact reveals one reason why the Protestant theologians were anxious to find clear rules to govern typology. Other popular works on the subject were Thomas Taylor, *Moses and Aaron, or the Types of the OT opened*, London, 1653; Samuel Mather, *OT Types Explained and Improved*, do. 1673, rewritten by Catherine Fry and published in 2 vols. in 1834 under the title *Gospel of the Old Testament* (regarded by some as the fullest exposition of the subject); and K. Vitringa, *Observationes Sacrae*, 3 vols., Francker, 1689-1708.

The last named deplors the rise of rationalism, and certainly the rationalistic and unimaginative temper of the 18th cent. was inimical to the practice of typology. Something of the 18th cent. methods of thought affects Marsh's *Lectures on the Criticism and Interpretation of the Bible*, and here we find a quite definite rule as to the scope of typology laid down. He will admit no types except those which Glassius had called innate. He defends this

position with much good sense and learning, though it is really a confession of weakness and inability to discover the principles which govern the practice of the NT writers.

At the beginning of the 19th cent. the subject attracted attention. It was much affected in circles influenced by the Evangelical Revival. Typology engaged the eloquence and learning of the Bampton lecturers in 1814 (Van Mildert) and 1824 (J. J. Conybeare), and of the Hulsean in 1826 (Temple Chevallier), besides giving rise to a good deal of other literature. But the spread of scientific criticism and the study of ancient religions, and before long of comparative religion, were destined to strike a death-blow to typology as a recognized branch of hermeneutics.

The religion of the Jews was for a time regarded as beneath the notice of the student of religion, and, when it came into its own again, a much broader view of the relation between the old and new covenants held the field. Thus De Wette wrote that the entire OT is a great type of Him who was to come, and that Christianity lay in Judaism as leaves and fruit lie in the seed.¹ Again, Clausen finds the foundation of the connexion between the 'deeper apprehension and the immediate sense' in the law of general harmony by which all individuals, in the natural as well as in the spiritual world, form one great organic system.² The impress of the modes of natural science upon this utterance did not recommend it to those whose conception of the supernatural and providential alienated them from the rising naturalism, but the effects of modern methods of scientific study are already apparent in Fairbairn's *Typology*, since the publication of which no standard work on typology has appeared. It survives now principally in devotional works or in the expositions of those to whom the results of Biblical criticism are still unwelcome. Sometimes it is pursued with dignity and real spiritual value (as in the works of Andrew Jukes), but sometimes with a distressing puerility or even offensiveness. It must be acknowledged that, on the other hand, modern writers of the critical school have unduly ignored the importance of typology—an attitude to which that of Edwin A. Abbott offers a brilliant exception. In his view the NT, and particularly the Fourth Gospel, is full of typical suggestions. In this way, believing the author to record what he took to be facts, but with a definite spiritual intention, he reconciles the rejection of the historicity of the narrative with the retention of its spiritual import. In a word, he allegorizes the records, while acknowledging that the author believed that he was recording facts, but facts with a typical significance.

This view is of importance in two respects. First, it reminds us of the fact that the symbolic significance of things and words held a far greater place in the thought of ancient times than it does with us, who have learned to form abstract conceptions and to search for exact definitions. *E.g.*, the NT writers can speak of the 'blood of Christ' without explanation, in a manner that perplexes us. In the second place, it is based on a fundamental principle of sound interpretation, viz. the endeavour to discover what the original author of any document meant to convey. When we read of Melchizedek, or the ritual of the Tabernacle, or of David, it is not enough to ask what those passages may suggest to us; we must first ask what they suggested to the original readers. If the principles of truth which they then suggested be one with the principles more clearly seen in the

fuller revelation in Christ, then the imperfect revelation may be regarded as typical of the fuller yet to come, because so mankind was being prepared for the clearer light. Now, David's career is so presented in the OT as to subordinate the imperfections of his character to those qualities which suggested the ideal of a perfect Shepherd-King; the ritual of the Tabernacle was such as to awaken a sense of sin which the sacrifices could never satisfy, and the figure of Melchizedek held up to men (even if the story be simply legendary) a dim conception of a Priest-King greater than Abraham or the priesthood of Aaron's line. Inasmuch as such dimly seen ideals are the result of God's spirit working in the human spirit, we can justly speak of a divine intention in these records, and, without disregarding the human element or ignoring the original meaning, we see in them the gradual unfolding of a divine purpose, much as we can see in the lonely flowering of the first snowdrop an earnest of the summer glory of the garden.

4. The strength and weakness of typology.—The passing of typology need not cause alarm. Just as the discovery of the law of evolution necessitates a broader sweep of investigation on the part of those who to-day put forward the argument from design, but has not invalidated that argument, so our conception of the oneness of revelation is to-day based on a broader view of the OT, but is not therefore the less true or the less deeply founded. Typology not only bred fancifulness and, what was worse, quarrelsomeness among the theologians, but it tended to reduce revelation to the character of a jig-saw puzzle, for, at least in many interpretations, the types are scattered haphazard through the OT, and are quite unrecognizable as such until the antitype is revealed. Any one who has studied the works of art which typology has inspired will remember the chaotic confusion of the typical series as compared with the order of the antitype. To-day we recognize the guiding hand of God in history as the typologists could not, and so see a deeper and truer continuity of revelation. But that in its day this system of expounding the mystical relation between the OT and the NT had a marked educational value can be seen from the widely popular *Biblia pauperum*, illuminated MSS of which exist as early as the 13th cent., and from a development of it, *Speculum humane salvationis*, of which over 200 MSS survive. The invention of printing made these works still more widely popular. The same fact is evidenced by works of art ranging from the frescoes in the catacombs, through mosaics such as those in Santa Maria Maggiore in Rome¹ or San Marco in Venice, down to the magnificent series of windows in King's College, Cambridge. Indeed this connexion of typology with Christian art suggests the very close association of typology with æsthetics. That love of mystery which is almost universal has in reality an æsthetic aspect; for some it is satisfied in the dramatic ritual of the Mass, and for those who repudiated this conception of worship it has been satisfied by the exploration of the mystical sense of the OT, somewhat as the Qur'an supplied decorative motifs in Moorish art. This seems likely to give a permanent vitality to devotional typology, especially since the revival of popular mysticism. A word of caution may be offered. The history of typology shows how easily devotion may degenerate into fancifulness and unprofitable exercise of ingenuity. Only the most chastened of saints and the most self-restrained of scholars are immune from this danger; typology has always flourished in times of ignorance and

decay of learning, but its suggestions are not without value and helpfulness if they are received gratefully, much as one might derive illuminating thoughts from the contemplation of a sacred picture, rather than as revelations possessing dogmatic authority.

UDĀSIS.—The Udāsīs are the principal religious order of the Sikhs (*q.v.*). Also known as Nānak-putrā, 'sons of Nānak,' the founder of Sikhism, they are probably the oldest of the Sikh orders, but ascribe their foundation to Srī Chand, Nānak's elder son. The term *udāsī* is derived from Sanskrit *udās*, 'sad,' and means 'sorrow' or 'sadness.' The Udāsīs were separated from the active or militant Sikhs by the third *gurū* of that sect, Amar Dās, but he did not excommunicate them, as is sometimes stated. This separation is also ascribed to Arjan, the fifth of the Sikh *gurūs*. Whoever effected it, the severance marks the cleavage in the Sikh sect which definitely ranged it against the Muslim Mughal power, leaving the Udāsī order still in touch with orthodox Hinduism. Nevertheless the tenets of the order, deeply coloured as they are with Hindu asceticism, did not prevent its finding many followers among the descendants and disciples of the Sikh *gurūs*. Thus the sixth *gurū*, Hargovind, is said to have allowed Srī Chand to adopt Gurdittā, his eldest son, into the order by making him his direct disciple—a statement not free from chronological difficulties.

The Udāsī order was at an early period divided into four chapters (*dhuān*, lit. 'fires'). Their founders were Bābā Hasan or Hasna, Phūl, Gondā, and Al-mast—all four said to be disciples of Gurdittā. Of these founders the first bears a Muhammadan name (Hasan) and the last a purely Arabic title, *al-mast* denoting one drunk with love or devotion. Al-mast Sāhib, or 'the holy ecstatic,' is now represented at Nainī Tāl and Jagannāth, places far from the Panjāb and Sikhdom alike. Gondā Sāhib is revered at Shikārpur in Sind, as well as at a shrine near Amritsar in the Panjāb, while the other two possess shrines in the Panjāb hills only. This distribution points to efforts made by the earlier *gurūs* to spread Sikhism, or at least a quietist type of it, over India generally. The followers of these four chapters constitute the senior assembly (*barā akhārā*) of the order, its junior, or *chhotā akhārā*, having been founded later by Pherū, a disciple of Har Rāi, the seventh Sikh *gurū*. In theory all Udāsīs are celibate, but those who are so in practice are styled Nangā (or 'naked') Udāsīs. Sir Edward Maclagan, however, gives a different explanation of the term Nangā.

He describes their usual dress as red in colour, but 'a large section of them go entirely naked, except for the waistcloth, and rub ashes over their bodies. These, like the naked sections of other orders, are known as Nange; they pay special reverence to the ashes with which they smear their bodies, and which are said to protect them equally from either extreme of temperature. Their most binding oath is on a ball of ashes.'¹

As smearing the body with ashes symbolizes also death to mundane things, the Nangā Udāsīs are probably strict celibates, and hence the Nange

¹ *Census of India, 1891*, vol. xix., *Punjab and Feudatories*, p. 152.

are correctly so described. Another chapter of the order, sometimes said to be one of the four *dhuān*, is called the Bhagat Bhagwān, or 'devoted to God' (Bhagwān). Its tradition connects it with Hinduism, for, it is said, a Sannyāsī, by name Bhagatgīr, once visited the shrine (*derā*) of Bābā Nānak, the founder of Sikhism, when on his way to Hinglāj, a great place of Hindu pilgrimage in Baluchistān. Nānak's grandson, Dharm Chand, poured food into Bhagatgīr's bowl, but failed to fill it. The addition, however, of a pinch of *karāh prasād*, or sanctified meal, blessed with the words, *Srī wāh gurū*, 'All hail to the *gurū*,' caused the bowl to be filled forthwith. This miracle converted Bhagatgīr. It was confirmed when the goddess Hinglāj appeared to him and his companions as they kept their vigil before Nānak's shrine and thus fulfilled the object of their pilgrimage. Bhagatgīr and his followers became disciples of Dharm Chand, assuming the title of Bhagat Bhagwān. The principal *akhārā*, or meeting-place, of the chapter is at the Bibiksar tank at Amritsar, but it also has subordinate *akhārās* at Bareilly and other places in Hindustan and claims no fewer than 370 *gaddis*, or monastic foundations, in eastern India. The Bhagat Bhagwāns wear the matted hair (*jaṭṭa*) of the Sannyāsī, with a chain round the waist, and smear their bodies with ashes. But in their beliefs they accept Nānak's precepts and follow his rules as to eating and the like.

Yet another chapter is the Sangat Sāhib, which is admittedly not one of the four *dhuān*. Gurū Har Rāi had a cook, named Pherū, whom he taught, investing him with a black girdle and cap, and sending him as a commissary to the southern Panjāb—his native country—and towards the Indus, with a mission to collect the dues paid by the Sikhs to the *gurūs*. When Gurū Govind Singh abolished this system and destroyed the *masands*, or commissaries, whose oppression had caused grave discontent, Pherū made no resistance, though no one dared arrest him, and waited on the *gurū*. Impressed by his righteousness, the *gurū* gave him half his *pagrī*, or turban, in token that he was admitted to a share in his *gurū's* authority, and promised that his following should prosper. The *gurū* further bestowed on him the title of Sangat Sāhib, 'holy companion,' and sent him back to the scenes of his former activities, where he increased the number of his followers. In or before 1896 the Sangat Sāhib, as the chapter is called, established a peripatetic *akhārā*. One of its most noted disciples, an ascetic named Santokh Dās, worked many miracles. The Sangat Sāhibiās, or adherents of the chapter, are numerous and influential in the south and west of the Panjāb, but, as their traditions show, they are not completely under the control of the Sikhs or the regular Udāsīs. Another tradition assigns

the foundation of the chapter to a follower of the famous Sultān Sakhī Sarwar, who was converted by Gurū Govind Singh, and it undoubtedly comprises many who used to affect the cult of that saint and perhaps still combine with it their acceptance of Sikh doctrine. The chapter, however, possesses the Brahmhūt *akhārā* at Amritsar and an institution at Lahore, so it is distinctly affiliated to orthodox Sikhism, and in the great Sikh State of Patāla, where it is called the Bakhshish Sangat Sāhib, it pays special reverence to the *Adi Granth*, or original *Granth* ('Book') of Bābā Nānak, and has an *akhārā* of its own, distinct from those of the four *dhuān*. Lastly must be mentioned the Rāmdās Udāsī, a sub-order ascribed to another Gurdittā (who was a grandson of one of Bābā Nānak's converts) and established by one of the later *gurūs* in a monastery at Rāmdās, where the sub-order possesses a fine temple, at some distance from Amritsar. Each subdivision of the Udāsīs has its own organization for collecting and administering funds. Each is presided over by a head abbot (*srī mahant*), to whom the ordinary *mahants*, or monks, are subordinated.

The Udāsīs generally are recruited from all Hindu castes and will take food from any Hindu. Sometimes, but not invariably, or even usually, congregated in monasteries, they are generally found wandering to and from such sacred Sikh places as Amritsar, Dera Nānak, and Kartārpur in the Panjāb, but they are also said to be numerous in the Mālwa to the south of it, and at Benares. The principal seats, however, lie in the central Panjāb and in the District of Rohtak, where Sikhism is by no means dominant. Their usages are not uniform. Some wear long hair like Sikhs, others matted hair like Sannyāsīs, and others again cut the hair. Some affect the *tilak*, or caste-mark, others avoid it. The dead are often cremated in the Hindu way, but apparently are sometimes buried. When a body is burnt, a *samādhi*, or mausoleum, is erected to some Udāsīs, but this privilege must be confined to those of special sanctity or *mahants*. While the majority are ascetics, some frankly engage in secular callings. Maclagan gives the following picture of their relations with the Panjāb villagers :

'In Ludhiāna the Udāsīs are described as mostly Jāts by origin, the *chelā* or disciple and successor being usually chosen from this tribe, and are found to be in possession of the *dharmsālās* in Hindu villages, where they distribute food to such as come for it and read the *Granth*s both of Bābā Nānak and of Gurū Gobind Singh, although they do not attach much importance to the latter. The head of the college is called a *mahant* and the disciples *chelās*. They live in Sikh as well as in Hindu villages, and it is probably on this account they do not quite neglect Gurū Gobind Singh. They rarely marry; and if they do so, generally lose all influence, for the *dharmsālā* soon becomes a private residence closed to strangers. But in some few families, such as that of Jaspāl Bāngar, which keeps a large *langar* or almshouse going, it has always been the custom to marry, the endowments being large enough to support the family and maintain the institution; but the eldest son does not in this case succeed as a matter of course. A *chelā* is chosen by the *mahant*, or by the family. If a *mahant* whose predecessors have not married should do so, he would lose all his weight with the people. The great shrine at Dera Bābā Nānak, in the Gurdāspur District, is in the custody of a community of Udāsī *Sādhs*, whose *mahant* used to be appointed with the consent of the Bedīs. Another shrine at the same place known as Tāhli Sāhib, from a large *tāhli* or shisham tree¹ which grew close to it, was founded by Sri Chand, and is also looked after by *mahants* of the Udāsī order.'²

Thus the Udāsīs display all the normal features of an Indian religious order—a lofty ideal, readily abandoned in practice, professed adherence to a reformed faith, tempered by judicious compromise with the established system, and the inevitable evolution from an ascetic celibate order into a hereditary caste. In the last phase of the Sikh régime the Nānakputras had sunk to employment

as escorts to caravans, their sacred character as 'sons of Nānak' ensuring them against attack.

ULTRAMONTANISM.—Ultramontanism is the term applied, often in a hostile or critical spirit, to the tendency to centralize in the papacy the doctrinal teaching and government of the Catholic Church. More vaguely still it is applied in general to extreme Roman Catholicism, to the tendency to emphasize all that separates Catholics from other Christians or from other men. Often enough it is used, quite inappropriately, as a mere nickname for ordinary Catholics who are conscious of their obligations as members of a universal Church. Thus the Catholic parties in the German and Belgian Parliaments have been called Ultramontane, though they would certainly not admit that they take their politics from Rome.

Historically the word 'ultramontanus' was in occasional use in Central Europe from the 11th cent. onwards in a merely geographical sense, just as 'citra-montanus' was used in Italy, to describe a man who lived south of the Alps. It does not seem to have been commonly used with any theological significance till the 17th cent., when it was applied to those who opposed the prevailing Gallican tendencies in France. The counter-reformation in general, and especially the pontificate of Sixtus v. at the close of the previous century, had done much to organize the central administration of the Church, while, on the other hand, the growing power and self-consciousness of the French monarchy tended to insist upon, and to express more definitely as principles, Gallican practices which might be traced back to the 13th century. It is in opposition to Gallicanism (*q.v.*) that Ultramontanism has its most definite meaning, and Fénelon, the Jesuits, and others who opposed the ecclesiastical policy of Louis XIV. and the Four Articles of 1682, were, in a sense, the first Ultramontanes. In the 18th cent., when the influence of religion was at its lowest, Gallican principles kept a strong hold on the French Church, but they found their most complete expression in the writings of the German Febronius and in the policy of Joseph II. The Ultramontanism which opposed Gallicanism and Josephism was little more than the assertion of the universal character of the Church, which both these systems tended to obscure, and an effort, far from successful till the 19th cent., to assert the right of the Church to live her own religious life without the constant interference of the State.

Formal Gallicanism, with its Four Articles, may be said to have been destroyed in France by the Revolution. The fall of the *ancien régime* liberated the Church; numbers of the more Gallican clergy were discredited by joining the Constitutional Church; and Catholicism was purified and revived by suffering and persecution. No more striking manifestation of papal power had yet been seen than the act which, in accordance with the Concordat, practically deprived thirty-seven bishops of their sees. The Concordat was thus an Ultramontane act, and, though Napoleon added to it the Gallican *articles organiques* and, when he quarrelled with the pope, tried to make the Four Articles the law of the State, nothing could restore the old pre-

Revolution Gallican system. The spirit, however, survived and inspired both the statesmen of the restored monarchy and many of the more old-fashioned clergy, yet the Restoration was also the period in which the Ultramontane movement of the 19th cent. received its most powerful expression in the writings of Joseph de Maistre, de Bonald, and Lamennais. These men realized that the Revolution had destroyed the old foundations on which men had rested their habits of thought and action, and that a fresh start had to be made. De Maistre knew that the revolutionary spirit was still abroad, stronger perhaps than ever, and his *Du Pape* (1819) is an appeal as much to practical utility as to principle. It is only the Christian Church which has in it the strength to overcome 'the Revolution'; and without an infallible papacy the Church is, like the States-General, reducing the monarchy to a shadow and therefore slipping back into revolution. He was disappointed with the immediate effect of his book, but his rigid, authoritative mind had great influence on the Ultramontanes of the middle of the century. A man of far greater intellectual power than de Maistre, the Vicomte de Bonald emphasized the weakness of the individual man in finding out for himself the essential principles of thought and conduct. What a contrast between the disagreement of philosophers and the agreement of practical men about practical matters! The individual reason rightly, therefore, falls back for support on the convictions of society and on tradition. This 'traditionalism' Lamennais combined with the Ultramontanism of Joseph de Maistre. Lamennais's passionate temper always made him push a thing to its extreme limit, and he turned de Bonald's trust in tradition into a universal test of truth. The voice of the pope was for him the expression of this 'universal consent.' In his first stage he combined legitimacy with Ultramontanism; in his second he appealed to the people and tried to make democracy the exclusive ally of the Church. The *Avenir*, which Lamennais and his friends edited in 1831, was probably the most brilliant expression of the earlier stage of 19th cent. Ultramontanism. The enemy which the *Avenir* fought was the Gallican tradition of State control over the Church which had been reinforced by the revolutionary doctrines of State-absolutism. The aim was liberty—liberty of conscience, of association, of education, of the press. Devotion to Rome was the great instrument of liberty, for the papacy represented the universal aspect of the Church and was independent of the different governments. It provided also an element of fervour and historic sentiment at a time when Europe, under the influence of the Romantic movement, was casting off the 18th cent. and all its works and recapturing the power of religious enthusiasm. The exclusive form in which Lamennais's ideas were expressed ultimately set Rome itself against him, but the movement continued under wiser men, Lacordaire, Montalembert, de Ravignan, and others. They succeeded in all but destroying the old Gallican spirit and in putting a new life into the French Church. In the Revolution of 1848 the Church, which had been so unpopular in 1830, exercised a powerful influence.

The defeat of Gallicanism, however, brought out a division in the Ultramontane ranks which the struggle had concealed. The Falloux Law, which was passed under the Second Republic and which broke down the old State monopoly of education, led to the first open breach. On one side Montalembert, Falloux, and Dupanloup were prepared to make concessions to the State in order to secure an invaluable piece of legislation, and because they shared in the ideas of their time so far as

these were not definitely opposed to Catholic principle. On the other side were a number of Catholics whose policy became characteristically identified with a newspaper, the party of the *Univers*. Louis Veuillot, the editor of the paper, may without much exaggeration be called the leader of the party; he was certainly its noisiest and most popular mouthpiece. The aim of this school went much farther than merely to acquire for the Church the control of her own religious life. They wished to secure for her the predominance which in an ideal world the spiritual would have over the temporal, and which in fact the Church did partly enjoy in the Middle Ages. Such an aim was incompatible with the ideas and practices prevailing among a people who were far from being mediæval in faith, but Veuillot and his party were prepared to fight for it by bitter antagonism to free-thinkers, by opposition often bitter enough to those, even should they be bishops, whom they considered lukewarm Catholics, and by making the most of the support of the State, if it should happen to be on their side, even when that State was the autocratic Second Empire. The archbishop of Paris himself, Sibour, brought out the difference between the two schools in a letter to Montalembert (1853):

'When twenty-five years ago,' he said in substance, 'we boldly professed ourselves "Ultramontanes," the Ultramontane school was then a school of liberty. We defended the independence of the spiritual power against the encroachments of the temporal power, but we respected the Constitutions of the Church and of the State. The Pope was not the whole Church nor the Emperor the whole State. On the one side there were bishops and councils with a real authority, on the other aristocratic and democratic elements with their rights. No doubt there are times of crisis when both the Pope and the civil government may override all rules. The old Ultramontanes admitted this, but they did not turn the exception into a rule. The new Ultramontanes have pushed everything to extremes and accepting to the full the idea of power they have argued extravagantly against all liberties whether in Church or State.'¹

Another French bishop could write that the fanaticism of the *Univers* had done more harm to religion than that of Voltaire. It is indeed difficult at first to understand Veuillot's popularity among French Catholics. He seems the most perfect representative of that 'insolent and aggressive faction' which never tired of calumniating their brethren in the faith and of trying to force their private opinions on the Church. For men not of the faith, whom he considered its enemies, for free-thinkers, for 'the race of Cain,' he had no pity. He had never any hesitation in distinguishing between the wheat and the tares. Yet the *Univers* was read in nearly every *cure* in France, and Veuillot appealed far more than Montalembert to most French Catholics. To begin with, he was intensely democratic. Himself a man of the people, he was always thinking of the people. It was his passionate desire to protect the simple from the aggressive irreligion of the bourgeois free-thinker, while his fondness for the extreme point of view in controversy, his scorn of moderate opinions, and his intolerable abuse of the military metaphor in matters of religion were more in sympathy with French character than the constitutionalism of the Montalembert school.

It must be added that the extreme character of French Ultramontanism under the Second Empire is partly to be accounted for by the reactionary policy adopted by Pius IX. when he returned from the exile to which he had been driven in spite of his liberal reforms. To the world at large the most complete expression of this reactionary policy was the Syllabus of 1864. More sympathy would be felt now than in optimistic mid-Victorian days for a document which declared that the world had gone astray by the neglect of God and of Catholic principles. At the time, however, what appeared

¹ Cf. Lecanuet, *Montalembert*, iii, 104.

to be a declaration of war against 'modern civilization' was taken as an official confirmation of all the excesses of the *Univers*.

'Ultramontanism' is a word much used in German politics and religious controversy of this period, but so heavy was the hand of the Erastian State in the first half of the 19th cent. that the word meant no more than the natural claim of German Catholics to manage their own spiritual affairs. Josephism survived longer in Germany than Gallicanism in France, and it was reinforced first by the current German philosophy of State-absolutism and later by the growth of conscious German nationalism. There was an important Catholic revival in the twenties and thirties, closely connected with the Romantic movement, but it had little effect on religious politics. The first struggle for liberty and the first victory occurred not in any of the Catholic states but in Protestant Prussia. The imprisonment in 1837 of the aged archbishop of Cologne and the support given him by Pope Gregory XVI. led to a popular movement in his favour and a general protest against the action of the Government. When Frederick William IV. came to the throne in 1840, he inaugurated a new policy and Prussia, by the freedom which she allowed the Catholics, became a model for other German states. The Revolution of 1848 extended this liberty to different parts of the country, but it was followed by a reaction, especially in S.W. Germany. Two schools began to be distinguishable in the fifties. One was that of Mainz, led by Bishop Ketteler, with the *Katholik* as its organ, devoted mainly to practical work and social problems, but in close union with Rome and therefore soon to be called Ultramontane. Closely connected with it was the more learned group of Würzburg, where Denzinger, Hettinger, and Hergenröther were teaching. The rival school was that of Munich in alliance with the Bavarian Government and the University. Its leading spirit was Döllinger, and it was interested mainly in the philosophical and historical aspects of theology and was very jealous of any Roman interference with German science. The education of the clergy came to be a subject of much controversy, for in Germany seminary and university training had long gone on side by side. A number of the bishops distrusted the theological teaching and the atmosphere of the universities, while Döllinger and the Munich school suspected intensely the training given by the Jesuits in the German College in Rome, were contemptuous of Roman theology, fought against the revival of Scholasticism, and dreaded the spread of Jesuit influence in and through the German seminaries. In time they came to see in the power of the State a means of checking this 'Romanization,' and Döllinger, who had fought for the Church against Josephism and been called an Ultramontane in 1848, now began to appeal to the State against Ultramontanism. Yet among the German Ultramontanes there was little of the extravagance of the *Univers*. No doubt, as controversy grew more bitter, there were violent language and personal attack on both sides, and the air had to be cleared in Germany, as elsewhere, by the Vatican Council.

In Italy the more extreme Ultramontanism was represented by the *Civiltà Cattolica*, a review published in Rome under the editorship of Carlo Curci and a small number of Jesuits who were a curiously independent body and often quite out of sympathy with their more moderate brethren across the Alps and even in Italy. The *Civiltà* was notorious for its support of the *Univers*, for its extreme papal doctrines, and for its personal attacks on more liberal though equally devoted Catholics.

There was an echo of these continental battles even in England in the controversy which was aroused by the reviews edited by Acton and his friends, first the *Rambler* and then the *Home and Foreign Review*. These reflected, though in a more moderate form, the views of Döllinger and the Munich school. On the other side the lead was taken by William George Ward and the *Dublin Review*. Neither side disputed the authority of strict definitions of dogma; but the controversy turned on the amount of respect due to the general guidance of Rome. Acton claimed absolute liberty outside dogmatic definitions, while Ward looked to the papacy for positive direction. A loyal Catholic, he maintained, should accept not only the defined teaching but the 'doctrinal intimations' of Rome.¹

Underneath these controversies of the sixties we seem to see two tendencies at work. The more liberal Catholics wished, in various degrees, to keep in touch with the times, to make the best of the learning, the thought, the science, the political conceptions of the age. With some this might and did lead to a real contempt for traditional Catholic practices and methods. The Ultramontanes, on the other hand, felt the danger which lay in excessive sympathy with the 'spirit of the age.'

'The "Rambler" . . . appeared to Mr. Ward to worship the modern ideal, both in ethics and in politics, with an unreserve which was quite inconsistent logically with the principles of Christianity.'²

Ward had no hope in the movement led by Döllinger. To him contemporary thought was moving away from Christianity, and the one essential thing was to react against it, to preserve the purity of the faith and of Catholic ideals. Push this point of view farther, much farther than Ward ever pushed it, and you come to Veillot's extravagances with his conflict between the 'race of Abel' and the 'race of Cain.' Now the papacy under Pius IX. undoubtedly took the Ultramontane side, and the liberals found themselves more or less in opposition to the tendencies prevailing in Rome, while the Ultramontanes were anxious to make these tendencies prevail everywhere and, in opposition to the nationalism of the day and the attacks on the temporal power, to magnify the authority of Rome in the government and teaching of the Church. Veillot, e.g., looked forward to the time when papal bulls would take the place of all conciliar deliberation. Thus it is that the question of the doctrinal authority of the pope was raised and that the Syllabus led to the Vatican decree of infallibility. Yet there is a certain unreality about the controversies which raged round the Council in 1869 and 1870, for the number of those who actually disbelieved in papal infallibility was small indeed. The papal Definition of the Immaculate Conception in 1854 had been accepted universally. What most of the opposition feared was the added governmental authority which they conceived the decree would give to the pope, the increase which it would produce in all those centralizing and autocratic tendencies which they dreaded.

'I am much more concerned,' said Montalembert, 'about the government of the Church than about the definition of Papal Infallibility.'³

It is obvious too that the opposition of Dupanloup and the 'Inopportunist' was due to the fear that the Definition would lead to conflict with the State and would emphasize the differences between the Church and modern society. The language of the more extreme Ultramontanes in speaking of the pope as 'inspired,' or in such mad phrases as 'when the Pope thinks, it is God who meditates

¹ W. Ward, *W. G. Ward and the Catholic Revival*, p. 146.

² *Ib.* p. 139.

³ Lecanuet, iii. 456.

in him,' must have contributed not a little to make the 'liberals' fear that the Definition might mean the triumph in the Church of the more extreme faction.

The Definition came, after months of discussion, in a form more moderate than even such Ultramontanes as Ward had originally expected. It had the effect of making a clearer distinction between the doctrinal and the administrative functions of the papacy. It is no longer possible for an Ultramontane to claim that every utterance of the pope on matters of faith is protected by God from error. Papal infallibility is defined and in so far limited, and the conditions laid down in the Definition have seldom, if ever, been satisfied by the papal doctrinal pronouncements of the last forty years.

Ultramontanism became, therefore, a vaguer term after 1870. The party of the *Univers* continued, indeed, to exist and to carry on its controversial methods in support of the temporal power of the pope or of the royalist movement in France. It saw in a political *coup d'état* the only defence against the attack which from 1879 onwards the Republican party directed against Catholic education, the religious orders, and other forms of Catholic life. Louis Veuillot died in 1883, but the *Univers* remained the most popular of Catholic newspapers until its place was partly taken by Paul de Casagnac's Bonapartist *L'Autorité*. It seems absurd, however, to call this party Ultramontane, seeing that at least during the pontificate of Leo XIII. its aims were opposed to those of the papacy. The pope was anxious to reconcile the Catholics with their governments both in France and in Germany. In Germany he succeeded in bringing the *Kulturkampf* to a close, though at the cost of putting pressure in 1886 on the so-called Ultramontanes of the Centre party, in order to secure their support for Bismarck's seven years' army estimates, whilst in France his policy of urging the French Catholics to accept the Republic met with much opposition from the royalists.

In a sense, however, the term 'Ultramontanism' may be rightly applied to the administrative centralization which is a mark of papal policy since the middle of last century. The enthusiasm felt so widely among Catholics for Pius IX., the great prestige of Leo XIII., a conscious reaction against disruptive national movements, the mere improvement in the means of communication—these are some of the causes which explain such a centralization. It was a particular feature of the pontificate of Pius X. and of the measures which he took against 'Modernism.' It has certainly helped to protect the unity and the tradition of the Church in the midst of growing hostility or at least indifference, and often enough Rome has proved more broad-minded than the local ecclesiastics. Thus two of the greatest bishops of the second half of the century, Ketteler and Manning, were appointed by the direct action of the papacy. Many Catholics would, however, welcome a reaction in the direction of the constitutional traditions of the Church, especially in such matters as the election of bishops and their synodal meetings.

LITERATURE.—It is difficult to give a bibliography on so general a subject. For the Gallican controversy see art. GALICANISM; for 19th cent. Ultramontanism, F. Nielsen, *History of the Papacy in the XIXth Century*, Eng. tr., 2 vols., London, 1906. An excellent study of the question is to be found in Wilfrid Ward, *William George Ward and the Catholic Revival*, do. 1893; E. Lecanuet, *Montalembert d'après son journal et sa correspondance*, 3 vols., Paris, 1895-1902, contains the best account of the controversy with Veuillot. For a defence of Veuillot on general grounds cf. Jules Lemaitre, *Les Contemporains*, do. 1888-98, vi. For the Catholic controversies in Germany cf. G. Goyau, *L'Allemagne religieuse: le Catholicisme*, 4 vols., do. 1905-09. For the Vatican Council see art. COUNCILS (Christian: Modern); for the measures taken by Pius X. against the Modernists see art. MODERNISM.

F. F. URQUHART.

'UMAR AL-KHAYYĀM.—Although much has been written by European biographers concerning the celebrated astronomer and poet of Nishāpūr, 'Umar ibn Ibrāhīm al-Khayyām or al-Khayyānī, generally known in Persia as 'Umar Khayyām, the greater part consists of legends derived from late and untrustworthy sources, while the facts of his life and character remain singularly obscure, notwithstanding that since 1897 one contemporary and several early notices have become available. Khayyām or Khayyānī is a family name, and does not indicate that either 'Umar or his father was a tent-maker by trade. The dates of his birth and death are uncertain. Probably he was born between A.D. 1025 and 1050, and the evidence of his contemporary, Nizāmī 'Arūdī, shows that his death took place after 1115 and some years before 1135, and that he was buried at Nishāpūr in the Hira cemetery; ¹ the date A.D. 1123 given by some authorities may well be correct. On chronological grounds alone, the story of his friendship at Nishāpūr with two school-fellows who afterwards rose to eminence—Nizāmū 'l-Mulk, the great vizier of the Seljūq sultans Alp Arslān and Malikshāh, and Ḥasan al-Shabbāh, chief of the so-called 'Assassins'—is extremely improbable; and, though it occurs in the history of the Mongols by Rashīdū'ddīn († A.D. 1318), it must be regarded as a fiction. ² 'Umar received the education of a scholar, including literature, natural science, theology, philosophy, and medicine. We possess two treatises on algebra and geometry from his pen; ³ of seven other works on scientific and metaphysical subjects only the titles have been preserved. ⁴ Adopting astronomy as a profession, he was chosen in A.D. 1074 to take part in, and apparently to preside over, a commission of astronomers appointed by Nizāmū 'l-Mulk and Sultan Malikshāh for the purpose of reforming the calendar. ⁵ Their labours resulted in the institution of the Jalāli era, named after the honorary title (Jalālu'ddīn) of Sultan Malikshāh, and in the publication of the astronomical tables known as *Zij-i Malikshāhi*, which were edited by 'Umar Khayyām. ⁶ Like most mediæval astronomers, 'Umar practised astrology, and two of his predictions are recorded by Nizāmī 'Arūdī, ⁷ who observes that 'Umar had no great belief in such prognostications. During the period of disturbance following the death of Malikshāh (A.D. 1092) he seems to have left Nishāpūr. He was at Balkh in A.D. 1112-13, and at Merv two years later. ⁸ Possibly it was at this time that he made the pilgrimage to Mecca, 'not from piety but from motives of prudence, and, when he reached Baghdād on his homeward journey, refused to meet the learned scientists of that city who were eager to become acquainted with him.' ⁹

Besides a few Arabic poems, 'Umar wrote a number of Persian quatrains (*rubā'iyāt*). That he was regarded as a writer of occasional verse rather than as a poet appears from the fact that his name is not mentioned at all in the oldest extant work containing biographies of Persian poets, the *Lubābu 'l-ʿArab* of Aūfī (c. A.D. 1220),

and only incidentally by Daulatshāh (end of the 15th cent.); moreover, the author of the *Chahār Maqāla*, who treats of poetry and astrology in separate sections, places 'Umar among the astrologers and makes no reference to his poems. The most ancient MS, preserved in the Bodleian Library and dated A.D. 1461, contains 158 *rubā'īs*; a facsimile of this text has been published by E. Heron-Allen.¹ In later MSS and editions the number of quatrains is very much larger. The question as to their authenticity was first raised in 1897, when Valentin Schukovski published in Russian in *al-Muzaffariyē* (a *Festschrift* in honour of Baron Victor Rosen) his famous article entitled 'Umar Khayyām and the "Wandering" Quatrains.'² Here Schukovski shows that 82 quatrains ascribed to 'Umar are to be found in the works of other Persian poets. Since the publication of his article the number of 'wandering quatrains' has risen to 101, representing 46 different poets³—a total which would be enormously increased if the entire field of Persian poetry were explored in a systematic manner, and if account were taken of anonymous quatrains, either written as variations on those which already formed part of the collection or added to it for no better reason than that, 'Umar being specially and pre-eminently a quatrain-writer, it was natural to ascribe to him any favourite *rubā'ī* of which the authorship was unknown. Even in the oldest and presumably least adulterated MS the proportion of 'wandering quatrains' already discovered and assigned to their proper authors is about 12 per cent. Of the remainder many are likely to be genuine, but we have no means of identifying the original 'Umarian nucleus or determining its size. The whole collection must be viewed, not as the work of an individual, but as an anthology reflecting various aspects of Persian spiritual and intellectual life and covering a period of six centuries.

It follows that the character of 'Umar Khayyām cannot be read in the *Rubā'īyyāt* attributed to him, which give expression to diverse and often radically inconsistent modes of thought. Two notices, however, cited by Schukovski from writers of the 13th cent. throw some light on the matter.⁴ The first, by Ibnu'l-Qiftī (see reference above), describes 'Umar as a man who tried to conceal his want of religion and shrank from uttering his real opinions. Concerning his poetry, Ibnu'l-Qiftī remarks that it is widely circulated and reveals an irreligious spirit to those who look below the surface, although its literal sense is sometimes in accord with the teaching of the Sūfis.⁵ He then quotes four Arabic verses, of which the following is a translation:

'If my soul is content with a livelihood sufficient for my needs, which is gained by the labour of my hands and arms, I am safe from all changes and accidents, and care not whether Time threatens me or flatters my hopes. Have not the revolving heavens determined to reduce all happiness to misfortune?
Therefore, O my soul, abide patiently in thy sleeping-place: its towers will not topple down until its foundations have collapsed.'

Najmu'ddīn Dāya († A.D. 1256), author of a mystical treatise entitled *Mir'ādū'l-Ībād*, reckons 'Umar among those unhappy philosophers and materialists who have gone astray from the truth, and quotes two sceptical quatrains⁶ as evidence of his 'utter shamelessness and corruption.' This passage is important because it shows that an ardent Sūfi of the 13th cent. looked upon 'Umar

as an enemy to mysticism; and, inasmuch as the *rubā'īs* quoted are probably authentic, we cannot but agree with his judgment so far. The charge of materialism, when brought by Sūfis and theologians against scientists and philosophers, carries no weight: 'Umar is as unlikely to have been a materialist as he is likely to have been a free-thinker and pessimist. It should be noted, further, that the name Khayyām occurs in twelve quatrains, and constitutes at least a presumption in favour of their authenticity, and that these, together with the two quoted by Najmu'ddīn Dāya, exhibit the principal elements of the *Rubā'īyyāt*, viz. hedonism, philosophical contempt for the *profanum vulgus*, attacks on the orthodox, lamentations for the cruelty of fate, meditations on the incompatibility of a supreme intelligence with the sufferings of life and on the nothingness of man, hope of divine mercy, and a certain morality which recognizes the duty of doing good to others. 'But the Sūfi mysticism seems to be excluded, although the poet often makes use of Sūfistic terms.'⁷

Nicholson, *Intro.* to the ed. of Fitzgerald's version of the *Rubā'īyyāt*, do. 1909; J. B. Nicolas, *Les Quatrains de Khayyām*, Persian text and French tr., Paris, 1867.

REYNOLD A. NICHOLSON.

UNCLEAN.—See HOLINESS, TABU.

UNCTION (Christian).—As a religious rite, and apart from social usages, unction was taken by the Christian Church immediately from the Jews, though for some purposes it was borrowed by the Jews from other nations. In the OT unction was used in the 'consecration' of priests, kings, prophets, and places.²

1. In connexion with the complete rite of baptism.—This use of unction was almost universal from very early times up to the Reformation.

(a) *The New Testament*.—It is disputed whether the apostles used unction in the rite of Christian initiation. In 2 Co 1^{21f.}, 1 Jn 2^{20, 27}, all Christians are said to have been anointed. This is undoubtedly metaphorical, but it perhaps points to the actual use of oil in the apostolic age before or after baptism, at least in some places; as it was then certainly in use for other purposes,³ the metaphor would in that case be more apposite. On the other hand, in Acts, where two accounts are given,⁴ in which in addition to the baptism proper the laying on of hands is described, unction is not mentioned. Tertullian certainly thought that the apostles used it in connexion with baptism, for he traces it back to the 'primitive discipline' of the OT.⁵ It is possible that it was used in the apostolic age in some places, but not in others, and it is noticeable that laying on of hands and anointing are not for this purpose joined together in the NT, though they were both there used for other purposes.⁶ Or it is possible that the custom of anointing at baptism arose in sub-apostolic times, being due to a literal interpretation of the NT metaphor.⁷

(b) *The subsequent ages*.—After NT times or at least from the middle of the 2nd cent. onwards unction was used, sometimes preceding, sometimes following, immersion, or both before and after. But it is necessary to note that, originally and for many centuries, immersion and its complement, which in the West from the 5th cent. onwards has been known as 'confirmation,' were as a normal

rule a single rite; and it is immaterial to consider whether any particular anointing belongs to the one part or to the other.

We get no light on the subject in the scanty literature of the first three quarters of the 2nd cent.; but it is to be remarked that unction is not mentioned in the *Didache*, though it gives the words of baptizing into the threefold Name.¹ Towards the end of the century Tertullian tells us that unction was administered after the immersion, as a long-standing custom;² Irenæus says that the Gnostic Marcosians used it in the parody of Christian baptism;³ and early in the 3rd cent. Hippolytus says that the Naassenes (or Ophites) used it.⁴ Theophilus of Antioch also mentions unction as being the reason of the name 'Christian,'⁵ and thus implies his belief that the custom was apostolic.

Irenæus and Hippolytus, in the works mentioned, do not actually say that the Catholics used unction, though we may infer this from the fact that the Gnostics were clearly copyists in their baptismal rites; but the matter is now set at rest by the fact that the 'so-called Egyptian Church Order' in all its versions has unction, in this case before as well as after immersion (though the fragmentary Latin version, which appears to be the oldest, is wanting in the description of the rite before immersion). R. H. Connolly has shown that this Church Order, at least in the main, dates back to Hippolytus himself.⁶

Later in the 3rd cent. the custom of anointing at baptism is attested by Cyprian⁷ and Origen;⁸ but it was not used by the Novatians.⁹ There are frequent references to unction in connexion with baptism in the Church Orders and in the Fathers from the 4th cent. onwards; there was usually an anointing before immersion and either one or two anointings after: if two, then the presbyter administered the former, the bishop the latter. But a peculiar custom prevailed in the early Syrian Church. There we find only one anointing, and that before immersion, so that in this Church the 'confirmation' took place before the rite at the font, instead of after it, as everywhere else and as in the NT.

The evidence for this custom is now full and complete;¹⁰ it continued till the 5th or 6th century. Probably Severus (patriarch of Antioch, A.D. 512-518) introduced the post-baptismal unction among the West Syrians (Monophysites), and the catholicos Ishi'yahbh III. (A.D. 647-658) among the East Syrians (Nestorians). The only known exception is in a commentary ascribed to Ephraim,¹¹ where an unction after immersion is mentioned. But this work is probably not Ephraim's. These commentaries are a catena of notes on the OT, many by Jacob of Edessa, some headed 'Of Ephraim,' though the heading is often doubtful, and the extracts may be paraphrases rather than quotations. If at any point they are not in accord with attested sayings of Ephraim (as is the case here), we may safely conclude that they are not his.

The ordinary custom, then, from the time of Hippolytus, was to have an anointing before, and at least one after, immersion; in that case ordinary olive oil was generally used before immersion and chrism or unguent (*μύρον*) after, the latter being oil mixed with balsam, spices, etc. But there are several exceptions. In Theodoret¹² 'chrism of

μύρον' is used before immersion; in the Armenian and East Syrian rites oil is used throughout.

(c) *At the effeta*.—This was a ceremony in the West (called in Spain *effetatio*) which took place several days before baptism, and was named from the Aramaic *Ephphatha* ('Be opened'), the ears and nose being touched. For this ceremony oil was originally used, as we see in John the Roman Deacon's *Epistle to Senarius*¹ and in the works of Ildephonsus, bishop of Toledo.² Afterwards, as in the *Gelasian Sacramentary*³ and in later pontificals, saliva was used instead.

In several authorities, such as Ambrose,⁴ the *Bobbio Missal*,⁵ the *Stowe Missal*,⁶ Alcuin,⁷ and Amalarius of Metz,⁸ neither saliva nor oil is explicitly mentioned at the *effeta* itself; but in the *Gregorian Sacramentary*⁹ and the *Gelasian*, and often elsewhere, the *effeta* takes place just before the anointing of shoulders and breast. It is quite possible that this anointing may be the unction which takes place just before immersion, put into an earlier position.

(d) *In consecrating the font*.—In both East and West oil or chrism or both were often poured in the form of a cross into the water at the consecration of the font. This we find in Ildephonsus¹⁰ in Spain; at Rome in the *Ordo Romanus Septimus*;¹¹ in Gaul in the *Missale Gallicanum Vetus*,¹² also in the *Bobbio Missal*¹³ and the *Missale Gothicum*;¹⁴ and in most Western pontificals. It is also common in the East. It is mentioned in the writer who poses as Dionysius the Areopagite;¹⁵ and is found in the Greek rite of baptism,¹⁶ and the Armenian,¹⁷ the Coptic, West Syrian, Maronite, and (in some MSS) the East Syrian.¹⁸

(e) *During the catechumenate*.—There are a few traces of an earlier unction than that of the *effeta* mentioned above. Augustine, speaking of our Lord's anointing the blind man with the clay in Jn 9⁶, says that Jesus 'perhaps made him a catechumen.'¹⁹ This may refer to a custom of unction at the reception of candidates into the catechumenate. In Spain Isidore of Seville speaks of catechumens being anointed before they became 'competentes,' i.e. accepted candidates for baptism.²⁰ The Roman Synod held A.D. 402 speaks of their being anointed at the third scrutiny.²¹ But the phrase 'oil of catechumens' usually means the oil administered just before immersion, as opposed to the chrism administered after. In the later Western authorities three oils are distinguished: (1) 'holy oil,' to sign the 'heathen child' on the breast and between the shoulders before immersion;²² (2) 'holy chrism,' after immersion; (3) 'sick man's oil.'²³

(f) *Consecration of the chrism*.—In the West the chrism was ordinarily hallowed by the diocesan bishop, in the East by the patriarch, on Maundy

Thursday; so, in the West, in the *Gregorian*¹ and *Gelasian*² *Sacramentaries*. Leo the Great implies that the same custom existed in Egypt in the 5th century.³ Proterius, bishop of Alexandria, was murdered on that day, and Leo says that 'the hallowing of the chrism has failed.'⁴ But in the East Syrian and Malabar rite, where ordinary oil is used instead of chrism, it is consecrated by the presbyter at the time of baptism;⁵ a little of the 'holy oil' said to be descended from St. John is added.⁶ There were elsewhere some exceptions. At the first Council of Toledo (A. D. 400) permission was given to consecrate chrism at any time.⁶ In Gaul it was perhaps consecrated on Palm Sunday.⁷ Formerly the Armenians sometimes allowed diocesan bishops to consecrate the oil,⁸ but this is now confined to the catholics.

The rule that bishops alone may hallow the chrism is laid down in the West at the first Council of Toledo,⁹ by Pope Innocent I.,¹⁰ at the second¹¹ and third¹² Councils of Carthage, at that of Hippo,¹³ by Augustine,¹⁴ at the Council of Vaison in Gaul,¹⁵ and at the second Council of Seville,¹⁶ by Amalarius of Metz,¹⁷ and by Thomas Aquinas;¹⁸ also in Egypt, early in the 4th cent., by Didymus of Alexandria.¹⁹ But in time of persecution in 'Africa' presbyters were allowed to consecrate the chrism, as John the Deacon tells us.²⁰ In the West the oil, as opposed to the chrism, was ordinarily consecrated at the time of the service by the officiant, whoever he might be.

(g) *Meaning of the unction.*—Originally the anointing was considered to be the consecration of the Christian to the royal priesthood.²¹

So Tertullian compares the baptismal unction to the anointing of the Aaronic priests.²² The same idea is found in the 3rd cent. in the *Older Didascalia*;²³ and (emphatically) in the derived *Apostolic Constitutions*.²⁴ Jerome, apparently alluding to unction, and using the word 'baptism' in its widest sense, says that 'the priesthood of the laymen is baptism.'²⁵ The idea of consecration to the priesthood is also found in Augustine,²⁶ Ambrose,²⁷ John the Deacon,²⁸ Isidore of Seville,²⁹ Alcuin,³⁰ and his disciple Rabanus Maurus,³¹ and became a commonplace. The consecration was specially connected, by John the Deacon, Alcuin, and many others, with the anointing of the head immediately after immersion.

A special significance was attached to the post-baptismal unction³² in places where the laying on of the hand was dying out, or was less emphasized, and even in Egypt, where that ceremony was long retained. The gift of the Spirit, elsewhere associated with the imposition of the hand, was then ascribed to the unction.

This is the case with Sarapion of Thmuis in Egypt,³³ Ambrose (probably),³⁴ and even Pope Innocent I.³⁵ The North Italian author of the *de Sacramentis* says that at the signing (with chrism) the bishop (*sacerdos*) invokes the Holy Ghost in His sevenfold gifts.³⁶ Even Augustine³⁷ and Pacian of Barcelona³⁸ speak in the same sense. In the East, where the imposition of the hand in confirmation died out early, we should expect the same thing; and Cyril of Jerusalem³⁹ says that the object of the *μύρον* is to convey the Holy Ghost. Narsai (an East

Syrian) apparently calls the unction 'the drug of the Spirit,' and certainly says that the Spirit is given by it.⁴⁰

In the developed Eastern rites we sometimes find the association of the gift of the Spirit with the chrismation; explicitly in the Coptic rite in the prayer at the unction after immersion,² and in the Ethiopic.³ Other Eastern rites are confused on this point, but, as immersion and confirmation are never separated in them, they are not particularly careful to ascribe a special significance to one or other part of the service.

(h) *Unction at the reception of heretics.*—This is in reality part of the question which we are now considering. For, as all agreed that the Holy Spirit could not be given outside the Church, even in the great controversy between Cyprian and Pope Stephen as to heretical baptism in the 3rd cent., the ceremony used when heretics were converted and admitted to the Church had normally as its object the reception of the Holy Ghost. It was the custom in the West and in 'Africa,' and originally (it seems) in at least some parts of the East, to receive heretics by the imposition of the hand. But in places where the latter ceremony was less emphasized they were received by unction.

This was the case in Didymus of Alexandria,⁴¹ at the councils of Orange on the Rhone⁴² and of Epau in Burgundy,⁴³ and at the Trullan Council of Constantinople.⁴⁴ Basil also directs the reception of heretics by unction,⁴⁵ and Gregory the Great says that this was the custom in the East.⁴⁶ Theodoret says that the Novatians were anointed on reception, because they did not use unction in baptism.⁴⁷

2. *Unction of the sick.*—The early history of this subject has too often been considered, by writers of all schools of thought, merely from the point of view of post-Reformation controversies. It is more profitable to put these, in the first instance, on one side, and to deal with the purely historical question of the use by the Early Church of unction for sick people, whatever was the purpose of such unction. In the opinion of the present writer, it will be found that the evidence for unction of the sick is very much the same, as regards time, as that for unction in connexion with baptism, the only difference being that, while for the latter the evidence of the 2nd cent. is stronger than that of the 1st, for the former the case is reversed, and the evidence for unction of the sick, which is strong in the apostolic age, is less so in the age which followed it. It will be found, it is believed, that the commonly expressed opinion on this subject will have to be reconsidered.⁴⁸

(a) *The New Testament.*—Unction of the sick is mentioned as having been used during our Lord's ministry: in Mk 6¹³ the Twelve 'anointed with oil many that were sick, and healed them.' In the subsequent period it is commended by St. James;¹² the sick man is to call for 'the presbyters of the church,' who are to pray over him, 'having anointed him with oil in the name of the Lord,' and this 'prayer of faith' is both for bodily healing and for forgiveness of sins. We read also of our Lord anointing with saliva¹³ in performing cures; and of the figurative anointing of the eyes with eye-salve in the Apocalypse.¹⁴ The 'oil and wine' used by the Good Samaritan had no religious significance,¹⁵ though they have received a spiritual interpretation. The passage in St. James is referred to by Origen¹⁶ and Chrysostom.¹⁷ The

latter implies that the unction of the sick was still practised in his day: he is speaking of the power of the priest to forgive sins.

(b) *2nd and 3rd centuries.*—The first known reference to the unction of the sick after St. James applies to the reign of the emperor Septimius Severus (A.D. 193–211), or more probably to a time before his accession. Tertullian says¹ that the Christian Proculus Torpacian had once (*aliquando*) healed 'Severus, the father of Antoninus' [Caracalla] by anointing. If unction was used for the healing of a sick heathen, *a fortiori* it would be used for Christians. It might be held that this was a purely medical use of unction. But any possible doubt on this head has been taken away by the investigations of R. H. Connolly with regard to the *Egyptian Church Order* (already referred to).²

In the Latin as well as in the Ethiopic version of this Church Order there is a form given for the blessing of the oil for the sick, offered apparently by the laity.³ This form we may with confidence assign, with the great bulk of this work, to Hippolytus of Portus, and therefore we have evidence of unction of the sick at Rome early in the 3rd century. The form states that the unction is for the healing of the body, but nothing is said of spiritual blessing. This new evidence shows that we must correct the statement of the committee of the Lambeth Conference of 1908, that 'there is no clear proof of the use of unction for the sick in the Christian Church until the fourth century'⁴—a statement which has been frequently repeated.

(c) *From the 4th cent. onwards.*—In the 4th cent. we have a series of Church Orders which show that unction of the sick was a common practice. In the *Testament of Our Lord*⁵ a form is given for blessing oil and water for healing; this prayer is independent of the Hippolytean form, and much fuller; it incidentally refers to spiritual benefits. The oil would be for application, the water for drinking. The *Apostolic Constitutions* give a form⁶ for consecrating oil and water by the bishop, or in his absence by the presbyter; this refers to healing, but incidentally also to demons and other spiritual ills. This form is not found in the epitome (of the eighth book of *Apost. Const.*) known as the *Constitutions through Hippolytus*.⁷ In the *Canons of Hippolytus*⁸ oil for the sick and firstfruits are blessed; no form is given, but 'Gloria Patri' is added. In the *Sacramentary of Sarapion*⁹ oil and bread and water for the sick are blessed, doubtless by the bishop, as the book contains only the portions of the services said by him.

The form contains the words 'Let every Satanic energy . . . depart from . . . these thy servants,' and it has been suggested that this shows that the oil was consecrated at the time of use.¹⁰ Elsewhere in this work there occurs, after the anaphora, a 'prayer concerning the oils and waters that are offered' (by the laity). In both these prayers bodily healing is primarily asked for, then spiritual blessings, and protection against demons and the like. A form for consecrating oil for the sick is found also in G. Horner's *Statutes of the Apostles*.¹¹

In the above works the people seem to have brought the oil (and water and bread) for the sick to be blessed by the bishop or presbyter, and then to have applied it themselves, in spite of Ja 5¹⁴. At the same time they also brought firstfruits to be blessed.

We have a good deal of other evidence of the use of unction for the sick, the earliest referring to Egypt.

¹⁰ J. Wordsworth, *Bishop Sarapion's Prayer Book*, London, 1899, p. 77n.

¹¹ London, 1904, pp. 162–178. This is in a long interpolation, and the date is not certain.

Palladius, bishop of Helenopolis, in his *Historia Lausiaca*, describes how the monks of that country in the 4th cent. used oil for the sick—Benjamin of Nitria,¹ Macarius of Alexandria,² and John of Lycopolis.³ The first of these monks healed the sick by touch of the hand or by oil consecrated by himself. Sozomen also tells us how the monks of Egypt in that century anointed a paralytic with oil and healed him;⁴ and Rufinus makes a similar statement.⁵ On the other hand, Athanasius mentions only imposition of the hand in healing the sick; the Catholics would not allow an Arian to lay a hand on a sick man's head.⁶ Thus unction and laying on of the hand were alternatives, and we see the same thing in the NT: Mk 5²³ 6⁵ 7³² 8²³. 25 [Mk] 16¹⁸, Mt 9¹⁸, Lk 4⁴⁰ 13¹², Ac 9¹². 17 28⁸—all of our Lord and the disciples.

In the 4th cent. Chrysostom says that the sick were healed with oil from the church lamp,⁷ and this was afterwards a common practice.⁸

In the 5th cent. Pope Innocent I., asked if the sick might be anointed with chrism (*sanctum oleum chrismatis*), and if bishops might anoint, answers in the affirmative; the oil blessed by the bishop may be applied by any Christian if necessary, but it cannot be applied to penitents, because it is of the nature of a sacrament.⁹

Some eighty or more years later Casarius, bishop of Arles († 542), says in one of his sermons: 'Whenever any sickness comes, let the sick man receive the body and blood of Christ and then anoint his body,' and the promise made by St. James will be fulfilled.¹⁰ And in another sermon he says that it is better than magic uses to go to the Church and receive the body and blood of Christ, and faithfully and copiously to anoint (*perunguerent*) oneself and one's own with blessed oil, and to receive not only healing of the body, but also remission of sins, as James the apostle says.¹¹

Here then, in the beginning of the 6th cent., it is contemplated that the sick man should ordinarily anoint himself, though the oil has previously been consecrated.

From the 6th cent. onwards we read of the 'oil of the cross' in healing. This was oil touched by a relic of the true cross, and was considered to be especially efficacious.¹²

Among the Easterns we find the use of oil for the sick to be almost universal.

(d) *Armenians* in practice anoint only sick priests, not deacons or lay people.

The *Instruction in the Christian Faith*, by Chosrov, says that the unction is for the healing of the body and the forgiveness of lighter sins; the apostles sometimes laid hands on the sick, and sometimes anointed; unction is not essential, but prayer is, and, if necessary, this sacrament may be administered without the anointing of oil.¹³

The earliest mention among the Armenians of unction as a preparation for death is c. A.D. 800; and no rite for the anointing of the sick is found in any ancient euchologion or *mashtotz*.¹⁴ The old Armenian office for the visitation of the sick consists of prayers and communion.¹⁵ Denzinger mentions an Armenian custom of anointing the faithful (not only the sick) on Maundy Thursday with butter (not oil), blessed by the bishop.¹⁶

(e) *East Syrians (Nestorians).*—In the *Takhsā*, or Missal, it is directed that the holy oil of baptism is not to be used for consecrating churches or for anointing the sick;¹⁷ for unction of the sick

¹⁷ Syriac text (Urmi, 1890), p. 147. This part has not been translated into English.

a single collect is appointed, and is to be said by the priest when he blesses the oil.¹ In this Church *hnānā* (lit. 'mercy'), dust from the tombs of the martyrs, is mixed with oil and water and applied to the sick person.² In the ordination of presbyters prayer is offered that 'they may lay their hands on the sick and they may be healed.'³

(f) *The Copts* have an office of the 'holy oil' which they call 'the lamp' (*ḥavāb*);⁴ imposition of hands is included in it, and seven presbyters officiate. The Greek Orthodox also have a direction to anoint the sick with 'the holy oil from the lamp.'⁵

(g) *The West Syrians (Jacobites)* also have an office for blessing 'the oil of catechumens, which is also the oil of the sick.'⁶

(h) *The Orthodox*.—Here seven priests, if they can be had, administer the oil. The Russian *Longer Catechism* says⁷ that unction with oil is a sacrament, in which, while the body is anointed with oil, God's grace is invoked on the sick to heal him of spiritual and bodily infirmities; and it then quotes Mk 6¹⁸, Ja 5¹⁴.

(i) *Unction of the sick in England*.—Theodore, archbishop of Canterbury, in his *Capitulare* (A.D. 680), says that Greeks allowed presbyters, if necessary, to make the exorcized oil and chrism for the sick, but Romans confined the consecration of it to the bishop.⁸ The *Excerptions* of Egbert, archbishop of York (A.D. 732-766),⁹ say that the sick are to be anointed with oil hallowed by bishops (*sacerdotibus*), and that the presbyter is to have the eucharist always ready, that the sick may not die without communion.¹⁰ King Edgar's *Canons* (A.D. 960) order every priest to have unction for the sick.¹¹

Ælfric's¹² *Canons* (c. A.D. 1000) direct the priest to 'have hallowed oil apart for children [i.e. for confirmation], and apart for sick men, and always to anoint the sick in bed. Some sick men are fearful, so that they will not consent to be anointed' [they feared that unction would kill them]. If a man is anointed and recovers, and then once more falls sick, he can again receive unction; it is not an ordination, but in it is healing and forgiveness.¹³

The form of blessing the oil is given in the *Pontifical of Egbert*, archbishop of York.

It prays that it may be to every one who touches it for protection of mind and body, for the driving away of all pains and all infirmities, and every sickness of body; and refers to the anointing of priests, kings, prophets, and martyrs.¹⁴ The form in the present *Roman Pontifical* is nearly the same.

In the later instances we see the restriction of the administration of the oil to a priest. This led to the practice of extreme unction, and then unction was made to precede the last communion. The anointing of the sick was retained in the First Prayer-Book of Edward VI. (1549), and was on the forehead, and explicitly for the healing of both soul and body. It was omitted in the Second Prayer-Book (1552), but restored by the Non-jurors.

3. Extreme unction.—When the anointing of

VOL. XII.—33

the sick came to be looked upon principally as a preparation for death, it received this name, which properly means 'the last of the unctions' but was popularly understood to mean unction administered to those in *extremis*; it was no longer, unless in exceptional cases, for the healing of the body, but was for spiritual benefit only. The name is not found before the end of the 12th cent.; it appears first in Peter Lombard;¹ after that it became common. But the idea itself is found in the 10th cent., in Ælfric.²

We find frequent directions on the subject in the Middle Ages. The Synod of Exeter under Bishop Quivil (held in 1267) says that extreme unction is for the healing of the body and for forgiveness of sins; it is not the least venerable of the sacraments, and no money is to be exacted for it; the clergy are not to absent themselves from their parishes except of necessity, lest any die without confession, viaticum, and extreme unction; some ignorant persons refuse to receive this last-mentioned rite, and the clergy are to preach about it.³ The Synod of Worcester under Bishop Woodloke (held c. 1308) has the same directions, except about the money.⁴ And in Scotland we find similar rules in the 13th century. Every sick person over 14 years of age in danger of death should receive extreme unction, and no fee is to be charged. It may be repeated if necessary, and no restriction is laid down on this point.⁵

Aquinas deals at length with extreme unction in the supplement to his *Summa Theologica*, written between 1265 and 1271. He says⁶ that it is a sacrament because it avails for the remission of sins, whereas the oil of catechumens [administered before baptism] does not do so. This sacrament was instituted by Christ Himself, though He promulgated it through the apostles; some, however, think that He left it to the apostles to institute.⁷ Olive oil is the convenient 'matter,' as in Ja 5¹⁴, and it is to be first consecrated by the bishop, as in all other unctions.⁸ Extreme unction must have a 'form,' as all other sacraments of the new law have; this form is a prayer, as in St. James, but the intention of the minister is expressed in the words 'By this holy unction,' etc.⁹ Aquinas proceeds to deal with the theological significance of the rite. It avails for the remission of sins, as St. James says, and also for the healing of the body, just as immersion in baptism cleanses the soul through the cleansing of the body.¹⁰ It does not impress 'character,' like ordination or confirmation, seeing that it may be repeated.¹¹ Aquinas then deals with the minister of extreme unction. It cannot be conferred by a layman, like baptism, as it is not so necessary, nor yet by deacons, for St. James speaks of 'presbyters'; but the administration is not confined to bishops alone.¹² With regard to the recipients of extreme unction, Aquinas remarks that it is not for those who are in health, nor for all the sick, but only for those who are near death. It is the last remedy which the Church can confer. It is not for madmen, unless in lucid intervals, nor for young children, as it is a remedy for actual sin, not for the relics of original sin, unless indeed these are strengthened in some way by actual sin. Only certain portions of the body, not the whole, are to be anointed, the mutilated being anointed on that part which is nearest to the lost limb.¹³ Further, extreme unction can be repeated without injury, but not in the same illness.¹⁴ Elsewhere Aquinas says that by it men are prepared for worthy communion [i.e. the viaticum]; it is inferior to baptism and the eucharist, and is not of necessity, but is for progress in the Christian life.¹⁵

Maskell¹⁶ gives the rite of extreme unction from the *Sarum Manual* (his copy is dated 1543):

After a prayer referring to Ja 5¹⁴, and asking for restoration to health ('saluti pristinæ restituere'), the priest anoints the eyes, ears, lips, nostrils, hands (the laity on the palms, the priests on the outside, as they had already been anointed on the palms at ordination),¹⁷ the feet, and the back, or in the case

of a female the front. At each anointing he prays for forgiveness in these words: 'By this unction and His most tender mercy, may the Lord forgive thee whatsoever thou hast done amiss through sight' (hearing, etc.). A psalm is said between each anointing, and after the unctions a blessing is given, referring to purification of mind and body. Then follows a prayer which has special reference to the sick man's approaching death, but this is not in the Bangor MS quoted in Maskell's note, and seems to be later than the rest. The sick man is then communicated if he is capable of retaining what he swallows; otherwise he is assured that spiritual communion suffices, and the well-known words are quoted: 'Tantum crede et manducasti.'¹ In the *Pontifical of Magdalen College*, probably of Hereford or Canterbury and of the 12th cent., the first prayer mentioned above ends differently; here there is only one unction, in which the references to the various senses are combined.² In this *Pontifical* two different prayers follow the blessing, referring to the forgiveness of sins.

Only one priest is mentioned in the *Sarum Manual* as administering unction, but Walter Raynold, archbishop of Canterbury (1313-37), speaks of *sacerdotes* in the plural; and W. Lyndwood glosses this by saying 'two at least, except in case of necessity.'³ Raynold says that all over fourteen years of age should receive extreme unction;⁴ and also that it can be repeated only if a year has elapsed.⁵

The oil was consecrated on Maundy Thursday;⁶ and this was the case also at Rome.⁷ By a constitution of J. Peckham, archbishop of Canterbury (1278-94), any unused oil was burnt.⁸

The Council of Trent says that extreme unction was instituted by our Lord as a sacrament of the NT, outlined (*insinuatim*) by St. Mark, and commended to the faithful and promulgated by St. James. The 'matter' is oil blessed by a bishop, for the unction represents the grace of the Holy Spirit, and the 'form' is 'By this unction,' etc.⁹ The effect is primarily forgiveness and strengthening of the soul, and occasionally restoration of bodily health; the ministers are bishops and presbyters. Extreme unction is to be used for those who appear to be dying; if they recover and then again fall ill, it may be repeated.¹⁰ See also art. EXTREME UNCTION.¹¹

4. **Unction at ordination.**—The idea of anointing at ordination is consecration to God and endowment with His gifts. The custom is derived from the OT, where kings, high priests, priests, and prophets are anointed.

In Ex 297, Lv 8¹², Moses anoints Aaron, whose anointing is also mentioned in Ps 133², Sir 45¹⁶. In Ex 28⁴¹ 29²¹ 30³⁰, Lv 8³⁰ 10⁷, Aaron's sons are anointed as priests; in Lv 21¹⁰, Nu 35²⁵, high priests in general receive unction. In 1 K 19^{15f}, Hazael, Jehu, and Elisha are anointed. The unction of prophets in Ps 105¹⁶, Is 61¹, is perhaps metaphorical. The anointing was with olive oil and spices in Ex 30^{23f}.

The same conception is found in the name 'the Christ,' 'the Messiah' ('the Anointed One'), as in Lk 4¹⁸, which quotes Is 61¹, in Ac 4²⁶, which quotes Ps 2², in Ac 10³⁸, and in He 1⁹, which quotes Ps 45⁷; cf. also Dn 9²⁴.

But, while in Eastern ordinals we frequently read of anointing in a metaphorical sense, the actual unction at ordination was confined to the West.

¹ 'Only believe, and thou hast eaten.' The saying is from Augustine, in *Johann.* tract. xxv. 12 (on Jn 6^{23f}), 'crede et manducasti'; but he is not speaking specially of spiritual communion.

¹¹ The subject of unction of the sick is treated very fully by F. W. Puller (*The Anointing of the Sick*, London, 1904), but the present writer had not the advantage of having seen that book before compiling this article. Puller gives at length the evidence of which only an outline is here attempted. He is especially concerned to refute the later teaching about Extreme Unction and to advocate what he argues to be a more primitive use. His argument is greatly strengthened by R. H. Connolly's investigations as to the 'so-called Egyptian Church Order'; see § 1 (c) above.

(a) At the consecration—or, as it was originally called, the ordination—of a bishop unction is not so ancient as the laying on of the hand, or as the custom of putting the book of the gospels on the elect's head. But it is found at Rome in the 5th century.

Leo the Great says: 'Now there is a nobler rank of Levites [deacons], there are elders [presbyters] of greater dignity, and priests [bishops] of holier anointing [sacrorum est unctio sacerdotum]'.¹ Elsewhere he says that 'it is not the prerogative of earthly origin which obtains the unction, but the condescension of divine grace which creates the bishop,'² and that 'the unction of the Holy Spirit consecrates priests.'³ It is just possible, but not likely, that the unction here is only metaphorical.

In the 6th cent. Gregory the Great refers to this unction of the bishop;⁴ and it is found also in Gaul, but not in 'Africa,' and perhaps not in Spain.⁵ In *Egbert's Pontifical*, of the 8th cent., both head and hands were anointed;⁶ and this was the case at Rome also.⁷ In England the bishop's head was twice anointed, first with chrism mixed with oil, then (just before the unction of the hands) with chrism only; on each occasion was said:

'May thy head be anointed and hallowed with celestial blessing in the pontifical order, through the unction of holy chrism and oil and our blessing, in the name of the Father and of the Son and of the Holy Ghost, Amen.'⁸

(b) Unction at the ordination of a presbyter was not the custom of the earlier Roman Church, as Pope Nicholas I. explicitly states in 864.⁹ It is not in the *Leonine Sacramentary* nor in some MSS of the *Gregorian*;¹⁰ but it became general in the West after the 9th cent., and was introduced at Rome. Amalarius of Metz († 837) says that in Gaul the presbyter's hands were anointed at ordination by the bishop.¹¹ In *Egbert's Pontifical* the presbyter's head was also anointed,¹² but this seems soon to have been dropped.

(c) Unction of the hands at the ordination of deacons seems to have been a peculiarity of the Celtic and Anglo-Saxon rites; it is mentioned in Gildas's *Epistle*¹³ (c. A.D. 560) and in *Egbert's Pontifical*.¹⁴

In all these cases the unction of the hands was on the palms.¹⁵

5. **Unction at the coronation of kings.**—The idea of this unction was the same as that of the unction at ordination. It is taken from the OT.

In 1 S 9¹⁶ 10¹ 16¹³ Samuel anoints Saul and David; in 2 S 2⁴ men of Judah anoint David (so metaphorically Ps 89²⁰); in 1 K 13⁴ 39 Zadok and Nathan anoint Solomon, Zadok applying the oil; in 1 K 19^{15f} Elijah anoints Hazael and Jehu; in 2 K 11² 'they made [Joash] king and anointed him.' Hence comes the phrase 'the Lord's Anointed' in 1 S 16⁶ and elsewhere, also in La 4²⁰, and even of Cyrus in Is 45¹; and in Jotham's parable, Jg 9⁸, the trees 'anoint a king over them.'

This unction is first mentioned as a Christian custom in the Acts of the sixth Council of Toledo¹⁶ (A.D. 638). The Visigoth kings in Spain were anointed at their inauguration. We read of unction at that of King Wamba in 672.¹⁷ And in

Woolley, *Coronation Rites*, Cambridge, 1915. The 'cornu illud de quo reges ungebantur' of the *Pilgrimage of 'Etheria'* ('Silvia') refers, not to Christian practice, but to a supposed relic of OT times (Duchesne, *Christian Worship*³, p. 510).

¹⁷ Woolley, pp. 33, 120.

France Pippin, father of Charlemagne, was anointed in 750.¹ But in these cases there is no mention of crowning, and the anointing was the central feature of the rite.² On the other hand, the emperors who were crowned for many centuries at Constantinople—for no emperor was crowned at Rome before Charlemagne—appear not to have been anointed before the 9th cent. (when Basil the Macedonian [867-886] is thought to have received unction),³ or, as some believe, not before the 12th or 13th cent.;⁴ in the latter case the earlier references are metaphorical only. In the Greek rite of coronation as fully developed, and hence in the Russian rite which is derived from it, unction is a prominent feature.⁵ It is uncertain if Charlemagne was anointed as *Roman emperor*.⁶ It will thus be seen that unction at the inauguration of kings is earlier than at that of emperors. Both England and France claimed to have a miraculous chrism sent down from heaven for the purpose.⁷

The Abyssinians have the custom of unction at the coronation of the Negus; it is probable that this is not derived from European practice, but is directly deduced from Holy Scripture.⁸

The coronation service for an English king found in *Egbert's Pontifical* is the most ancient of those extant; it is printed by Martène⁹ and Maskell,¹⁰ and the latter gives in his notes a collation of the same service in the *Leofric Missal*. In Egbert the king is anointed once only, on the head, one of the bishops ('unus ex pontificibus') saying the prayer, and the others anointing him. There is here no coronation of a queen-consort, though we find one later (with unction), in the 10th century.¹¹ There was more than one recension of Egbert's office; that called the *Liber Regalis*, which probably dates from the time of Edward II., remained almost unchanged till the coronation of James II.¹² In the service in the *Sarum Pontifical* given by Maskell¹³ the king's hands, head, breast, shoulder-blades, and elbows ('ambae compages brachiorum') are anointed.¹⁴ The custom of anointing has been retained in England ever since the Reformation, at the coronation of a king, of a queen-regnant, and of a queen-consort. Notices of unction at the coronation of James I. and his queen, of Charles I., Charles II., James II., William and Mary, and Victoria may be found in *Hierurgia Anglicana*.¹⁵ At the coronation of George V. the king was anointed thrice in the form of a cross (four Knights of the Garter holding over him a rich pall of silk or cloth of gold): first on the crown of the head, then on the breast, then on the palms of both hands.¹⁶ Charles I. was anointed first on the palms of the hands, then (after a prayer) on the breast, then between the shoulders, then 'on the boughs of both arms,' then on the crown of the head;¹⁷ this followed the more ancient custom. The English coronation rite is the only remaining office in Christendom where the full rites of the anointing and all the details of solemn investiture are still extant.¹⁸ The chrism was, before the coronation, consecrated by the Dean of Westminster if a bishop, otherwise by the Archbishop of Canterbury; but in the case of William

and Mary the oil was blessed in the coronation service itself; this addition to the latter was dropped from the time of Anne.¹

In France Napoleon I. was anointed on head and hands at his coronation; and his consort Josephine likewise.²

In Scotland unction was first allowed at a king's inauguration in 1329.³ After the Reformation there were four Scottish coronations: James VI. was crowned in 1567, when one year old; his consort, Anne of Denmark, was crowned in 1590; Charles I. was crowned as King of Scotland in 1633, Charles II. in 1651; at the first three coronations unction was used, but not at the last.⁴

On the continent of Europe we find anointing retained at coronations in the reformed rite at Prague in 1619, in Prussia in 1701, in Denmark from 1559 to 1840, in Sweden from 1675 till our own day, and in Norway in modern times.⁵

6. Uction at the consecration of churches, etc.—This also is taken from the OT.

Jacob anointed the stone in Gn 28¹⁸, and S. R. Driver remarks that this was a very common idea among primitive peoples.⁶ The tabernacle was anointed in Ex 30²⁶ 40⁹, Lv 8¹⁰, Nu 7¹. In Is 57⁶ we read of the pouring of a drink-offering to the 'smooth stones of the valley.'

From an early date churches and altars were consecrated with chrism.

We read of this in Gaul at the councils of Agde or Agatha⁷ and Epaon,⁸ in the *Canons* of Egbert of York,⁹ in his *Pontifical*,¹⁰ in Isidore of Seville,¹¹ Rabanus Maurus († A.D. 815), the disciple of Alcuin,¹² and Walafrid Strabo († A.D. 849).¹³ In the *Sarum Pontifical*¹⁴ twelve places in the church and the altar are anointed with chrism; holy water is also used. But neither oil nor chrism was used in reconciling a desecrated church.¹⁵

We find the same custom in the East. In pseudo-Dionysius the Areopagite (c. A.D. 500?) the altar is consecrated with unguent (μύρω).¹⁶ The West Syrians (Jacobites) use chrism in consecrating altars,¹⁷ as also do the Greeks.¹⁸ From the 8th cent. we read of the Armenians consecrating churches with unguent,¹⁹ even in the case of the rededication of a desecrated church.²⁰ Among the East Syrians (Nestorians) the consecration of a church is called *syāmidhā* ('laying on of the hand') and is of two kinds, with and without oil; the former is for new or rebuilt churches, or for rededicating a church which has been desecrated owing to some very grave cause, and must be performed by a bishop; the latter is intended for use after minor accidents or breaches of the ecclesiastical law, and may be performed by priests commissioned by the bishop. In the former each wall and the altar and the outer lintel of the sanctuary door towards the nave are signed with the oil in the form of a cross.²¹

In the *Sarum Manual* of 1543 bells also are dedicated with oil and chrism,²² and, at a much earlier date, in *Egbert's Pontifical*.²³ Similarly the Armenians dedicate with chrism the semantron—a wooden board struck by a mallet, and much used by Eastern Christians to call the people to church.²⁴ The Armenians also solemnly dedicate a cross, even for private use, with unguent.²⁵ In *Dunstan's Pontifical* the chalice is anointed when it is dedicated.²⁶

In England the Caroline divines used oil in consecrating churches. The Puritans objected that 'they shew us that the church, by the bishop's anointing some stones thereof with oil, and sprinkling others with water, and using from the Roman pontifical some more prayers, some more ceremonies upon it, becomes a ground more holy.'¹

7. **Unction of a dead body.**—From the first the Christians prepared the body for burial either by embalming or with spices and unguents (*μύρα*);² this was in contrast to the Roman custom of cremation. References to the Christian usages in this respect are found in Tertullian,³ Clement of Alexandria,⁴ Minucius Felix⁵ (early 3rd cent.?), and in the *Acta* of Tarachus, a martyr in the Diocletian persecution (A.D. 304).⁶

As an ecclesiastical act we find it, in the East, in pseudo-Dionysius the Areopagite; the hierarch [bishop] and the rest salute the dead body, and the hierarch pours oil on the departed, just as before baptism the candidates are anointed with the oil of the sacred chrism.⁷ In Goar's *Euchologion* we read of a corpse being anointed just before burial with oil from church lamps, or of a cinder from the thurible being placed on it.⁸ This custom is also found in the books of the East Syrians (Nestorians) and of the Armenians, where clergy anoint the departed, the Armenians calling it a sacrament;⁹ but in practice, while in the case of a departed dignitary the East Syrians retain the solemn final kiss of peace, they do not appear to use unction.¹⁰ The office used by the Armenians for the purpose may be seen in Denzinger.¹¹ In the West, Theodore, archbishop of Canterbury, says that dead monks were carried to church and anointed on the breast with chrism before the mass.¹²

LITERATURE.—This is given in the footnotes.

A. J. MACLEAN.

UNDER WORLD.—I. Origin of the belief.—

The wide-spread conception of an under world in religion and myth is generally, though not invariably, associated with the dead. An under world of the dead is not the only conception of their dwelling-place: spirits may lurk about the place of burial or linger among the abodes of the living; they may dwell in distant regions or islands, or they may ascend to a place in the sky. These conceptions may be held simultaneously, especially where differences of rank or ideas of retribution suggest separate places for different classes of souls. They are also connected, especially in the lower culture, with the idea that man has several souls which after death separate and abide in different localities. They may also result from the mingling of different tribal or racial beliefs.¹³ We do not know what ideas the earliest men had regarding the dead, or how soon the belief in a spirit or soul, apart from the body, was entertained. But, while it must have been obvious that death had brought about some difference between the dead and the living, it is doubtful if the dead were ever regarded as absolutely extinct and cut off from all life and action. The wide-spread and early custom of burial, the practice of placing articles by the corpse, and the feeding of the dead at the grave, all suggest the contrary. It is not improbable, therefore, that the dead man was re-

garded as passing some kind of existence in the grave. The grave was his house, and it was this idea perhaps that led to the custom of making very elaborate tombs for the dead, of which the chambered barrow forms an example. That the dead lived on in the grave, while their return among the living was feared, is also suggested by the belief that they could come from it in the body—in which we find the root of the vampire belief¹—and by the customs of heaping a mound of earth or placing heavy stones on the grave, and binding the dead with cords.² Many folk-traditions represent the dead as coming in the body from the grave,³ and the idea of their still living in the grave or barrow is seen clearly in early Scandinavian tradition. Thus the grave was in itself a small under world. This was more emphasized where several persons were buried in one tumulus or grave, or where the separate graves of members of one family or clan lay side by side. The grave or graves as a subterranean dwelling-place easily passed over into the conception of a hollow region under the earth, an under world where the dead lived. At whatever time the conception of the soul, spirit, or shade arose, it did not alter this belief. The spirit might come and go from the grave or inhabit with other shades the larger under world.

The formation of a belief in an under world was also aided by observed phenomena. The sun seemed to rise out of the earth or sea in the east and to sink into these again in the west. What then more natural than to suppose that during the night it passed through some underground region, to emerge again in the morning? This under world (sometimes thought of as beneath the sea into which the sun seems to sink) through which the sun passed was then associated with the abode of the dead, and in many descriptions of the latter we are expressly told that, when it is night here, it is day there, and *vice versa*. Hence, too, the entrance to the abode of the dead is not always near at hand, but far off, usually towards the sunset, and their dwelling-place is reached only after a long and perilous journey.

Yet for many races the under world was not visited by the sun. Being under the earth, it was a dark and gloomy place, and this was accentuated by the fact that those who inhabited it were shades or shadows. Here, too, we may see another conception leading to the idea of another world. The eyes of the dead were closed; they were in darkness. Their shades were faint replicas of living beings, seen only in dreams and darkness. Where could such have their abode? The grave was a dark, hollow place, and men knew also that caves leading into the interior of earth grew darker as the entrance was farther left behind. There must then be a dark, hollow place within the earth, fit abode for those now shut off from light.

Thus the under world may be a shadowy, undesirable place, or, again, it may be a reflexion of the upper world, now light, now dark, as the sun visits or leaves it.

2. **The under world in ancient religions.**—It is surprising that cultured races in the past hardly abandoned the belief in a gloomy under world. The Babylonians called this region Aralu, and it was conceived as a vast underground dwelling, as 'the land without return,' the dark abode of all the shades of the dead, with its entrance in the west, the region of sunset. The sombre goddess Eresh-Kigal and the terrible god Nergal ruled over it. Seven walls, pierced by as many gates,

¹³ On these varying conceptions see art. BLEST, ABODE OF THE; STATE OF THE DEAD.

surrounded this place of terror, where 'dust lay thick on door and bolt,' where the shades dwelt with dust for their food, in darkness and gloom, among terrible evil spirits and demons. All these ideas are vividly set forth in the story of the descent of Istar to Hades. How far other conceptions of a better region or of retribution were held by the Babylonians need not be discussed here. Gloomy as was the fate of the dead in Aralu, there was a worse fate, viz. where burial rites had not been performed and the spirit had to wander, consumed by gnawing hunger and feeding on offal.¹

The older Hebrew conception was not dissimilar, and the strong desire to be buried in the family grave or by the side of relatives suggests that Sheol or Hades, like the under world elsewhere, was 'originally conceived as a combination of the graves of the clan or nation.'² The shades (*réphāim*) dwelt in the under world, outside the rule of Jahweh, distinguished from each other according to their state on earth, but in a region of darkness, dust, and silence. The state of the shades in Sheol is seen from such passages as Ps 115¹⁷, Job 7⁹ 10^{21f.}, Is 14^{9f.}, Ezk 32^{17f.}. While the later belief was generally different from this, it still kept the idea of an under world, but now generally as an intermediate state of the dead, waiting for the day of judgment in different compartments of it, better or worse, for the righteous or the wicked. Sometimes it was a place of torment for the wicked at death, or it or a subterranean Gehenna became the place of torment after the judgment.³

An under world does not appear consistently in Egyptian beliefs regarding the dead, their state and locality, which were of a conflicting nature. In the earliest period, and indeed all through the later periods, the soul was associated with the body in its sepulchre, leaving it and returning to it. An under world is spoken of here and there, probably connected with the grave. But many other regions—on earth's surface or in heaven—were open to the dead. In the Osirian religion the blissful abode was in heaven or elsewhere, and it was sometimes regarded as lying in a deep hole under the earth.⁴ The theology of the religion of Rā pictured the soul traversing the other world in the bark of the sun by night, passing through guarded gates into twelve successive regions, peopled by gods, demons, and the dead. These regions were either underground or in what corresponded to an under world—the valley through which the sun passed behind the Mountain of Sunset until it reappeared in the east. This was the Duat, or Tuat, the hidden part of the world.⁵

According to O. Schrader, the primitive Indo-European conception of the realms of the dead was that the ancestral spirits dwelt in the earth. They made no distinction between this region of the dead and the tomb.⁶ In Vedic times in India, probably as a result of the newer custom of cremation, Yama's kingdom, to which the spirits of the

fathers went (the *pitrs*), was a heavenly one, but it is probable that it had formerly been a subterranean region.¹ The Vedic hells as well as those of Brāhmanic and later Hindu belief are abysses of the under world;² yet even in the earlier (Vedic) period we hear of the fathers being in the earth, and in the age of the epics Yama's realm is in the south, beneath the earth.³

The Greeks preserved the idea of an under world of the dead, Hades, the hidden place, intact for a long period. See art. UNDER WORLD (Greek).

The Roman under world, Dis, was the abode of the *manes*, and this belief was connected with the earlier one, that the soul rested with the body in the tomb. In the Comitium at Rome the *lapis manalis* covered an opening which was supposed to lead to the underground abode of the shades, whence they came up to be fed on the days when the stone was removed. Other approaches to the under world were known—e.g., the cave of Avernus at Naples. But to the Romans the under world was never such a definitely expressed object of belief as it was to the Greeks.

The Scandinavian and Teutonic under world, Hel, the hollow place, was perhaps an extension of the hollow barrow or tumulus in which the dead were supposed to live feasting and occupying themselves with the good of their kindred. Though later conceived as a gloomy place of punishment, this description applies more properly to Nifhel, lower than Hel. All men at first went to Hel,⁴ which, in the Elder Edda, is hardly a place of gloom. As described in *Balder's Doom*, a road leads through the under world by grassy plains to the mighty hall of Hel (*i.e.* the goddess who rules over Hel). Walls are decked with shields, and beer stands ready on tables.⁵ The myths seem to prove that Mimir's fountain of immortal mead and his grove, and Urd's fountain, were in the under world.⁶

Similarly in the old mythology of the Finns and of the Esthonians the region of the dead is an under world. By the Finns it was called Tuonela, and, possibly through Christian influences, it had come to be regarded as a place of punishment. The Esthonians called their under world Porgu, and it was supposed to be reached through a cave.⁷

The old native religion of Japan, Shinto, regarded the dead as still living in the tomb, but the Japanese also had a belief in a dark and repulsive under world called Yomi ('darkness') and Ne no kuni ('the root country'), with divinities of death and plague. Though not specifically said to be the region of the dead, it would appear to have been, as the name Yomi is used for the state of the dead or the grave, while the place itself, regarded as a region of corruption, suggests the decay of the tomb. Yomi was later identified with the Buddhist hell.⁸

3. The under world in the lower culture.—Among the lower races opinions as to the locality in which the dead exist are as various as in the beliefs of the higher races, but the conception of an under world frequently occurs, and its nature and conditions are described with great detail.

Such an under world, sometimes situated beneath the sea, is known to some of the tribes of New Guinea, sometimes as a place resembling this world, sometimes much superior to it, while, as with the Waga-Waga, it is said that, when it is night here, it is day there, and *vice versa*, suggesting that it is visited by the sun during our night.¹ A region under the sea, called Tsiabiloum, is the place of spirits, according to the New Caledonians—a delightful place, far more fertile than earth, where sickness, death, toil, and darkness are unknown.² In many parts of Melanesia the other world is above ground, often on a distant island, but in the eastern group of islands it is below the earth and is called Panoi and other names. It is a peaceful place and on the whole resembles the upper world. But, according to some, the spirits die there, and then revive in another Panoi, situated below the first.³

Generally in Polynesia, while a superior heavenly region was reserved for men of rank or for those slain in battle, there was an under world for all the other spirits of the dead, called Po, or Sa-le-fee, or other names. This region was mainly regarded as a gloomy, undesirable place, though sometimes, as in Raratonga, it was pleasant and bright.⁴

In N. America the Eskimo have a belief in various regions for different people, but among the different tribes the under world constantly appears, now as a better, now as a worse place.⁵ The American Indian tribes are far from uniform in their beliefs; the under world of the dead is found mainly among the tribes of the south-west, but sporadically elsewhere. It is reached after a long journey, and is generally a pleasant region, and also the place whence the first men emerged on earth's surface.⁶ Occasionally, as with the Tlingit, the underworld abode is one of several, and it is to it that drowned persons go.⁷ Similar distinctions, according to rank or manner of death, occurred with the Mexicans, whose under world, Mictlan, was a gloomy place, reserved for those who did not go to one of the other regions. This resembled the dismal under world of the Peruvians, the place allotted to the bulk of the people. An under world of the dead is less frequently met with among the S. American tribes—*e.g.*, the Matacos, the Muyscas, and the Patagonians, who thought that vast underground caverns contained the souls of the dead. None of these were unpleasant places.⁸

Among African tribes, both Bantu and Negro, the belief in an under world is very common. This country of the dead is usually reached through a cave or hole in the ground, or through a pool or lake. Especially with the Bantu it is a region much like the earth, with villages, forests, rivers, etc., but among some Negro tribes it is less desir-

able, as some of their sayings suggest.¹ Stories of descent by the living to this underground region are widely spread over Africa.

4. **The under world in Christian belief.**—Through both Jewish and pagan influences the locality of the souls of the dead in Christian belief was placed beneath the earth, either as an intermediate state, with part of it as a paradise region (Irenæus, Tertullian), or, more generally, a place of punishment. This belief is illustrated from theological writings, legends, poems (*e.g.*, Dante's *Inferno*), and art. It has now ceased to be a vital part of Christian belief.

5. **The under world as fairyland.**—In the art. FAIRY it is shown how frequently the abode of the fairies, dwarfs, and such like beings is underground, and various theories for this folk-belief are discussed—*e.g.*, that which regards fairies as spirits of the dead.

6. **Divinities of the under world.**—The divinity who reigns over the under world is frequently a personification of that region itself, and this is more particularly the case where, *e.g.*, Earth and Under-earth are conceived as personified in one being. The earth-goddess is also the ruler of souls (*e.g.*, Demeter or Persephone), with the under-earth people, the *Δημήτριοι* or *ἰπποθόβιοι*, as her subjects.²

J. A. MACCULLOCH.

UNDER WORLD (Greek).—The Greek conception of the under world is the product of a long process of evolution. The following strata can be clearly determined.

1. **An under world which is strictly local, and in which the attributes of the dead are purely physical.**—This conception is well expressed in a vase in the Central Museum at Athens. This archaic vase is of the type known as 'prothesis,' a class of vase used in funeral ceremonies and decorated with funeral subjects. Two mourners stand lamenting, one on either side of a grave, erect on which is a 'prothesis' vase. Within the grave itself is represented what the mourners believed the grave to contain: (a) the *eidola*, little winged figures of the dead, and (b) a great snake. The under world was to the vase-painter strictly local; it was the grave itself. The little winged *eidola*, shrunken men, represent the individual dead, strengthless and vain; the great snake represents the collective might of the dead, the *δαίμων* of life and reincarnation, the immortality of the *γένος* or tribe. This *δαίμων* in human form was the tribal hero, in later monarchical days the king, like the ancestor of the Athenians, envisaged as half-man, half-snake. He was essentially a local power, and to him the fertility of the local earth was due; his temple was his tomb. This belief in the snake-hero was essentially the faith of a settled people of agriculturists to whom the local earth with its perennial crops was all-important—a people who practised field-magic. With the heroic age, its shiftings of peoples, its conquests and migrations, the conception of the under world, dependent like all other religious conceptions on social developments, was bound to change. This brings us to the next development or stratum.

2. **An under world remote, non-local, Pan-Hellenic—in a word, the Homeric or heroic under world.**—In *Odyssey*, xi., the so-called *Nekuia*, we have a description of an under world which, though its kernel is undoubtedly local, *i.e.* Bœotian, has become in virtue of many accretions Pan-

Hellenic. This under world is no longer a local grave, but a vast remote kingdom of the dead, separated from the living world by the stream of Okeanos, but in confused fashion accessible by a trench dug in the earth. The old conception partly lives on. This under world of Homer reflects of course the Homeric social structure. We have the great mass of the people represented by the 'strengthless heads of the dead,' who 'sweep shadow-like around,' and with whom Odysseus holds no converse; and we have the souls of great particular heroes, who, after drinking of the black blood, can hold converse with the living. Instead of the collective *δαίμων*, the snake, we have individual aristocratic heroes who emerge in truly heroic fashion. The function of these splendid Homeric dead is not to fertilize the earth for their successors, but to live on themselves after their kind, though in more shadowy fashion. They are no longer either physical or local; they are functionless—no longer perennial, but merely immortal and quite non-moral.

To the literary *Nekuia* of Homer must be added the great fresco of Polygnotus, the *Nekuia* painted by him in the Lesche at Delphi of which Pausanias has given us a detailed account.¹ The *Nekuia* of Polygnotus, if we may trust Pausanias, based not on the *Odyssey* but on another Bœotian epic now lost, the *Minyad*. In it stress is laid on a new element just dawning in the *Nekuia* of the *Odyssey*, and this brings us to our third stratum.

3. An under world which is moralized, containing new elements—retribution and purification.—These two elements appear very clearly in a black-figured amphora at Munich.² To the right is Sisyphos rolling up his stone, to the left the Danaïds are filling their bottomless cask. Sisyphos stands for retribution, the Danaïds mark the transition to purification.

In the *Nekuia* of Homer Odysseus, after he has had speech of various heroes whom he has known in the upper world, sees as in a vision, but does not speak with, Minos the judge of Hades, Orion the mighty hunter, and the great criminals Tityos, Tantalos, Sisyphos. Of these figures the two first are marked by one great characteristic: they are doing in Hades what they did in the upper world. Minos, who judged Crete, is judging in Hades; Orion is still hunting wild beasts. But the three 'criminals' have been usually supposed to be, not carrying on their normal pursuits, but being 'tormented.'³ S. Reinach has brilliantly and conclusively shown that the three 'criminals' also are depicted as carrying on their earthly activities; it is only a later moralizing age that supposes them 'tormented.' We will take only one instance—Sisyphos rolling his stone. Sisyphos is the ancient king of Corinth, and, like all other ancient kings, a *δαίμων* of weather and sky powers. He controls the sun; in a sense he is the sun. It is his business to roll the ball of the sun, the huge stone, up the steep of heaven, whence eternally it rolls down again. The senseless punishment becomes intelligible as a periodic function eternally incumbent. Hades is peopled with the *δαίμων* powers of an elder world; it is the dower-house of antique religion.

The Danaïds are analogous figures; but about them have grown up accretions more complex; they stand not only for retribution but also for purification, and they are ultimately connected with the mystery-cult of Orpheus. Primarily, however, they are quite simple figures; they are the daughters of the old Danaos, king of Argos. He makes the weather, and they make the rain; they are well-nymphs, projections of ancient rain-making ceremonials; they carry water in order that water may well forth from sky and earth. They are

depicted as on the vase pouring water in a *pithos*-well, the bottom pierced to communicate with and fertilize the earth. But their labour is ceaseless, *i.e.* periodic, year by year. But, when their nature as rain-makers is forgotten, the ceaseless labour is thought of as a punishment, a retribution; they are 'condemned to carry water in leaky vessels'; they, the fertility-bringers, are doomed to endless, barren toil. What was their crime? But for Pausanias,⁴ we could never have guessed. He saw in the *Nekuia* at Delphi figures represented as carrying water in broken vessels, and he explains them as 'of the number of those who held the Eleusinian mysteries to be of no account.' They are the uninitiated, never purified in the upper world; they ceaselessly seek purification in the world below. Thus the well-nymphs, with their simple physical function as perennial fertilizers, have been moralized by a later and mystical theology.

In the Hades of Homer there are no water-carriers, no uninitiated, for Homer knows nothing of the mysteries. His theology has reached the retribution, but not the purification, stage. But from Homer onwards, as has recently been shown by Gilbert Murray, the conceptions of bliss and torment are in ancient literature, and we may add in ancient art, 'always connected with the mysteries,' whether Orphic or Eleusinian. The mental pictures of Heaven and Hell which were current in ancient times and are still to a certain extent traditional among us are based on the actual ritual of the mysteries. The scenery and arrangements, so to speak, of the other world are, in the first instance, projections of the initiation-ceremonies. Such is the purgatorial water-carrying of the uninitiated Danaïds.

UNEMPLOYMENT.—See EMPLOYMENT.

UNIATS.—See SYRIAN CHRISTIANS.

UNIFORMITY.—See LAW (Natural), ORDER.

UNITARIANISM.—Unitarianism, an English term derived from the Latin *unitarius* (first used of a legalized religion in 1600²), is applied to a mode of religious thought and organization founded on the conception of the single personality of the Deity in contrast to the orthodox doctrine of His triune nature. The corresponding term 'Trinitarian' was first used in the modern sense by Servetus in 1546. The adjective 'Unitarian' has sometimes been employed beyond the limits of Christianity—*e.g.*, in connexion with Muhammadanism; this article deals only with the development of modern Unitarianism on Christian lines. The place of the corresponding doctrine in the NT and the early Church must be studied in the usual authorities on historical theology.

1. Beginnings on the Continent.—The general movement of humanism at the opening of the 16th cent. led to a variety of speculation which was largely stimulated by the publication of the Greek text of the NT by Erasmus (1516). His omission of the famous Trinitarian verse, 1 Jn 5⁷, and his aversion to the scholastic type of disputations produced a marked effect on many minds. The earliest literary trace of anti-Trinitarian tendencies is usually found in a treatise of Martin Cellarius

¹ x. 23-31.

² Jahn Cat. 153.

³ x. xxxi. 11.

⁴ See § 4 below.

(1499–1564), pupil of Reuchlin, and at first a follower and friend of Luther. In 1527 he published at Strassburg a work entitled *de Operibus Dei*, in which he used the term *deus* of Christ in the same sense in which Christians also might be called *dei* as ‘sons of the Highest.’ The first treatise of Servetus (1511–53), *de Trinitatis Erroribus*, followed in 1531. The minds of the young were on the alert. Teachers, theologians, lawyers, physicians, mathematicians, men of letters and science, were all astir. They travelled and discussed, and new views were carried far and wide. In Naples a young Spaniard, John Valdes, became the centre of a religious group of noble ladies for the study of the Scriptures till his death in 1541; and in 1539 Melancthon found it necessary to warn the Venetian senate of the existence of widespread Servetianism in N. Italy. Out of this circle comes Bernard Ochino (1487–1565) of Siena, who passes slowly through Switzerland to London, serves as one of the pastors of the Strangers’ Church (1550–53) till it is broken up by Queen Mary, takes shelter again in Zürich, and finally migrates to Poland in 1559, and joins the anti-Trinitarian party. There Catherine Vogel, a jeweller’s wife, had been burned at the age of 80 in 1539 at Cracow for believing in ‘the existence of one God, creator of all the visible and the invisible world, who could not be conceived by the human intellect.’¹ An anti-Trinitarian movement showed itself at the second synod of the Reformed Church in 1556, and in 1558 secured a leader in the person of a Piedmontese physician, George Blandrata. Dutch Anabaptists started various heretical movements, and David Joris of Delft (1501–56) declared in his *Wonder-book* (1542) that there is but ‘one God, sole and indivisible, and that it is contrary to the operation of God throughout creation to admit a God in three persons.’ Thousands of Protestants from Germany, Alsace, and the Low Countries, migrated to England in the reign of Henry VIII., and the Strangers’ Church under Edward VI. contained also Frenchmen, Walloons, Italians, and Spaniards.

2. Beginnings in England.—English thought was not unaffected. In the 15th cent. Reginald Peacock, bishop of Chichester, had opened the way by his two treatises, the *Repressor of overmuch Blaming of the Clergy*² and the *Book of Faith*,³ to the discussion of the relative values of Scripture, tradition, and reason as grounds of faith, and had pleaded for freedom of investigation. Lollard and Anabaptist diverged in different directions from orthodoxy along independent lines. On 28th Dec. 1548 a priest named John Assheton abjured before Cranmer the ‘damnable heresies’ that ‘the Holy Ghost is not God, but only a certain power of the Father,’ and that ‘Jesus Christ, that was conceived of the Virgin Mary, was a holy prophet . . . but was not the true and living God.’ In the following April a commission was appointed to search out all Anabaptists, heretics, or contemners of the Common Prayer. A number of London tradesmen were brought before this body in May. The opinions which they recanted included the statements ‘that there was no Trinity of persons; that Christ was only a holy prophet and not at all God; that all we had by Christ was that he taught us the way to heaven.’⁴ Occasional executions took place, such as that of the surgeon George van Parris, of Mainz, in 1551 for saying that God the Father was the only God, and Christ was not very God. The Eastern counties, being

in constant communication with Holland, supplied most of the victims, down to Bartholomew Legate, of Essex, who declared Christ a ‘mere man,’ but ‘born free from sin,’ and who was the last sufferer by Smithfield fires (1612), and Edward Wightman, who was burned a month later at Lichfield, charged with ten various heresies as incongruous as those of Ebion, Valentinus, Arius, and Manes.¹ One foreign teacher, Giacomo Aconzio (Latinized as Acontius, born at Trent about 1520), held his own through the troubled times. Engineer and theologian, philosopher and lawyer, mathematician and poet, he came to England in 1559, and received a post at Elizabeth’s court, which he managed to retain even when Bishop Grindal excommunicated him two years later for advocating tolerance to Anabaptists. In his *Stratagemata Satanae*² he drew a distinction between articles of faith necessary to salvation and beliefs derived from them which might be matters of dispute. Adhering to Scripture, he declared the Father to be ‘the only true God’; affirmed the moral, not the essential, filiation of Jesus Christ; and asserted the subordination of the Holy Spirit to the Father. But the time was not yet come for his full influence in England.

3. Types of speculation.—Three types of speculation were thus in the European field by the middle of the 16th century. (1) That of Servetus was founded on the ‘dispositio’ of Irenæus and the ‘economy’ of Tertullian;³ the Trinity was a Trinity of manifestations or modes of operation; when God is all in all (1 Co 15²⁸), ‘the Economy of the Trinity will cease.’⁴ His theology was Christocentric: ‘There is no other person of God but Christ . . . the entire Godhead of the Father is in him.’⁵ (2) Many of the Anabaptists were Arians. (3) A humanitarian view of Jesus, recognizing a miraculous birth, was beginning to claim attention. The last of these succeeded in establishing itself in the east of Europe before English Unitarians began to move.

4. The Socinian development.—When Blandrata reached Poland in 1558, he found that there were already some anti-Trinitarians in the Protestant synod. Seven years later they were excluded, and they consequently formed a small group which refused to call itself by any other name than Christian, though other titles (such as the Minor Church) were sometimes applied to it. In 1579 the settlement of Faustus Socinus in their midst led to the establishment of a new theological type to be long known in Western Europe as Socinianism (*q.v.*).

Socinus (1539–1604) belonged to a distinguished Italian family, the Sozini, in Siena. His uncle Lelius Socinus (1525–62) had evaded the Inquisition by flight to Switzerland in 1547. He became the friend of Calvin and Melancthon; he visited England; he travelled to Poland. He did not escape controversy and suspicion; he would not deny the doctrine of the Trinity, but he would accept it only in the words of Scripture. Faustus Socinus was of a more aggressive temper. At twenty-three years of age he published his *Explicatio primæ partis primi capituli Evangelii Johannis*,⁶ in which he ascribed to Christ only an official and not an essential deity. A long series of works followed, and in 1578 he accepted an invitation from Blandrata, then in the service of Prince John Sigismund of Transylvania, and went to Kolozsvár. Blandrata had invoked his aid against Francis Dávid, who rejected all forms of

⁶ Rakow, 1662.

cultus addressed to Christ.¹ Socinus pleaded for the *adoratio Christi* as obligatory on all Christians, and urged that the *invocatio Christi* should not be forbidden. In 1579 he settled in Poland, where the rest of his life was spent. The members of the Minor Church were converted to his views, which found expression in the *Racovian Catechism* issued in Polish in 1605, a year after his death.² A Latin edition followed in 1609. The Polish adherents of Socinus failed, however, to hold their ground. Deprived of their right to office, their leaders were powerless. Roman Catholic reaction triumphed. Their college at Rakow was suppressed, and finally in 1660 they were offered the option of conformity or exile. Some went to Germany and Holland; some carried their worship to Transylvania, and maintained a slender separate existence till 1793. But the influence of Socinus was perpetuated in the massive volumes of the *Bibliotheca fratrum Polonorum quos Unitarios vocant*, published at Amsterdam (1665-69). His theology rested on a rigid view of the authority of Scripture.³ The modern methods of historical criticism were of course unknown. Philosophy raised no difficulties about the supernatural, but reason started objections from the side of the multiplication-table.

'The essence of God is one,' says the *Racovian Catechism*, 'not in kind but in number. Wherefore it cannot in any way contain a plurality of persons, since a person is nothing else than an individual intelligent essence. Wherever then there exist three numerical persons, there must necessarily in like manner be reckoned three individual essences, for in the same sense in which it is affirmed that there is one numerical essence, it must be held that there is one numerical person.'⁴

But Socinus admitted the application of the term 'God' to Christ in an inferior sense (Jn 10^{34c}), and argued from Jn 3¹³ that after his baptism Christ had been conveyed to heaven, where he had beheld his Father, and heard from him the things which he was afterwards sent back to earth to teach. Raised again to heaven after his resurrection, he was made the head of all creation, with divine authority over the world, and in that sense God. He was thus no 'mere man,' and deserved divine honour. Modern Unitarianism has departed widely from this Christology. Apart from the necessarianism of Priestley, it is nearer to Socinus in its view of human nature, which he treated (against the Calvinists) as endowed with free will, and capable of virtue and religion. But the Polish Unitarians did not regard it as intrinsically immortal. A future life would be a gift direct from God, its conditions being made known by Christ. For those who did not fulfil them there was no hell, only extinction.

Unitarianism acquired ecclesiastical status also in the adjoining province of Transylvania. In 1563 Blandrata was invited by Queen Isabella to the court of her son Prince John Sigismund. At Kolozsvár (Klausenburg) he was brought into contact with Francis Dávid, who had been sent by his Roman Catholic teachers to Wittenberg. There Dávid had passed into Lutheranism, but afterwards, dissatisfied with its doctrine of the sacraments, he joined the Calvinists. His distinction led to his appointment (1564) as bishop of the Hungarian churches in Transylvania. Under Blandrata's influence he began to doubt the separate personality of the Holy Spirit, and became involved in discussions with the Calvinist leader, Peter Melius. In these debates Melius is said to have first used the word *Unitarius*. Dávid was

¹ See below.

² The town of Rakow, founded in 1509, was the ecclesiastical base, with a school and university (1602).

³ His treatise *de Auctoritate S. Scripturæ*, written in 1570, was first published at Seville, and claimed by a Jesuit Lopez as his own. Commended in 1728 in a charge by Bishop Smallbrooke, it was translated into English by Edward Combe in 1731.

⁴ Eng. tr. by Thomas Rees, London, 1818, § iii. ch. i. p. 33.

strong enough to carry large numbers of clergy and laity with him. In 1568 a royal edict was issued, granting entire freedom of conscience and speech, and giving legal recognition to 'the Four Religions,' Roman Catholicism, Lutheranism, Calvinism (or Reformed), and 'the Klausenburg Confession.' More than 400 preachers with their churches, and many professors in colleges and schools, ranged themselves under Dávid's supervision. Dávid, however, soon advanced another step, and questioned the propriety of prayer to Christ. Blandrata's attempt to influence him through Faustus Socinus (1578) did not convince him, and in the following year, under a Roman Catholic prince, Dávid was tried for innovation in doctrine and sentenced to imprisonment. Five months later (Nov. 1579) he died in the castle of Deva in his seventieth year.

The name *Unitarius* first appeared in an authoritative document in a decree of the Synod of Lécsfalva in 1600. It was formally adopted by the Church in 1638. For two centuries after Dávid's death the community was in frequent danger from political and religious vicissitudes. Their churches were transferred to Calvinists or to Roman Catholics; they were deprived of their schools; they were debarred from public office. A statute of 1791, however, confirmed their position as one of 'the Four Religions,' and they have since enjoyed ecclesiastical peace.¹ They have now about 140 churches, chiefly among the Szeklers of Transylvania, with a few in Hungary, including a vigorous modern foundation in Buda-Pesth. Till 1919 their bishop sat in the Hungarian House of Peers. At Kolozsvár they have a university, and they have devoted great attention to education. No doctrinal subscription is imposed upon their ministers, and under the influence of progressive change, and contact with Unitarian teaching in England and America, the Socinian Christology has been abandoned. The official hymn-book of 1865 made no provision for the worship of Christ.

5. Growth of Unitarianism in England.—The teaching of Socinus gradually made its way into England. The Latin version of the *Racovian Catechism* was sent to England with a dedication to James I.; it was formally burned in 1614. Two Socinian works appear in the first two catalogues of the Bodleian Library (1620-35), but a considerable number may be traced in the catalogue by Thomas Hyde in 1674. Bishop Barlow, himself once librarian, in *Directions for the Choice of Books in the Study of Divinity* (originally drawn up in 1650 and expanded after 1673), named numerous others in connexion with a syllabus of the principal questions at issue between Socinians and other Reformed communions.² Theology was deeply concerned with the claims of the Roman Catholics on the one hand and the controversies of the Puritans on the other, and from the days of Richard Hooker (1553-1600) a series of writers discussed the respective authority of the Church, the Scriptures, and reason. Doubtless revelation was necessary, but Scripture was its medium. If it was the teacher of theology, what was theology, asked Hooker, but the science of divine things? and 'what science,' he went on to ask, 'can be attained unto without the help of natural discourse and reason?'³ The Arminian revolt against Calvinism tended in the same direction, and 'the ever memorable' John Hales (1584-1656), when he

left the Synod of Dort after hearing Episcopius expound Jn 3¹⁶, 'bid John Calvin good-night.'¹ A stream of protest flowed on against the attempt to define the mysteries of the Godhead beyond the terms of Scripture. It had been the plea of Acontius in the *Stratagemata Satanae*; and William Chillingworth (1602-44) owned him as his teacher of the mischief of creeds which led to the 'persecuting, burning, cursing, damning of men for not subscribing to the words of men as the words of God.'² Chillingworth was indebted for acquaintance with Socinian literature to Lord Falkland. He had seen some volumes in the rooms of Hugh Cressy of Merton College, Oxford, who 'claimed to have been the first to bring in Socinus's books.' Cressy afterwards became a Benedictine monk; Falkland was designated by John Aubrey 'the first Socinian in England.' Other and wider influences were at work. Lord Herbert of Cherbury (1583-1648) in his *de Veritate*³ analysed the whole faculties of the mind, and discovered among its *notitiae communes*, innate, of divine origin, and indisputable, certain 'common notions' of religion in five articles. These he exemplified historically twenty years later in the *de Religione Gentilium* (completed in 1645), one of the earliest treatises in comparative theology. The great authority of Grotius (1583-1645) gave special weight to his exposition of Christianity in the *de Veritate Religionis Christianae*.⁴ He discourses of the attributes of God, but is silent about His triune nature. He proves that there was such a person as Jesus, that he rose from the grave and was worshipped after his death. He vindicates his character as Messiah, but never mentions the Incarnation. His *Annotationes* on the NT were equally free from traditional dogma. It was not surprising that Stephen Nye, the author of the *Brief History of the Unitarians also called Socinians*,⁵ should affirm that he 'interpreted the whole according to the mind of the Socinians.' Under such influences diversity of opinion was recognized as inevitable. Writers so different as Hales, Jeremy Taylor,⁶ and Milton⁷ declare in almost the same words that heresy is not a matter of the understanding; the faithful pursuit of reason did not make a heretic; the mischief lay in the influences that perverted the will. Chillingworth thought it possible to reduce all Christians to unity of communion by showing that diversity of opinion was no bar to it. That all Christians should think alike was an impossibility; it remained for them to be 'taught to set a higher value upon those high points of faith and obedience wherein they agree than upon those points of less moment wherein they differ.'⁸ Such writers did not adopt the theology of Socinus, but they were in agreement with him in his plea for Scriptural statements rather than dogmatic creeds. 'Vitals in religion,' said Benjamin Whichcote (1609-83), the leader of the Cambridge Platonists, 'are few.'⁹

Meanwhile an occasional English traveller like Paul Best (1590-1657) had visited Poland and returned infected. Milton noticed in the *Areopagitica*¹⁰ the 'stay'd men' sent by 'the grave and frugal Transilvanian' to learn the 'theologic arts' of England. The danger of Socinianism was

spreading. The Convocations of Canterbury and York agreed in June 1640 to prohibit the import, printing, or circulation of Socinian books; no minister should preach their doctrines; laymen who embraced their opinions should be excommunicated.¹ A series of angry writers denounced them with shrill abuse. Parliament made the denial of the Trinity a capital crime (1648), but an English translation of the *Racovian Catechism* was published in 1652 at Amsterdam, followed by *A Twofold Scripture Catechism* from the pen of John Biddle in 1654. These works led the Council of State to order John Owen, whom Cromwell had made Dean of Christ Church and Vice-Chancellor of the university of Oxford, to prepare a reply. His *Vindiciæ Evangelicæ* appeared in 1655.

'Do not look upon these things,' he wrote with heat,² 'as things afar off wherein you are little concerned; the evil is at the doore; there is not a City, a Towne, scarce a Village in England, wherein some of this poyson is not poured forth.'

6. Influence of Biddle and Locke.—John Biddle (1616-62) has often been called the father of English Unitarianism. Sprung from the family of a Gloucestershire yeoman, he came up to Oxford in 1634, and graduated M.A. in 1641. The Gloucester magistrates appointed him shortly after to the mastership of the free school in the parish of St. Mary de Crypt. There his Biblical studies led him independently to doubt the doctrine of the Trinity, the particular difficulty being the deity of the Holy Ghost. Imprisonment in Gloucester and at Westminster did not prevent him from publishing his views, which became more and more opposed to the prevailing orthodoxy. Released in 1652, he founded for the first time gatherings for the exposition of the Scriptures on anti-Trinitarian lines, and these developed into regular meetings for worship. Biddle's catechism shows distinct Socinian influence in the views that Christ as man was taken up into heaven to be instructed for his prophetic office, that God's love was universal, and that Christ died to reconcile man to God, not God to man. But Biddle did not adopt the Socinian practice of prayer to Christ. In spite of imprisonment and exile in the Scilly Islands (1654-58) he gathered followers in increasing numbers. They were sometimes called Biddelians, sometimes Socinians, but they are said to have preferred the name Unitarian to all others.³

The death of Biddle in 1662 and the Act of Uniformity checked the movement as an organization for worship, but it continued as a mode of thought. The constant plea for a return from the creeds to the Scriptures led Milton finally into an Arian Christology. Thomas Firmin (1632-97), a wealthy and generous mercer, who had been the friend of Biddle and also had close relations with Archbishop Tillotson (1630-94), promoted the circulation of literature. The *Brief History of the Unitarians, also called Socinians*, was published at his request in 1687. The Toleration Act of 1689 excluded those who denied the Trinity on the one side, and Roman Catholics on the other. But an active controversy broke out the following year, which resulted in the production of a long series of Unitarian tracts (1691-1705) largely financed by Firmin, in which the chief ecclesiastical disputants, John Wallis and William Sherlock,⁴ were cleverly played off against each other, and the argument was enforced on grounds of Scripture and early patristic testimony. The Unitarian influence was so strong that Parliament found it necessary (1698)

to threaten the profession of the obnoxious heresy with cumulative penalties amounting to the loss of all civil rights, and three years' imprisonment. But in the meantime a new and powerful influence had entered the field. In 1695 John Locke (1632-1704) had published his treatise on *The Reasonableness of Christianity*.

Locke's *Letters concerning Toleration*¹ and his *Essay concerning Human Understanding*² had already placed him at the head of contemporary English thinkers. It was a lamentable sign of the heated temper of the time that the inquiry into the essential nature of Christianity was published anonymously. Locke did what Grotius and Hobbes (in the *Leviathan*³) had done before him. He went back to the Gospels and the first preachers of the new faith, and found that their message consisted in the proclamation of Jesus as the Messiah, the proof of this character resting on his fulfilment of prophecy and his miracles, especially the Resurrection. He had indeed already confided to his journal in 1681 the pregnant remark that the miracles were to be judged by the doctrine, and not the doctrine by the miracles. But he could still say in 1703 that the Scripture had God for its authority and truth without any mixture of error for its matter. This did not, however, prevent him from recognizing the occasional character of the apostolic letters; and in the paraphrases of the Epistles of St. Paul⁴ (published after his death), by treating their teaching as relative to the age and persons for whom it was designed, he really laid the foundation of the historical method. His whole theory of knowledge, however, and his polemic against innate ideas, led him to fall back on the conception of revelation, and to find in Scripture an ultimate authority for religious truth. Meanwhile the violence of some of the Trinitarian controversialists drove many minds along the paths already trodden by Milton and Sir Isaac Newton in the direction of some form of Arianism. William Whiston (1672-1752), who had succeeded Newton at Cambridge as Lucasian professor in 1703, was deprived for this heresy in 1710; and it was in the background of the treatise of Samuel Clarke (1675-1729) on *The Scripture Doctrine of the Trinity*,⁵ though he objected to the ancient Arian statement, 'there was [a time] when there was no Son.'

The formularies of the Church of England prevented anything like general change within its ranks. But Protestant Dissent was not organized on the basis of dogmatic creeds. The English Presbyterians under the leadership of Richard Baxter (1615-91) had ardently desired comprehension in the Establishment, but they had as ardently repudiated what they called 'human impositions.' Driven out of the Anglican Church, and unable to create a Presbyterian polity, they found themselves side by side with the Congregationalists in 1689. When they took out licences for places of worship, their trustees avoided doctrinal tests, though they themselves were mainly Calvinistic. They often devoted their chapels to 'the worship of God by Protestant Dissenters.' Sometimes the Presbyterians were named, sometimes the Independents, sometimes both conjointly. They reserved to themselves, in the language of Timothy Jollie of Sheffield (1659-1714), 'liberty to reform according to Scripture rule in doctrine, discipline and worship.'⁶ The way was thus open to gradual theological modification. The process

was slow, and its operation unequal in different places. Pastors and people did not always move together. The transition through varying types of Arianism naturally took place at varying rates; e.g., Nathaniel Lardner (1684-1768), after resting in Clarke's Arianism, finally abandoned it in his *Letter on the Logos*.¹ The result was that at the beginning of the 19th cent. nearly 200 chapels were occupied by Unitarians, whose principles were unfavourable to sectarian activity. When the Manchester Academy (now Manchester College, Oxford) was opened in 1786, its first principal, Thomas Barnes, who dedicated it 'to Truth, to Liberty, and to Religion,' was himself an Arian. His colleague, Ralph Harrison, became a Unitarian. True to the practice of their forefathers, the founders refrained from imposing any tests on either tutors or students. The Presbyterian Board, established in 1689, governs the Presbyterian College at Carmarthen—the continuator of a series of academies, the first of which was founded on the same basis by Samuel Jones, sometime fellow of Jesus College, Oxford, one of the 2000 ejected ministers of 1662.

7. The work of Priestley and Belsham.—The process of theologic change was promoted from another side. Joseph Priestley (1733-1804), bred among the Independents, threw off the Calvinistic theology of his youth, and, after resting a little while in Arianism, reached in 1768, while minister at Leeds, a simple humanitarian view of the person of Jesus. His scientific studies had already gained him the fellowship of the Royal Society (1786), and his *Appeal to the Serious and Candid Professors of Christianity*² carried his name in 30,000 copies all over England. His industry, his wide range of knowledge, his clearness of thought and style, his fearless utterance, his untiring earnestness, his elevation of purpose and purity of life, his simple piety, secured for his theological and philosophical teaching a dominant position in Unitarian thought. At Doddridge's Academy at Daventry he had studied Hartley's *Observations on Man*,³ and adopted a materialist view of human nature. But this in no way impaired the religion which he learned from the Gospels. The teachings of Jesus, guaranteed by his miracles and triumphantly established by his resurrection, supplied him with a positive ground for faith; and the identification of the God of revelation with the Sole Cause of all phenomena, including every form of human activity, created a type of religious sentiment which long pervaded Unitarian devotion. In his *Doctrine of Philosophical Necessity Illustrated*⁴ he affirmed that his doctrine should produce 'the deepest humility, the most entire resignation to the will of God, and the most unreserved confidence in his goodness and providential care.'⁵ Among the Yorkshire acquaintances of Priestley was Theophilus Lindsey (1723-1808), vicar of Catterick on the Tees. A movement had been started by a small group of the clergy of the Establishment for the relaxation of the terms of subscription. The failure of a petition to Parliament led Lindsey to resign his living (1773) and make his way to London. There in 1774 he opened an auction-room in Essex Street, Strand, as a Unitarian chapel, and thus 'first organized Unitarian Dissent as a working force in the religious life of England.'⁶ He used the Anglican liturgy adapted to 'the worship of the Father only.'

The London movement was reinforced in 1789 by the appointment of Thomas Belsham (1750-

1829), once like Priestley an Independent, to a theological tutorship in a college at Hackney. A scholar of no small attainments, he wielded a vigorous pen, and took a leading share in promoting the development of denominational activity. This was opened in 1791 by the foundation of the 'Unitarian Society for promoting Christian knowledge and the Practice of Virtue by the Distribution of Books.' Lindsey, Priestley, and Belsham were its leaders. The preamble and rules, drawn up by Belsham, contained the first public profession of belief in the proper unity of God, and of the simple humanity of Jesus Christ, in opposition both to the Trinitarian doctrine of three Persons in the Deity and to the Arian hypothesis of a created Maker and Preserver of the world. The love of civil and religious liberty prompted a petition the next year (1792) for the abolition of the penal laws affecting religion, to which Charles James Fox lent his aid, and this was accomplished in 1813 (so far as Unitarians were concerned) by the repeal, through the efforts of William Smith (1756-1835), M.P. for Norwich, grandfather of Florence Nightingale, of the clauses of the Toleration Act which rendered the profession of Unitarianism illegal. Meanwhile local Unitarian associations had been founded, and a denominational literature was springing up. Chapels long closed were reopened; new congregations were assisted; a Unitarian Fund was started; and missionaries were sent out to various parts of the kingdom. Endowed by the Act of 1813 with civil rights, the Unitarians proceeded to form an association for protecting them (1819); and finally in 1825 a number of separate organizations were amalgamated in the British and Foreign Unitarian Association. This body was created to promote the principles of Unitarian Christianity. But its founders refrained from imposing any definition of them on its adherents. In the spirit of the English Presbyterians of a century and a half before, they left each member free to interpret them for himself.

The type of Unitarianism then prevailing was largely shaped by the writings of Priestley and Belsham. There were still Arians of different degrees (designated as 'high' and 'low') among both ministers and congregations. But the emphasis of controversy fell more and more clearly on the humanity of Jesus, and the proof of this lay in the Scriptures. The doctrine of their plenary inspiration was indeed denied. Criticism had already distinguished different documents in Genesis. The narratives of the birth of Jesus were inconsistent with each other, and one or both might be rejected. But both the OT and the NT contained 'authentic records of facts and of divine interpositions,' and Charles Wellbeloved, principal of Manchester College, York, could write in 1823:

'Convince us that any tenet is authorised by the Bible, from that moment we receive it. Prove any doctrine to be a doctrine of Christ, emanating from that wisdom which was from above, and we take it for our own, and no power on earth shall wrest it from us.'¹

On this basis Jesus was presented as 'a man constituted in all respects like other men, subject to the same infirmities, the same ignorance, prejudices and frailties,'² who was chosen by God to introduce a new moral dispensation into the world. For this end the Holy Spirit was communicated to him at his baptism. He was instructed in the nature of his mission and invested with voluntary miraculous powers during his sojourn in the wilderness, and, thus equipped as the Messiah, was sent forth to reveal to all mankind without distinction the great doctrine of a future life in which men should be rewarded

² Belsham, *A Calm Inquiry into the Scripture Doctrine concerning the Person of Christ*, London, 1811, p. 447.

according to their works. Of this the supreme proof was found in the Resurrection, to which his death on the cross as a martyr to the truth was a necessary preliminary; and he was destined to reappear to raise the dead and to judge the world. From this scheme all theories of atonement and satisfaction disappeared. Priestley with his usual frankness had admitted that a necessitarian 'cannot accuse himself of having done wrong in the ultimate sense of the words.'¹ But, though this type of Unitarianism was deficient in the sense of sin and produced a curious reluctance to recognize the existence of a 'soul,' its teachers lived habitually at a high moral tension, demanding a constant conformity of the will of man to the will of God. Associated with the emphatic assertion of the Father's wisdom and beneficence, such views naturally anticipated the final victory of good. Thomas Southwood Smith (1788-1861) in his *Illustrations of the Divine Government*²—a book warmly admired by Byron, Moore, Wordsworth, and Crabbe—powerfully impressed on Unitarian thought the doctrine of universal restoration, which had already found utterance in one of Cromwell's chaplains, and gained various champions (Hartley among them) in the 18th century.³

8. Legal difficulties.—The modifications of belief which had brought many of the occupants of chapels erected by Presbyterians and Independents to Unitarian theology at last aroused the attention of those who remained orthodox. Besides a number of meeting-houses, the Unitarians were in possession of two important trusts—Lady Hewley's Charity in York (1704), and Dr. Williams's Trust in London (1716). A suit was instituted against Lady Hewley's trustees in 1830. Legal proceedings were slow and costly, and on 23rd Dec. 1833 judgment was finally given against them. One of the trustees was the minister of St. Saviourgate Chapel (which Lady Hewley had habitually attended), Charles Wellbeloved. It was at once seen that the whole tenure of the chapels was endangered. A long period of litigation followed, but the Law Lords finally confirmed the first decision in 1842. Meanwhile numbers of suits were threatened for the recovery of the buildings, burial-grounds, and endowments which had descended in undisputed succession through generations of pastors and laity. Between Lady Hewley's pastor, John Hotham, and Charles Wellbeloved there had been but one ministry, that of Newcome Cappe (1755-1800); the three pastorates covered 144 years. In the presence of such continuity of tenure the claim of the existing occupants was irresistible, and in 1844 the Dissenters' Chapels Act, introduced by the Government, gave the needed relief. Without naming either Presbyterians or Unitarians, it secured to such Dissenting congregations as had no creeds or tests the right to change their opinions as they saw fit in the lapse of time.⁴ The chapels subsequently built by Unitarians, and the funds raised for the support of their ministers, have been almost invariably founded on the principle known as 'open trust.' The consciousness of this historic evolution supplies the key to the conflict of tendencies in modern Unitarianism between the impulse to theological denominationalism and the desire to realize on however small a scale the 'Catholic communion' which had been the ideal of the English Presbyterians who followed Baxter.

9. Martineau and the modern school.—The most potent personal influence in the latter direction was that of James Martineau (1805-1900) (*q.v.*).

¹ *Illustrations of Philosophical Necessity*, 1777, § xi. (*Works*, ed. Rutt, iii. 518).

² Glasgow, 1816.

³ See art. UNIVERSALISM.

⁴ Cf. the speech of W. E. Gladstone, on the second reading, *Parliamentary Debates on the Dissenters' Chapels Bill*, London, 1844, p. 165.

In his first work, *The Rationale of Religious Inquiry*,¹ he abandoned the position of the older Unitarianism, which would have accepted the doctrines of the Trinity, the Atonement, and everlasting torments, if they could be found in the Scriptures. 'No seeming inspiration,' he affirmed, 'can establish anything contrary to reason.'² Three years later in the famous Liverpool controversy (1839), in the midst of incisive criticisms of the evangelical scheme of salvation, he laid the foundations of a new view of revelation no longer as a communication of truth, certified by miracles, but as an appeal to the conscience and affections—and a fresh interpretation of the moral life on the basis of free will instead of necessity. Meanwhile he was reading Strauss, and soon reached the conclusion that belief in miracles was not essential to Christianity. The Messianic function of Jesus was thus undermined. Wellbeloved had already insisted on the contemporary significance of many of the prophecies supposed to refer to Christ. When the miracles were disowned, the second guarantee of the supernatural character of Jesus fell away: the followers of Locke found themselves deprived of their 'reasonable' Christianity, and the faith of Christ seemed to become only a superior kind of natural religion. Martineau meanwhile pursued a double line of study. In a group of articles in the *Westminster Review* he expounded the Tübingen reconstruction of the origins of Christianity on its critical side, while on the philosophical he vindicated the communion of the human spirit with the Divine, and presented Jesus as the expression, within the limits of our nature, of the righteousness and love of God. Revelation was thus transformed from supernatural instruction into the realization of more exalted character; its medium was not a written word, but a higher personality. To establish the principles of spiritual theism and find a place in man's soul for that 'dwelling in God and God in him' which Priestley had described as the highest type of personal devotion was the aim of a long series of brilliant articles in the *Prospective and National Reviews*, which culminated in two great treatises, *Types of Ethical Theory*³ and *A Study of Religion*.⁴ By these works, as well as by his sermons and occasional *Addresses*, he exercised an influence which went far beyond his own denomination, so that Gladstone described him as 'the greatest of living [English] thinkers.'⁵

Other writers were not inactive beside him. The saintly John James Tayler (1797–1869), in his *Retrospect of the Religious Life of England*,⁶ delineated with singular breadth of view and literary charm the significance of contrasted principles of authority and freedom; and from his pen came the first formal discussion of the Johannine question in England in his *Attempt to ascertain the Character of the Fourth Gospel*.⁷ A long series of scholars had pleaded for the revision both of the text and of the translation of the NT; and, by the advice of the veteran John Kenrick, George Vance Smith was invited to join the company of the Revisers (1870). In James Drummond (1835–1918) Unitarianism possessed a theologian of the older school of learning, whose works on *The Jewish Messiah* (1877), *Philo Judæus* (1888), *Inquiry into the Character and Authorship of the Fourth Gospel* (1903), and *Studies in Christian Doctrine* (1908) maintained the tradition of devout scholarship. John Relly Beard (1800–76) led the way to modern dictionaries of the Bible

by his *People's Dictionary of the Bible*,¹ and made other valuable contributions to theological literature. Cultivated laymen, also, such as Edgar Taylor, Samuel Sharpe, and H. A. Bright, rendered no small services to the Unitarian cause. Most influential of all, perhaps, in its protest against prevailing supernaturalism was *The Creed of Christendom*² by William Rathbone Greg. Francis William Newman and Frances Power Cobbe found many readers; and the writings of Ralph Waldo Emerson and Theodore Parker, together with the studies of Max Müller, opened the way to religion beyond the bounds of Christianity. The Hibbert Trustees, who sought to promote the spread of Christianity in 'its simplest and most intelligible form,' were the first to inaugurate in 1878 a series of lectures on the history of religions, and Manchester College included that subject in its theological course as early as 1875. The discourses of Martineau, J. Hamilton Thom, and Charles Beard provided varied illustration of the preacher's power; and the sermons and hymns of Stopford Brooke, after his withdrawal from the Church of England in 1880, presented, with a rich glow of poetic beauty, the main features of religion as understood by Unitarians.

10. Church organizations.—While English Unitarians have been active in education and philanthropy (witness their domestic missions in important urban centres, established on unsectarian principles after the visit of Joseph Tuckerman of Boston, Mass., in 1833), they have not attempted to secure large numerical increase. New chapels have been built, but denominational zeal has never been active. Congregational independence has been sturdily maintained. In 1882 a National Conference was organized, which has now 365 congregations in the United Kingdom on its roll, but they have no common name. Proposals for united action on Presbyterian lines were made by Martineau in 1838, but the demand for congregational autonomy defeated them. The individualism fostered by the constant plea for liberty is unfavourable to the growth of corporate church-life. Generous funds have been raised in aid of ministers' incomes and insurance, and the Conference has found it necessary to lay down educational qualifications for access to these benefits, and has thus constituted an accredited class of religious teachers. Unitarianism has thriven actively in some districts of Wales, but it has little hold in Scotland. The oldest of its congregations north of the Tweed was founded at Edinburgh in 1776. In Ireland Thomas Emlyn was prosecuted at Dublin in 1703 for denying the deity of Christ. Ulster Presbyterianism witnessed a movement against subscription which culminated in 1726 in the formation of a separate Presbytery of Antrim on a non-subscription basis. Many of the ministers passed through Arianism to Unitarianism, and in 1830 the Remonstrant Synod of Ulster was formed. At the same time, largely through the zeal of Martineau, then assistant pastor in Dublin, an Irish Unitarian Christian Society, embracing both individuals and congregations, was established in Dublin, which was merged (1835) in an Association of Irish Non-subscribing Presbyterians and other Free Christians, including the Presbytery of Antrim, the Synod of Munster, and the Remonstrant Synod of Ulster. Finally, in 1910 the Antrim Presbytery and the Ulster Synod united for purposes of church government under the name of the Non-subscribing Presbyterian Church of Ireland.

11. Unitarianism in America.—Unitarianism in America sprang out of the Congregational order

of the New England churches. Their theology was Calvinistic, but the 17th cent. foundations were based upon religious covenants instead of dogmatic creeds. Thus the First Church in Boston affirmed:

'We . . . do hereby solemnly and religiously promise and bind ourselves to walk in all our ways according to the rule of the Gospel, and in all sincere conformity to [Christ's] holy ordinances, and in mutual love and respect to each other, so near as God shall give us grace.'¹

The way was thus open, as in English Dissent in the 18th cent., to gradual theologic change. The literature of the Trinitarian controversy passed across the Atlantic, and the leaven of discussion in the works of Sherlock and South, Clarke and Whiston, supplemented by the writings of the Unitarian Emlyn, began to produce its effect. A slow movement towards Arianism and Arminianism set in, invigorated by reaction against the 'great awakening' under Jonathan Edwards (1735) and the early preaching of George Whitefield (1740). Jonathan Mayhew (1720-66) and Charles Chauncy (1705-57), pastors in Boston, led the way towards a more liberal faith. Under the ministry of James Freeman (1759-1835) the congregation of King's Chapel purged their Anglican liturgy of all references to the Trinity (1785). By this act, says the historian of the chapel, the first Episcopal church in New England became the first Unitarian church in the New World. The writings of Priestley and Lindsey were freely circulated, and at the end of the century the doctrine against which they protested had been rejected by all the Boston ministers but one. The name Unitarian was indeed rarely attached to the churches, but the mode of thought and worship prevailed more and more widely. It was found all the way from Portland (Maine) to Charleston (S. Carolina).

In 1803 William Ellery Channing (1780-1842) came to Boston and began the ministry which so powerfully influenced Unitarian thought. In reaction against a still powerful Calvinism, with its doctrines of human depravity, the wrath of God, and the atoning sacrifice of Christ, he proclaimed 'one sublime idea,' which he defined as 'the greatness of the soul, its divinity, its union with God by spiritual likeness, its receptivity of his Spirit, its self-forming power, its destination to ineffable glory, its immortality.'² This was the real challenge to New England orthodoxy; it operated with no less force in dispelling the materialism of Priestley and giving a fresh impulse of spiritual life to Unitarianism on both sides of the ocean. With this exalted view of man's true being, Channing declared himself surer that his rational nature was from God than that any book is the expression of His will; and reason and conscience were thus enthroned in the ultimate seat of judgment. Neither philosopher nor scholar in the technical sense, he exercised by his religious genius and the force of his ethical appeal a far-reaching influence both in the United States and in Europe. 'Always young for liberty,' he protested against every form of sectarian narrowness. He cheerfully took the name Unitarian because unwearied efforts were made to raise against it a popular cry, and he never was in any sense a Trinitarian. But he believed in Christ's pre-existence; he accepted his miracles. He would not, however, exclude from his fellowship the stoutest humanitarian, though he might repudiate the miracles altogether. For such a mind denominational aggressiveness was impossible, and this spirit was infused into the leaders of the movement which culminated in the foundation of the Divinity School of Harvard University in

1816, when the Unitarian controversy was at its height.

'It being understood,' said the constitution, 'that every encouragement be given to the serious, impartial, and unbiased investigation of Christian truth; and that no assent to the peculiarities of any denomination be required either of the Students, or Professors, or Instructors.'

The movement of which Channing was the most distinguished representative soon demanded some kind of organization. Literature must be circulated, congregations assisted, and churches built. In 1825, on the same day on which English Unitarians formed their association,¹ the American Unitarian Association was constituted. A noble line of eminent scholars, theologians, historians, jurists, poets, statesmen, accepted its principles and gave dignity to its profession of faith. It was not long, however, before new forces appeared on the field. The study of German philosophy produced a school of New England transcendentalism. Ralph Waldo Emerson (1803-82) (*q.v.*) resigned the pulpit of the Second Church in Boston on the question of the observance of the Lord's Supper, and six years later his famous 'Address to the Harvard Divinity School' (1838) signaled the breach of the new thought with the older views of revelation and miracle. Theodore Parker (1810-60) emphasized the same theme in a much criticized sermon on 'The Transient and Permanent in Christianity' (1841), followed by his widely read 'Discourse of Matters pertaining to Religion' (1842). A new type of Christianity without miracle was thus presented, emphasizing the divine immanence in nature, and holding up the religion of Jesus—the love of God and the service of man—as the 'absolute religion.' Unitarianism fell into the snare from which Channing would fain have saved it, and developed an orthodoxy of its own. When Henry Whitney Bellows of New York proposed to organize the churches (1865) in a National Conference, and its members adopted the declaration that they were 'disciples of the Lord Jesus Christ,' a group of bolder spirits formed a 'Free Religious Association,' where Emerson's name appeared first on the list. In 1894, however, the Conference repudiated all authoritative tests, and simply accepted 'the religion of Jesus, holding, in accordance with his teaching, that practical religion is summed up in love to God and love to man.'² The developments of criticism, science, and philosophy, the study of comparative religion, the desire for the widest possible fellowship, and the growing demands of philanthropy, have all contributed to broaden the outlook in every direction, and in 1900 the 'International Council of Unitarian and other Liberal Religious Thinkers and Workers' was formed in Boston. It has since held large and successful gatherings in London, Amsterdam, Geneva, Boston, Berlin (1910), Paris (1913), and Boston (1920), assembling a wide representation of different nationalities and faiths.

As in England, so also in America, Unitarianism has been an important influence in religious thought. It represents a mode of approach to the great problems of human life and destiny in which it is closely allied with the time-spirit. Its looseness of denominational organization makes its advance over so vast an area slow and hesitating, but its churches steadily increase, and in 1918 the list (including Canada) comprised 490 societies. The Divinity School at Harvard University gradually broadened out under the administration of Charles W. Eliot (1869-1909) into a school of scientific theology and independent research. The Meadville Theological School (Pennsylvania), founded in 1844, and the Unitarian Theological

School at Berkeley (California), founded in 1904, have remained more definitely within Unitarian lines.

12. World-wide influence.—(a) *The Colonies and India*.—The British Dominions, Canada, Australia, New Zealand, Africa, all have Unitarian churches. English and American Unitarians are also in close touch with the Theistic churches of India, and with Unitarian work in Japan, and receive students from the Far East into their theological colleges, besides sending out representative ministers to preach and lecture.

(b) *Germany*.—Continental thought has been affected by the same general influences which produced the Unitarian movement in England and America. The writings of the English Deists of the 18th cent. helped to foster German rationalism, and the critical study of the Scriptures led to the abandonment of doctrines of mechanical inspiration and Biblical authority. Belief in miracles was partly undermined by the influences of science and philosophy; and the *Leben Jesu*¹ of D. F. Strauss, together with the investigations of F. C. Baur into the development of the early Church, opened new paths for the historical treatment of the origins of Christianity. The results reached by Baur were modified by the subsequent researches of some of his own pupils, but a powerful school of thought, led by teachers such as H. Holtzmann (Strassburg), C. Holsten (Heidelberg), Carl von Weizsäcker (Tübingen), A. E. Biedermann (Zürich), R. A. Lipsius (Jena), O. Pfeleiderer (Berlin), reached a position which was substantially Unitarian, though it did not employ the name or lead to withdrawal from the State Church. In 1863 a liberal union was founded under the title of the 'Protestantenverein,' which gave practical expression to this mode of thought. It still exists, though in a state of somewhat diminished activity. Recent theological liberalism has tended to take one of two directions. Under the influence of Albrecht Ritschl (*g.v.*) of Göttingen, a higher value has been ascribed to the person of Jesus, quite apart from external miracle, than was usual among the older 'liberal' theologians. Among the leaders in this direction are A. Harnack, W. Herrmann (Marburg), and H. H. Wendt (Jena). On the other hand, the study of Christianity in connexion with the religions of the empire has led younger scholars to emphasize its relations with contemporary phenomena; and along these lines the late professors W. Wrede, J. Weiss, and W. Bousset, and the brilliant group led by H. Gunkel, E. Troeltsch, C. Clemen, H. Weinel, W. Heitmüller, and H. Lietzmann have all been working. The valuable translation and commentary issued under the general editorship of Johannes Weiss,² and the long series of *Religionsgeschichtliche Volksbücher*, represent the general attitude of liberal theology on the problems of primitive Christianity.

(c) *France*.—A similar movement of thought, though more limited in range, may be traced in France, since the appearance of Renan's *Vie de Jésus*,³ within the Reformed Church, represented especially by A. Coquerel (*fils*), Albert and Jean Réville, and a distinguished group of scholars and preachers. When the 'Séparation' took place in 1905, the Reformed Church split into two bodies, the 'National Union of Evangelical Reformed Churches' retaining a Confession of 1872, and the liberal group designating itself the 'National Union of Reformed Churches,' which is powerfully represented in the Theological Faculty of Paris, and exercises the greater influence both in the

pulpit and in the press. Liberal Lutherans like Maurice Goguel and Eugène Ehrhardt share the same general view.

(d) *Switzerland*.—Swiss Protestantism has been affected in like manner. The abolition of formal tests of orthodoxy by the Geneva Church opened the way for a type of Christianity essentially Unitarian; and in German Switzerland the theologians of Basel and Zürich have made important contributions to both Biblical and dogmatic studies on similar lines. Practical interest in social questions is now to some extent withdrawing attention from the critical and historical inquiries of the older liberalism, and even leading to a partial reaction towards the language and ideas of orthodoxy.

(e) *Holland*.—A similar tendency shows itself in Holland. In the second half of the 19th cent. the Dutch Reformed Church, the Remonstrants, the Mennonites, and the Lutherans were all affected by the philosophical and scientific modes of thought which generate Unitarian theology. Scholars like J. H. Scholten, A. Kuonen, and C. P. Tiele educated successive generations of students in the newer methods of critical investigation. Many of the younger ministers of the present day, however, without returning to orthodoxy, are more inclined to recognize spiritual values in some of the old doctrines of the Church, and, while they claim to be 'liberals,' are at the same time unwilling to be classed as 'modern.' Their view of human nature is not optimistic. The natural man must be regenerated by the Spirit of Christ; for this generation there is no other way.

(f) *Other countries*.—In Italy a little group, assisted by various university professors, is conducting a monthly periodical, *La Riforma Italiana*, on Unitarian lines with the names of Mazzini and Channing blazoned upon its cover. There are Unitarian congregations in Denmark, Sweden, and Norway. The veteran poet Matthias Jochumssen in Iceland († 1920) espoused the same cause, and communicated his enthusiasm to his countrymen in the United States. Even among the educated negroes of Lagos on the W. African coast religious thought has produced spontaneously an active movement in the same direction.

UNITED PROVINCES OF AGRA AND OUDH.—These provinces, in which Oudh, a separate jurisdiction since its annexation in 1856, was included in 1877, were up to 1902 known as the North-West Provinces. The change of title was mainly due to confusion with that of the

¹ 3 vols., Tübingen, 1835.

³ Paris, 1863.

North-West Frontier Province, which was formed out of some Districts of the Panjāb. The joint jurisdictions of Agra and Oudh extend between N. lat. 23° 52' and 31° 18', E. long. 77° 3' and 84° 39', with a total area of 107,267 sq. miles and a population in 1911 of 47,182,000. The Provinces contain a hilly and submontane tract to the north-west; Bundelkhand, a part of the Central Indian plateau to the south; while the central and more important region constitutes the W. and Central Indo-Gangetic Plain, the basin watered by the rivers Ganges and Jumnā (*q.v.*). The Districts between these two main rivers until they join at Allāhābād (*q.v.*) are known as the Duāb, 'land of the two waters.'

1. **History.**—The United Provinces form one of the best-known historical regions of India. The aboriginal population, wrongly classed as Dravidian (*q.v.*) by Risley, was probably of the Mon-Khmer stock. These 'pre-Aryans' have left traces in stone implements in the hills and plains, cup-marks on boulders in the northern hills, and cave paintings in the Kaimūr range to the south. At some unknown date, possibly about 1000 B.C., the so-called 'Aryans' who had been settled for a considerable period in the E. Panjāb¹ seem to have moved gradually eastward, and the *Mahābhārata* and the *Rāmāyana* epics describe the fortunes of two bodies of Ksatriyas, one to the west with their capital at Hastinapur (*q.v.*), the other at Ayodhya, the modern Ajodhya in the Faizābād District. One wave of invaders or colonists seems in the early period to have moved along the base of the Himālaya into Magadha or Bihār; the other occupied Madhyadeśa, the 'Middle Land,' or the Dnāb and its surrounding Districts.² For the earliest period there is no settled history till the time of Gautama Buddha (c. 407-487 B.C.). The next fixed date is that of Chandragupta Maurya (321-297 B.C.), the Sandrocottus of classical writers, who rose to power after the invasion of Alexander the Great. His grandson was the famous Aśoka (*q.v.*), three of whose pillar edicts have been found in the Provinces. We know little of the Kushān or Śaka invaders who entered India about the middle of the 2nd cent. B.C. The Gupta dynasty rose to power from about A.D. 320 until 450, when the first Hun invasion took place. This is remarkable because many of the Rājput (*q.v.*) houses sprang from its chiefs. In 1018 Maḥmūd of Ghazni, the first Muhammadan invader, raided the Provinces, and under the early Muhammadan kings Delhi was the capital, being succeeded by Agra early in the 16th century. Bābur defeated the Afghān king Ibrahim in 1526 and founded the Mughal empire, which with its capital at Agra or Delhi, under Humāyūn, Akbar, Shāhjahān, and Aurangzīb, lasted till the death of the last in 1707. Then commenced a period of anarchy until by treaty with Asafu-d-daula, Nawāb of Oudh, most of the eastern portion passed into the hands of the British. This was followed by further large cessions as the result of the Marāṭha war in 1803. In 1833 the Provinces were separated from Bengal and placed in charge of a lieutenant-governor. Since that time the only serious disturbance of order occurred in the Mutiny of 1857.

2. **Ethnology.**—The population is of a mixed type, made up of the pre-historic Mon-Khmer stratum leavened by successive entries of foreigners: Aryans, Scythians, Huns, Musalmāns. In the E. Gangetic Plain there is considerable congestion, the density of population rising to 706 per sq. mile. The people occupy 106,020 villages and 435 towns (of which 24 rank as cities), the

most important in order of population being Lucknow, Benares, Agra, Cawnpur, Bareilly, Meerut. Muhammadans favour a town life much more than Hindus; out of 1000 of each faith only 72 Hindus as compared with 269 Musalmāns are urban. This concentration in towns is one cause of the progress of Islām.

3. **Religion.**—Hindus (85·04 %) are much in excess of Muhammadans (14·77 %) or Christians (·38 %), but now Hindus are slowly decreasing, and there is an increase in Muhammadans and Christians. The progress of Islām is not to any great extent the result of direct propaganda, but is due largely to social conditions. Muhammadans are more prolific; they live more in towns and under less insanitary conditions than Hindus; their diet is more varied and liberal, and they are less addicted to the use of drugs like the preparations of hemp; they marry later and allow widows to remarry, while high-caste Hindus prohibit widow-marriage. On the other hand, their women suffer in health from seclusion (*parda*), and, being confined to the house, they are more liable to attacks of plague.¹

(a) *Brāhmanic Hinduism.*—What has been termed Brāhmanic Hinduism is the creed of the better classes, while the lower castes are largely animistic. It is impossible to draw the line between these forms of belief, which in all grades of society converge and intermingle. Orthodox Hinduism is regulated by a body of Brāhmins numbering 4½ millions, many of whom enjoy a high reputation for sanctity, act as domestic priests, or study theology, philosophy, and ethics at sacred places like Benares. Those of a lower grade act as guides at places of pilgrimage, cast horoscopes, and practise various kinds of magic. The majority, however, exercise no religious functions, and make their living by agriculture or domestic service, or take employment in the army or the police. Some of the most sacred places of Hindu pilgrimage are found in these Provinces: Hardwār, shared by Saivas and Vaiṣṇavas; Mathurā, devoted to the cult of Kṛṣṇa; Prayāg or Allāhābād, the sacred junction of the Ganges and Jumnā.²

(b) *The development of monotheism.*—An important development in recent times is the tendency to adopt a form of monotheism.

To quote R. Burn, 'the general result of my enquiries is that the great majority of Hindus have a firm belief in one Supreme God, called Bhagwān, Parameshwar, Ishwar, or Narain. Mr. Bailie made some enquiries³ which showed that this involved a clear idea of a single personal God; but I am inclined to think that this is not limited to the more intelligent, but is distinctly characteristic of Hindus as a whole. . . . There has been much discussion as to whether this monotheistic idea has been a natural result of contact with Islām or Christianity. As pointed out above, however, the idea of a single personal God was not unknown to Hindus long before they came into touch with adherents of these two religions, and I am inclined to think . . . that the tendency of Hinduism, with all its eclecticism and elasticity, is to develop more on the lines of indigenous beliefs, than on an entirely new direction copied more or less from some foreign religion.'⁴

'The Hindu who is a Saiva or a Vaiṣṇava has no real place for Parameshwar in his religious ideas, and would probably explain his presence by saying he was Siva or Vishnu. According to the Purānic philosophy, Parameshwar is the universal spirit when manifested as a personal god, who, according as he is dominated by activity (*rajas*), goodness (*satva*), is separated from the divine personalities, Brahmā, Siva and Vishnu. This, however, is merely stated to explain his relation to them; for it is a recondite theory which does not trouble the ordinary Parameshwar worshipper. To him Parameshwar is the supreme personal God, who made the world, is pleased by good and displeased by evil deeds, but is too much exalted to trouble much about mundane affairs. If the Hindu is not professedly a Saiva or a Vaiṣṇava, he will look on Siva and Vishnu as on the whole

² Manu, *Laws*, ii. 21.

subordinate to him, though much more valuable helpers in times of trouble. Still, nebulous as his idea of Parameshwar may be, it makes him at bottom a monotheist. But it is to some extent wrong to say that he "worships" Parameshwar. He may or may not repeat his name in the morning, and occasionally he has the *Sat Nārāyaṇ Kathā* recited in his honour; but this is all. It is a waste of time to importune a god with prayer and sacrifice when his attitude is one of suave aloofness; and the Hindu reserves his attentions for the minor gods and godlings.¹

(c) *Islām*.—The local distribution of Muhammadanism is dictated partly by historical, partly by economic causes.

¹The Muhammadan is found chiefly where Muhammadans held sway in the past: in Meerut and Rohilkhand Divisions, the "Home Counties" of the Moghul Empire, in Agra, Farrukhābād, Jaunpur and Oudh, all centres of Muhammadan States or provinces. In Cawnpore, Allāhābād and other districts with large cities, his tendency to urban life is sufficient to explain his numerical strength; this is also a factor which affects his presence in such historically Muhammadan centres as Agra, Meerut, Lucknow, Fyzābād, and Bareilly.²

(d) *Jainism*.—Jains, numbering 75,427 in 1911, show a tendency to decrease. The city mercantile class, deficient in virility owing to their sedentary habits, produce small families, and, as E. A. H. Blunt reports, the country Jain shows little enthusiasm for or knowledge of his religion.

²The truth seems to be that whatever theoretical differences may exist between Jainism and Hinduism, yet the followers of the same creeds in the same community do not differ very greatly in their practice. The bar to their intermarriage is no more insuperable than between Roman Catholics and Protestants. . . . Men of to-day think less about religion because the stress of modern conditions leaves them less time for other than mundane affairs. The active pursuit of religion, which means the active performance of ritual, is postponed to old age; the official or professional man takes to religion when he retires.³

It is natural also that, when a Jain girl is married into a Hindu family, she rapidly succumbs to the influence of the more popular faith. Jainism being reticent and unenterprising, she naturally adopts religious usages which enjoy more prestige and which are regulated by Brāhmins, whom Jains themselves employ for their domestic rites.

(e) *Sikhism and other faiths*.—Sikhs, numbering 15,186, are foreigners, mostly sepoys or policemen. Parsis, Jews, and Brāhmins are also foreigners and possess little influence, while Buddhists, representatives of a faith once dominant, now number only 780, and are mainly confined to the Tibetan frontier, with a few Nepalese, Chinese artizans, Magh cooks, and other smaller groups.

The Arya Samāj is chiefly confined to the upper and educated classes, and seems as yet to have made little impression on the peasantry.⁴

(f) *Christianity*.—Christians show a remarkable increase. The propaganda began with the visit of a Roman Catholic priest to Agra in 1578. It became active through the work of Henry Martyn at Cawnpur in 1810. In 1811 the Baptist Missionary Society, and in 1813 the Church Missionary Society, entered the field. Christians, including those in the Native States, numbering 58,518 in 1891 and 102,955 in 1901, increased to 179,694 in 1911.

³The new convert, may be, is no better than his predecessors; but a new generation, the children of the first generation of converts, is growing up. If the missionaries could and can get little out of that first generation, the second generation is in their hands from their earliest years. The children of the converts, born in Christianity, are very different to their parents; their grandchildren will be better still. It is this which provides the other side to the black picture so often drawn of the inefficiency of Christian conversion. And this generation is now beginning to make its influence felt. The Hindu fellows of these converts have now to acknowledge not only that they are in many ways better off than themselves, but that they are better men. And this has undoubtedly contributed to the better esteem in which Christians are regarded. . . . A convert, no doubt, is still outcasted, but he is now regarded as

a member of a fresh caste, and Hindus bear with his idiosyncrasies as they do with those of any other caste.¹

UNITY.—See CHURCH.

UNIVERSALISM.—I. Uses of the term.—The word 'universalism' has been used in at least three distinct senses. (a) It is convenient to take first in order the use of the word which is in fact the most modern. It designates the setting aside of the belief that a nation or a race is privileged to enjoy the special protection and favour of God, or of a deity whom it recognizes as peculiarly its own; and contemplates all nations and races as standing, actually or potentially, in one and the same relation to one and the same God. Universalism in this sense has become current largely owing to the influence of F. C. Baur; its opposite is particularism. In the OT the view of the special relation of a deity to a people is expressed in such passages as *Jg* 11²⁴, when Jephthah says to the Amorite: 'Wilt not thou possess that which Chemosh thy god giveth thee to possess? So whomsoever the Lord our God hath dispossessed from before us, them will we possess.' The steps by which this particularism yielded to the larger thought, first of Jahveh's rule over all peoples as God above all gods, and next as being the only God, whose sway is universal, but who has chosen Israel as His special care, are sufficiently familiar. There are within the pages of the OT occasional indications of a desire to extend to other nations the Messianic hope and the kingdom of God.² In the NT we are familiar with the distinction between the universalism of St. Paul and of the Lucan writings,³ in contrast with the exclusiveness of the Jew and the Judæo-Christian, who, if they did not entirely disapprove the proffer of the gospel to the Gentiles, yet wished to make conditions and impose practices which St. Paul strongly repudiates. In the NT the larger view seems to win its way from the announcement of a salvation which, beginning from Israel, shall be unto all peoples, to the Apocalyptic vision of the 'great multitude which no man could number, out of every nation, and of all tribes and peoples and tongues,'⁴ and of a New Jerusalem whose gates are never shut.

(b) The second use of the term 'universalism' has to do with the theological question of the extent of the benefit wrought by the atoning death of Christ, and with the relation of the Calvinian doctrines of election and predestination (*qg.v.*) to the expressed purpose of the gospel, that all men might be saved. The Arminians had maintained, as the second of their five points, 'that Jesus Christ by His death and sufferings made an atonement for the sins of all mankind in general, and of every individual in particular,' but they went on to say that none could be partakers of this benefit but those possessing a true faith, which can belong only to those who are regenerated by the operation of the Holy Ghost. This was condemned as error by the Synod of Dort (1618). There were many, however, who desired to mitigate the lan-

guage of absolute predestination and particular redemption. Among these were John Cameron, professor in the Protestant seminary of Saumur (1618-22), and his pupil, Moyses Amyraut, professor of theology at Saumur (1633). The aim of both was to vindicate for the Deity a larger and more real benevolence and goodwill to mankind than was contemplated in the Canons of Dort. They postulated a general will to save all men, but, in order to be effective, this required to be reinforced by the exercise of a particular will. The merits of Christ's passion and death were in themselves sufficient, but not efficient for all men. In other words, though the impenetration is universal, the application is individual: the general will is not a will *decreti* but *præcepti*, and it may be wholly resisted by mankind in bondage to sin. The universality of salvation is conditioned; the promise is *sub conditione fidei*. A similar distinction is made between objective grace, an offer of pardon to all, and subjective grace, which is the application to the individual by the particular will of God. The special action of grace is variously described: sometimes it seems identical with 'effectual calling'; in other connexions it is that which brings a man to the knowledge of the truth, and, acting through the intellect upon the heart, brings about conversion.¹ The doctrine of this school is known as 'hypothetical universalism.' Its promulgation led to some persecution of Amyraut in France, to the withdrawal by the Swiss Reformed Churches of their students from the seminary at Saumur, and the elevation of that of Sedan in its place as the centre of French Protestant orthodoxy. Amyraut and his friend Paul Testard were summoned to appear before synods of the Reformed Church of France at Alençon (1637) and Charenton (1644-45); they were acquitted on all charges of heresy, but this acquittal was strongly reprobated by the rigid Calvinists of the Reformed Church. It was, however, approved and defended by the learned Jean Daillé (Dallæus) (1594-1670), pastor of Charenton, who published in 1655 *Apologia pro duabus Synodis Nationalibus*. The position of the High Calvinists was defended by Friedrich Spanheim (1600-49), professor at Leyden, in his *Disputatio de gratia universalis* (1644), followed by *Exercitationes* (1646).

The controversy spread to England, where John Davenant (1576-1641), bishop of Salisbury, who had attended the Synod of Dort, was engaged in finding a 'middle way' between the Remonstrants and the Supralapsarians, and did this with a special reference to the *Gallicana Controversia*, in his *Dissertationes duæ de Morte Christi et de Prædestinatione*, published at Cambridge in 1650. John Owen had already denounced the 'error' of universal redemption and those 'who try to go a middle way between the Churches of France and the Arminians,' especially in his anonymous work *Salus Electorum Sanguis Jesu* (1648). The term 'universalist' was applied to the advocates of universal redemption perhaps first by Obadiah Howe, whose work, *The Universalist Examined and Convicted*, appeared in 1648. The controversy engaged the ready pen of Richard Baxter, then at Kidderminster, who thus alludes to his early work upon it:

'Another Manuscript that lyeth by me, is a Disputation for some *Universality of Redemption*, which hath lain by me near Twenty years unfinished . . . partly because at last came out after *Amyraut* and *Davenant's Dissertations*, a treatise of *Dallæus*, which contained the same things, but especially the same Testimonies of concordant Writers which I had prepared to produce.'²

This work, entitled *Universal Redemption of Mankind by the Lord Jesus Christ*, was published in

¹ See art. AMYRALDISM.

² *Reliquiæ Baxterianæ*, London, 1696, bk. i. pt. i. p. 123.

1694 by Joseph Reid, who had been Baxter's assistant and had transcribed his MS in the year 1657.

It is to be remembered that throughout this period the doctrine of 'general redemption' was being taught by the early English Baptists, known as General Baptists from their opposition to the doctrine of particular election. Of these the first was Thomas Helwys (1550?-1616?), who had been the chief supporter of John Smith's little congregation in Amsterdam, and had been baptized by him, and who returned to England after Smith's death in 1612. He set forth the doctrine of general redemption in a document of a few pages printed in 1611 and entitled *A Short and Plain Proof by the Word and Workes of God . . . that all men are redeemed by Christ*. He was the founder of congregations in London and the home counties.

(c) Universalism in the third sense denotes the doctrine held by persons and churches called 'Universalist.' With some minor differences, all such agree in the belief in the final salvation of all mankind. The opponents of this doctrine are designated by its adherents as partialists or limitarians.

The assertion and defence of this doctrine are based mainly on the language of the NT, as, e.g.: 'All that the Father giveth me shall come to me; . . . and this is the Father's will which hath sent me, that of all which he hath given me I should lose nothing' (Jn 6:37-39). 'And I, if I be lifted up from the earth, will draw all men unto me' (12:32). 'As in Adam all die, even so in Christ shall all be made alive' (1 Co 15:22). 'God was in Christ, reconciling the world unto himself' (2 Co 5:19). 'That . . . he might gather together in one all things in Christ, both which are in heaven, and which are on earth' (Eph 1:10). 'God our Saviour; who will have all men to be saved . . . for there is one God' (1 Ti 2:3-4, 5). 'For the grace of God hath appeared, bringing salvation to all men' (Tit 2:11). 'The Lord is . . . not willing that any should perish, but that all should come to repentance' (2 P 3:9). 'And he is the propitiation for our sins; and not for ours only, but also for the sins of the whole world' (1 Jn 2:2). 'Death and hell were cast into the lake of fire' (Rev 20:14).

In scriptural argument the Universalist contention has mainly turned on the following points:

(1) The purpose of God: see Ac 3:21, ἀποκατάστασις πάντων, where the recovery of a primal condition, once forfeited, is certainly indicated; the end is to be as the beginning.

(2) The means and sanction of such recovery by the office and work of Christ. 'Therefore as by the offence of one judgment came upon all men to condemnation; even so by the righteousness of one the free gift came upon all men unto justification of life' (Ro 5:18). 'That he by the grace of God should taste death for every man' (He 2:9).

(3) The nature of the ultimate salvation. 'Then cometh the end, when he shall have delivered up the kingdom to God, even the Father; when he shall have put down all rule and all authority and power. For he must reign, till he hath put all enemies under his feet. The last enemy that shall be destroyed is death. For he hath put all things under his feet. But when he saith all things are put under him, it is manifest that he is excepted, which did put all things under him. And when all things shall be subdued unto him, then shall the Son also himself be subject unto him that put all things under him, that God may be all in all' (1 Co 15:24-28). The consummation is reached by the divine indwelling in every human soul.

2. **Universalism in Patristic literature.**—When the expectation of a speedy coming of the end and a Messianic reign of a thousand years on earth died away in Christian circles, attention was directed to the idea of a world-process, involving an evolution of a spiritual realm, supplanting the material universe, which Gnosticism in its various forms had made familiar. Christian Platonism set itself to combine the promises of the gospel with the more spiritual elements of Greek philosophy. When the Christian philosophers of Alexandria undertook to set forth a true gnosis, as against the several false ones, they had to exhibit salvation on the scale not of the individual, but of the cosmos.¹

In the view of Clement of Alexandria († A.D. 220) God's purifying discipline of man extends beyond this life.

¹ See art. ALEXANDRIAN THEOLOGY.

Death is the means whereby the soul is made more immediately subject to redeeming influences, and through correction and repentance may rise to various stages of spiritual development, the highest of which is eternal communion with infinite goodness, love, and truth. This is the completion of that likeness of God wherein man was made at the beginning.

Origen († A.D. 254) extended the notion of the discipline of souls much farther both in scope and in detail. His mind was at once more laborious and more speculative than Clement's.

He conceived a chain of existences in which the human life of this world is but a link. Souls arrive from an infinite past, in which their experience and their discipline have been carried on with the most varied results, to exercise here their privilege of free will, to rise or to sink according as they have accepted or resisted the spiritual influences that are perpetually striving for their redemption. Into future aeons beyond this life Origen carries the divine work of leading souls towards the goal of all sentient being, which is attained in likeness to God, for in the end God will be all in all. Fallen angels and demons will be rescued to share with mankind the ultimate salvation. It is to be noted that, when Origenism was anathematized as heresy, under Justinian (A.D. 541-543), it was not his view of the universality of salvation that was condemned, but then, as afterwards, his doctrine of the pre-existence of souls and of the final salvability of devils.

Gregory of Nyssa († A.D. 394) moves towards the same result from his central conviction as to the ultimate annihilation of all evil. For he says:

'If God will be in all existing things, evil, plainly, will not then be among them.'¹ 'The resurrection is nothing else than the reconstitution of our nature in its original form.'² Nothing that had its origin from God will fall out of His kingdom. When all the evil that is intermingled with things that are melted out by cleansing fire, everything that originated from God will become such as it was from the beginning, before the evil entered into it.

The same view was taken by Didymus of Alexandria († A.D. 395), who explicitly endorsed Origen's opinion on the conversion of devils.

Among the later Fathers of the Church in the East it suffices to mention Theodore of Mopsuestia († A.D. 428), an opponent of Origenism, who maintained that sin and its penalty were both agents in the moral purposes of God as conducive both to self-knowledge and to repentance, and thus effective for the restoration of the wicked.

The current of Alexandrian thought came again to the surface in the 9th cent. in the mind of John Scotus Erigena († A.D. 877), in the form of a pantheistic theodicy. He predicts, at the conclusion of a complicated and somewhat inconsistent scheme, the absorption of all into the divine; wickedness, death, and misery are all transformed into goodness, life, and blessedness; and the *consummatio mundi* is that God is all in all.³

In the period immediately preceding the Reformation some form of belief in universal salvation is found in connexion with very various forms of doctrine and life; e.g., this belief is seen in combination with the Antinomianism of the Brethren of the Free Spirit (*q.v.*), and the fanatical asceticism of the Albanensian Cathari.⁴

3. **Universalism in Germany.**—A certain prevalence of Universalism among the German Anabaptists has been attributed to the influence of Hans Denk, scholar and mystic (1495-1527), but his extant writings do not show that he gave it any prominence in his teaching. That the Anabaptists were largely credited with such opinion is evident from cap. xvii. of the *Augsburg Confession* (1530), where there is formal condemnation of the Anabaptists 'who believe that there will be an end of the punishments of the damned and the devils.'

At the end of the 17th cent. and the beginning of the 18th controversy was very rife on three points—the eternity of punishment, the millennium, and the restitution of all things. A number of the publications of this time, especially on the last-named topic, are embodied in a great work published in three volumes folio at Frankfurt in

¹ *De Anim. et Resurr.*

² *Ib.*

³ *De Divisione Naturæ*, v. 30.

⁴ See art. ALBIGENSES.

1701-10, entitled *Μυστήριον ἀποκαταστάσεως πάντων, oder das Geheimniss der Wiederbringung aller Dinge*, compiled by Johann Wilhelm Petersen (1649-1727). Petersen had been professor at Rostock and a prominent divine of the Lutheran Church. He was deposed from office in 1692, because of his having embraced Universalist opinions, to which he had been converted by his wife, Johanna Eleanora von Merlau. She had been influenced in this direction before her marriage by the writings of the English mystic, Jane Lead, whose opinions were widely circulated in Germany by her disciples, who constituted the Philadelphian Society.¹ Petersen was a very voluminous writer, and both he and his wife contributed largely to the contents of the great compilation.

For many years after the appearance of Petersen's work a great number of writings, for and against the doctrine of restoration, were published. On the orthodox side appears the great name of Johann Lorenz von Mosheim (1694-1755). On the other side the most remarkable publication, in permanence and popularity, was the little work entitled *The Everlasting Gospel*, which, having run through many editions in Germany from 1700 to 1745, was destined to achieve wide influence in America. It professed to be written by Paul Siegvolk, but it is known that the author's real name was Georg Klein-Nicolai, for which Paul Siegvolk is a transparent disguise, effected with the aid of German, Latin, and Greek.

Such subjects as eternal punishment were from this time open to latitudinarian treatment in Germany, but it remained for F. D. E. Schleiermacher (1768-1834) to give to his contemporaries and successors a definite direction towards Universalism. Among systematic theologians the one who has most closely followed Schleiermacher (*q.v.*) in his eschatology is the Zürich professor, Alexander Schweizer (1808-88).²

4. **Universalism in England.**—It has been inferred, from a mandate of Simon Langham, archbishop of Canterbury, dated 5th Nov. 1368,³ that doctrines of universal salvation, extending even to the salvability of devils, were current at that time in England. A number of opinions are condemned as erroneous, extending from the possible salvation of Saracens, Jews, and pagans to beliefs such as, e.g., 'it is not possible that one should be damned for original sin without actual sin,' and that the nature of demons may not be essentially irreparable. This mandate is addressed to the Chancellor of the University of Oxford, and it is surely more probable that it intends to deal with the possible re-appearance of Origenistic speculation in academic disputations than with any popular advocacy of such views.

The 42nd of the English Articles of 1553 has for its title 'That all men shall not be saved at the length,' and it runs:

'They also are worthy of condemnation who endeavour at this time to restore the dangerous opinion, that all men, be they never so ungodly, shall at length be saved, when they have suffered paines for their sins a certain time appointed by God's justice.'

It is generally admitted that this condemnation is directed against Anabaptist opinions promulgated by foreign refugees who had then recently come to England in large numbers and been permitted to establish churches. Such doctrine is not attributed to the English Lollards, save probably in one document, viz. *The Protestation of the Clergy of the Lower House within the Province of Canterbury, with Declaration of the Faults and Abuses which heretofore have and now be within the same, worthy*

² H. R. Mackintosh, 'Studies in Christian Eschatology,' in *Exp.* 8th ser., viii. [1914] 128 ff.

³ D. Wilkins, *Concilia Magnæ Britannicæ et Hibernicæ*, London, 1737, iii. 75.

special Reformation (1536), where, under no. 4, we read:

'That if there be a place where they [souls departed] be punished, God is not yet born, nor He that shall redeem the world.'

Here, obviously, not a doctrine of temporary punishment, but one of no punishment at all, is condemned. The return of foreign Protestants to their own countries on the accession of Queen Mary (1553) probably accounts for the withdrawal of the Articles 40, 41, and 42.

It would have been strange if, in the general outburst of the most diverse religious opinions from 1640 onwards, the maintenance of universal salvation had not found a place. It is warmly advocated in a little anonymous book entitled:

'Divine Light, manifesting the love of God unto the whole world: with the True Church.

Wherein the holy Spirit of Truth manifesteth the Glory of God in Christ, exalting Christ, a spiritual Christ, and All-saving Jesus; shewing that Christ is a sure Foundation, and chief Corner-Stone for all Spirituall building, unto the raising up lively hopes for all People to proceed in Beleeving the great Mercies and loving-kindnesses of our God in Christ, in whom God hath redeemed us his saints, and All; having wrought all things for us, and all in Christ, wherein wee are made perfect.

Sent forth by the Minister of the Lord Jesus, whom He hath appointed his servant for the Good of All:

In bringing Glad Tidings of Good Things unto the whole Creation. Esai 62. 7. 13.

The Lord will worke for the manifestation of his Truth in this his due time. Printed in the year 1646.'

The author does not deny that the elect are found in every age, but they are those who are chosen to proclaim to the world general redemption and the holy covenant. It is evident that the work attracted much attention, for in *A Testimony to the Truth of Jesus Christ as also against the Errours, Heresies and Blasphemies of the Time and the Toleration of them, Inscribed by the ministers of Christ within the Province of London, December 14, 1647*, we find that the 'errours against God's eternal decree of Election and Reprobation' are taken verbatim from the *Divine Light*. Under date 4th Feb. 1646 the Lords and Commons put forth an order for a day of public humiliation 'for the growth and spreading of Errors, Heresies and Blasphemies,' and among the 'errors' enumerated are two, referred to *Divine Light*:

'(a) "That God's eternal election is of all men, one as well as another"; (b) "that all shall be saved at last, both men and devils, and that they that deny it are the great Antichrist; that true faith is to believe it; and that though this Faith of general redemption were but in three persons only in the world, it should be sufficient to save all the rest of the Creation."¹

In the so-called Draconic Ordinance, passed by Parliament in 1648, while deniers of the Trinity are threatened with death, those who maintain that all men shall be saved are declared liable to imprisonment.

Another vigorous little tract, of six pages, written by Henry Horn and published in 1653, deserves mention in connexion with the *Divine Light*, viz. *The Light of God spreading itself in all the dark Corners of the Earth; with glad Tydings to all People, with a Restauration of all Things, and the Lyon's Power overthrowen*.

At this time three men were itinerating in the country, preaching Universalism, and gathering small bodies of adherents. They often preached in churches, but more frequently challenged the clergy in public disputation after the manner of the 'gifted brethren' of the army. These were William Erbury (1604-54), Gerrard Winstanley († 1652), and Richard Coppin († 1659). The last-named was frequently imprisoned; his works largely consist of accounts of debates with his clerical opponents and his judges. One of his chief contentions is that there may be redemption from hell, and in support of this he argues that, in

¹ *Hell broke loose*, London, 1646, p. 5.

Biblical language, 'everlasting' does not mean 'endless.'

The latter point is elaborated at length by Samuel Richardson, a Baptist, in his work entitled *Of the Torments of Hell: The Foundation and Pillars thereof discovered, searched, shaken and removed, with infallible Proofs, that there is not to be a Punishment after this Life, for any to endure, that shall never end*, printed in 1658, and reprinted in *The Phoenix*, ii. [1708]. In this little work the author carries himself beyond the end proposed, and convinces himself of the ultimate salvation of all men.

In 1661 appeared an anonymous treatise entitled *A Letter of Resolution concerning Origen and the Chief of his Opinions*, reprinted in *The Phoenix*, i. [1707]. The author was George Rust, who in 1667 became bishop of Dromore. His statement of Origen's opinions is not mere exposition, but reveals the author as more than favourable to the notion of universal restitution.

A classic of Universalist literature was being produced at this period by Jeremiah White (1629-1707), Fellow of Trinity College, Cambridge, and chaplain to the Protector. The book was not printed until 1712, and did not then bear the author's name. The title is *The Restoration of all Things, or a Vindication of the Goodness and Grace of God, to be manifested at last in the Recovery of his whole Creation out of their Fall*. *Rev. xiv. 6*. White approaches his subject from the predestinarian side; his style is forcible, simple, and dignified, reminding the reader of the Cambridge Platonists.

Isaac Barrow (1630-77) had already approached the subject from the Arminian side in his sermons, nos. 39-42, 'The Doctrine of Universal Redemption Asserted and Explained.'

Thomas Burnet (1635?-1715), Master of the Charterhouse, towards the end of his life, wrote a Latin treatise, *de Statu Mortuorum et Resurgentium*, which he circulated in MS among his friends, strictly enjoining that it was not to be printed. After his death, however, it appeared in print (1727), and subsequently in an English translation (1733). The author is perhaps not very clear as to the processes and stages by which the soul after death arrives at the general resurrection and the last judgment, but he is unmistakably opposed to the doctrine of endless punishment. He maintains, however, that this doctrine should not be publicly discredited, but used as a deterrent from sin in popular teaching.

Archbishop Tillotson (1630-94) held that the Biblical language as to future punishment is to be regarded as a divine threatening of wrath to come, which in God's mercy may not be literally realized.

The views of George Cheyne (1671-1743) inclined towards Universalism.

Popular preaching of Universalist doctrine had a brief success in London under the vigorous advocacy of James Rely (1720-78). He had been a convert of Whitefield's, and was for some time a preacher among his adherents, but he espoused the doctrine of a 'finished salvation' in Christ, maintaining that all sin and all suffering for sin had been accomplished and ended in the passion of Christ, and that mankind has therefore expiated all offence in the person of Christ, its corporate head. The only offence for which man is still accountable consists in the disbelief or the ignoring of this fact. Rely made a convert of John Murray, who in 1770 carried his doctrine to America.

Elhanan Winchester (1751-97) came from America in 1787, and in the following year published *The Universal Restoration Exhibited in Four Dialogues*. He gathered a large congrega-

¹ *Works*, London, 1830-31, iii.

tion in Parliament Court, London, and was succeeded there, on his return to America in 1794, by William Vidler (1758-1816), who had been a Baptist minister at Battle, and, on embracing Universalism in 1792, had been expelled, with his congregation, from the Kent and Sussex Association of Baptist Churches. Vidler was not successful in maintaining a large congregation in London, but did great service to the cause he advocated by establishing in 1797 a periodical entitled *The Universalist's Miscellany*, which in 1802 became *The Universal Theological Magazine*. This continued from 1797 to the end of 1805, and was succeeded by *The Monthly Repository* (1806-37), a valuable record of men and movements on the liberal side of the old dissent.

Universalism, apart from any attempt at the organization of a Church, found an advocate in Sir George Stonhouse († 1793), a Syriac scholar of eminence, who had spent much time in the examination of Syriac MSS in Continental libraries. At Oxford he had been a member of the little band of Methodists over whom John Wesley presided, nicknamed the Holy Club, and had maintained, against his fellow-members, the doctrine of universal restitution. In later life he resided at East Brent, Somerset, and was much interested in a society formed in the neighbouring parish of Burnham and called the Burnham Society, 'to study philosophy and polemic divinity and debate on the difference of religious opinions, in brotherly love.' The minutes of the society record discussions on the pre-existence of souls and universal restitution.¹ Stonhouse published (anonymously at Bristol in 1761) *Universal Restitution a Scripture Doctrine*, and two subsequent volumes on the same subject in 1768 and 1773.

Another independent study is *The Restitution of All Things: An Essay on the Important Purpose of the Universal Redeemer's Destination* (1785), by James Brown, chaplain of the British garrison at Savannah in the Province of Georgia. The author is apparently quite unaware of any efforts or any books of purport similar to his own.

At the close of the 18th cent. Universalism began to spread among English Unitarians. John Prior Estlin, of Bristol (1747-1817), published *Discourses on Universal Restitution* (1813), directed principally against the doctrine of the final annihilation of the wicked. A more generally interesting treatment of the subject was put forth by T. Southwood Smith (1788-1861), in his *Illustrations of the Divine Government* (1816).

David Thom (1793-1862), minister of the Scotch Church, Rodney Street, Liverpool, having been licensed by the Presbytery of Glasgow, was in 1825 censured and suspended by that Presbytery upon charges of heresy, which, however, lay entirely within the sphere of Calvinistic doctrine. His adherents formed an independent congregation, which soon became known as Berean Universalists, for Thom now espoused the doctrine of a 'finished salvation,' analogous to that of Rely, and constructed on a distinctly Calvinistic basis. His works consisted of laborious and often paradoxical interpretations of Scripture, but in 1850 he republished Jeremiah White's *Restoration of All Things* with a historical preface. The same year marked the appearance of a magazine, *The Universalist*, edited by Richard Roe, to which Thom became a constant contributor, his efforts being largely devoted to restraining the Unitarian tendencies of contemporary Universalism, especially in the United States.²

Universalism has, at a later time, been approached from various sides by writers within the Church of

England, notably F. W. Farrar,¹ Andrew Jukes,² and Alfred Gurney.³

5. **Universalism in Scotland.**—As early as 1755 certain small congregations in the Merse (Berwickshire) which had been associated with the Reformed Presbytery (a branch from the Cameronian side of the Scottish Covenanters) united in declaring their belief in 'the boundless love of God and the universal mediation of Christ.' Feeling the need of a pastor, they solemnly set aside three young men considered fit for the office, and, after a day of consecration and prayer, determined by lot which of the three should be recognized as their pastor. The lot fell upon James Purves (1734-95). This was in 1769; and, as they desired to have direct recourse to the Scriptures of the prophets and apostles as the source of true knowledge, ecclesiastical and civil, Purves was directed to apply himself to the study of the original tongues, and for this purpose went to the University of Glasgow. In 1776, many families of the original body having settled in Edinburgh, he was appointed pastor over them, but did not relinquish his relation with the societies in the Merse. Purves having publicly advocated Universalist views, his congregation in 1792 adopted the title of Universal Dissenters. Later, in 1813, it became generally known as Unitarian. In 1812 T. Southwood Smith became minister of the congregation, the charge having been vacant since the death of Purves. During the period of his ministry he studied medicine, and, having graduated M.D. in 1816, became subsequently well known as a pioneer of sanitary reform. The congregation is now represented by St. Mark's Chapel, opened in 1835.⁴

Neil Douglas (1750-1823), who in 1809 seceded from the Relief Church, established Universalist congregations in Greenock and Glasgow, and preached in many other places. His successor, William Worrall († 1828), continued his work, and congregations were established in Glasgow, Greenock, Johnstone, Paisley, Ayr, and Falkirk, which united in an annual conference. He published three volumes of a periodical entitled *The Gospel Communicator*. Probably a survival of his activity is to be seen in the Universalist Church of Stenhousemuir, Larbert, the only congregation in the United Kingdom still bearing the title Universalist.

James Morison (1816-93) founded the Evangelical Union in 1843 on the basis of three universals: universal love of God, universal atonement of Christ, universal work of the Holy Ghost. Declaring that the sacrifice of Christ was for all men everywhere, Morison stops short of universal salvation; the obstacle, in his view, is not, as in Amyraldism, the lack of special grace in the individual, but 'unbelief, the only obstacle to salvation which the death of Christ has not removed.'⁵

6. **Universalism in America.**—The progress of Universalism in America has found a competent and judicious historian in Richard Eddy; hence its main lines may be readily traced and succinctly stated.

The first advocates of universal salvation were probably the German Baptists, called Dunkers or Tunkers,⁶ who were settled in Germantown, Pa., as early as 1719, and there established a church. They brought or imported Universalist books from Germany, and among them was *The Everlasting Gospel*, attributed to Paul Siegvolk (see above). The translation and printing of this, which may

¹ Extracts, etc., were printed in 1798.

² D. Thom, *Sermons with Memoir*, London, 1863.

be regarded as the primary document of American Universalism, is probably due to the influence of G. de Benneville, who, after having suffered persecution for preaching Universalism in France and Germany, settled in Pennsylvania in 1741. The title runs thus :

'The Everlasting Gospel, commanded to be preached by Jesus Christ, Judge of the Living and Dead, unto all creatures, Mark xvi. 15. concerning the Eternal Redemption found out by him, whereby Devil, Sin, Hell and Death, shall at last be abolished, and the whole Creation restored to its primitive Purity; being a testimony against the present Anti-Christian World. Written in German by Paul Siegvolk, and translated into English by John S[iechla]. Germantown: Printed by Christopher Sower, MDCCLIII.'

There is abundant evidence that in the latter half of the 18th cent. Universalism was spreading widely in the Episcopal, Congregational, and Presbyterian Churches. Controversy was roused especially by the anonymous publications of Charles Chauncy, of Boston (1705-87), e.g., *Salvation for all Men* (1782). But the organization of societies on a basis distinctly Universalist is due to John Murray (1741-1815), who, deserted on account of his Rellian views by his former friends in Whitefield's Connexion, and broken by domestic afflictions, had determined to seek refuge and obscurity in the New World. The ship that bore him and was making for New York was driven by a storm into shoal water off the coast of New Jersey. It became necessary to land part of the cargo, and of this Murray was left in charge. Wandering on shore, he came to a settlement called Good Luck, and met with its founder, an aged man named Thomas Potter, who, in addition to his farm buildings, had built a meeting-house, and confidently expected that the Lord would send him a preacher. He hailed Murray as the heaven-sent messenger of the gospel, and constrained him to preach. An inscription on a granite boulder now marks the spot where Potter and Murray met, and records that on 30th Sept. 1770 Murray first preached in America. For some time after this Murray itinerated as a preacher among orthodox Baptists, until in 1774 he settled at Gloucester, Mass., with a congregation many of whom had been already influenced by the teaching of Rely. Here in 1779 some of these joined with Murray in a church covenant; this marks the earliest form of organization among American Universalists.

Murray's later ministerial life was spent in Boston, but at this time a new centre of Universalist activity was formed in Philadelphia by the labours of Elhanan Winchester. Winchester's followers, who were at first known as Universal Baptists, joined the adherents of Murray in organizing 'The First Independent Church of Christ commonly called Universalists.' A convention, held in Philadelphia in 1790, drew up Articles of Faith and a plan of church government. The third of these Articles runs :

'We believe that there is One Mediator between God and man, the man Christ Jesus, in whom dwelleth all the fullness of the Godhead bodily; who, by giving himself a ransom for all, hath redeemed them to God by his blood; and who, by the merit of his death and the efficacy of his Spirit, will finally restore the whole human race to happiness.'

Murray and his adherents adopted these Articles in 1791, and subsequently altered them in a Rellian direction. But the personal friendship of Murray and Winchester could not avert divergence between their followers; for, while Murray advocated a 'free and finished justification' obtained at once by the expiatory suffering of Christ, and summed up in the words 'no future punishment,' the adherents of Winchester suspected a perilous tendency to Antinomianism in these views, and Winchester's own teaching included an elaborate eschatology involving a millennial reign of Christ with the saints on earth, their ascent into the heavenly places, the conversion of this world into

a lake of fire for the age-long punishment of devils and wicked men, and the ultimate purification and elevation of both to final sanctification.

Another view which would appear to be more definitely Antinomian in tendency than Murray's was propounded by Caleb Rich of Warwick, Mass. (1750-1821), and attained a certain local ascendancy. According to this, as at the creation the soul was inserted into the mortal frame, so now with each individual soul; it remains untainted by the deeds and desires of the flesh, and at the dissolution of its material envelope rises again to God in its original purity.¹

Notwithstanding these divergencies, it is remarkable that in Aug. 1803 the Convention of Universalist Churches of New England, held at Winchester, N.H., in which 38 societies were represented, agreed upon a Profession of Faith which is still the standard of American Universalism. This, known as the Winchester Profession, is as follows :

'Article i.—We believe that the Holy Scriptures of the Old and New Testaments contain a revelation of the character of God and of the duty, interest, and final destination of mankind.

'Article ii.—We believe that there is one God, whose nature is Love, revealed in one Lord Jesus Christ, by one Holy Spirit of Grace, who will finally restore the whole family of mankind to holiness and happiness.

'Article iii.—We believe that holiness and true happiness are inseparably connected, and that believers ought to be careful to maintain order and practise good works; for these things are good and profitable unto men.'

The general consensus marked by the Winchester Profession prepared the way for a new departure, and for the commanding influence of a new leader in the person of Hosea Ballou (1771-1852). He published in 1805 *A Treatise on Atonement* (subsequently much revised). This little work severed Universalism from its origins in Calvinism, and lifted it from controversy to a level of affirmation and construction. It sought to build up a theology on the one postulate of God's universal and everlasting love. Ballou finds the reality of atonement not in the appeasing of God's wrath and the reconciliation of God to man, but in the reconciliation of man to God.

'To believe in any other Atonement than the putting off of the old man, with his deeds, and the putting on of the new man, which after God is created in righteousness and true holiness, is carnal-mindedness and is death.'²

While he emphasizes God's dealings with man in the way of moral discipline and retributive justice in the present life, and insists on the continuity of the divine judgment of the individual from day to day, he anticipates that death will in some way so quicken the powers of the soul and enlighten all spiritual faculties that nothing that can be called penal lies before it in a future state. Though he did not lay stress upon the doctrine of no future punishment, his implicit adherence to it had certain definite consequences. Ballou rejected the deity of Christ, and thus espoused Unitarianism some years before it became dominant in the Congregational churches of Boston. But the Unitarians were strongly opposed to Ballou's views as to death and the future life, and Channing went so far as to say that Ballou ascribed 'the power to death of changing and purifying the mind,' thus 'burying moral evil in the grave.' Another consequence was what is known as the 'Restorationist Controversy,' which proceeded intermittently from 1817 until 1831, and led to an actual division in the Universalist body. It began with a friendly controversy between Hosea Ballou and Edward Turner, published in a periodical called *The Gospel Visitant*. Ballou took the side of no future punishment, but declared that at that time he was not absolutely convinced on the subject.

¹ Cf. with this the view attributed to Helen Burns, i.e. Maria Brontë, by her sister, Charlotte Brontë, in *Jane Eyre*, ch. vi.

² *A Treatise on Atonement*¹⁴, Boston, 1902, p. 123.

In 1822 a further stage was reached, in which Jacob Wood, who wrote under the name 'Restorationist,' gave evidence of the difference of opinion which at this time prevailed in the Universalist body, and of the incompatibility of the two doctrines—viz. that 'of universal salvation at the commencement of a future state' and that 'of the final restoration of all men by Jesus Christ,' adding:

'The doctrine which admits all characters alike to heaven at death, is subversive of a just distinction between virtue and vice.'

This diversity of opinion led to an actual schism. In 1831 a number of Universalist churches formed the Massachusetts Association of Universal Restorationists, which continued for ten years. The great majority, including many who had a doctrinal affinity with the Restorationists, strongly disapproved of the secession. The seceders, while adopting the Winchester Profession, altered, in 1833, the first clause of Art. iii. so as to read:

'We believe in a retribution beyond death, and in the necessity of faith and repentance.'

The 'no future punishment' creed disappeared in 1878 as the motto of Universalism, when the Universalist ministers of Boston and its vicinity approved a declaration of faith, in which these words occur:

'We believe that repentance and salvation are not limited to this life . . . Salvation . . . whether effected here or in the future life, is salvation by Christ, and gives no warrant to the imputation to us of the "death and glory" theory.'

Art. ix. runs:

'Whatever differences in regard to the future may exist among us, none of us believe that the horizon of eternity will be relatively either largely or for a long time overcast by the clouds of sin and punishment, and in coming into the enjoyment of salvation, whosoever that may be, all the elements of penitence, forgiveness, and regeneration are involved. Justice and mercy will then be seen to be entirely at one, and God be all in all.'

Already for many years the objections to Universalism from the side of the Unitarians had been disappearing, as the views here stated were gaining ground among Universalists. The Universalists, combining a liberal faith with an evangelical fervour, appealed to many whom the drier light of Unitarianism did not reach, and without any formal alliance the two denominations have been constantly associated in social efforts and religious sympathy.

In 1903 a centennial meeting, held at Winchester, N.H., re-affirmed the Profession in its original form. In 1899 the following 'conditions of fellowship' had been appended to Art. iii. in a general convention held at Boston:

'The acceptance of the essential principles of the Universalist Faith, to wit: (1) The universal fatherhood of God; (2) the spiritual authority and leadership of His son, Jesus Christ; (3) the trustworthiness of the Bible as containing a revelation from God; (4) the certainty of just retribution for sin; (5) the final harmony of all souls with God.'

The latest statistics of the Universalist Church in America record the names of over 600 recognized ministers, and a still larger number of parishes and meeting-places; seven in Canada, some of which have fellowship with Universalist conventions in the United States. There are numerous women's missionary societies and mission circles; a regular mission is maintained in Japan, and a congregation has been formed in Cuba. There are also eight colleges, theological schools, and academies.¹

UNIVERSALITY.—I. Definition.—The universal is defined by Aristotle as 'whatever may naturally be predicated of many things,'¹ or 'that is called universal which naturally belongs to more than one thing.'² The important word in these definitions is 'naturally.' It is explained by the following:

'I call that universal which belongs to the subject, distributively, essentially, and as it is what it is';³ in scholastic terms, 'which is true *de omni*, *per se*, and *quatenus ipsum*.'

By *de omni* Aristotle means 'in every case and always.' *De omni* is merely the enumerative or collective universal. *Per se* and *quatenus ipsum* explain the 'naturally.' There are four senses of *per se*: (1) when the predicate is part of the definition of the subject, (2) when the subject is part of the definition of the predicate, (3) that which is not predicated of any other subject, (4) when the subject itself is the cause of the predicate. Aristotle says the expressions *per se* and *quatenus ipsum* are the same, but he seems to have in view *per se* in the first and the second sense only; for he has just said that whatever is universal is inherent in things necessarily, and subsequently he says that everything is inherent in either of those ways or according to accident, but accidents are not necessary.⁴ This is what Aristotle means by universal in the strict sense—the primary universal, the universal as it occurs in mathematics, as when we say that triangles have their internal angles equal to two right angles, or that two contradictory predicates, 'straight' or 'curved,' imply the notion line.

Grote and Prantl reduce the third and fourth senses to the first. Grote says of the third:

'The predicate must not be extra-essential to the subject, nor attached to it as an adjunct from without, simply concomitant or accidental.'

Of the fourth sense he says:

'The like distinction holds in regard to events; some are accidentally concomitant sequences, which may or may not be realized (e.g., a flash of lightning occurring when a man is on his journey); in others, the conjunction is necessary or causal (as when an animal dies under the sacrificial knife).'⁵

The same identifications are made by Prantl:

The latter explains the third sense of *per se* thus: 'what is enunciated not in predicative manner as property, but as individual substance, remains identical with itself in the multiplicity of possible predicates.'⁶

Prantl expressly identifies the fourth sense of *per se* with the first. The third and fourth are both regarded as resting upon the activity of the creative concept and its necessary causality.

The meaning of Aristotle seems to be this. In certain cases attributes are essentially conditioned by the nature of the subject in which they are found, but we do not see this. The predicates may not after all be true *de omni*. Similarly with regard to events. The nature of the living thing may essentially condition the effect of the wound, but after all it may not. Such wounds may not be always fatal. We cannot, therefore, make such universals the basis of a demonstrative science. We do not see the primary universals or the necessity which belongs to such universals.

This interpretation of Aristotle, common to Prantl and Grote, is in accordance with the scholastic treatment of demonstration, especially the *demonstratio potissima*. The property of risibility as flowing from the definition of man as a rational animal is an illustration of the third sense of *per se*. Risibility was supposed to belong to man essentially. This is certainly not evident in itself and has led to an extremely different interpretation of Aristotle, put forward by Saint-

⁶ Prantl, *Gesch. der Logik im Abendlande*, i. 122.

Hilaire and Mansel. With regard to the third sense of *per se*, both interpret it as referring to the existence of the substance. Saint-Hilaire says :

'The individual substance is never necessary ; and, moreover, it is for itself alone, and is never in a subject other than itself.'

As to the fourth sense he says :

'No more does it carry in itself a character of necessity ; thus in the example chosen by Aristotle, there is no necessity that the man die by strangulation ; for there is a crowd of other totally different causes of death.'

This would restrict the universal and the necessity it involves to the first two senses of the words *per se*. In this restriction Mansel agrees with Saint-Hilaire, and puts forward a theory of the demonstrative syllogism which limits it to the demonstrations of mathematics.

2. The two universals.—The truth is that Aristotle has two universals—the primary universal, where subject and predicate are co-extensive and convertible, which is characterized by necessity, and another universal in which this is not the case. In one passage he says :

'By universal, here, I mean that which is not convertible with its subject.'

His object is to show that such a universal, unless it issues in a primary universal, is valueless for science. The universal in the strict sense belongs to mathematical science and other deductive sciences ; the other universal belongs to the uniformities of co-existence and sequence which experimental science investigates. Locke, Dugald Stewart, and Mansel have regarded deductive science, especially mathematics, as involving an essentially distinct logical procedure from that of the inductive sciences. J. S. Mill seeks to reduce mathematics to the inductive level. Medieval thought and Platonism tend to enlarge the scope of demonstration. The teaching of Aristotle is the same as that of Locke, Stewart, and Mansel.

It is this distinction of the two universals which some later logicians seem to have in view. Petrus Hispanus distinguishes between predicable and universal. Predicable is affirmed of many things, but universal exists in many things.³ Others make the distinction turn upon whether in the proposition we tell of the subject *quid sit* or *quale sit*—what it is or what are its attributes or characters. According to this, that only is a universal which is predicated of inferior classes ; but a predicable which is also predicated of co-ordinate classes would not be a universal. There are thus five predicables, but only two universals—genus and species.⁴

3. The problem of universals.—The above doctrine of universals considers the universal as its nature is affected by the precise relation in which the predicate can stand to the subject in a proposition ; and the distinction of universals which it sets up affects the consideration of universals taken in their widest sense. The most difficult problem relating to universals—a problem still unsettled—is that concerning their existence. Do they exist only in the mind ? If outside the mind, where ? Are they mere names ?

4. Plato and Aristotle.—

'Two things,' says Aristotle, 'may be fairly ascribed to Socrates—inductive arguments and universal definition, both of which are concerned with the starting-point of science. But Socrates did not make the universals or the definitions exist apart ; his successors, however, gave them separate existence, and this was the kind of thing they called Ideas.'

¹ J. Barthélemy Saint-Hilaire, *Logique d'Aristote traduite en Français*, Paris, 1839-44, iii. 24.

² *Anal. Post.* ii. 17.

⁴ Burgersdyk, quoted by Mansel in Aldrich, *Artis Logicae Rudimenta*, p. 24.

⁵ *Metaphysica*, 1078^b 28, tr. W. D. Ross, Oxford, 1908.

'They at the same time treat the Ideas as universal substances, and again as separable and individual. That this is not possible has been shown before. The reason why those who say the Ideas are universal combined those two views in one, is that they did not make the Ideas substances identical with sensible things. They thought that the sensible particulars were in a state of flux and none of them remained, but that the universal was apart from these and different. And Socrates gave the impulse to this theory, as we said before, by means of his definitions, but he did not separate them from the particulars ; and in this he thought rightly, in not separating them.'

These remarks of Aristotle are aimed at the Platonic theory of Ideas—the theory as expounded in the earlier dialogues. Whether in the later dialogues the Platonic theory undergoes a change we shall consider below. Aristotle knows of no such change. Plato's theory as conceived by Aristotle is as follows :

Plato supposed that there existed, besides the individual things of sense, which are continually changing and passing away, another kind of beings, apart from matter and movement, which he termed Forms or Ideas, by participation in which each individual and sensible thing is made to be what it is. These Ideas are eternal and self-subsistent. Material things participate in them, and are copies of the Ideas, which in themselves exist in an intelligible region apart from the world. When we, on perceiving sensible things, form general concepts, we, according to Plato, revive by reminiscence the recollection of the Ideas, with which we were familiar in a previous state. What we term a general concept is the Idea in its subjective existence as an intelligible form in our intellect. Archer Butler² and others have distinguished the Platonic Idea from the general concepts of the understanding ; but this separation is rejected by Bonitz and Zeller.³

Whatever may be thought of this theory, it is remarkable that the most essential objections to it have been brought forward by Plato himself in the *Parmenides*.

'Perhaps,' says Jowett, 'there is no passage in Plato showing greater metaphysical power than that in which he assails his own theory of Ideas. The arguments are nearly, if not quite, those of Aristotle.'

The difficulties—how without division or multiplication the Ideas can participate in the many, or the many in the Ideas ; the necessity of a still higher universal to unite the Idea itself with its corresponding phenomena ; the so-called third-man argument ; most serious of all, the uselessness of Ideas for knowledge, arising from their disconnexion with our minds and with phenomena—are here set forth.

'The perplexities,' says Jowett, 'which surround the one and many in the sphere of the Ideas are also alluded to in the *Philebus*, and no answer is given to them. Nor have they ever been answered by any one else who separates the phenomenal from the real.'

This statement may be allowed to stand, but the question arises: Did Plato separate the phenomenal and the real, or did he unite them ? The answer is: He did both. 'Separation' is a category of the spatial and temporal. The Idea is spaceless and timeless,⁶ yet it does not exist in total aloofness from phenomena. It is in this way that we answer the difficulties which have been raised in this connexion, and which have led to the theory of a 'later Platonism.' There is in reality no essential change. The force of these objections—perhaps derived from the Megaric school, perhaps pressed home by Aristotle—was no doubt felt by him. But what happened in this case is what in such cases always happens. The old point of view is retained and an effort is made to show that it answers the new questions. In this respect there is a striking parallel between the later philosophy of Plato and that of Fichte. Originally, in Fichte, the Ego projects from itself a purely phenomenal world. Schelling showed

⁶ *The Parmenides of Plato*, ed. T. Maguire, Dublin, 1878, p. xxvi.

that the world in its turn produces the Ego, and thus 'turned over a leaf' in the history of philosophy. The Absolute is in the world, therefore, as well as in the Ego. Fichte in his later philosophy seeks to show that his Absolute—the Ego, pure Being—is the active living power in phenomena. In the *Philebus*, *Sophist*, and *Timæus* Plato does the same. The Idea is spaceless and timeless, but nevertheless one with mind and life and power in the phenomenal world.

It is just in this that the change wrought in the philosophical standpoint by Aristotle consists. He denies the transcendent existence of the Idea or universal, and places it in the composite world of matter and form. The world thereby ceases to be merely phenomenal. Matter itself becomes something positive. It is no longer a mere negativity. The centre of gravity has passed from the ideal to the real world. Both Plato's and Aristotle's doctrines have been called realism. Both affirm the reality of the Idea or Form; but in Plato it is a reality above the world, in Aristotle in the world. Aristotle rejects the detached existence of the universal. He holds that the subjective concept is related to the objective reality, but in place of the transcendent existence of the Ideas, in contradistinction to individual objects, he regards the Essence or Form as immanent in the things. The precise nature of this immanence, in Aristotle, has been a matter of dispute. According to Hamilton,¹ he has been viewed as 'a Realist, a Conceptualist, and a Nominalist, in the strictest sense.' The questions at issue are formulated by Porphyry thus: whether genera and species do really exist in nature, or in mere conceptions only; whether, if existing, they are bodies or incorporeal; whether they are inherent in the objects of sense or disjoined from them.² Even though Aristotle brought down the Idea from its super-celestial sphere and embodied it in things, it still has an existence in the Divine Being, the Form of Forms. If the Divine Mind be one with things, *i.e.*, if Aristotle be interpreted pantheistically, we have still the questions as to the nature of this union—the unity and multiplicity of the Idea. If the Divine Mind be different from things—*i.e.*, if he be interpreted theistically—the Idea has a transcendent existence, if not in itself, still in the Divine Mind where the unification of the Idea lies; and what is the nature of it is the subject of the great controversy between nominalism and realism in the Middle Ages. The difficulty consists in this: that, if the universal is merely something repeated over and over again, in individuals, then genera and species fall asunder into merely resembling individuals, essential community of nature is denied; but, if such repetition be rejected, and the universal be considered as some one thing throughout the individuals, then the plurality becomes merely phenomenal and illusive. Extreme representatives of realism, like William of Champeaux, held that the universal exists for itself as a universal in individual things, and were thus led into pantheism.³

5. Moderate realism.—In the moderate realism of St. Thomas Aquinas we have a fusion of Aristotelian and Platonic realism. St. Augustine had already interpreted Plato's Ideas as the thoughts which God had of things before He created them. St. Thomas Aquinas admits the existence of the universal or the Form in a threefold sense, *ante rem*, *in re*, and *post rem*.⁴ The universal *ante rem* corresponds to the Platonic Ideas, understood as archetypal ideas in the mind of God—the patterns

in the Divine Intellect after which all things were made. With regard to the universal *in re* or *a parte rei*, the universal nature does not exist as the same in the individuals as it exists in them objectively. It is only alike in them. We, in our consideration of it, regard it as a unity or community of nature, as one and the same in all. The universal nature exists as a universal, in the human intellect, by virtue of its power of recognizing the common nature. This is the universal *post res*. But, if the universal, as universal, exists thus only in the act of recognition in the mind, we seem to be impaled on the difficulty of Parmenides, which he put to the youthful Socrates, and which is briefly this: What then is this common nature which is known by the mind? Moderate realism answers this question by its doctrine that universals are fundamentally in things. 'Universalia sunt formaliter in mente fundamentaliter in rebus ipsis.'

'To the universal nature thus fundamentally taken, it does not essentially belong, to be one or many, in the intellect or out of the intellect, in individuals or outside them, communicable to a number or incommunicable.'¹

If we ponder on this universal, we shall not find it so very different from the timeless and spaceless Idea of the *Philebus* and *Sophistes*. At any rate, it approaches the conception by which Plato sought to allay the difficulties and doubts he himself raised in the *Parmenides*.

6. The Scotist formalism.—It was almost inevitable that this doctrine, placing at the roots of things an Essence or Form in itself subject to no individualizing conditions, should beget a new form of realism. This is precisely what did happen. Duns Scotus distinguishes carefully between the unity of an individual and the unity of a universal nature. The last he conceives almost as certain modern logicians conceive the unity of a variable in a propositional function. The universal appears in the particular individual things, but it is apprehended as universal by the understanding. In itself it is neither particular nor universal, but just what it is. It is something antecedent to universality and particularity, but, as antecedent in itself, indifferent to either.² This is what distinguishes the realism of Duns Scotus from the earlier realism of Bernard of Chartres or William of Champeaux, that universals are not apprehended as *actu* such in objective reality.³ This would be to reduce them to individual unities; or, rather, numerically the same nature would pervade the individuals. In the system of Duns Scotus a primitive universal unity—matter—is progressively pluralized and individualized by form, almost as a single throb of Bergson's *élan vital* is broken into its manifold reverberations in nature. Each throb, however, is in Scotus a system of unities; and it is evident that these universals, if they are neither to be pluralized in the individuals nor consolidated into a single being in a real universal, must be conceived as passing over into the individuals, and yet as each retaining its own unity in them. This is the view that underlies the doctrine of formalism elaborated in the Scotist school. Universality is thus conceived as in the things, not by a distinction of reason, as moderate realism would hold, not by a *distinctio realis*, as extreme realism would hold, but by a formal distinction, which still allowed it to be identified with the series of individual things.

7. The realism of Francis de Mayronis.—It is obvious that such a view approaches very close to

¹ Thomas Marie Zigliara, *Summa Philosophica*, 3 vols., Paris, 1884, i. 317.

⁴ *Ib.* iii. 110 ff.

the doctrine which regards the universal as such as existing in things, and, if we regard this universal as numerically one with the universal as contemplated by the Divine Mind, we are in danger of being led back to a pantheism such as was actually held by Bernard of Chartres. If now we are to escape such pantheistic conclusions, there is one, and only one, way of escape within the same general point of view: it is to give the universal a self-existence, as Plato did, independent of the Divine or any mind. This step was taken by the greatest of the disciples of Scotus—Francis de Mayronis. Relations are divided by Mayronis into *relationes secundum esse* and *relationes secundum dici*. The former are between things which in their entire being fall under the category of relation; the latter are between things which, taken by themselves, are absolute, but are understood with reference to something else and remain entitatively distinct from the relation into which they enter.¹ This corresponds to what has been recently called the monistic and the monadistic view of relations. To Mayronis, however, it is a classification of relations, not of theories about relation. Such relations are moreover real, not mere *relationes rationis*, and have a being distinct from the existence of the things between which they exist. The relation between the subject and object of knowledge is so distinct from its terms that it exists separately—from which it follows that ideas are veritable entities.² Universals in themselves therefore exist neither in the soul nor in things. They are not a something as against another something; but they are something as against nothing or as against a mere mode or manner of being. They are eternal in the negative sense of being timeless. They are not necessary, nor are they contingent. They have an intelligible being from themselves essentially distinct from God. With Duns Scotus, Mayronis distinguishes between *esse essentialis* and *esse existentialis*. It is the latter *esse* that comes from God. To the same kind of being—*esse essentialis*—belongs the *primum principium complexum, i.e.* the principle of contradiction, which he regards as a hypothetical copulative proposition.³ In all this we may see in Francis de Mayronis a mediæval 'new realist.'

8. **Nominalism.**—The realism of the Scotists tends towards pantheism or else to the setting up of uncreated entities independent of the Divine Mind. The only other course is to identify completely the universal with individual things, *i.e.* to give up the universal as such, to recognize only individual things—the doctrine of nominalism. It has been sometimes questioned whether mediæval nominalism is really nominalism and not rather conceptualism. With regard to the early nominalism, it is hard to put any other interpretation on the opinion attributed to Roscellinus by Anselm, that universals are *flatus vocis*. His pupil Abelard is supposed to have approached more nearly to the conceptualist standpoint. But what is cited in support of this points really the other way. Abelard bases his view on that definition of the universal which is given by Aristotle and quoted at the beginning of this article, and which is based on the proposition. What Abelard seems to mean is that the universality arises from the universal statements we are able to make, and not from anything intrinsic in the thing. This metaphysical denial implicitly carries with it the rejection of conceptualism. And the same implicit rejection must be attributed to Occam, although

Hamilton says that 'the later Nominalists, of the school of Occam, were really Conceptualists.'¹ Occam's doctrine is called 'terminism.' The *conceptus* is *id quod terminat actum intelligendi*. This is not something that exists *subjectively* in the mind, but something that exists *objectively*. The universality is not therefore something in the mind, but is the result of the act of the mind by which it gives signification to the term. It is in accordance with this that he claims for understanding an intuitive knowledge of objects of sense, rejects *species sensibilis* and *species intelligibilis*, merges the *intellectus possibilis* in the *intellectus agens*.²

9. **Modern philosophy; the psychological problem.**—All the problems of modern philosophy have been set to it by mediæval philosophy. The problem of the universals is no exception. The schools of Aquinas, Scotus, and Occam present to modern philosophy a problem which had to be solved psychologically. What constitutes the community of nature between general thoughts within us and things outside us? We have seen that, metaphysically, philosophy has been driven in Occam to give up the belief in a common nature in things.

(1) *Hobbes.*—In modern philosophy we find the psychological consequence in Hobbes. The idea of a common nature in thoughts is given up. Thoughts are as individual as things. 'There is nothing,' says Hobbes, 'universal but names.'³

(2) *Locke.*—To Locke, on the other hand, all knowledge consists in the perception of the agreement or disagreement of ideas. Names can be general only if they stand for general ideas. Locke has been termed a nominalist. It has even been stated that he could be interpreted as a realist. But, if conceptualism means finding the universal in the idea, then Locke is what he has been generally considered, a conceptualist.

According to Locke, 'the mind makes the particular ideas received from particular objects to become general . . . by considering them as they are in the mind, such appearances, separate from all other existences, and the circumstances of real existence, as time, place, or any other concomitant ideas. This is called abstraction, whereby ideas taken from particular beings become general representations of all of the same kind, and their names general names, applicable to whatever exists conformable to such abstract ideas.'⁴ 'General ideas are fictions and contrivances of the mind, that carry difficulty with them, and do not so easily offer themselves as we are apt to imagine. For example, does it not require some pains and skill to form the general idea of a triangle (which is yet none of the most abstract, comprehensive, and difficult), for it must be neither oblique nor rectangle, neither equilateral, equicrural nor scalenon; but all and none of these at once? In effect, it is something imperfect, that cannot exist; an idea wherein some parts of several different and inconsistent ideas are put together.'⁵

(3) *Berkeley.*—This doctrine Berkeley, the protagonist of modern nominalism, attacked in the Introduction to *The Principles of Human Knowledge*.

'Whether others have this wonderful faculty of abstracting their ideas, they best can tell. For myself I find indeed I have a faculty of imagining, or representing to myself, the idea of those particular things I have perceived, and of variously compounding and dividing them. I can imagine a man with two heads; or the upper parts of a man joined to the body of a horse. I can consider the hand, the eye, the nose, each by itself abstracted or separated from the rest of the body. But then whatever hand or eye I imagine, it must have some particular shape and colour. Likewise the idea of a man that I frame to myself, must be either of a white, or a black, or a tawny, a straight, or a crooked, a tall, or a low, or a middle-sized man. I cannot by any effort of thought conceive the abstract idea above described. And it is equally impossible for me to form the abstract idea of motion distinct from the body moving, and which is neither swift nor slow, curvilinear nor rectilinear; and the like may be said of all other abstract

general ideas whatsoever. To be plain, I own myself able to abstract in one sense, as when I consider some particular parts or qualities separated from others, with which, though they are united in some object, yet it is possible they may really exist without them. But I deny that I can abstract from one another, or conceive separately, those qualities which it is impossible should exist so separated; or that I can frame a general notion, by abstracting from particulars in the manner aforesaid—which last are the two proper acceptations of *abstraction*.¹

Berkeley explains precisely what he means by universality :

'It is, I know, a point much insisted on, that all knowledge and demonstration are about universal notions, to which I fully agree. But then it does not appear to me that those notions are formed by abstraction in the manner premised—*universality*, so far as I can comprehend, not consisting in the absolute, positive nature or conception of anything, but in the relation it bears to the particulars signified or represented by it; by virtue whereof it is that things, names, or notions, being in their own nature *particular*, are rendered universal.'²

In the edition of 1734 he says :

'And here it must be acknowledged that a man may consider a figure merely as triangular; without attending to the particular qualities of the angles or relations of the sides. *So far he may abstract*. But this will never prove that he can frame an abstract, general, inconsistent *idea* of a triangle. In like manner we may consider Peter so far forth as man, or so far forth as animal, without framing the forementioned abstract *idea*, either of man or of animal; inasmuch as all that is perceived is not considered.'³

(4) *Hume*.—Berkeley's doctrine on this subject was pronounced by Hume to be 'one of the greatest and most valuable discoveries that have been made of late years in the republic of letters,' and he believes that he himself adopts it; but Hume's view was essentially different. Berkeley had said that all general *names* signify indifferently a great number of particular ideas.⁴ Hume attributes to him the opinion 'that all general ideas are nothing but particular ones, annexed to a certain term, which gives them a more extensive signification, and makes them recall upon occasion other individuals, which are similar to them.'⁵ This is Hume's own doctrine. He holds that the idea before the mind is always some particular idea. Abstract ideas are in themselves individual, but, when we have found a resemblance among several objects, we apply the same name to all. The name, being applied to other individuals, different in some respects from the idea we have first on hearing it, does not revive the idea of all these individuals, but the custom of applying the name to them and a readiness to survey any of them, which produces any other individual one for which we have occasion. It is clear that Hume differs from Berkeley in this, that he does not recognize, as Berkeley did, the power the mind has of regarding the individual idea as representing and standing for the class to which it belongs. In Hume the idea is particular, and only possesses the power in association with the name of calling up other particular ideas. The nominalist doctrine, as it appears in Berkeley and Hume respectively, determines the counter-conceptualist doctrines of Reid and Brown.

(5) *Reid*.—Reid contends that Berkeley unwillingly or unwarily grants all that is necessary to support abstract and general conceptions :

'If a man may consider a figure merely as triangular, he must have some conception of this object of his consideration; for no man can consider a thing which he does not conceive. He has a conception, therefore, of a triangular figure, merely as such. I know no more that is meant by an abstract general conception of a triangle.'⁶ 'He who considers Peter so far forth as man, or so far forth as animal, must conceive the meaning of those abstract general words *man* and *animal*, and he who conceives the meaning of them has an abstract general conception.'⁶

(6) *Brown*.—According to Brown, the feeling of resemblance in certain respects is the true general notion, or general idea, as it has been less properly

⁶ *Works*², p. 408.

called, which the corresponding general term expresses.¹ Brown holds that between the perception of two or more objects and the invention and employment of the general term there must rise in the mind an intervening general notion of resemblance, the feeling or notion of the resemblance being immediately subsequent to the perception. It is the omission of this stage of the process that constitutes in his view the error of the nominalists. Thus, as Reid regards the power of considering a figure merely as triangular, or Peter merely as man, as a proof of having the abstract and general conception, so Brown regards the circumstance of felt resemblance between two or more objects as the general notion of such objects. Brown has been criticized by Hamilton, but J. S. Mill in his *Logic* has been influenced by Brown's view.²

(7) *James Mill*.—James Mill held that a general idea is that of a combination of individuals belonging to the class. The word 'man' calls up the ideas of an indefinite number of individuals. The name 'man' is the name of every individual and of the whole combination.³ This confounds general and collective terms. 'Tree' does not mean a wood.

(8) *Hamilton*.—According to Sir W. Hamilton, the opposing parties are really at one. The whole controversy arises from not distinguishing the images of sense and the unpicturable notions of intelligence. The solution depends on the distinction expressed in German by the terms *Begriff* and *Anschauung*. The images of the imagination, which were what Berkeley and the nominalists meant by ideas, are individual.⁴

If it were only this distinction that was wanting, the controversy would have ended long ago. Not to mention the schoolmen, the distinction was present to Berkeley himself.⁵ The really important question is, What is the relation between thought proper or pure intellect and imagination? Is the image always necessary to the realization of the concept? Hamilton held that it was :

'The concept *horse*, I say, cannot, if it remain a concept, that is a universal attribution, be represented in imagination; but, except it be represented in imagination, it cannot be applied to any object, and, except it be so applied, it cannot be realised in thought at all.'⁶

This is what Hamilton termed the 'relativity of concepts.'

(9) *J. S. Mill*.—When this view of the relativity of the concept to the image is adopted, there is but little difference between the conceptualism of Hamilton and the nominalism of J. S. Mill.

According to Mill, 'We have only complex ideas of objects in the concrete: but we are able to attend exclusively to certain parts of the concrete idea: and by that exclusive attention, we enable those parts to determine exclusively the course of our thoughts as subsequently called up by association; and are in a condition to carry on a train of meditation or reasoning relating to those parts only, exactly as if we were able to conceive them separately from the rest.'⁷

The distinction between Hamilton's view and Mill's thus reduces itself to that of 'a potential universality as against an universal potentiality,' but in neither writer is there an attempt to account for or to show the necessity of the relativity of the concept, or, what is the same thing, the power of a partial consideration of an idea to lead out beyond it.

(10) *Mansel*.—A different view of the relation

between the concept and the image is taken by Mansel:

'I see lying on the table before me a number of shillings of the same coinage. Examined severally, the image and super-scription of each is undistinguishable from that of its fellow; but in viewing them side by side, *space* is a necessary condition of my perception; and the difference of locality is sufficient to make them distinct, though similar, individuals. The same is the case with any representative image whether in a mirror, in a painting, or in the imagination waking or dreaming. It can only be depicted as occupying a certain place; and thus as an individual, and the representation of an individual. It is true I cannot say it represents this particular coin rather than that; and consequently it may be considered as the representative of all, successively but not simultaneously. To find a representative which shall embrace all at once, I must divest it of the condition of occupying space. . . . If we substitute Time for Space the same remarks will be equally applicable to the objects of our internal consciousness.'¹

Mansel seems thus to have thought that the concept embraces all objects under it, simultaneously. But, if this were so, it would be a collective, not a general, concept. In the case selected—the shillings—the image may be regarded as identical with the concept, and this image and concept are alike indifferently representative of any shilling. As Hamilton says:

'The whole generality [of concepts] consists in this—that though we must realise them in thought under some singular of the class, we may do it under any.'²

(1) *Problem of the synthetic power of the concept; Hegel and Lotze.*—This, however, raises the important question of 'what is meant by 'realising under.' Mansel's doctrine is that the concept, to become universal, must be divested of all present relation to the image. The latter is only called in to verify its possibility. The existence of such imageless thought has been the subject of important investigation by H. J. Watt and others of the Würzburg school.³ Without entering into the psychological inquiry, it may be pointed out that there must be some element in the concept by which it relates itself to the image and some element in the image by which it corresponds to the concept. Many are inclined to find this element in tendency or will, as that which gives vitality and meaning to the concept. It would be nearer the truth to say that will is will, and tendency is tendency, only through the concept. We have already remarked that Hamilton did not attempt to explain the relativity of the concept. It is nevertheless the underlying problem of his 'law of the conditioned' and 'conditions of the thinkable systematized.' It may be said to be the fundamental principle of Hegel's *Logic*. And it is precisely this feature of the concept as a sort of intussusceptible principle that Lotze has in view when he says:

'Of the true universal, on the other hand, which contains the rule for the entire formation of its species, it may rather be said that its content is always precisely as rich, the sum of its marks precisely as great, as that of its species themselves; only that the universal concept, the genus, contains a number of marks in a merely indefinite and even universal form; these are represented in the species by definite values or particular characterisations, and finally in the singular concept all indefiniteness vanishes, and each universal mark of the genus is replaced by one fully determined in quantity, individuality, and relation to others.'⁴

In the last chapter of the *Posterior Analytics* Aristotle asserts the existence of a faculty—the organ of primary truths, the basis of demonstrative science—by means of which reason can pierce the objects of sense and penetrate to the universal and the cause. The whole of mediæval philosophy assumes such a power. Aquinas, Scotus, Occam, all alike imply it. Modern philosophy uniformly rejects it. Empiricism expressly denies it. Idealism denies any real essences distinct from thought.

⁴ Lotze, *Logic*², Eng. tr. ed. B. Bosanquet, Oxford, 1888, i, 52.

But, if intellect and its laws are in correlation with, and form an organic unity with, space, if the inner essences of things and the forces which control them determine, and are determined by, spatial relations,¹ it will follow that the formulæ of physical and chemical text-books are no mere descriptive statement, no mere analytical elaboration of working concepts, but that these concepts are, as Hegel, Hamilton, and Lotze by implication describe them, concepts of entities and forms of energy which really exist, move, and are moved.

UNIVERSE.—See COSMOGONY AND COSMOLOGY, ESCHATOLOGY, NATURE.

UNPARDONABLE SIN.—See SIN (Christian).

UPANISADS.—The Sanskrit treatises or dialogues known as the *Upanisads* are the expression of the philosophical speculation of Indian sages and teachers during many centuries. The period of their fullest fruition, when with most originality and insight Hindu thinkers proposed to themselves and to the circle of their pupils solutions of the world's greatest mysteries, both mental and spiritual, is supposed to have been from the 8th to the 6th cent. before our era. The *terminus a quo* is the age of the *Brāhmanas*; for the *Upanisad* literature appears as tertiary strata after the early Vedic poetry and the prose treatises of the *Brāhmanas* with their minute ritual and ceremonial observances. The strata perpetually overlap, and the limits suggested are to be understood only in a broad and general sense. There can be little doubt, moreover, that substantially the earliest *Upanisads* antedate the rise and extension of Buddhism in the 5th and following centuries. Buddhist teaching appears in the most important respects to be dependent on doctrines and premisses already formulated and expounded in the older *Upanisad* literature. There are many, however, and perhaps insuperable difficulties in the way of drawing up a precise genealogical scheme of doctrinal and literary development in India or for its sacred books. In their present form neither the Buddhist nor the more ancient *Upanisad* treatises are free from the contamination of later elements. For the majority of the *Upanisads* no such early origin can be claimed, although all or practically all give more or less definite expression to ancient speculative thought. Many that pass under the name are of comparatively recent date, originating in the early centuries of the Christian era. Some also are to be referred to an altogether later time.

1. *Title and date.*—With regard to the meaning and implication of the title *Upanisad* itself there is little or no doubt. It is derived from the

¹ See art. SPACE, POWER.

Sanskrit root *sad*, 'to sit down,' 'to be seated,' with the prefixed prepositions *upa* and *ni*. Originally therefore it implied the sitting down at the feet of the teacher, the attitude of the pupil who respectfully listens to his master's words. In ordinary usage, however, the word is employed to express the doctrine itself which the teacher inculcates, and, finally, mystical or secret doctrine in general. It is in this sense that the *Upaniṣad* teaching is the *Vedānta*, the end (*anta*) and aim of the Veda, the substance and sum of all true wisdom; and in practice, and in all the Brāhmanical literature, the word is thus confined to the highest and most abstract teaching or knowledge, the speculative doctrines which are regarded as within the province of *śruti*, divine revelation. Its use as a title of the treatises in which the doctrines are conveyed may be compared to the Greek *εὐαγγέλιον*, or the English 'Gospel.'

The native Indian equivalent of *upanisad* is *rahasyam*, 'secret,' 'hidden.' The latter term apparently always connotes the idea of secrecy or concealment of a text or doctrine, the knowledge of which should be communicated only to those who are accounted worthy. Thus in one passage it is enjoined that the father shall teach the doctrine to his eldest son, 'but to no one else, whoever he may be.'¹ This conception of a secret or esoteric knowledge has always determined the treatment by the Hindus of their sacred writings, and in many of the sects is maintained to this day as an inviolable principle of their religion.²

The number of these treatises is very considerable. A late collection cites more than 100 names. And, if all works, early or late, that inculcate mystical teaching or propound special theories or doctrines concerning the unseen are to be regarded as having just claim to the title *Upaniṣad*, there would seem to be no reason why such treatises should not be indefinitely multiplied at the present time. The total number, according to Barth,³ 'amounts to nearly 250,' including an 'Allah' *Upaniṣad*, assigned to the time of Akbar. Most of the later *Upaniṣads* are sectarian in character, and with more or less fidelity expound *Upaniṣad* doctrine from the point of view of the popular religions, exalting Viṣṇu or Śiva, or endeavouring to promote the discipline and teaching of the Yoga, or with other limited aim. Many are attached more especially to the *Atharvaveda*, and of these the majority are of comparatively late origin. The treatises quoted or referred to by Śaṅkara in the 9th cent. in his commentaries on the sacred texts are usually and no doubt correctly supposed to be the oldest. They all, however, contain earlier and later material, strata of thought or language which have been worked up and welded together, and have all undergone modification and interpolation at the hands of later teachers and revisers. These older works are few in number, and together with some of the earlier Atharvan treatises may be regarded as forming the *Upaniṣad* group of the sacred writings in the more restricted sense of the term.⁴

2. Authorship.—Of the authors of these treatises

¹ *Chhānda*, iii. xi. 5; cf. *Maitrī*. vi. 29: 'this most mysterious secret shall be imparted to none who is not a son or a pupil, and who has not yet attained tranquillity.'

² Cf. Pr 239, Mt 76; Deussen, *Philosophy of the Upaniṣads*, Eng. tr., p. 101., who points out that in Greek philosophy the same thought recurs of a doctrine too sacred or difficult of apprehension to be allowed to become the property of all.

³ *Religions of India*³, Eng. tr., p. 65f.

⁴ The eleven *Upaniṣads* known to Śaṅkara, substantially at least in the form in which they are now extant, have been translated by Max Müller in *SBE*, vols. i. and xv. These are the *Chhāndogya*, *Kena*, *Aitareya*, *Kauṣītaki*, *Iṣā* (or *Vājasaneyi*), *Kāṭha*, *Muṇḍaka*, *Taittirīya*, *Bṛhadāraṇyaka*, *Svetāśvatara*, and *Praśna*. Renderings of these and others are available in all the principal languages of Europe and India. It is of course probable that Śaṅkara was acquainted with other treatises of *Upaniṣad* character, some of which may be among those which have been preserved; but, if so, they are now known under different names. The Sanskrit texts are published in many series, and also separately; see the 'Literature' at the end of this article.

nothing is known with certainty. Many names of teachers or authorities have been preserved, and in some instances the documents themselves contain lists or genealogical tables of descent, which trace the origin of their doctrine and confirm its authority by appeal to ancient divine sanction. It is probable that for a considerable period the teaching was entirely oral, within the care and custody of the schools of learning. The names recorded, so far as they are genuine, are those of the heads of the several schools. Within these schools the doctrines taught were regarded as a sacred and secret trust. On this subject most of the older treatises contain strict and similar injunctions. In the more ancient *Upaniṣads* also the instruction is generally conveyed in the form of dialogue, the teacher replying to the questions or answering the doubts of his disciples, who seek from him an exposition of the highest knowledge or a solution of the problems and mysteries of this life and of the future after death; sometimes also, in Socratic fashion, the teacher is himself the questioner. Essentially therefore the dialogues represent and give expression to the unsatisfied longings of the human mind and heart.

3. Classification.—It is usual to classify these older treatises in three or four groups, which may be distinguished not only by the character and fullness or otherwise of their teaching, but by the style and diction which they employ, and the more or less archaic nature of their composition. It is not possible, however, to go beyond a provisional and general statement or to have much confidence in details of arrangement which may find expression in a definite scheme of chronology. As a whole the *Upaniṣad* literature is later than the *Araṇyakas* (*g.v.*) and earlier than the condensation of philosophical rule and precept into mnemonic *Sūtras*. The internal dependence and succession set forth below is substantially that of Deussen, to whose work all students of Indian literature and philosophy are greatly indebted. On broad lines and in substance the arrangement may be accepted, at least provisionally. With our present knowledge broad and tentative conclusions only are justified. Earlier and later elements in thought and style and composition are not always separable, or capable of being assigned to their right position in the history of the texts. Some treatises, notably perhaps the *Svetāśvatara*, which in its extant form and on general grounds is placed comparatively late in the chronological order, contain archaic elements, on which have been imposed later doctrines until the various strands of thought are almost inextricably interwoven, and the teaching presented is with difficulty reduced to self-consistency.

(1) The oldest group consists of six treatises, written in prose of an archaic style. At the head of the group are the *Bṛhadāraṇyaka* and the *Chhāndogya Upaniṣads*, which are acknowledged to be the most complete and authoritative exponents of *Upaniṣad* doctrine. The other members of the group, in the order named, are the *Taittirīya*, *Aitareya*, *Kauṣītaki*, and *Kena*. The last-named is composed partly in verse, and as regards its teaching also seems chronologically to approximate to the second group.

(2) In the second group the composition is almost entirely metrical. The oldest and most independent member of the group is the *Kāṭha* or *Kāṭhaka Upaniṣad*. There follow the *Iṣā*, *Svetāśvatara*, *Muṇḍaka*, and *Mahānārāyaṇa*. The authors of the *Iṣā* and *Svetāśvatara* are said to be directly indebted to the *Kāṭha* both in doctrine and in expression; and a similar mutual relation is maintained between the last three treatises on the list. In all these the leading principles of the *Upaniṣad* teaching, which in the earlier group appear to be in a formative stage and open to discussion, are apparently regarded as established doctrines.

(3) In the treatises of the third group there has been a return again to prose, but the prose is of a type distinct from that of the earlier *Upaniṣads*, and approximates to the style of the classical Sanskrit. The group consists of three members only, *Praśna*, *Maitrāyaṇiya*, and *Māṇḍūkya*. The inference with regard to their later origin is hardly disputable, and is

sustained by the character of the teaching which they present.¹ Two at least of these, *Praśna* and *Māṅḍūkya*, together with the *Muṅḍaka* in group (2), are attributed to the *Atharvaveda*.

(4) By far the larger number of the *Upaniṣad* treatises are sectarian in character, or belong to the *Atharvaveda* or the systems and schools of the principal sects. For the most part they are written in prose, more rarely in verse, or in prose and verse intermingled. Their doctrine or teaching varies with the sect to which they belong. They apply *Upaniṣad* principles to sectarian ends, and to establish the religious doctrines of their several creeds. The most interesting perhaps and important are those attached to the Yoga philosophy. With not a little force they urge and maintain the fundamental doctrines of the Yoga faith. Many, but not all, of the *Upaniṣads* of this group are accessible in modern renderings. Thirty or more are usually enumerated as the oldest and most instructive: *Ātma-bodha*, *Nārāyaṇa*, *Mahā* (Vaiṣṇavite); *Atharvaśiras*, *Kaivalya* (Śaivite); *Brahmavidyā*, *Jābala*, *Arūṇeya*, *Sannyāsa*, *Yoga-tattva* (Yoga, or Sannyāsa), etc.

4. Translation and interpretation.—The difficulties of translation and interpretation of these treatises are considerable. Like the other scriptures of the Veda, the texts have certainly been preserved in the Śākhās with fidelity and accuracy from ancient times. Previous, however, to a final determination of form and limits they were evidently treated with much freedom, being revised, re-edited, interpolated, or abridged, and in general made to conform to later or individual standards of orthodoxy and belief. A considerable number of them were made accessible for the first time in a Western rendering at the beginning of the 19th cent. by Anquetil du Perron, who worked from a Persian translation in the year 1656 of a collection of 50 *Upaniṣads* known as *Oupnek'hat*.² The text itself is the strangest medley of Latin and Persian, with Sanskrit words transliterated or adopted, almost unintelligible without a key. As is well known, Schopenhauer (*q.v.*) regarded the publication as epoch-making in the history of Western philosophy and made it the basis of his own system.³ Thirty years later Rāmmohun Roy, the great Indian reformer and founder of the *Brahma Samāj* (*q.v.*), published English translations of several treatises. He was followed in English, French, or German by H. T. Colebrooke, E. B. Cowell, P. Regnaud, O. Böhtlingk, A. Weber, and others. The most important and satisfactory renderings are those by Max Müller in *SBE*, and by Deussen in his *Sechzig Upaniṣad's*. The latter contains introductions to the several treatises which are of great value.

5. Contents and analysis.—A brief analysis of the older and doctrinally the more significant treatises will enable a fair conception to be formed of their general scope and character. Often the *Upaniṣads* are not easy to analyse on account of the desultory nature of their style and contents. The abrupt changes of subject, the absence of any logical method or arrangement, the universal employment of metaphor are constant stumbling-blocks in the way of classification or orderly analysis. The entire treatment is suggestive rather of intimate oral instruction than of methodical exposition. There is little development of thought, nor is any attempt made to set forth a progressive and complete exposition of the truth as the authors conceive it. The most important writings are the *Bṛhadāraṇyaka* and the *Chhāndogya*.

¹ For a full statement of the reasons for the order adopted, and the mutual dependence of the several treatises, see Deussen, p. 22 ff.

² *Oupnek'hat* (*id est, Secretum legendum*), originally published in 1801-02 in 2 vols. Each vol. contains an Introduction; *Monitum ad Lectorem*, followed by a *Dissertatio*, and a preface note on the Persian text on which the translation is based. The Latin rendering is succeeded by lengthy *Emendationes et Annotationes*, *Animadvertenda*, and *Supplementum*; and at the close of vol. ii. an explanation is given of the technical Sanskrit terms used in the text. See also Deussen, *Sechzig Upaniṣad's*, p. 830 ff.

³ See Max Müller, in *SBE* i. p. lviii ff., who gives an example of du Perron's style from his rendering of the *Chhāndogya Upaniṣad*.

(a) The *Bṛhadāraṇyaka Upaniṣad* is the most interesting, as it is the richest in content, of all the *Upaniṣads*, and presents the most systematic exposition of doctrine. It is attached to the Vājasaneyin school of the *Yajurveda*, and in its present form is appended to and forms part of the *Satapatha Brāhmaṇa*, of which, according to the Mādhyandina śākhā, it forms the last of the fourteen *kāṇḍas*, or collections, into which the *Brāhmaṇa* is divided. In the Kāṇva śākhā, or school, it is the seventeenth book. The *Upaniṣad* in its existing form is composite, and not the work of one author. It comprises six *adhyaṅgas*, or chapters, of which the last two are of later date and adopt a different theological and philosophical standpoint, especially, as it seems, with regard to the doctrine of transmigration. The first four *adhyaṅgas* are Vedāntic, and of these the earlier two exhibit the philosophic doctrine of the *ātman*, which is represented as superseding and transcending the polytheistic worship of the gods. The third and fourth chapters may be regarded as the kernel of the treatise, in which is recorded the final teaching of the *Upaniṣads* in its essential and most characteristic form. In reply to questions addressed to him Yājñavalkya with elaborate detail and subtlety expounds the metaphysical doctrine of *Brahman* or the *ātman*. If the name represents a real individuality, and is not merely a title under whose shelter many convergent thoughts and reasonings have found expression, Yājñavalkya may claim a place with the greatest thinkers of the world or of any age.

The earlier chapters of the first *adhyaṅga* are to a large extent occupied with symbols and fanciful plays upon words. *Mṛtyu*, or death, is at the beginning of things, and produces successively the elements, speech (*vāc*), the Vedas, sacrifice, etc. The whole is explained as intended to promote the worship of Virāj. The third chapter is a contest of the *devas* and *asuras* in song under the form of a contest of the *devas* and *asuras* in song (*udgītha*) the antagonism of good and evil. The *asuras* defeat all the senses in turn, but are themselves overcome by the agency of *prāṇa*, or the breath, and victory remains with the *devas*. The passage is too long to quote, but is a good example of the allegorizing method of the *Upaniṣads*. In the fourth and following chapters various cosmological theories and processes, more or less fanciful, are set forth, concluding with the fundamental assertion of the unity of the self (*ātman*) with the triad *nāma*, *rūpa*, *karma*, or name, form, and work, as examples of which are given *vāc* (speech), *chakṣus* (the eye), and *ātman*, i.e. the bodily or lower self. Thus that being a triad is one, i.e. the bodily or lower self; being one, it is that triad (i.e. the *ātman*); therefore is it immortal, guarded (covered) by the true. *Prāṇa* (breath) is the immortal, *nāmarūpa* (name and form) are the true; by these is the breath guarded.

Following upon the teaching of the first *adhyaṅga*, the second expounds the true *vāc*, the higher knowledge or doctrine of the *ātman*, with which the last paragraph of the first *adhyaṅga* seems to form a link. The first chapter, which is found in substance also in *Kauṣ.* iv., is remarkable in that it represents a *Brahman* as seeking enlightenment from a ruler of Kṣatriya race, Ajātasatru of Benares (Kāśī), who refutes his erroneous conceptions of the *Brahman* and makes known to him the real truth concerning the nature of the *ātman*. This representation of the dependence of a *Brahman* upon Kṣatriya instruction is usually understood, and probably rightly, to be indicative of an early condition of Indian society, in which the *Brahmans* did not hold the practical monopoly of all knowledge which was theirs in later times; they were equalled or surpassed by members of the warrior caste. The discussion makes free use of metaphor and simile, and many passages present difficulties of interpretation. In the first chapter Gārgya Bālāki, a *Brahman*, proposes a series of definitions or identifications of the *Brahman*, which are in turn shown to be defective. Its true nature is then explained under the figure of profound slumber (*suṣupti*); the sleeper is at rest, unconscious, no longer subject to any external disturbance or influence. "From that *ātman* all *prāṇas* (senses), all worlds, all *devas*, all creatures proceed. The secret (*upanīṣad*) therefore is "the reality of the true" (*satyaṣya satyam*, or "the reality of the reality," i.e. the most essential reality). The *prāṇas* are the true, of them he (the *ātman* or *Brahman*) is the true." . . . "The forms of *Brahman* are two, material and immaterial, mortal and immortal, the lasting and the transient, being and other-being (*sat* and *śat*, this and that, the real and the unreal). . . . Further with regard to the *ātman* the real is the material, which is distinct from the breath and the ether within the body (*ātman*); this is the mortal, the permanent, the *śat*. Of this material, this mortal, this permanent, this *śat*, the essence is the eye, for it is the essence of the *śat*. Breath, however, and the ether within the body are

immaterial ; this is the immortal, the impermanent, the *tyad* ; of this immaterial, this immortal, this impermanent, this *tyad*, the essence is the *puruṣa* (person) in the right eye ; for it is the essence of the *tyad*. . . Accordingly its significance (*ādeśa*, instruction, rule) is expressed by *neti neti* (not so, not so) ; for beyond this, that you say it is not so (*iti na*), there is nothing further. Its name however is "the reality of reality" (*satyaśya satyam*) ; that is the senses (*prāpās*) are the real, and it is their real.¹

The fourth chapter expounds the doctrine of the true *Brahman*, the all-comprehending and universal Self, in the form of an instruction given by Yājñavalkya, as he is about to abandon the world for the life of a recluse, to his wife Maitreyī. The narrative is repeated with unimportant variations in iv. v., and seems there to be more in place.²

"If, sir, this whole earth, full of wealth, were mine, should I thereby be immortal?" "No, no," Yājñavalkya replied, "as the life of the rich would be thy life. There is no hope of immortality by wealth." And Maitreyī said : "What is the worth to me of that whereby I do not become immortal? What my lord knoweth declare to me." . . . And Yājñavalkya said : "Not indeed for the love of husband is the husband dear ; but for the love of the self (*ātman*) the husband is dear. Not indeed for the love of wife is the wife dear ; but for the love of the self (*ātman*) the wife is dear."

The same formula is then repeated for sons, wealth, cattle, the *Brahman* and *Kṣatriya* castes, the worlds, gods (*devas*), Vedas, creatures.

"Not indeed for the love of all is all dear ; but for the love of the self (*ātman*) is all dear. The self indeed is to be seen, to be heard, to be perceived, to be heeded, O Maitreyī. When the self indeed has been seen, heard, perceived, known, then all this is known."

Who knows the *Brahman* caste other than in the *ātman* (self) him the *Brahman* caste rejects ; who knows the *Kṣatriya* caste other than in the *ātman* him the *Kṣatriya* caste rejects ; who knows the worlds other than in the *ātman* him the worlds reject ; who knows the gods other than in the *ātman* him the gods reject ; who knows the Vedas other than in the *ātman* him the Vedas reject ; who knows the creatures other than in the *ātman* him the creatures reject ; who knows everything other than in the *ātman* him everything rejects. This *Brahman* and *Kṣatriya* caste, these worlds and gods, these Vedas, all these creatures, this all, it is the self (*ātman*).³

As the sea is the meeting-place of all waters, of all contacts the skin, of all tastes the tongue, of all scents the nose, of all forms the eye, of all sounds the ear, of all thoughts the mind (*manas*), of all sciences the intellect, of all actions the hands . . . the feet of all movements, speech of all the Vedas ; as a lump of salt has no within or without but consists entirely of taste, so indeed that *ātman* has no within or without but consists entirely of knowledge ; having arisen from these creatures (elements), into them it again vanishes ; after death there is no consciousness.

For where there is as it were duality there one sees the other, smells the other, tastes the other, greets the other, hears the other, perceives the other, touches the other, knows the other, but where the self (*ātman*) alone is all this, how should he see another, smell another, taste another, greet another, hear another, perceive another, touch another, know another? How should he know him (whereby all this is known)? He, the *ātman*, is "not so, not so" (*neti neti*) ; incomprehensible for he is not comprehended, indestructible for he is not destroyed, unattached for he does not attach himself, unfettered, he is not pained nor suffers harm. How then should one know the Knower?

After a fifth chapter, in which the doctrine of *Brahman* is set forth and elaborated under the symbol of honey (*mādhu*), the *adhyaṅga* concludes by reciting the stem or genealogical tree (*vaṁśa*), giving in succession the names of the teachers by whom the doctrine has been transmitted, leading up to *Brahman* and *Svayambhū* the self-existent.

Apart from the divine or mythological origin to which the succession is traced it is impossible either to affirm or to disprove the correctness of the names given in these lists. It is sufficiently probable that the fame and names of the masters of the schools would be preserved within the schools themselves, and not likely that the lists are entirely due to imagination or invention. The presence of the records here would seem to indicate that the two *adhyaṅgas* once formed a separate whole, which has been more or less interpolated, and incorporated with other parts into a single treatise. A similar list, coincident with this for two-thirds of its length, is found at the close of

¹ *Bṛhad.* ii. iii. ; cf. iii. ix. 26, iv. ii. 4, iv. 22, v. 15. It is difficult, perhaps impossible, to find English equivalents for the Sanskrit terms which are employed. The 'lasting' and 'transient' are from the point of view, as it were, of human appreciation, as the hills are lasting and a spiritual vision is fleeting or transient. Max Müller renders by 'solid' and 'fluid' ; Deussen has 'das Stehende und das Gehende.' The negative doctrine of *neti neti* is the extreme refinement of *Upaniṣad* teaching with regard to the nature of the higher *Brahman*.

² Cf. also *Chhând.* Up. vi. xiii., vii. xxiv.

the fourth *adhyaṅga*, and a different and shorter genealogical stem at the end of the *Upaniṣad*. There are variations also in the two recensions of the text.

The Yājñavalkya books, *adhyaṅgas* III. and IV., begin with his acceptance of a challenge by King Janaka, which none of the other *Brahmans* venture to take up. In nine chapters questions on abstract and metaphysical problems touching the life after death and the nature of the self are put to him by his rivals, and by his successful dealing with these he vindicates his claim to be the wisest of all. The ninth chapter concludes with a renewed challenge on the part of Yājñavalkya to meet any questions put to him, but no one ventures to assume the rôle of questioner. The book is in general introductory, asserting the authority and predominance of the great teacher, who is to expound the ultimate truth in the dialogue of the succeeding *adhyaṅga*.

In the first chapter of the book King Janaka Vaideha repeats various definitions of *Brahman* that have been given to him, as speech (*vāc*), breath (*prāṇa*), sight or the eye (*chakṣu*), hearing (*śrotra*), mind or will (*manas*), the heart (*hṛdaya*). Yājñavalkya has no difficulty in proving that these are imperfect explanations, useful approximations to the truth, but not the truth itself. In the second and following chapters Yājñavalkya assumes the part of instructor, still under the control, from which it is difficult or impossible to escape, of simile and metaphor. *Brahman* is the *puruṣa* in the eye, mysterious, and to be described only in negatives (*neti neti*, 'not so, not so'). The self is the true and only light, within the heart, self-illuminating and himself the light of all.

Then is a father not a father, a mother not a mother, the worlds not worlds, the gods not gods, the Vedas not Vedas. Then a thief is not a thief . . . a mendicant not a mendicant, a hermit not a hermit ; unvexed by good, unvexed by evil, he has then overpassed all the sorrows of the heart.

Though he then sees not, yet is he seeing, though he sees not ; for there is no interruption of seeing for the Seer, because he is imperishable ; but there is no second, no other, distinct from him, that he could see.¹

A similar assertion is made with regard to the senses of smell, taste, speech, hearing, thought, sensation or touch, knowledge ; all designed to show that the affirmations and predicates of ordinary life are meaningless when applied to the *ātman* :

"Where there is as it were another, then would one see the other, smell the other, taste the other, address the other, hear the other, think the other, feel the other, know the other. A solitary ocean is the Seer, without a second (*advaita*) ; that is the *Brahma*-world, O King."²

The fourth chapter further illustrates and explains the nature of the *ātman*, the fifth is the instruction to Maitreyī, as in ii. iv., and the sixth and last chapter of the *adhyaṅga* gives the *vaṁśa*.

The fifth *adhyaṅga* opens with an invocation, asserting the twofold nature of the *Brahman*, and quotes an old authority for the saying that *Brahman* is space (*kha*, 'ether'), 'the ancient air-filled space.' There follows the well-known parable of Prajāpati and his disciples :

"The three (races of) Prajāpati's sons, gods, men, and *asuras*, lived as students with their father Prajāpati. Their period of studentship finished, the gods said : "Be pleased to tell us, sir." He said to them this syllable *Da*. "Have you understood?" he said. "We have understood," they said, "you bade us subdue ourselves (*dāmyata*)."³ "Yes," he said, "you have understood."

Then the men said to him : "Be pleased to tell us, sir." He said to them this same syllable *Da*. "Have you understood?" he said. "We have understood," they said, "you bade us be generous (*datta*)."³ "Yes," he said, "you have understood."

Then the *asuras* said to him : "Be pleased to tell us, sir." He said to them this same syllable *Da*. "Have you understood?" he said. "We have understood," they said, "you bade us be merciful (*dāyadhvam*)."³ "Yes," he said, "you have understood."

This same divine voice, the thunder, repeats *Da Da Da*, that is, Subdue yourselves, Be generous, Be merciful. Therefore should these three be enjoined, self-restraint, generosity, mercy.

The further chapters of the book relate for the most part to types or similes of *Brahman*, which are explained as more or less adequate representations of the truth. The most interesting is the exposition of the significance of the four feet (*pada*) of the *gāyatrī*, the sacred invocation or 'Magnificent' of the *Brahmans*.³ Each foot has a special meaning. The fourth (*turiya*) is the bright foot (*darsanāt padam*), and symbolizes the bright or shining one, the sun or the *puruṣa* in the sun. The last chapter is an invocation of Aditya, or the sun, repeated in *Vājas. Up.* xv.-xviii.

¹ *Bṛhad.* iv. iii. 22 f.

² *Ib.* 31 f.

³ *Rigveda*, iii. lxiii. 10, v. lxxxiii. I ; cf. vi. iii. 6.

The sixth and final *adhya*ya is *khila*, additional or supplementary.¹ It supplies little new information or teaching, and is in parts even more highly metaphorical and difficult. The usual genealogy or list of successive teachers follows, and Yājñavalkya's authority is claimed for some at least of the instruction offered.

(b) It is hardly necessary or worth while to follow through in similar detail the *Chhândogyâ*, which shares importance with the *Bṛhadâraṇyaka* as the most ancient written source of *Upaniṣad* doctrine. It is attached to the *Sāmaveda*, and is divided into eight chapters, or *prapāthakas*, not all of which are parts of the original treatise. There has been combination, adaptation, and insertion; but no data are available for determining the changes that have been made or for restoring the primitive form. The additions or interpolations are probably more numerous than the losses.

The treatise is highly charged with symbolism. Meditation on the sacred syllable *Om* is enjoined, which is the essence (*rasa*) of all things, and is the *udgītha*, on which in its successive forms as *prāṇa*, *vāch*, etc., the *devas* meditate in their rivalry with the *asuras*.² *Om* is the immortal imperishable sound (*svara*), and is identified with *prāṇa*, *prāṇava*, or the *udgītha*, to the syllables of which a symbolical interpretation is given.

(c) The *Kāṭha* or *Kāṭhaka Upaniṣad* is placed by Deussen at the head of his second class, the ancient metrical *Upaniṣads*. It belongs to the literature of the Black *Yajurveda*, of which the *Kāṭhas* formed a well-known school; and it is perhaps the best-known of the *Upaniṣads*, having been rendered into English by Rāmmohun Roy in the early part of the 19th century. Since that date many editions and translations have been published. Its historical and literary affinities are not easy to determine. Deussen finds evidence of direct dependence of the *Isā* and *Svetāśvatara Upaniṣads* upon the *Kāṭhaka*; and that the *Svetāśvatara* has exercised an indirect and less powerful influence upon the two other members of the group, the *Mundāka* and *Mahānārāyaṇa*. The general classification may be accepted, but the details of interrelationship are still very obscure.

The text of the *Upaniṣad* consists of two *adhya*yas or six *vallis*, the first three of which contain the story of Nachiketas and the three gifts which he obtained from Death, the all-knower. The fourth *valli* is a further exposition by Death of the mystery of the *Brahman*, and a polemic against pluralism. In the fifth and sixth *vallis* the *ātman* or *Brahman* is described under various figures or metaphors, the one Self and lord, all-comprehending, self-existent, the eternal thinker. They who discern the Self within are wise and secure to themselves eternal happiness and peace. The legend of Nachiketas is found also in the *Brāhmaṇa* of the Black *Yajurveda*,³ and is there explanatory of a well-known religious rite. To judge from analogy, the myth was probably invented to account for the existence of a rite which bore this name, the original circumstances or foundation of which had been forgotten.

Nachiketas is the son of Vājasravasa, a religious householder, who at the call of religion is represented as making the voluntary surrender of all his worldly possessions (*sannyāsa*) in order to provide for his spiritual interests. The name perhaps signifies 'unnoticed,' 'unobserved,' and was designed, as in many other instances, to secure that the child should be inconspicuous, and 'unobserved' by the watchful powers of evil. Vājasravasa distributes all his goods in alms, and Nachiketas, knowing that the *sannyāsa* of the father involves the giving away of the son also, is anxious to learn his fate. His father replies that he will give him to Yama, signifying thereby that filial relations and claims have thenceforward no meaning for him, as being dead to the world. Nachiketas takes the answer literally, and goes off to the house of Yama,

where he stays for three days, and in the absence of the master of the house is left without entertainment. Yama on his return is annoyed that a Brāhman guest has been thus inhospitably treated, and offers him in compensation three gifts, which he is to choose for himself. There is no difficulty with regard to the first two gifts. They are granted in full and without hesitation. For the first Nachiketas asks that the anger or indifference of his father may be overcome, and that he may be moved to kindness and consideration towards himself. The second request is for an explanation of the fire-sacrifice, the ritual of which Yama expounds, and promises that it shall henceforth bear his name, the Nachiketas rite; a knowledge of the three Nachiketas fires and rightful performance of the sacrifice will ensure for the sacrificer heaven and abiding peace. The difficulty arises with the third boon:

'When a man is dead, there is a doubt—some say He is, others He is not. This I would fain know, taught by thee. This is the third gift that I choose.'

'Hereon even the gods of old have been in doubt. Hard to understand and reconcile is this subject. Choose another boon, Nachiketas; do not urge me, excuse me this.'

'True that the gods have hereon been in doubt, and thou thyself, O Death, hast acknowledged it to be hard to understand. But no teacher may be found so capable as thou; no other boon is comparable to this.'

'Choose long-lived sons and grandsons, cattle in plenty, elephants, gold, and horses; choose rich possessions on the soil, and life for thyself as many years as thou wilt.'

If there is a boon equivalent in thine eyes, choose it—wealth and long life. Be lord over the wide earth, Nachiketas; I grant thee consummation of all desires.

Whatever desires are difficult to realize here below, ask according to thy will—noble maidens with their chariots and music, not to be won by men, I give them thee for service. Ask me not, Nachiketas, concerning death.'

'What profit has a man of these things, O Death, evanescent as they are, that impair the vigour of all the senses? A full life-time even is brief. Keep your chariots, dance and song.'

Man's happiness consists not in wealth. Shall we grasp wealth, whensoe'er we see thee? Our life is but as long as thou dost ordain. This boon, however, alone do I choose.

Who that has had foretaste of that which perishes not nor changes, mortal and fettered here to earth, would find pleasure in a long life, when he has given due thought to beauty and indulgence and pleasure?

That, O Death, on which doubt rules here below, declare to us what will be in the great Hereafter. No other boon does Nachiketas choose than that which unlocks this mystery.'

Yama is under the necessity of yielding; and he begins by congratulating Nachiketas on his preference for knowledge rather than wealth or pleasure. But it is not an easy way:

'Though anxiously sought it is not to be gained when taught by common men, and without a teacher access thereto there is none—so small that it eludes the grasp of the mind.'

Reasoning will not find the way, but taught by another it is easily learnt. It is thine now; a true seeker art thou; an inquirer such as thou is to be desired.'

The exposition then begins with the identification of the sacred syllable *Om* (*q.v.*) with the *Brahman*. It is one of the most commonly chosen metaphors of the *Upaniṣad* writers:

'This syllable is *Brahman*, this syllable is the Supreme; he who knows this syllable, whatever he wishes is his.'

The text then sets forth in metaphysical terms the nature of the transcendent Seer (the *ātman*) and the conditions under which he may be known.

'The Seer is not born, and does not die; he has no origin and no descent. Unborn, eternal, abiding is that Ancient One. He dies not, when the body dies.'

If the slayer thinks that he slays, if the slain thinks himself slain, they both are in error; there is no slayer, and no slain.

Smaller than the small, greater than the great, the Self is concealed here in the heart of the creature. Free from desire and from grief, his senses subdued,⁴ a man sees the majesty of the *ātman*.

Sitting he moves far; lying he goes everywhere. That god of joy and not-joy who save myself has power to know?

Bodiless in the bodies, changeless in the changing, the wise man discerns the *ātman*, great, all-pervading, and is saved from sorrow.

Not by dissertation nor by wisdom nor by much sacred lore is that *ātman* to be gained; only by him whom he chooses is he to be gained; to him the *ātman* discovers his own being.

He who has not desisted from evil, who is restless, ill-content, whose mind is not at ease, even by knowledge cannot gain him.

Him to whom Brāhman and Ksatriya are alike indifferent,⁵ and death would be diminution,⁶ who could really find?⁷

In the third *valli* the Self, the highest *Brahman*, is the charioteer sitting in the chariot (the body), *buddhi* (intellect) guides the car, *manas* (mind or will) is the reins, the senses are the horses, the objects of sense the road on which they run:

1 i. i. 20 ff.

2 i. ii. 8 ff.

3 *Kāṭha*, i. ii. 16.

4 *Dhātuprasādāt*, Deussen, *gestillten Sinnendrangs*; cf. *Taitt. Ar.* x. x. 1; *Svet. Up.* iii. xx. The variant reading *dhātu: prasādāt* is followed by Max Müller, 'by the grace of the Creator' (*SBE* xv. 11; Deussen, *Sachzig Upan.* p. 274 f.).

5 *Odāna*, as food merely for the body; cf. *Ep. Phil.* iii. 8.

6 *Upasechanam*, a diluent, relaxation of power, and therefore inconceivable.

7 *Kāṭh.* i. ii. 18-25.

1 Cf. *Chhând.* *Up.* v. i. 1; *Kaus. Up.* ii. iii., iii. iii.; *Praśna Up.* ii. iii.

2 Cf. *Bṛhad. Up.* i. iii. 1 ff.

3 iii. 1. 8; see *SBE* xv. p. xxi ff.; Deussen, p. 262 f.

'He who has understanding, is self-controlled and ever pure, he reaches that realm whence there is no rebirth.

He who guides his car with understanding, wisely handles the reins (*manas*), he wins through to the goal of his journey; there where is the highest place of Visṇu.

Higher than the senses are material things, higher than material things is the mind, higher than the mind is the intellect, higher than the intellect is the great Self (*ātman*).

Higher than the great Self is the undiscerned (*avyaktam*), higher than the undiscerned is the *puruṣa*, higher than the *puruṣa* there is nothing; that is the goal, the highest way.

In all creatures it lies hidden, the *ātman*, invisible, discerned only by the keenest intellect. The touchstone of the finest is the fine.¹

Nachiketas therefore obtains his boon:

'He who has perceived that which is beyond hearing or touch or sight, undecaying, without taste or smell, eternal, without beginning or end, higher than the great, unchanging, he is delivered from the jaws of death.'²

The remainder of the *Upaniṣad* presents variations of the same theme and is of interest not only for the reiteration and emphasis of central doctrines, but also for the picturesque metaphors which it employs to set them forth. The inadequacy of these and of all metaphors is acknowledged, but they are aids to the mind in its attempts to comprehend the incomprehensible. He is *prāna* (breath), *agni* (fire), the *puruṣa* in the midst of the body, lord of the past and the future. In reality the *Brahman* is undifferentiated. 'He goes from death to death who sees difference here.' Through almost the whole of the fourth *valli* there runs the refrain, 'This is that,' reality is one and indivisible.

The *Kāthaka Upaniṣad* gives a stronger impression of unity and of singleness of design and thought than most of these treatises. There is little to suggest diversity of authorship or revision and alteration of the text. It is probable that changes of this nature have taken place, but they have been on a comparatively small scale. The recurrence of the name of Nachiketas at the close of the first and second *adhyaṅgas*, with the assurance of salvation to those who possess the knowledge of the mystery of the *ātman*, expounded to him by Death, has been supposed to indicate the union into one of two treatises, originally distinct. The inference is hardly justified by the context and the form under which the name appears. It is perhaps more probable that the verse in which it occurs at the end of the *Upaniṣad* is an insertion.

(d) One of the most difficult of the *Upaniṣad* treatises both in form and in interpretation is the *Svetāśvatara*. In the introduction to his translation of the *Upaniṣad*³ Max Müller expresses this view, and further in a few lines controverts the idea that the name ('the white mule') implies Christian authorship or participation. Not only is the language abrupt, entangled, and defiant of the rules of grammar, but the thought seems repeatedly to lose itself and to represent not one but many phases of doctrine and belief. Not the less perhaps on this account it is of very great interest. Among the more important *Upaniṣads* this treatise is the leading exponent and representative of Sāṅkhyan doctrine, and it is in the *Svetāśvatara* that the earliest use of the name Sāṅkhya with a technical connotation appears to occur. To reconstruct its history with any certainty—a writing doubly palimpsest, as it has been termed—is probably impossible. It is a medley of thought and teaching in which almost every phase of Hindu philosophical speculation seems to struggle for expression. Nothing is known of the Sākhā of the *Svetāśvatara*, the school within which the scripture was guarded, studied, and taught. Together with the *Kāthaka*, *Taittirīya*, and others it was recognized as belonging to the Black *Yajurveda*.

It is probably right to regard the original basis or nucleus of the *Upaniṣad* as Vedāntic. It was known to the author of the *Vedānta Sūtras*, and

Sāṅkara wrote a commentary upon it. The relation of the individual and the universal Self is asserted and discussed from an entirely Vedāntic point of view. On this basis, however, were superimposed theistic and sectarian statements of belief and doctrine, which introduced freely the dogmas of the sects, and even the names of sectarian divinities. Sāṅkhya and Yoga conceptions also, intermingled and reiterated, and in some parts predominant, contribute to form a whole which, as it appears in the extant literature, is probably the result of some centuries of discussion and revision in the schools. The *Upaniṣad* therefore does not readily lend itself to explication and analysis. Its moods change too rapidly to be fixed and indexed. The text also is in many instances corrupt, and out of various readings, which seem to be more or less conjectural, it is sometimes only possible to select that which appears to give a tolerable sense.

The treatise begins with an interrogation and a challenge: What is the cause, the ultimate principle and groundwork, of all? and the answer is *Brahman*. Whence is our birth, our life, our sustenance, and at whose bidding do the joys and sorrows come that we endure? Speculative replies are dismissed as incredible, as that time, nature, necessity, etc., either alone or in combination, should be the final cause. The individual Self is then depicted, the divine essential force (*devat-māśakti*), revealing itself as self or soul through and under the veil of its qualities (*guṇa*), figuratively described as a wheel with many spokes, etc.; by the practice of meditation and self-discipline (*adhyanāyoga*) the seers learnt to know this hidden force. Verse 7 supplies the Vedāntic interpretation: in the highest *Brahman* the triad (of the user, the used, and the governor, *bhoktri*, *bhōgya*, *grertri*, i.e. the Self, the universe, and God) become one; nothing further remains to be known, everything has been declared under triple form, and this is *Brahman*. The following verses of the chapter are descriptive of the Self under various figures or illustrations; self-knowledge is to be obtained by meditation on the sacred syllable *Om*.

The first seven verses of the second *adhyaṅga* are a hymn in praise of Savitr, made up for the most part of 'tags' from the *Vājasaneyin* and *Taittirīya Saṅhitas*. The rest of the chapter is written in the spirit of the Yoga, adoration of the god who is above and behind all phenomena.

The opening of the third *adhyaṅga* again is sectarian; Rudra is creator, sustainer, lord of all. The (impersonal) *Brahman* is higher than all, and those who know the great *puruṣa*, shining as the sun beyond the darkness, are immortal. The *puruṣa* is the incarnate Self (*ātman*).

'Without hands or feet he grasps and moves, eyeless he sees, earless he hears. He knows what can be known, but none knows him; him they name *puruṣa*, the first, the great. Smaller than the small, greater than the great, he dwells as the *ātman* in the heart of the creature. Passionless, by the grace of the creator one sees him unmoved (*akratun*, lit. 'without will', Deussen, *willensfrei*), the great lord. I know him, the unaging Ancient, the self of all, all-pervading, omnipresent; for him rebirth is stayed, whom the seers proclaimed immortal.'²

The fourth *adhyaṅga* exalts the sun-god, whose functions and attributes are figuratively expounded and interpreted in a Vedāntic sense. Peace and immortality are the possession of him who knows the god, Śiva, the eternal, creator of all, dwelling in the heart of man:

'Of him there is no image whose name is Great Majesty. His form is not visible, none ever sees him with the eye. They who with heart and mind know him thus dwelling in the heart become immortal.'³

The section ends with a brief prayer to Rudra.

The fifth *adhyaṅga* contains teaching on the two themes of knowledge and ignorance, of the means of deliverance from the latter, and of the *Brahman* as transcending all. He manifests himself in various ways, 'migrating through his own works,' and is seen now in this and now in that shape, incarnate under many forms. In the sixth and last *adhyaṅga* neither nature nor time is the source of all, but *Brahman* alone. He is the beginning and cause of all, the one god, hidden in all beings, without parts or attributes, immortal, the lord, protector and ruler of the universe. This is the supreme mystery in the Vedānta, not to be communicated to one who is unworthy.

6. History of doctrine.—It would seem, therefore, that the characteristic central doctrine of the *Upaniṣads*, the doctrine of *Brahman* or the *ātman*, was at first developed and systematized within Kṣatriya circles and at the courts of kings. This combination of royal functions with the mood of a philosopher or a poet was not unfamiliar to Oriental experience. The *Brahman*, on the other hand, occupied himself almost exclusively with

¹ *Kāth.* iii. 8-12. ² *Ib.* iii. 15. ³ *SBE* xv. p. xxxii.

¹ *Cf.* i. 12. ² *III.* xix ff. ³ *IV.* xix f.

the ritual and the securing of his class ascendancy ; and only later adopted a doctrine of the universe which had been formulated by others, but which harmonized with his modes of thought, and lent itself readily to his schemes for the establishment of his own predominance on the basis of secret or superior knowledge. These references to a Kṣatriya monopoly of the highest knowledge, imparted by kings to Brāhmins at their request, have been preserved and handed down within the Brāhman literary schools, and it seems improbable that such statements would have been allowed to pass if they had not been in accord with the facts. Probably also the doctrine and several duties of the *āśramas* (*q.v.*), whether widely practised or not, afforded an opening and facilities for the assimilation of the new knowledge. In later times the position was reversed, and with the establishment of intellectual and class pre-eminence the Brāhmins confirmed their claim to a monopoly of the supreme wisdom ; and this was conceded to them the more readily as the other castes became more and more immersed in political intrigue or business enterprise. In the issue, by perseverance and the skilful use of opportunity, the Brāhmins secured the first place in knowledge as in honour, and were regarded as the depositories of the secrets of wisdom and right instruction.

7. **Essential doctrine.**—This highest and most treasured teaching, for which divine authority was claimed, was formulated as the cardinal doctrine of the *Upaniṣad* literature, an idealistic monism, which consisted essentially in the assertion that all is one, 'one only without a second,' and as a necessary corollary that the material universe as it manifests itself to and is approached through the bodily faculties is unal (*māyā*). Only *Brahman*, the unknown Self (*ātman*), is in possession of a real existence. *Brahman*, moreover, is an abstract impersonal neuter, not an individual or masculine. The attribute of personality, as all other attributes, is denied to him, and he or 'it' can only be defined, if such may be called definition, by negatives (*neti neti*). The human self, the self of the living being (*ātman* or *jīvātman*), is subject to delusion only so far as it imagines itself to be an individual, distinct from all other selves. In reality it is itself the supreme Self (*ātman*), identical with *Brahman* ; there are not two or many selves ; but *Brahman* and every so-called individual self are one and the same. There is no 'difference,' in the realm of true understanding and insight. 'One only without a second' (*ekādvitīyam*) expresses the ultimate thought and the fundamental postulate of the speculation of the *Upaniṣads* ; or, as the doctrine has been formulated by Deussen and others in the form of an equation which summarizes *Upaniṣad* teaching in this respect,

Brahman = *ātman*.

The formula is not of course due to or used by the authors of the *Upaniṣads* themselves.

8. **Secondary teaching.**—This idealistic and monistic doctrine of the sole reality of *Brahman* underlies all the teaching of the *Upaniṣads*. Although not peculiar to the Indian literature, it is there developed in its most complete form and carried to its utmost logical conclusion. A considerable portion, however, of these treatises expounds what is generally known as the doctrine of the lower *Brahman*, a compromise or concession to the view which the ordinary man takes of the universe as stable, for all practical purposes permanent, conditioning his daily life, limiting and satisfying his outlook upon reality. This teaching was avowedly for those, and for those only, who were incapable of comprehending the higher knowledge, whose mind worked within the limitations

imposed by the faculties of the body. For these there was constructed or traditionally maintained a cosmology or doctrine of the universe, in which *Brahman* appears as the creator of a real world, which is then informed, sustained, and its working ensured by his universal and vitalizing presence. In this sense *Brahman* is immanent in the universe, which has no existence apart from him, and will ultimately be resolved or cease to be, returning into the source from which it came. *Brahman* therefore in the cosmological theory of the *Upaniṣads*, which is throughout secondary and does not contain or convey the secret of the highest knowledge, becomes individualized, endowed with properties and capacities, and an apparent or provisional reality is allowed to the universe and to the souls therein. The human *ātman* or *jīvātman* possesses a measure of freedom and individuality of its own, it thinks and determines, and of its own free and enlightened will promotes its return to the *paramātman*, the supreme soul whence it was derived. Thus far therefore the *Upaniṣads* may be said to contain the germs at least of a real theism. It is for the most part in the later treatises and especially in the *Śvetāśvatara* that these doctrines are set forth. They were not, however, developed on theistic lines, and it is probable that they represent speculation or belief which was in its origin entirely independent of the severe idealism of the *ātman* doctrine, tentatively harmonized with the latter and subordinated to it in the *Upaniṣad* teaching. All things would ultimately return to their primitive source, and their impermanent and unreal character would be made manifest. Thus the higher doctrine or faith was conserved under the forms and as the ultimate truth of the lower.

9. **Psychology.**—To the same secondary teaching belongs the psychological doctrine of the *Upaniṣads*, so far as these treatises may be said to present a consistent or coherent doctrine concerning the human soul. It is evident that this teaching also is derived from external sources, originally independent, and only artificially and with difficulty accommodated to the fundamental presupposition of *Upaniṣad* thought. Where all souls are one, and there is no difference, there is no room and no need for a psychology. On the lower plane of teaching, however, souls created by or emanating from *Brahman* are in a certain sense distinct and individual, although this impression or conviction of distinctness is ultimately due to *māyā* and to *māyā* alone. Some provision therefore must be made for their return, their final and universal reunion with *Brahman*, if a permanent duality was to be avoided. The last alternative as a solution of the mystery of the soul's nature and existence did in fact find expression in some of the *Upaniṣads* in premonitions and intimations of the later doctrine of the Sāṅkhya, which is avowedly dualistic. In general, however, the psychological teaching expounds two independent themes or subjects—the states of the soul, and the means or methods of its return. No definite connexion is made between these, or any relation suggested. They are due to different systems of thought, and no attempt apparently is made or regarded as necessary to co-ordinate them. The latter doctrine, including especially that of the two paths, is closely related to the wider doctrine of predestination.

The four conditions or states of the soul are : (1) the waking state ; (2) dream-sleep, in which the soul remains conscious and active in its dreams ; (3) dreamless slumber, *suṣupti*, *suṣupta*, in which the soul is passive, and unconscious of its environment ; (4) *turiya*, *turya*, *chaturtha*, the 'fourth' state, which is more or less artificial, and

is unknown to the older *Upaniṣads*. It was perhaps invented to secure or complete the correspondence with the four *āśramas*, the *turiya* being the sublime but undefinable state to which the *sannyāsin* had attained. The three earlier states received also mystical names: *vaiśvānara*, that which is common to all, the habitual mode or outlook of all men; *taijasa*, luminous, vigorous, intense; *prāñña*, intelligent. Similar states or stages are familiar in the experience of European and other mystics.

(1) The waking state is the normal condition of the natural man, who without reflexion accepts the universe as he finds it, believing it to be real. The mystical title *vaiśvānara* is apparently intended to suggest that to the natural faculties of all such men the same physical universe presents itself.

(2) In dream-sleep the soul fashions its own world in the imagery of its dreams, 'the spirit serves as light for itself.'¹ To the dreamer the scenes and experiences through which he passes in his dreams appear real, and in this his dream-world no other has part. The illusion of duality, however, is still maintained; there is one who knows and another that is known. In other passages the spirit is represented as quitting the body during the dream-sleep and wandering hither and thither, returning sometimes only with difficulty to its accustomed home.

(3) In the third state all distinct consciousness of knowing subject and known object is superseded, the human spirit is one with the eternal Knower, the supreme intelligence, *prāñña ātman*. In the teaching of the earlier *Upaniṣads* this is apparently the final state, the consummation of bliss in union with *Brahman*. 'When a man has fallen so sound asleep, and has so completely and perfectly been lulled to rest that he knows no dream-image, that is the Self, that is the immortal, the fearless, that is *Brahman*.'²

(4) The introduction of a fourth state appears to have been based upon a recognition of the transitory character of the *susupti*. The slumber is interrupted, and the spirit of the slumberer may then return to the waking state in which it is troubled and anxious, and the external visible universe is regarded as a real object of knowledge. 'When the three states named have ceased, and the spiritual subsists alone by itself, contrasted like a spectator with all existing things as a substance undifferentiated, set free from all existing things, this spiritual state is called the *turiya*.'³ In this state the *ātman* has realized a permanent union with *Brahman*, which is not liable to interruption by any return to a lower condition; nor is it interfered with or destroyed by engaging for a time in any of the illusory activities of ordinary life. Worldly duties and employments do not affect the soul that is one with *Brahman*.⁴

10. Eschatology.—The Indian doctrine of the two paths, the *devayāna* and the *pitryāna*, the way of the gods and the way of the fathers, by one or the other of which the souls of the dead make their way from this world to a future abode of happiness or misery, presents easily recognized parallels to similar teaching in other faiths. That the theory was of independent origin in India admits of little doubt. Later it was elaborated and brought into close association with the kindred doctrine of transmigration and was then carried far by wandering Indian missionaries; and in this way it may not improbably have suggested or influenced the beliefs of other peoples, especially the Mithraic teaching concerning the ascent of the soul to the highest heaven. As early as the *Rigveda* reference is made to the *devayāna* as the path by which Agni bears the offerings to the gods, and on which the gods themselves descend to partake of the sacrifices. On the same road the faithful worshipper ascends through successive stages or 'stations' to the highest felicity in *Brahman*. The passages in the *Upaniṣads* which enumerate the 'stations' give no indication of the origin of the theory, nor attempt to explain its meaning or significance. The earliest is probably *Chhând. IV. xv. 5 f.*:

'He (who knows this) . . . (after death) goes to light (*archis*, brightness, i.e. of the funeral fire), from light to day, from day

to the light half of the moon, from the light half of the moon to the six months of the sun's northward movement, from the months to the year, from the year to the sun, from the sun to the moon, from the moon to the lightning. Thereupon an unearthly guide (*puruṣa*) conducts them to *Brahman*. This is the path of the Devas, the path of *Brahman*. They who proceed thereby do not return to the changing life of man.'¹

The *pitryāna*, on the other hand, is the way of darkness, for ignorant and defiled souls, and progress is marked by analogons but contrary stations; e.g., the dark half of the moon is substituted for the light half, etc. Those who travel on this road do not reach the year or the sun, but are detained in the moon till their *karma* is exhausted, after which they return to earth, and are again subject to rebirth:

'But those who in a village fulfil their religious duties and give alms (i.e. *grhashtas*) go to the smoke, from the smoke to the night, from the night to the dark half of the moon, from the dark half of the moon to the six months of the sun's southward movement. They do not attain to the year. From the months they go to the world of the fathers (*pitrloka*), from the world of the fathers to the ether, from the ether to the moon. . . . Here they dwell as long as aught remains (i.e. of *karma* and its consequences), then return again by that way to the ether, from the ether to the wind (*vāyu*). Having become wind he (the *grhashta*) becomes smoke, having become smoke he becomes vapour, having become vapour he becomes cloud, having become cloud he descends in rain. These then are born as rice or corn, herbs or trees, sesamum or beans. . . . They who have lived a good life in this world will as a reward attain a good rebirth as a Brāhman, or a Ksatriya, or a Vaiśya; but they who in this world have lived a shameful life will attain a shameful rebirth, as a dog or a pig or an out-caste (*chāṇḍāla*).'²

There is thus in the *Upaniṣads* tentative if somewhat indefinite teaching with regard to the fate of the soul at and after death. Two conceptions were apparently involved, which were in all probability originally independent and belonged to different orders of ideas. Neither of them was due in its inception to the thinkers of the *Upaniṣads*, but both were derived from external and pre-existing sources. The thought of a return of the soul to the earth, to be embodied again in human or animal form, or even in the form of an insect or plant, is common to nearly all primitive peoples, and is undoubtedly of great antiquity. The distinct thought of a recompense of felicity or suffering in another world for the deeds done upon earth is neither universal nor so old. It has usually been accepted as an alternative to the earlier view of the soul's future destiny, superseding or displacing but not amalgamating with it. The contribution which the *Upaniṣad* thinkers made was in effect to combine these ideas by transferring the retribution from an unknown and future sphere to the known and visible present, and by asserting the precise equivalence of the recompense after death to the deeds, good or evil, of the earthly life. Thus all the elements of the Indian doctrines of *karma* and transmigration are found in the oldest *Upaniṣads*. They obtain here their final and fullest expression. No evidence or proof, however, is offered in support of these theories, nor is any reference given to previous history or development, which might explain or justify the statements made. They are supported, as is all the teaching of the *Upaniṣads*, by an appeal to the authority of eminent teachers of the past. It seems strange that no attempt should be made to fortify so important a doctrine as transmigration by reference to analogy, or to a wider and reasoned view of life as a whole. They are simply recorded as the definite and complete statement of the final destiny of the soul.

11. Summary.—Thus a very considerable part of this literature is occupied with doctrines that belong to the lower *Brahman*, and are avowedly inferior to the ultimate and supreme truth that *Brahman* is all in all. They are half-truths,

⁴ On the states of the soul see Deussen, p. 296 ff., and the references there given. Deussen regards the introduction of the fourth stage as due in part to the increasing prevalence of the Yoga doctrine, which involved the belief that by intense meditation, abstinence, and self-control the union of the human spirit with the one eternal spirit might be secured.

guiding and controlling the practical life of the universe, which lose interest and significance when the full truth is apprehended by the soul. 'He who knows' need not concern himself about any of these matters, whether of belief or practice. This doctrine, the doctrine of the *ātman*, alone is 'true' in the exact sense of the word. And the consciousness of this seems always to underlie the most precise exposition of doctrines, which in form at least conflict with it. *Brahman* alone is real; all else is *māyā*, illusion. This word appears first in its technical meaning in the *Svetāśvatara Upaniṣad*, where so many conflicting trains of thought meet and find a home. Essentially, however, and apart from its late literary expression, the doctrine of the universe as shadowy and unreal is far older in India than the literary employment of the term *māyā* would suggest. It is presupposed in most of the teaching that concerns the material universe, and is more or less consciously accepted by all Indian sects at the present day. The man who knows this, that *Brahman* alone exists, is truly wise. He realizes the unreal elusive character of the things that are seen, and has apprehended the supreme truth that *Brahman* only is, and that he himself is *Brahman*.

12. **Ethics.**—The *Upaniṣads* also enforce ethical teaching, but in a desultory manner. There is a considerable element of moral and religious instruction, commending a practical life of sobriety and devotion in sincerity and love of the truth. It is undoubtedly this ethical content that has given to these treatises their unique position among the sacred books of the Hindus. Self-restraint, generosity, loving-kindness are cardinal virtues, the observance of which is incumbent upon all who seek deliverance from the entanglements of this world and final union with the Supreme. The aim and purpose for all and each is release from the *saṁsāra*, the perpetual round of rebirths, and return to the original and eternal source of all in God. Thus the ethical teaching of the *Upaniṣads* is essentially self-interested and individualistic; virtue is to be practised for the sake of personal and private advantage in the cessation of rebirth (*punarṁrītyu*, repeated or reiterated death), when the soul reaches its final end in the one Supreme. The morality taught in these books is therefore negative rather than positive. It is a doctrine of abstinence from all that would hinder the severance of worldly bonds, rather than of positive delight in that which is good. The ideal of a devout life is that of the *sannyāsin*, the ascetic, who has renounced all, and is self-centred in profound and uninterrupted meditation. The doctrine thus expounded is that upon which Buddhism has drawn, in the *Hinayāna* at least, for its ideal of the perfect monk, and is closely connected

with the later Yoga, in which the teaching was systematized and carried to extremes of asceticism and self-torture. In its essential elements it is undoubtedly older in India than the period of the *Upaniṣads*, and gives expression to the austere quality which is native apparently to some forms of Indian religious life. The *Upaniṣads*, moreover, never lose their hold of idealism. To this all other teaching is subordinated. The veil of *māyā* is cast over all. And neither in ethics nor in theistic statement is there the same conviction or earnestness that is apparent in the exposition of the monistic doctrine of the *Brahman*.

USURY.

Babylonian (C. H. W. JOHNS), p. 548.
Christian (J. Dow), p. 550.

Hebrew (W. H. BENNETT), p. 555.
Jewish (J. ABELSON), p. 556.

USURY (Babylonian).—'Usury' is a wide term and commonly covers many transactions, distinct in their origin and purpose; and it is doubtful whether any custom existed in Babylonia which exactly anticipated any modern interpretation of the term. Interest on loans, rent of estates, wages, anything paid to any one for the use of anything the right to which is not thereby alienated, may be brought under the heading usury from one point of view or another. It would not, however, be accurate to regard this as a definition of usury for the purposes of this article, nor would

it be advisable to limit the meaning to either the exaction of exorbitant interest or ruinous charge for accommodation. In fact it may be doubted whether the Babylonians contemplated any transaction with which they were acquainted as answering to anything we understand by usury.

We must remember that the foundation of economic affairs was, from the earliest times with which we are acquainted to the latest for which we have evidence from cuneiform sources, the farming of sheep and cattle or of agricultural produce. In consequence, the natural increase

of flocks and herds being at least 200 per cent per annum, that of crops in the fertile soil of Mesopotamia at least 400 to 500 per cent, the rate of interest was excessively high according to our standard. But such returns, given security from loss by misfortune or disorder, must have led to a rapid increase of wealth. A fortunate possessor must soon have owned more than he could possibly protect. He was bound to employ others as shepherds or labourers merely to conserve his property. Unless he could command the services of slaves or subjects, he had to pay for such services. He might, and in Babylonia usually did, allot a portion of his flock to some shepherd to tend, demanding back after the pasturing and breeding season, his own again with a stipulated rate of increase, which we may loosely call usury. He might let out his farm or part of it to husbandmen, demanding a stipulated share of the crops, and leaving the rest as wages for the labour expended. Whether this constituted usury or not may depend on whether the amount demanded as return from the labourer bore a more or less reasonable relation to the average crop likely to be obtained. The reasonableness of the transaction depended upon many considerations which would be differently regarded then and now. In cases where a man's former prosperity had enabled him to realize his profits in the more stable form of money, he might lend that money as an accommodation to one who had less or even none, on the understanding that he was to receive again his own with usury, but where to draw the distinction between fair interest and usury must depend, not only on the custom of the country, but also on the yield it might reasonably be expected to produce when invested directly in agriculture or farming.

So long as the return for the accommodation which a creditor demanded kept well within the naturally expected profit to be made by the borrower, both were sharers in the benefits brought about by the accommodation. The abuses which might constitute usury arose by a demand for excessive return or by failure to accept responsibility and share in unexpected and unavoidable loss which fell on the borrower. It must early have occurred to the lender to demand security for his loan. By an early established custom the person of the debtor was held as security. This personal security extended over all the borrower's possessions. The debtor who failed to pay had to work off his debt somehow, and it was recognized as fair that the members of his family should be called upon to help him to discharge his debt. Thus he might assign any or all of his family—wife, children, or slaves—to work off his debt. This was to their advantage as much as to his, for they were thus secure of a living, though precluded from the profit of their labour, while, if he was bankrupt, he had no means of providing for them any more than for himself.

But the situation was full of possibilities of oppression, and the rich or prosperous man would soon have become master or partial owner of his poorer brethren indebted to him. So long as such a master treated his dependents fairly, and the land was secure from foreign conquest, a few rich men with a large industrious body of well-treated servants, certain of adequate maintenance, might well constitute a prosperous community. But the raids made in war, the spoliation of the rich man's capital, or the failure of a crop must have reduced the dependents to great misery. The tendency to accumulate wealth in the hands of a few avaricious men might work in the same direction through the tendency to strike hard bargains with labour. A benevolent or far-sighted ruler must early have

seen that an overworked or underfed population would grow discontented and so be unreliable in case of invasion to maintain the security of the land against foreign aggression. Hence legislation was introduced to check the abuses which might lead to an undue exploitation of labour by capital.

The celebrated Code of Hammurabi, the best-known body of legislation dealing with the subject, which we must regard as the outcome of innumerable other attempts in the same direction, devotes a large part of its regulations to controlling the tendencies of the state of society to permit oppression by the exaction of unfair enforcement of the literal terms of what had been entered upon as a free contract. These regulations of the code are already dealt with in the art. LAW (Babylonian), vol. vii. p. 817 f., and may be briefly summarized here. When a debtor owed for rent or share of crops and was unable to pay by reason of the failure of the crops not due to his own negligence, he was allowed to postpone payment to the next year. It was not legal to insist on the payment of any debt in one special form of tender, though this was often specified in a contract. Produce was made legal tender in any case, thus obviating the difficulty of its realization in a land where money was scarce, and equalizing the variations of exchange. The right of a creditor to seize the person of the debtor or of his dependents, and hold him or them in servitude until the debt had been worked off, was an obvious opening for great abuse, but was modified by the Code. By its enactment that such service should not excuse ill-treatment and, in any case, should not extend beyond three years, it clearly eliminated much injustice. The text of the Code as treated in art. LAW (Babylonian) was not then complete; but a contemporary, or at least very early, copy from Nippur¹ gives one of the lost sections enacting that, if a man borrow grain or money from a merchant and has not grain or money sufficient to repay him, he shall give the merchant whatever he has in his power in place of the debt that he owes in the presence of the city elders, and the merchant may not decline to accept it. This was a far-reaching enactment, and may be suspected of aiming specially at indebtedness to foreigners, or at any rate to men not exactly neighbours. By far the larger number of debts of which we have any record were owed to the temples, which stood to the people in the relation of agricultural banks. Their advances were of the nature of loans to tide over scarcity at seed-time, or to meet the expense of harvest operations when the last year's produce had already become exhausted, though a fresh crop was now in sight. They were mostly for a short term without interest, interest being demanded only in the case of delay to repay at the fixed time. Many of these temples were large land-owners, and also owned numerous flocks or herds. They, like other great owners, often farmed on the *metayer* system, furnishing to their tenants seed, agricultural instruments, and working animals, while advancing wages in kind. The numerous records of temple transactions which have reached us, due to the recovery of large temple archives, may easily have distorted the picture that we are able to draw of social life at that period, but they must have dominated the general custom. The landlord on this system was bound by that custom and his own interest, as well as by humanity, to see that his debtor, who was his tenant, should not be oppressed at any period of the year by want, tending to paralyse his efforts for their mutual profit.

In spite of all such regulations it is evident

¹ See *AJSL*, April, 1915, p. 225.

that debt and the servitude to which it led were very common features of Babylonian society. It was further met by a general amnesty from debt, or *seisachthia*, proclaimed by many a sovereign apparently to inaugurate his new reign, to secure popularity and encourage loyalty and thereby to achieve power to maintain his rule. The ability thus to remit debts doubtless lay in the power which the king had over temple revenues, as the temples were the chief holders of credit. Their responsibility to the citizens who sustained that credit was never lost sight of. They were called upon to redeem members of their city who became captives in war if these were without means to redeem themselves. The temples were stewards of their wealth for the god who watched over the welfare of his people. The loss to certain members of debts unpaid was a loss to the community at large who had furnished the source of their wealth, but, as this was the result of prosperous years, it might fairly be taxed to equalize over a term of years the incidental losses due to accident or bad seasons, to the 'hand of God,' or to enemy action. To grant such an amnesty, which seems to have involved a general release from debt and the restoration of liberty to prisoners and hostages for debt, was regarded as an 'establishment of equity' and was the prelude to fresh legislation. It is not completely clear that this amnesty touched private debts; it had in view rather debts to the temples, which were naturally in the power of the king. If private indebtedness was cancelled, it is difficult to see how injustice to the private creditor was avoided or what compensation he could have received for the forfeit of his capital and interest.

Most writers on the subject appear to have regarded the rates of interest charged for loans as exorbitant, but the high interest is associated in all periods with oriental custom and economic conditions. The multiplication of capitalists and the competition between them for investments have reduced the rate of interest under modern conditions to what we regard as fair, but any national scarcity of raw material or capital is bound to raise the rate again. Practically the risk involved determines the rate charged for a loan. Professional money-lenders were then more rare, and had to take greater risks. The profits which a borrower was able to secure by actual trading or farming were so high that accommodation for interest was less attractive to the lender unless the rate was high.

LITERATURE.—For the laws regarding usury see C. H. W. Johns, *The Oldest Code of Laws in the World*, Edinburgh, 1903, §§ 45-126; for the *metayer* system, *ib.* § 253. Johns, *The Civilization of Babylonia and Assyria*, Philadelphia and London, 1915. For *seisachthia*, M. Schorr, 'Eine babylonische Seisachthie aus dem Anfang der Kassitenzeit' (*SBAW*, 1915, pt. 4); S. Langdon, *PSEA*, 1914, p. 102. C. H. W. JOHNS.

USURY (Christian).—I. In the New Testament.—The words of Jesus contain allusions to borrowing and lending, but, as we should expect of one who refused to be a judge and divider (Lk 12¹⁴), there are no direct precepts to guide the Christian conscience. Mt 5⁴² and Lk 6^{34c} are but exhortations to an open-hearted charity. The Parable of the Talents (Mt 25¹⁴⁻³⁰) and the Parable of the Pounds (Lk 19¹¹⁻²⁷) allude to banking and interest, but in casual phrases, not in the pith and marrow of the teaching. Borrowing itself would be frequent enough in that age and country, not so much of the commercial type,¹ but more of the loose and personal kind, as between friend and friend, kinsman and kinsman. The shiftless Oriental is a ready if somewhat conscienceless

¹ See art. 'Interest,' in *DCG*.

borrower, and the Syrian peasant who to-day loans out his earnings in petty usury doubtless had his like-minded ancestor in the changeless East.¹ The ethic of these personal borrowings was adequately covered by the general principles enunciated by Jesus; there was no call, nor was it His method, to deal with usury as an economic and commercial factor.

What mattered for the future centuries was that by His life and example even more than by His words the great Master had suggested a certain attitude towards this world's goods. Himself reared among the poor and needy, He lived the life of a travelling teacher without home or material possessions; to those who left house and kindred and lands for His sake He had promised everlasting life (Mt 19²⁹); and to the rich young ruler, morally perfect though he claimed to be, He had given the arresting command to sell all and give to the poor (Mt 19²¹). Among the slaves and the folk of the lower orders who formed the majority of the early converts such teaching was treasured and, it may be, unduly emphasized; its potency appears in the communistic movement of Acts (4³²) and in the fact that from the beginning dear to the heart of the Christian society was the care of the poor. It is as but one phase of a general attitude to this world's goods that we must explain the Church's dislike of usury. In their simple, fraternal communities, with their pervasive atmosphere of kindly charity, the hard bargainer for gain was a chilling and unwelcome intruder, the personification of the spirit of the alien world without.

2. In the Fathers.—The early Fathers looked upon usury with severe disapproval. They may have been influenced in certain cases by the classical moralists, but the determining standard for them was the OT legislation and the general principles of the NT teaching, more especially a strained interpretation of Lk 6³⁵.

Tertullian,² Cyprian,³ and Clement of Alexandria⁴ accept as still binding on Christians the OT precepts (Ex 22²⁵, Dt 23¹⁸, Ps 15⁵, Ezk 18¹⁷), the first-named regarding the prohibition of interest as only a preparation for the higher demand of the Gospel to forgo even the capital: 'Quo facilius assuefaceret hominem ipsi quoque foeneri perdendo cuius fructum didicisset amittere.' Apollonius ranks usury with games of chance.⁵ Lactantius condemns it.⁶ The Fathers of the 4th and 5th centuries write to the same effect, only with a rising vehemence that suggests that the evil was increasing in decadent times. To Chrysostom it is *σύνδεσμος ἀδικίας*,⁷ to Ambrose it is *rapina*,⁸ Augustine places it in the category of crime: 'Audent etiam foeneratores dicere, non habeo aliud unde vivam. Hoc mihi et latro diceret, deprehensus in fauce; hoc et effractor diceret . . . et leno . . . et maleficus.'⁹ Basil¹⁰ and Gregory of Nyssa¹¹ in homilies of like spirit denounce the usurers as a breed of vipers that gnaw the womb that bears them.

The standpoint of the Fathers, however, is not to be explained as a mere narrow reading of Scripture: it is the view of men whose Christian conscience abhorred the exploitation of the defenceless and unfortunate. The practice of usury is regarded throughout this period not as an economic but as a moral question. Borrowing was still largely for the urgent personal needs of poor men who were fit subjects not for exaction but for charity. It was the soulless miser—living safely and meanly, gloating over his gains ill-gotten by pitilessly farming the necessities of the needy—who sat for the portrait of the usurer and drew the fire of the preacher. The Christian conscience was finely sensitive to the obligation of charity. Wealth was the gift of God, and men were but stewards, *dispensatores not possessores*.

¹⁰ *Hom. lvi.* in *S. Matt.*

¹¹ *Hom. in Ps.* xv.

'Understand then, ye rich, that ye are in duty bound to do service, having received more than ye yourselves need. . . . Be ashamed of holding fast what belongs to others. Imitate God's equity and none shall be poor.'

This note struck in *The Preaching of Peter* is typical. To a teacher like Ambrose rights of property were a creation of avarice; charity or almsgiving was an act of simple justice.¹ In all this the Church is moving in the realm of precept and ideal; law on the subject is not yet.

3. In the canons of the Councils.—Antagonism gradually hardened into prohibition,² as the Church developed in power after Constantine. At first she deals only with her own clerics, who, as guardians of ecclesiastical property, must have had practical difficulties and temptations. By the 17th canon of the Council of Nicea deposition is prescribed for usurious clerics. In the statute of the Council of Elvira (305-306) ordering expulsion from the Church of any person 'si vero in ea iniquitate duraverit' the mention of laymen is doubtful, but by 345 we find the Council of Carthage declaring it reprehensible in laymen. This view is repeated by the Council of Aix-la-Chapelle (789), and by the 9th cent. ecclesiastical law becomes positive in extending the prohibition to the laity: bishops are to require all Christians to abstain from usury and to punish the recalcitrant.³ Legislation threw its net ever wider as the evil increased, and the whole armoury of ecclesiastical pains and penalties was turned upon the offenders. Thus a canon of the 3rd Lateran Council (1179) ordained that 'manifest usurers shall not be admitted to communion, nor, if they die in their sin, receive Christian burial.' The 2nd Council of Lyons (1274) went farther, forbidding any community, corporation, or individual to permit the letting of houses to foreign usurers. Spiritual penalties are reinforced by civil: by another canon the wills of unrepentant usurers were declared invalid, thus bringing usury definitely within the jurisdiction of the ecclesiastical courts.⁴ The Council of Vienne (1311) brought matters to a climax, declaring the civil law on usury as of no effect and branding as a heretic any one who pertinaciously held that usury was not sinful.

4. In the Middle Ages.—This growing stringency indicates the advance of a tide that could not be checked. 'Since in almost every place the crime of usury has become prevalent,' admits the canon of the 3rd Lateran. Significant is the concession made in favour of the Jews by the 4th Lateran: only grave and excessive usury is forbidden them. By the 11th cent. commerce was finding new channels; towns were arising, markets opening, and thus problems of trade became urgent. Churchmen themselves needed large sums for building and for Crusades. This activity in the money market called for readjustments and new methods. The Church had to reconsider her whole attitude to trade and economic practice. The old view that business was an evil, with its roots in covetousness, had to go. The interchange of goods by which men lived had to be accepted; only its methods must be jealously examined. Christian principles had to be applied in detail. Over against Roman law, as codified by Justinian and studied in the schools, Churchmen had to set forth their own rule and standards. This task fell to the Schoolmen, pre-eminent among whom stands Thomas Aquinas. Even as he formulates his judgments on usury he has to make concessions, and, once one gap is made in the hedge of restriction, other gaps appear as the centuries pass, until

it becomes a question whether there is a hedge at all.

The scholastics based their judgment on more than the OT and gospel precepts.¹ (a) They accepted the dictum of Aristotle,² made familiar to us from *The Merchant of Venice*, that barren metal does not breed. Money was regarded merely as a medium of exchange; the modern concept of capital had not been evolved. The fact was overlooked that the money borrowed could purchase, e.g., a cow, and a cow does breed. (b) Roman law distinguished between consumptibles (e.g., a loaf) and fungibles (e.g., a house). In *mutuum* the thing borrowed was for consumption; its whole value lay in its first use; the use and the substance were inseparable; an adequate compensation was made when an equal quantity was returned. In this category money was ranked. When A borrowed money from B, his ownership over it was absolute; it was more than *possessio*, it was *dominium*; the process of exchange had the quality of a sale, and to sell an article and then charge for the use of it was unjust.

This, then, was the decision of the canonist conscience: in itself the loan of money did not justify a charge for its use. In those days of limited opportunity for investment it was doubtless often a gain to the lender to find a man willing to accept custody of the money, so long as it was returned intact. And the Schoolmen were ready to face the logic of facts and to make allowance for special cases. The custom sprang up of admitting compensation on various extrinsic grounds.³

(a) Bargains were not kept. A delay in payment might inflict serious loss. Was there to be no compensation? Certainly. So the lender was allowed to fix a fine to be paid if the bargain was not kept, the *pena conventionalis*, and this fine was frequently as high as the amount of the original debt. This sum represented the difference between the creditor as he actually was and as he should have found himself had the bargain been kept—hence the name *interest*, 'that which is between.' As the civil law had allowed the defaulting debtor to be imprisoned or even to become a slave, this money payment was really a milder punishment.

(b) Suppose a man who had lent his money were compelled himself to borrow at a high rate of interest through the failure of the debtor to repay. For such a real expense capable of proof compensation was allowed by practically all Schoolmen—*dammum emergens*.

(c) By handing over money to another the lender deprived himself of the gain he might have made in various ways (*lucrum cessans*). Aquinas disapproved of this as a basis of claim, a future gain being regarded as too hypothetical. It was selling what did not exist and by a hundred chances might never exist. But this plea by the 15th cent. gained wide acceptance.

(d) Another extrinsic title which won its way to approval later than the others was that based on the risk—e.g., in maritime ventures—that the sum borrowed would not be restored (*periculum sortis*).

(e) Once delay in payment (*titulus moræ*) was recognized as a reason for compensation, the practice easily sprang up of lending gratuitously for a short period and charging for delay beyond that period. This was but a step from the modern method of calculating interest.

It was not only by these strictly guarded avenues that money could pass for gain; the Middle Ages offered two other modes of investing money: (a) rent-charges, and (b) partnership.

(a) A squire drawing a fixed rent for a piece of land could transfer to another that right. Real productive property (*res frugifera*) was the indispensable basis for this contract; but the privilege was extended later to shops, toll-rights, etc., so that even the small trader and artisan could raise money to expand their business in this way.

(b) The stay-at-home merchant could entrust his goods to an agent—e.g., the owner of a trading ship—and might bargain for a share of the profit of the venture. This partnership assumed many forms, the approval of the canonists requiring two conditions: (1) the investor remained the owner of his capital; and (2) he shared in the risk, thus earning a moral right to a share of the profits.

In view of all these gaps in the hedge, it is difficult to maintain that the ban on usury seriously hampered trade and commerce. Indeed, no school-made dictum would have been suffered

long to impede forces so potent as the trading instinct in man and the international necessity of commerce. The masses during these centuries still lived largely by agriculture and the primitive crafts. Neither artisan nor farmer had a big margin of wealth to tide over ill-health or bad harvests or grievous taxation. In such conditions the petty usurer was a temptation and a snare, as he is to-day in similarly undeveloped communities—e.g., India and Egypt. Moreover, interest calculated per month, as was the system then in vogue, resulted in exorbitant charges. As the zealous guardian of the poor and the distressed, the Church was probably wise to keep her ban on usury. Her policy was certainly a long step in advance of the pagan practice by which the debtor was suffered to fall to the status of a slave. After the inroads of the barbarians, moreover, there was a period of chaos; commerce was stagnant rather than seeking for new outlets. What wealth an impoverished society possessed was swallowed up in the necessities of life; only after her recovery would there be free wealth for development, and that found open channels in partnerships and rent-charges. When capital was thus scarce and lending the monopoly of a few, unlimited freedom to impose interest would have led to abuse and produced a social cancer in that unripe age. Further, the Church was not herself detached from the realities of the economic world. She was one of the largest holders of property and monies, and Churchmen, as stewards of that material wealth, were driven to find ways and means of investment. The lessons of their own practical difficulties were not lost on them, as in their experience of the *montes pietatis*.

The Franciscans, with their sensitiveness to the needs of the poor, instituted at Orvieto (1463), Perugia (1467), and elsewhere these philanthropic loan-funds with a view to giving small loans to the poor on the security of pledges. 'But,' writes Ashley, 'even with papal patronage and the promise of spiritual and temporal advantages to those who should subscribe towards so charitable a work, the managers of the *montes* found it necessary to make a small charge for the loan in order to cover working expenses.'¹

A wordy warfare followed between the various orders, resulting in the notable judgment of the Lateran Council of 1515 by which the *montes* were allowed to levy moderate interest, provided their object was to cover working expenses and not to make a profit. Such a verdict could not fail to have far-reaching effect. The Church which had resisted usury in the interests of the poor was now compelled to allow moderate interest to an institution which existed on behalf of the poor. The Council itself apparently felt that the question had reached a new phase, and re-defined usury thus:

'This is the proper interpretation of usury, when gain is sought to be acquired from the use of a thing not in itself fruitful (such as a flock or a field), without labour, expense or risk on the part of the lender.'

The controversy on the triple contract in the 16th cent. also shows forces moving towards the admission of interest. A capitalist class was emerging—a process that was aided by the large profits made by traffic in Indulgences for which the Church herself was responsible. The powerful banking house of the Fuggers of Augsburg was behind John Eck who championed this method of investment at the University of Bologna in 1515, and John Major argued with cogency in its favour.²

Three different contracts with three different men were allowed: (1) a contract of partnership, (2) a contract of insurance against loss of capital, (3) a contract of insurance against fluctuation of profit. Could a merchant make all three contracts with one man? That meant that his capital was guaranteed, so was a fixed return. Was this usurious?

At Bologna there was no decision. Yet the

¹ Ashley, ii. 450.

² *In iv. Sententiarum*, dist. xv. qu. 49.

campaign taken up by Major and others might have achieved success but for the wave of reaction that came with the counter-reformation. Liberal opinion was swamped, and a reversion was made to a stricter standard by the bull *Detestabilis Avaritia* of Sixtus v. (1586), which revived the sternest condemnation of usury as 'detestable to God and man, as condemned by the sacred canons, and as contrary to Christian charity.'¹

5. The Reformation and after.—The yoke of authority was broken by the Reformation and it was inevitable that in the freer atmosphere of Protestantism the binding strictures on usury should be cast off. Not that that process was unopposed. On the contrary, the removal of the Church's ban only showed how strong was the popular sentiment against the practice; witness Martin Luther's earlier deliverances on the subject.² These are not the scientific judgments of the theologian, but rather the utterance of a son of the people, feeling keenly that oppression at the hands of the nobles and rich city merchants which led to the peasants' rebellion; there was also in the case his Christian fury against the Jewish usurers' ensnaring of his fellow-believers.³ His zeal for moral reform tended to swing him back to the strictest standard of the Fathers. He called on ministers to preach against usury (1540). In more reasoned mood, however, in cases where the participators are not poor, he allows rent-charges on real land and interest that compensates for actual loss (*damnum emergens* and *lucrum cessans*), provided the charge is moderate (four or five florins to the hundred).⁴

Melanchthon professes to accept the traditional, Scriptural prohibitions.⁵ But a practical guiding consideration to his mind is whether the usury is so immoderate as to have a disintegrating effect on the commonwealth, a consideration forced upon him doubtless by his study of classical times:

'Societas civilis non potest esse perpetua cum non servatur aequalitas . . . Exhauritur ergo altera pars et non servatur aequalitas, sicut res ipsa ostendit ubi concessae fuerunt immoderate usurae. . . .'⁶

He allows a payment 'supra sortem,' not only in cases of *damnum emergens* and *lucrum cessans* to those engaged in lucrative trade, but even where there is no *titulus moræ*, provided always the interest is moderate: 'Licet stipulari de eo quod interest etiam ante moram.'⁷

It was left to Calvin, however, to finally open the sluice, and that, too, without any such intention on his part. His standpoint is really the same as that of his contemporaries.⁸ Only he wrote to Æcolampadius a guarded opinion, the substance of which was seized on and the reservations slurred over. The opinion expressed was not for everybody. He hesitated to make any concession, feeling, on the one hand, that to condemn usury altogether was to impose restrictions severer than the Lord Himself desired, and, on the other hand, that, if he yielded an inch, some would take an ell. And what he feared came to pass.

¹ The Catholic Church has been slow to give official sanction to usury. As late as 1745 the *Viz Pervenit* of Benedict xiv. follows canonist lines. Not till 1830 did the Holy Office allow, in a particular case, that interest could lawfully be taken for money lent to merchants who were in lucrative trade. Cf. J. M. Harty, 'Historical Evolution of the Catholic Teaching on Usury,' in *Irish Theol. Quarterly*, iv. [1910] 17.

⁶ *Ib.*

⁷ *Ib.*

⁸ *Comm. in Ps* 155: 'Sciamus ergo contractus omnes quibus alter ex alterius damno lucrum inique captat quocunque tandem nomine vestiantur damnari'; cf. *Serm. in Dt.* xxiii.

Lk 6³⁵, the letter runs, has been badly twisted from its real sense; Jesus merely wished to correct the vicious custom of the world whereby men readily lent to the rich, who could pay back, and not to the poor. Dt 23¹⁹ was political and not to bind us further than reason and equity allowed. The strictures in the Psalms and Prophets were applicable to the Hebrews: our circumstances are different. The Aristotelian argument, to which Ambrose and Chrysostom subscribed ('pecunia non parit pecuniam'), is of no great moment. It is a specious quibble. Interest proceeds from money as naturally as rent from a field or house. A money gain is allowed for the use of a house. So money can be made fruitful when land is purchased and yields a yearly revenue. The argument is clinched by an illustration. A rich man, A, well endowed with landed property and other income, is short of ready money. Another man, B, is not so rich, but has abundance of ready money. A asks B for a loan of money. B could easily buy land for himself or he could have the land bought with his money hypothecated to him till the debt was repaid. Suppose instead of that he contents himself with the interest, the fruit of the money, is that to be condemned when the harsher contract is reckoned fair? That would be nothing else than playing with God, a child's game.

While thus Calvin does not condemn all usury, he does not give it indiscriminate approval, nor will he countenance it as a trade. Finally, he lays down seven conditions, the important being that usury was not to be demanded of men in need or distress; poor brethren were to be considered; the welfare of the State was to be safeguarded; and the legal rate was not to be exceeded.¹

A world eager for commercial freedom found it convenient to drop Calvin's qualifications, while his concessions were seized on as authority for a new standard. When the theologian had yielded the principle, the jurist was ready to rush in and establish the case at all points. Molinæus² demolished with meticulous detail the old arguments of the canonists. Though his book was placed on the Index, it was freely republished and circulated widely. More especially in the Netherlands, where Reformation principles were spreading and commerce was developing, the new views found open ears. Salmasius preached the cause in a series of brilliant volumes;³ but practical needs were probably more eloquent than argument. In Germany early in the 16th cent. several State legislatures began to allow *Interesse*, when stipulated in advance, and in 1654 the imperial diet did likewise. In Italy, under the shadow of Roman Catholicism, discussion did not arise till late, but in the busy commercial towns, by allowing interest to be bargained for beforehand from an early period and exploring other avenues of ingenuity, the prohibition of usury was rendered ineffective. In France the power of the Church maintained the ban until the Revolution. Not till 1789 was the prohibition removed. Turgot's *Mémoire sur les prêts d'argent*, the classic vindication of usury in France, did not see the light till 1789.

6. *Opinion in England.*—Christianity arrived in the infancy of English civilization and stamped her character from the beginning on social and political developments. Accordingly, the attitude of mind shown towards usury in popular literature⁴ and in early statutes is in harmony with the teaching of the Church. Indeed it would appear that not till the Jews arrived after the Conquest did the trade become a problem at all. The English people have always been healthily disposed towards commerce—indeed their very existence depends upon it—and they would be prompt to protest if the ban on usury were found restricting trade. What emerges is the opposite: a keen desire to grapple with and shackle the traffickers in usury. Complaints were often made that the ecclesiastical courts were not stringent enough.⁵ Progressive civilians sought further powers to stamp out the evil—*e.g.*, in the ordinance framed

by the London municipality in 1363.¹ The exact point of offence is defined in the revised statute (1390) which describes usury as 'a promise for certain without risk.' The wide-spread bitterness towards the Jew was one other illustration of the popular verdict against usury. The very exorbitance of the interest allowed—2d a week per £1, *i.e.* 43½ per cent—was enough to breed odium, and kings made rather a questionable use of these strangers. Feeling rose so high that the Jews were expelled in 1290, and in the following century (1376) the citizens of London called for the same measure against the Lombards, the agents of the grievous papal exactions, who had taken over the detested trade.

The way to change was prepared by the relaxations of the canonists themselves, but more by the fact that in the 15th cent. money transactions were altering in character. The borrowers were no longer poor men in need, nor barons suddenly confronted with some savage taxation or a levy for a crusade. Traders making good profits now needed money for developing business; they were willing and ready to pay for loans. And many began to find themselves in better times with a margin to invest: the phenomenon of capital was emerging. Still, when Henry VIII. in 1545, under the guise of limiting charges, really sanctioned interest at 10 per cent, he was probably in advance of public opinion. At any rate a wave of reaction followed, and the Act was repealed under Edward VI. Warm controversy marked the closing decades of the century. On the one side, divines who 'too much squinted towards Moses' preached a stricter standard than even the canonists and attacked rent-charges and partnerships.

The 'little more' of interest was likened to a sixth finger, a monstrosity; the usurers were as ivy on the oak, all-devouring. 'To what shall I liken this generation? They are like a butler's box; for as the counters at last come to the butler, so all the money cometh to the usurer.'²

There are indications of resentment of another kind caused by the arrival of a 'new rich' and the dispossession of old families by these 'ungracious pettie Brokers.'³ Irresistible forces, however, drove the other way. 'But goode Lorde, how is the worlde changed,' writes Thomas Rogers, 'that which Infidels cannot abide, Gospellers allowe.'⁴ The Reformation had broken the old spell of authority, and disciples of Calvin found ready listeners. Henry Bullinger and others spread abroad the newer view that usury was forbidden only so far as it was 'biting.' But, as Cunningham has it,

'The most important factor was the revolution in English commerce which occurred during the 16th century; for various circumstances had combined to bring about an entire recasting of the ordinary business system of the country. For one thing, the exclusive trading of the great guilds had suffered a series of severe blows and it was open to anyone to engage in commerce and win its rewards. The great improvements in the management of estates—as well as the planting of new industries—brought much wealth into the hands of many citizens all through the country. . . . For the first time in the history of England the circumstances were present which rendered the general formation of capital possible.'⁵

The Act of 1571 marks the victory of the liberal school. The rate was lowered to 8 per cent in 1624, but more significant was the fact that in that measure no attempt was now made to distinguish between usury and interest. The controversy smouldered on, but really for the time being the question had been settled by the advent of capital and the consequent changed conditions of commerce. The point at issue altered to the rate

of interest, for the limitation of which Thomas Culpepper, Josiah Child, and others pled. John Locke entered the lists with *Some Considerations of the Consequences of lowering the Interest and raising the Value of Money* (1691), but it was in another connexion that he made his most significant utterance, anticipating the next phase of the controversy: 'For it is labour indeed that puts the difference of value on everything.'¹ Jeremy Bentham's classic *Defence of Usury* also indicates a fundamental fact which makes this a perennial question, 'The children who have eaten their cake are the natural enemies of the children who have theirs.'²

The repeal of the usury laws in 1839 appeared to be 'the end of an auld sang.' But the freedom was abused. The usurer with his merciless exactions again came under control by the Money-Lenders Act of 1900, which requires the registration of their business names and addresses and allows the court, where the lender prosecutes for debt, to cancel the contract if the rates are excessive. Petty loan business, however, still survives.

7. The modern phase of the problem.—History repeats itself in the present phase of the controversy. Usury has come to mean exorbitant interest, but the legitimacy of interest is still debated. The early attacks on usury were motivated by the Church's sympathy with the oppressed poor; the latest attack finds its strength in the plea that interest is an unjust tax on the labouring classes.

'But observe, my Lord,—and observe as a final and inevitable truth—that whether you lend your money to provide an invalided population with crutches, stretchers, hearses, or the railroad accommodation which is so often synonymous with the three, *the tax on the use* of these, which constitutes the shareholder's dividend, is a permanent burden upon them, exacted by advance, and by no means an aid granted by benevolence.'³

Henry Smith said that the usurer was like a butler to whom all the counters returned. What offends the moralist to-day is that money is lent by those who have abundance and returns to them to increase that abundance, the increase being the unpaid dues of labour, which alone, the argument runs, produces wealth.

'It is not only that "every gate is barred with gold," but that year by year the burden of the past is becoming heavier on the present. Wealth passes down from father to son like a gathering snowball, at the same time as industry gets massed into larger and larger organizations, and the guidance and spirit of industry is taken more and more out of the hands of the worker and given to the capitalist.'⁴

By interest, then, the socialist claims, the rich are made richer and the poor poorer and the stability of the social organism is disturbed—the evil that Melancthon had feared.

Is interest, then, an unjustifiable tax that could be eliminated? The experience of the Franciscans with their *montes pietatis* and Proudhon with his Exchange Bank⁵ may well give pause. In spite of the strength of the socialist indictment, neither in theory nor in practice has the way out been demonstrated. The contention that labour alone creates value and that interest is the unpaid wage of the labourer and therefore wrong is not established unless it is reckoned that the service rendered by capital involves no sacrifice. The waiting or abstinence of the capitalist has not been swept out of court in spite of Lassalle's picture of the 'ascetic millionaires of Europe . . . like Indian penitents or pillar saints . . . holding a plate towards the people to collect the wages of their abstinence.'

'It is not true that the spinning of yarn in a factory after allowance has been made for the wear-and-tear of the machinery,

is the product of the labour of the operatives. It is the product of their labour, together with that of the employer and subordinate managers, and of the capital employed; and that capital itself is the product of labour and waiting; and therefore the spinning is the product of labour of many kinds, and of waiting.'¹

Could even a socialist community abolish interest and so give the labourer the full value of his labour? The difficulty lies in the fact that so many kinds of labour are not immediately productive. A vintage is harvested in 1920 and valued at hundreds of pounds. But in 1940 that value has increased enormously. Can labour be recompensed according to the value in 1940? It would be simple if the labourers could wait till 1940. But can they? Somebody must wait, and that is the plea for interest—the price of waiting. Interest has been defined as 'human impatience crystallized into a market rate . . . the premium that a man is willing to pay for this year's over next year's goods.'²

Only if all labour yielded products of immediate use could the community return to each man each year value for his whole labour. But in a progressive society effort must constantly be made for bettering conditions: expenditure must be put forth on schemes that can yield no immediate return. If the present generation is to hand on to the next finer means of transport and a nobler social equipment, can they do so without denying themselves a portion of the value of their labour? Is sacrifice not inherent in progress? A socialist state might possess itself of much capital, but that capital would not be inexhaustible. Some day the question would arise: where is the capital to come from for these improvements? How can a wage be paid to those engaged in these enterprises with deferred returns except by raising some contribution from other fields of labour? This could be done only by raising the price of other goods above the cost of their labour value, or by paying the labourers less than the value of their labour. Thus the socialist society has to impose a burden upon its citizens and deny them the full value of their labour just because of this fact that certain goods take time to mature; *i.e.* the element of waiting cannot be eliminated, and the price of that waiting must be paid.

'The complaint against interest is after all only a complaint that the great advantages of rapid progress cannot be had for nothing.'³

What practical policy can be suggested? It is admitted that laws directed against the usurer simply lead to more exorbitant charges to cover the risk of breaking the law. The most successful antidote is the co-operative bank, which meets the needs of those most subject to temporary distress, such as the artisan and the peasant farmer. The popular dislike of interest springs from the worker's resentment towards the idle rich. That privileged individuals should draw from a community enough for a life of idleness and luxury 'will always be regarded as a fundamental immorality.'⁴ But, as Cassel goes on to point out, that really calls for a more equal distribution of the nation's wealth rather than tampering with the method of interest. Society must consider rather the methods by which superabundant wealth comes into a few idle hands—as the laws of inheritance, unearned increment, and all forms of monopoly. Meantime the concern of the Christian Church is not to dictate any particular economic method but to maintain a zealous watchfulness over all developments in behalf of her ideals of justice, charity, and brotherhood.

JOHN DOW.

USURY (Hebrew).—I. Terms.—These do not throw much light on the moral and religious ideas connected with the subject.

לוה, 'borrow,' also means 'join,' and has been supposed to imply the dependence of the borrower on the lender, but it is more probable that there is no connexion between the two uses of the root. שאל, 'ask,' is also used in the sense of 'borrow,' and the *Hiph.* in that of 'lend.' עָבַט is used for 'borrow on pledge (or security),' and the *Hiph.* for 'lend on security'; כָּבַל is similarly used. As the last two roots are also used in the sense of 'bind,' they have been supposed to imply the binding of the debtor to the creditor. Nouns from these roots are used for 'pledge' or 'security.' עָרַב is used for 'be surety,' 'give pledges,' etc. For 'lend at interest' we find נָשָׂא, נָשָׂא, and נָשָׂא; נָשָׂא = 'interest.' *Nmashakh* also means 'bite'; and *neshekh* is supposed to mean 'something bitten off,' or to refer to the injurious and ruthless behaviour of a creditor in exacting interest. The AV 'usury' for *neshekh* simply meant 'interest' when AV was translated, and the suggestion which it now makes of exorbitant interest is misleading; it is simply 'interest,' as far as the mere word is concerned, apart from the implications of any special context. Thus the obviously neutral word נָשָׂא, EV 'increase,' from נָשָׂא, 'to be great,' is often used as a parallel and synonym of *neshekh*; and the word is rendered in the LXX by *τόκος*, and in the Vulg. by *usura*, which are simply the ordinary words for 'interest.'

2. History.—Debt plays only a small part in the OT, partly, no doubt, because it was not an important factor in primitive times, though it became more so as Israel grew more civilized and life more complex. In an agricultural community the failure of the crops might lead to borrowing (Neh 5³). A man might be involved in debt by becoming security for a friend (Pr 6¹). In later times taxation for a native government or for the payment of tribute to a foreign suzerain was a source of debt (Neh 5⁴). As far as the OT is concerned, debt always seems to have originated from such causes; the OT has little or nothing to say about the spendthrift who got into debt through sloth or extravagance. Moreover, commercial borrowing, which is a source of profit to the borrower, though known at a very early period in Babylon—*e.g.*, in the time of Hammurabi—does not seem to have existed in ancient Israel. There is no certain and definite information as to the rate of interest. The clause Neh 5¹¹, 'Restore . . . the hundredth part of the money,' has been understood to mean that interest was at the rate of one per cent per month, 12 per cent per annum, and that creditors were to forgo their interest; but most recent authorities—*e.g.*, Batten, *ICC*—read *mashsha'th*, 'interest,' for *m'ath*, 'hundredth.' Twelve per cent would probably be too moderate, the interest being determined mainly by the urgent need of the borrower. The consequences of debt might be serious; loans were sometimes obtained on the security of land or houses, *i.e.* on mortgage; when the debtor could not pay, the creditor took the property. Where there was no such security,

the debtor and his family might be sold as slaves (2 K 4¹⁻⁷, Neh 5⁴⁻⁶).

3. Moral and religious significance.—Like other misfortunes, the distress which necessitates borrowing is sometimes regarded as judgment on sin (Dt 15⁶ 28¹²⁻⁴⁴), and it is one of the characteristics of the wicked man that he borrows and does not repay (Ps 37²¹). But usually the OT sympathizes with the debtor and seeks to help and protect him; his position is regarded as the result of unavoidable misfortune. It is the duty of the prosperous man to help his poor neighbour in distress by benevolent loans; it is not to be a pure matter of business (Dt 15⁷⁻¹¹, Ps 37²⁶ 112⁵, Pr 19¹⁷). Necessaries are not to be pledged; thus the widow's ox, or her clothing, or a millstone are not to be taken in pledge (Dt 24⁶⁻¹⁷, Job 24³); clothing when pledged must not be kept over night (Ex 22²⁶ JE, Dt 24¹³). In fact the OT does not regard with approval the practice of taking pledges (Job 22⁶ 24⁹).

In view of the fact that the insolvent debtor and his family might be sold as slaves, Ex 21²⁻¹¹, which directs the emancipation of the Israelite slave at the end of the seventh year, was an attempt to give some measure of relief to the debtor. This attempt is carried to an extreme in Dt 15¹⁻⁶, which appoints a שְׁמִיטָה, EV 'release,' at the end of every seven years, when all debts were to be cancelled. The sequel shows what a large-hearted generosity the Deuteronomic writer demanded from his fellow-countryman: 'Beware that there be not a base thought in thine heart, saying, The seventh year, the year of release, is at hand; and thine eye be evil against thy poor brother, and thou give him nought' (15⁹). There is, however, no evidence that the law was ever enforced; it is on the face of it impracticable. Indeed, the Deuteronomic writer himself seems conscious that he is only setting forth an ideal. This appears from 15¹. We may set aside the AV 'Save when there shall be no poor among you,' and adopt the RV 'Howbeit there shall be no poor with thee,' *i.e.* no one shall need to borrow, 'for Jahweh will surely bless thee . . . if only thou diligently hearken unto the voice of Jahweh thy God, to observe to do all this commandment.' As Driver says in his comment on this passage, there will be 'no occasion for the present law to come into operation, if only the nation so comports itself as to merit Jehovah's blessing.' On the other hand, if Israel disobeyed other commandments, so that there were poor, the nation was not likely to observe this particular ordinance; in either case, it would be a dead letter; so it seems to have been. Other authorities propose the less probable rendering, 'Howbeit there *should* be no poor in thee,' *i.e.* the nation should establish a social system which would make poverty impossible. The Priestly Law of jubile (Lv 25) has a similar object to the release. It provides that at the year of jubile all land shall go back to the family to which it originally belonged, and that an Israelite sold for a slave through poverty shall be treated as a hired servant and released. As the loss of the family inheritance or of personal freedom was often due to debt, this law would have mitigated the unhappy consequences of what we should call bankruptcy. Here again this law, like that of the release, was a dead letter. Nevertheless, these laws are evidence of the anxiety of the legislators that neither an individual nor a family should be permanently ruined by insolvency.

A persistent feature of OT teaching is the prohibition of interest as between Israelite and Israelite, although interest may lawfully be taken from a foreigner (Ex 22²⁵ JE, Dt 23¹⁹⁻²⁰, Lv 25³⁶⁻³⁷ H, Ps 15⁵, Pr 28⁸, Ezk 18⁸⁻¹⁷ 22¹², Neh 5¹).

Interest would often be exorbitant, and indebtedness the occasion or pretext for fraudulent and unjust claims, successfully asserted through the corrupt administration of the law or by sheer violence. There can be no doubt that borrowing and its consequences contributed to the transference of the land from the yeoman farmers to comparatively few wealthy landlords against which the prophets protested. Doubtless the evils of the system largely arose from exorbitant interest, and from the rapacious and unscrupulous behaviour of creditors; but, as has already been pointed out, *neshekh*, EV 'usury,' is not usury in its modern sense of excessive interest, and we cannot give it that meaning in the OT passages in which it occurs; it means interest generally. It is true that Ex 22²⁵ specially refers to the poor, but even there Benzinger and Nowack are probably wrong in holding that it means only excessive interest; and in later passages there is no ground for any such limitation. As we have said above, the writers had not commercial loans in view, and their teaching was not intended to apply to interest in that connexion. The objection to interest seems to rest on two main grounds: (1) that the prosperous man with a superfluity should help those in difficulties, suffering from want; if gifts were impossible or undesirable, at least there should be free loans; (2) as in modern times, it was constantly the interest that ruined the debtor, where he might have repaid the capital, so that the social evils which crushed the poor were largely associated with interest; the simplest and most effective remedy seemed to be to prohibit interest altogether. In other words, the principle involved is that wealthy men should see in the misfortunes of their fellows a claim for generous assistance and not an opportunity for adding to their wealth by exploiting the need of the unfortunate.

The prohibition of interest and the other provisions in favour of debtors, like many other humane provisions in the OT, apply only to Israelites; lending to foreigners is expressly allowed (Dt 23²⁰), and is spoken of as a privilege granted by God to the faithful Israelite (Dt 28¹²). This is another example of the particularist attitude often found in the OT.

LITERATURE.—See sections on 'Debt' in *Heb. Arch.* of Ewald, Benzinger, and Nowack; the commentaries on the passages cited, especially Driver on Ex 22²⁵ (*Cambridge Bible*, Cambridge, 1911) and Dt 15¹⁻⁸ (*ICC*, Edinburgh, 1896); and the present writer's artt. 'Debt' and 'Usury' in *HDB*.

W. H. BENNETT.

USURY (Jewish).—I. **General views of Mishnāh and Talmud.**—In the Mishnāh and Talmud usury is indicated either by the Biblical word *שָׁחַד* or, as is more frequently the case, by the term *רִבִּית*. Both terms denote money, food, or any article which a man gives on loan to his fellow-man, on the condition that the latter repays something for the loan in addition to the original sum lent. The discrimination made in modern times between 'usury' and 'interest' is unknown to Jewish law. All 'increase,' whether large or small, is prohibited. Judaism has ever regarded the lending of money by one Jew to another Jew as merely a way of relieving the latter's temporary distress, an act of pure charity. The basic assumption is that the borrower is poor and wants money to satisfy his own personal wants. It is one of the 365 'negative' precepts of Judaism that a Jew may not lend on interest to another Jew. This prohibition is based on Lv 25³⁷, 'Thou shalt not give him thy money upon usury, nor lend him thy victuals for increase.' Another of the 365 'negative' precepts of Judaism is that a Jew may not borrow from another Jew on interest. This is derived from Dt 23¹⁹, 'Thou shalt not lend upon usury to thy

brother'—the peculiar 'Hiphil' form of the verb (*שָׁחַד*) leading the Rabbis to infer that the prohibition is aimed in this case at the borrower.¹ Likewise the Judaism of Talmud and Mishnāh forbids any Jew to be an intermediary or agent or surety or witness in any usurious transaction between Jew and Jew. The Rabbis by a curious exegesis derived this prohibition from the redundancy of the phraseology in Ex 22²⁵, 'If thou lend money to any of my people that is poor by thee, thou shalt not be to him as an usurer, neither shalt thou lay upon him usury.' The mediæval Jewish codes lay it down that, in the case of a Jew who has become a convert to another religion, it is forbidden to a Jew to lend to, or borrow from, him on interest. Likewise it is forbidden to a Jew to lend to, or borrow from, a Karaite Jew on interest.

2. **Different kinds of usury.**—The Talmud and the mediæval Jewish codes enumerate several kinds of 'increase' (*רִבִּית*). These are (a) *רִבִּית קַנְיָה*, i.e. 'fixed increase,' (b) *אֶקֶב רִבִּית*, i.e. 'the mere dust of increase,' (c) *שִׁמְרֵי קַנְיָה*, i.e. 'the semblance of increase,' (d) *רִבִּית נְקִיָּה*, i.e. 'increase payable by some means other than money.' They all refer, of course, to dealings between Jew and Jew. The first of these denotes the ordinary transaction where interest in money is paid direct on a loan, in violation of the express command of Scripture. The second (often called 'Rabbinical increase' as distinguished from the first, which is frequently known as 'increase under the Mosaic Law') denotes interest paid in some indirect way connected with bargain and sale, or interest the amount of which was not stipulated nor mentioned at all when the loan was first transacted but which was paid more or less gratuitously by the borrower or taken voluntarily by the lender with the consent of the borrower. It also covers cases where interest was paid by the borrower on the mere anticipation of a loan. A rule of this kind would forbid, on the ground of usury, the sale of futures, made when the market-price has not yet been fixed. Thus the Talmud says:

'A man should not say to his neighbour "Give me a kor of wheat and I will return it at threshing-time" because the market-price of wheat might rise in the meantime and the lender would profit.'² Or, again, 'a lender may not lodge in the borrower's house free of charge nor may he rent anything from him at less than the standard rate.'³

The third of the four above-mentioned kinds of 'increase' refers to interest paid out of sheer gratitude for a past loan or as the motive for inducing a future one. *E.g.*, after repayment of a loan a borrower might send a gift to the lender on the mere grounds that the lender's money had been in his (the borrower's) hands. This is forbidden. Or, again, if A has received a loan from B, he should not greet B in the street (out of gratitude) unless he had been in the habit of doing so before. A borrower should not consent to be a tutor to the son of the lender, gratuitously, unless he had been this before receiving the loan. The fourth form of 'increase' is illustrated by the case of a Jew who, after receiving a loan from a friend, honoured the latter by allowing him to perform some religious duty in connexion with synagogue-worship or home-ritual.

It is astonishing to read what an emphasis the Talmudic Rabbis laid on all these sins of 'moral' usury. A loan from one Jew to another should be an act of kindness without the least expectation of profit. This, the OT view, was upheld by the Rabbis inexorably, in spite of changed times and conditions.

Turning again to the already-mentioned four species of 'increase,' we should say that (a) *רִבִּית*

¹ See T.B. *Bābhā M's'ā*, 61a.

² *Ib.* 75a.

³ *Ib.* 64a.

בֵּית דִּין, where charged, was recoverable at law, before the Jewish court ('Beth Din'). If the defendant refused, he was flogged by order of the court, until he consented to pay. The case of (b), אָגַן רֵיחַ, was different. This was not recoverable. But, if the lender desired 'to fulfil his duty in the sight of Heaven,' it was obligatory on him to return the interest to the borrower. In other words, it was an act of religion, not of law.

According to the mediæval Jewish codes, the prohibition against taking or giving interest was suspended in the two following cases:

(a) Acting Rabbis or teachers of the Law, in borrowing from, or lending to, one another articles of food such as grain, etc., were allowed a fixed interest up to 20 per cent. But such charges were not to be made with frequency lest they might thereby set an undesirable example to the laity. As Rabbis were not commercial men, such transactions were not to be regarded as usurious. It was merely one of the ways of Rabbis helping one another and helping themselves at the same time. It hence came under the heading of 'charity' rather than 'usury.' (b) Money left by bequest or gathered for the support of orphans or the poor, or for the upkeep of schools for religious instruction or for the building of a synagogue, might be lent out on interest. This relaxation was made inevitable by the fact that in most countries of mediæval Europe Jews were precluded by the prevailing laws from investing any funds in landed property, and, as all the usual avenues of commerce were closed to them, they felt complete justification in investing public funds on what was, in the strict sense, an undeniably usurious basis.

3. Usury as between Jew and Gentile.—According to Maimonides,¹ a Jew lending money to a Gentile is religiously bidden to charge interest. Maimonides regards this as one of the 'affirmative' precepts of Judaism, deriving it from Dt 23²⁰, which, according to him, should be translated 'unto a stranger thou *must* lend money on interest.' But this view of Maimonides has been severely criticized by the later Jewish legalists and codifiers, and has never found acceptance generally. The prevailing Jewish doctrine is simply that in all transactions between Jew and Gentile interest may be given and taken by both parties.

Commerce is unsectarian. Usurious transactions, as was natural, frequently involved both Jew and Gentile. Hence it was only to be expected that, where Gentile intervention took place in a loan between Jew and Jew (and *vice versa*, where Jewish intervention took place in a loan between Jew and Gentile), there should be a temptation on the part of a Jewish lender or borrower to find a loophole for taking or paying interest, and thus evading the Jewish prohibition of usury as between Jew and Jew. The mediæval Jewish codifiers were well aware of all these contingencies, and their enactments on many a nice point in this connexion are very searching. Here, *e.g.*, are a few specimens culled from the *Shūlhān 'Arūkh* of Qaro:²

'Suppose the money of a Jew is deposited in the hands of a non-Jew who went and lent it to another Jew on interest. If the non-Jew was responsible for the safety of the money then the Jew is allowed to receive the accruing interest. But if the non-Jew is not responsible for the safety of the money, then interest is prohibited.' 'Suppose the money of a non-Jew is deposited with a Jew. If the latter is responsible for its safety then he may not lend it to a Jew on interest. But if he assumed no responsibility for the money, then he is allowed by Jewish law to lend it to a Jew. But he must not do this because it might convey a wrong impression.' 'A Jew says to a non-Jew, Come and lend out my money for me on interest (to Jews) and I will pay you wages for your work. This is prohibited, because the money belongs to the Jew and his clerk has no responsibility. But if a non-Jewish money-lender asks his Jewish clerk to do the same, the latter is allowed by Jewish Law to do it. But, in fact he must not do it on account of the wrong impression which might be conveyed.' 'Suppose a Jew borrows from a non-Jew on interest, then it is forbidden for a fellow-Jew to be a surety unless the lender distinctly stipulated that in case of default of payment he would not make the first claim against the surety (who would then sue the borrower and thus infringe the prohibition of usury as between Jew and Jew).'

These are but a few instances out of a large number given in the *Shūlhān 'Arūkh*.

4. History underlying the Jewish laws concern-

¹ *Yad Hā-ḥazakā*, 'Laws of Lending and Borrowing,' vi. 6.

² *Yōrēh Dē'ah*, 'Laws of Usury,' 160.

ing usury.—In OT times the Israelites were essentially an agricultural people with no genius for commerce. It was feared that usurious transactions between one Israelite and another might result in the alienation of one tribe's inheritance into the hands of another. This would mean an open violation of the law in Nu 36¹, 'So shall not the inheritance of the children of Israel remove from tribe to tribe; for every one of the children of Israel shall keep himself to the inheritance of the tribe of his fathers.' But usurious dealings between Israelite and non-Israelite were not looked upon as likely to lead to an infringement of this Mosaic Law. On the contrary, it was felt that any gain accruing to the Israelites from such transactions might be most usefully applied to the development and enrichment of the soil of the Holy Land. In later times, in the epoch of the Mishnāh and the Talmud up to the 5th cent. A.D., the Jews mostly dwelt in agricultural settlements in Babylonia, Palestine, and other parts of the world. The Talmudic legislators then found it necessary to enact the law of אָגַן רֵיחַ as mentioned above. Jewish farmers and agriculturists were to be financed by their co-religionists free of all interest. Such was the humanitarian spirit of brotherliness breathed by the Mosaic Law. Were usury permitted even in the slightest degree, debts would grow to such proportions that the creditors would eventually confiscate the entire property of the debtor, and the solidarity of the Jewish people would be utterly broken up. But no such enactments were applicable to the cases of usurious dealings between Jews and Gentiles. There was no love between these two branches of mankind; and, as the Gentile was allowed by law to charge the Jew exorbitant interest, the Jew had no alternative but to do likewise. In fact so hard did the lot of the Jew become through the oppressive measures of the Church that he felt himself justified in adopting no matter what expedients for protecting himself and defeating the foe. In Judaism the duty of self-preservation eclipses all other laws.

The year 1179, however, brought about a vital change. Pope Alexander III. in that year excommunicated all Christian usurers, so that henceforward Christians were debarred by canon law from taking usury. The Church decreed that all taking of interest was forbidden by Scripture as well as opposed to the laws of nature. It made no difference whether interest was low and reasonable, or high and extortionate. But, as canon law did not apply to Jews, the Church put no bar in the way of Jewish usurers; and kings soon found out how useful these Jews could be to the depleted exchequers of their realms. There are many instances in European history generally where wealth amassed by Jewish money-lenders fell into the hands of the king either during the life-time of its owner or after his death. There was a process of squeezing the Jew, sponge-like. Indeed, so indispensable did Jews become to the impoverished coffers of the State that many a mediæval monarch objected to their forced conversion to Christianity, because, once Christians, they would come within the net of canon law, and the annexation of their money would be forbidden. Thus, as Joseph Jacobs has shown, kings actually demanded to be compensated for every Jew converted to Christianity. In spite of the strongest protestations by the papal authority against usury in any form, the kings and princes of mediæval Europe were really the arch-usurers of their day. The rate of interest charged by the Jewish money-lenders was excessively high. But they were forced to this course by the pitiless rapacity of the governments as well as by the inhuman laws then in vogue which put the severest restrictions upon the Jews

in their efforts to earn an honest and reputable livelihood. The would-be Jewish trader was shackled. In England, Spain, and many other European countries he was absolutely forbidden by law to follow most of the trades and handicrafts which were open, without question, to all other citizens; and when, in rare instances, freedom was given, it was penalized and embittered by the imposition of special taxation. The Church left the Jews nothing to do except to deal in money or second-hand clothing.

But it would be erroneous to suppose that the usurers of the Middle Ages were confined solely to Jews. The increasing spread of commerce and commercial enterprises in those days made it imperative for governments to devise expedients for evading the canonical embargo upon usury. Italy was the first European country to start this evasion. Others soon followed—with the result that the competition between the Christian (chiefly Italian) and Jewish money-lenders in England became so keen as to render the Jews less indispensable than they formerly were to the English Exchequer. Their expulsion from England by Edward I. was the corollary of this fact.

5. The views of modern Judaism on usurers and usury.—The somewhat disproportionate tendency of Jews in recent times to follow the trade of money-lending may be set down as a piece of sheer atavism. Racial characteristics have a way of surviving long after the original causes which created them have disappeared. But it must be strongly emphasized that money-lending is considerably on the decrease among Jews of the 20th century. Commerce, handicraft, the professions of law, medicine, dentistry, literature, art and science generally—the young Jews of the present day are entering these callings in great numbers and with great gusto. Many of them are recruited from the ranks of the poorest parents. The trade of usury is looked upon with shame; and the usurer is stigmatized as a reproach to his people. In some Jewish communities to-day the money-lender is forbidden to have any voice in the affairs of the Synagogue and is socially tabued by the better classes among his co-religionists.

In fine, the attitude of modern Judaism towards usury practically coincides with the attitude of the Judaism of the OT, the Mishnah, the Talmud, and the mediæval codes. The attitude of the OT is summarized in Ezk 18¹³, '[He] hath given forth upon usury, and hath taken increase: shall he then live? he shall not live . . . his blood shall be upon him.' On this passage the comment of the Talmud is, 'The money-lender is compared to a murderer.'¹ The Mishnah² includes the usurer among those who are disqualified from giving evidence in a court of law. The *Shūlḥān 'Aruḥ*—the code on which modern orthodox Judaism, whether as creed, law, or life, is based—says:

'When can usurers be considered as having returned from their evil ways and as being again admissible as witnesses in a court of law? When they have torn up all the documents on which the principal and interest due to them from clients are recorded, with the complete and final resolution that they will never again lend on interest, not even to non-Jews. They must also restore to their former clients all the interest they have ever taken from them. If they can no longer identify all their clients they must devote the money to communal purposes.'³

These voices of the past are still expressive of general Jewish opinion to-day.

UTILITARIANISM.—I. INTRODUCTORY.—The term 'Utilitarianism' is used for both an ethical theory and a practical movement. The practical movement will be dealt with under II. 3. ii. below. As an ethical theory it signifies that the ultimate end is and ought to be general happiness, and that those actions are right which bring the greatest happiness to the greatest number. In Mill's words: 'The creed which accepts as the foundation of morals, Utility, or the Greatest Happiness Principle, holds that actions are right in proportion as they tend to promote happiness, wrong as they tend to produce the reverse of happiness. By happiness is intended pleasure, and the absence of pain; by unhappiness, pain, and the privation of pleasure.'¹ Or, as Sidgwick says, 'By Utilitarianism is here meant the ethical theory,' first distinctly formulated by Bentham, 'that the conduct which, under any given circumstances is objectively right, is that which will produce the greatest amount of happiness on the whole; that is, taking into account all whose happiness is affected by the conduct.'² By happiness Sidgwick means pleasure and absence of pain; and pleasure he defines as 'feeling which the sentient individual at the time of feeling it implicitly or explicitly apprehends to be desirable;—desirable, that is, when considered merely as feeling.'³

For utilitarianism Sidgwick prefers 'some such name as Universalistic Hedonism.'⁴ He says 'universalistic' in order to show that the utilitarian end is general, not individual, happiness. Cf. Mill: The utilitarian standard 'is not the agent's own greatest happiness, but the greatest amount of happiness altogether.'⁵ Hedonism (*q.v.*) is a general term including all systems of ethics which regard pleasure as the end actually aimed at (psychological hedonism), or as the end that ought to be aimed at (ethical hedonism). We may say that strictly the latter is alone worthy of consideration, for psychological hedonism, if true, makes any system of ethics irrelevant. But the earlier utilitarians based their theory of general happiness on the psychological assumption that man always desires pleasure. 'Nature has placed mankind under the governance of two sovereign masters, pain and pleasure. It is for them alone to point out what we ought to do, as well as to determine what we shall do.'⁶ Even J. S. Mill did not clearly distinguish between psychological and ethical hedonism.

The name 'utilitarian' (taken from 'utility' in the sense of pleasure and exemption from pain) was first used by Bentham in 1781. In 1802, writing to Dumont, he said: 'To be sure a new religion would be an odd sort of a thing without a name: accordingly there ought to be one for it—at least for the professors of it. Utilitarian (Angl.), Utilitairien (Gall.) would be the more *propre*.'⁷

In his earlier writings Bentham used the word 'utility' with great freedom. In later life he preferred to speak of 'felicity' or 'happiness' as pointing more clearly to the ideas of pleasure and absence of pain. 'Utilitarian' had been so little used by Bentham that J. S. Mill believed himself to be the first to apply it to those who accepted the greatest happiness principle. Mill tells us that he found the word in Galt's *Annals of the Parish*. It is there used to designate people who held certain revolutionary views current at the end of the preceding century. It was through Mill that 'utilitarian' and 'utilitarianism' became the generally accepted names for the party and the creed.

II. HISTORICAL.—Utilitarianism, both as an ethical theory and as a practical movement, is English. The idea of the greatest good for the greatest number is no doubt to be found in Greek philosophy, in the Stoic conception of the 'citizen-

ship of the world.' Leibniz, again, by establishing the general good or happiness as the end of law and of morality, is spoken of as the precursor of utilitarianism.¹ And the French materialists of the 18th cent., especially Helvétius, Montesquieu, and von Holbach, were to some extent occupied with the same ideas. But the movement to which the name is given is an English movement, and, while it demands fairly exhaustive treatment historically, the historical account may be confined to English writers.

1. We must begin with Hobbes. The theory of association, which played so large a part in the earlier utilitarian speculation, can be traced to him, although he never worked it out. His influence, which continued for two centuries, is best seen in the effect it produced upon those who opposed his theories. His conception of man as an unsocial and egoistic being with an insatiable desire for power, and his notion of morality as political obligation, had to be answered. And these answers were often the means of modifying the philosophical beliefs of his opponents, among whom were the utilitarians.

The answer to Hobbes made by the Cambridge Platonists does not concern us here. A contemporary of theirs, however, Richard Cumberland, foreshadowed utilitarianism in his *De Legibus Naturæ*, published in 1672. This work was lengthy and confused, and utilitarian principles were combined with others. Cumberland's object was to prove, as against Hobbes, that morality was natural, man being by nature social. He defined good as 'preservation,' following Hobbes here, but he included in preservation both perfection and happiness. Most stress was laid on the latter, and most practical use was made of it in the working out of the theory. Individual happiness, he held, must coincide with the good of all because of the Divine sanction: 'The greatest Benevolence of every rational Agent towards all, forms the happiest state of every, . . . and therefore the Common Good is the supreme Law.'²

A popular fallacy makes Locke (*Essay concerning Human Understanding*, 1690) the founder of English utilitarianism. Moral action was necessarily felicitic to Locke, but this he held in common with other non-utilitarian moralists. He did not adopt the greatest happiness principle, and he did not work out the pleasure side of his theory. Empiricism, largely due to him, was, of course, of immense importance in the development of utilitarianism.

An answer in the 18th cent. to the unmitigated egoism of Hobbes came from the Moral Sense school. Their method was psychological rather than rationalistic, and took the form of a new account of human nature. Of this school Hutcheson, through his emphasis on benevolence, approached nearest to the position which utilitarianism was to take up, and from Hutcheson came the formula 'the greatest happiness for the greatest numbers' which, slightly changed, becomes so familiar in Bentham. Bentham states that he got this formula from Priestley. That was probably a mistake, as it does not occur in Priestley's works.³ The exact formula used by Bentham, 'the greatest happiness of the greatest number,' is found in a translation (1767) of Beccaria's *Dei Delitti e delle Pene*. Whether it was suggested to him by Hutcheson is not known.

In 1731 there was published anonymously a small dissertation prefixed to Law's translation of King's *Origin of Evil*. It was entitled *Preliminary Dis-*

sertation: concerning the Fundamental Principle of Virtue or Morality. The author was John Gay. This was the first definite statement of the utilitarian position. Brown, Tucker, and Paley are the logical successors of Gay. Their theories, so far as essentials are concerned, may be regarded as expansions of Gay's outline. In the *Dissertation* Gay treats first of the criterion of virtue, then of motive, and lastly of the theory of association, which was the psychological groundwork of his theory of ethics. The 'immediate criterion' of virtue Gay found in the will of God. But, as God must will the happiness of men, the latter is the 'criterion' of God's will. Happiness is defined as a 'sum of pleasures.' The motive of the moral agent is egoistic, for all desire is desire of pleasure. Gay is then faced with the fundamental difficulty which beset all the utilitarians, up to and including John Stuart Mill, of proving the coincidence of the pleasure of the individual and of society. For, if men were and could be actuated only by a desire for their own pleasure, it was manifest that the coincidence of the pleasure of the individual with general pleasure must be proved before the latter could become an object of desire. Gay met this difficulty with his theory of 'sanctions.' He enumerated four sanctions—the natural, the social, the legal, and the religious. He emphasized the last, for he realized that there is no sanction which can ensure the complete coincidence of the pleasure of society and the pleasure of the individual except the supernatural sanction. It is their emphasis on this sanction which constitutes Gay, Brown, Tucker, and Paley theological utilitarians, and which, starting as they did with the selfish theory of the moral motive, renders their system of utilitarianism alone consistent. In his discussion of the supernatural sanction Gay brings out clearly his theory of obligation, which became the accepted one. The moral imperative was not categorical but conditional, he held—conditional on the required action being a means to the happiness of the individual. Complete obligation to virtue could then come from God only, for He alone could make the coincidence between 'my happiness and general happiness' perfect.

'Thus those who either expressly exclude, or don't mention the will of God . . . must either allow that virtue is not in all cases obligatory . . . or they must say that the good of mankind is a sufficient obligation. But how can the good of mankind be any obligation to me, when perhaps in particular cases, such as laying down my life, or the like, it is contrary to my happiness?'¹

The latter part of the *Dissertation* is given up to the discussion of psychology. The psychological basis for ethics Gay found in association. Through the law of association other things beyond the pleasure of the individual might be desired as proximate ends, though the ultimate end was pleasure. In this way altruistic desires might be developed. Gay held it unimportant that the ultimate motive was always egoistic. If a man helped another, his immediate motive being kindness, the fact that his ultimate object was to benefit himself was of no consequence.

It has seemed worth while to discuss Gay's treatise rather fully because, though it consisted of only 30 pages, was published anonymously, and attracted little notice at the time, it contained all the essentials of theological utilitarianism. In fact we find no important modification of Gay's utilitarianism made by any one until we come to John Stuart Mill.

In 1740 David Hume published his first treatise on Ethics, being book iii. of the *Treatise of Human Nature*. The *Inquiry concerning the Principles of Morals* was published in 1751. Hume's standpoint was very different in the two works. It is

unnecessary to discuss the cause of this change; so far as concerns ethics, the *Inquiry* seems to represent his real position. In his analysis of the moral motive in this work Hume approaches modern utilitarianism. But he exercised no influence until the time of J. S. Mill. In the *Treatise* Hume makes the moral motive ultimately egoistic; his position is substantially that held by Gay, and afterwards found in Hartley, Brown, Tucker, Paley, Bentham, and James Mill; whereas in the *Inquiry* his account of human nature implies originally altruistic as well as egoistic tendencies. Disinterested benevolence is natural.

'Whatever contradiction may vulgarly be supposed between the selfish and social sentiments or dispositions, they are really no more opposite than selfish and ambitious, selfish and revengeful, selfish and vain.'¹

Hume's treatment of the moral motive is more important than his treatment of the principle of utility. He accepted the latter, but he did not use it consistently in his analysis of the virtues.

Between Hume's two works there appeared *Observations on Man, his Frame, his Duty, and his Expectations* (1749) by the physician David Hartley. In this work Hartley elaborated the theory of the association of ideas in a way which greatly influenced the later associational school and especially James Mill.² Hartley was not a typical associationist-utilitarian. Much of his work was given up to theological discussions. He accepted the utility principle, but, like J. S. Mill, he held that there were qualitative differences in pleasures. In practice also he seems to have held that conduct should be guided by 'obedience to the Scripture precepts' rather than by consideration of consequences. He was probably the first to raise the difficulty of the hedonistic calculus.

'It is impossible,' he says, 'for the most sagacious and experienced persons to make any accurate estimate of the future consequences of particular actions, so as . . . to determine justly, what action would contribute most to augment happiness and lessen misery.'³

2. Theological utilitarianism. — Just twenty years after Gay's *Dissertation* there appeared the *Essays on the Characteristics* (1751) by John Brown. In 1768 the first volumes of Tucker's *The Light of Nature Pursued* were published, and in 1785 came Paley's *Principles of Moral and Political Philosophy*. Brown, Tucker, and Paley, along with Gay, are the exponents of theological utilitarianism, the first definite form which utilitarianism took, and which in its time exercised an immense influence. A generation trained in Locke was not disposed to adopt the system of the Moral Sense school, but welcomed the rival system whose groundwork was a conception of consciousness as composed of separable atoms, sensations and ideas, aggregated into clusters.

The outline of theological utilitarianism was found in Gay's *Dissertation*, and neither Brown, Tucker, nor Paley added anything vital to it, though they amplified and popularized it. J. S. Mill says that Brown in his *Essays* on Shaftesbury's *Characteristics* produced an able argument for utilitarianism. It is to the second of the essays that Mill refers. Brown's argument was, in brief, that common sense pointed to conduciveness to happiness as being the essence of virtue. He argues that 'those very affections and actions, which, in the ordinary course of things, are approved as virtuous, do change their nature, and become vicious in the strictest sense, when they contradict this fundamental law, of the greatest public happiness.'⁴

The ultimate end Brown gives as the 'voluntary production of the greatest happiness.'¹ The moral motive, he holds, is egoistic. 'The only reason or motive, by which individuals can possibly be induced to the practice of virtue, must be the feeling immediate, or the prospect of future private happiness.'² How can the end and the motive be reconciled? 'The lively and active belief of an all-seeing and all-powerful God' alone can do it, a God 'who will hereafter make them happy or miserable, according as they designedly promote or violate the happiness of their fellow-creatures.'³ This is all entirely in line with Gay. Brown did not touch psychology. For that he definitely refers his readers to Gay.

Abraham Tucker was an extraordinarily prolix writer. There are seven volumes of *The Light of Nature Pursued*. The first four appeared under the name of 'Edward Search' in 1768; the last three were issued posthumously. Like Gay, Tucker turned his attention to psychology, and, like him, he held that ultimately men were egoists—though not in the sense of Hobbes. Altruistic tendencies were explained by contiguity and translation. Tucker was a convinced determinist. Free agency is to him no more than the dependency of actions upon volition.⁴ The will follows the strongest motive. All this was thoroughly consistent with the Lockean groundwork and with the ordinary utilitarian theory of obligation. Two points remain to be stated. Tucker says that there are no qualitative distinctions in pleasure. This had been implicit in Gay and others. The second point has reference to the hedonistic calculus. Tucker argued, and Paley followed him here, that there must be general rules of expediency, and that these must be followed rather than any effort made to calculate the probable felicific consequences of any particular act. Tucker states many of the modern objections to the calculus.

'Our tastes,' he says, 'varying as much as our faces makes us very bad judges of one another's enjoyments. . . . Nor do we judge much better of our own pleasures, for want of being well aware of their aptness to cloy upon repetition and to change their relish perpetually according to our disposition of body or mind or the circumstances we happen to stand in.'⁵

In 1785 William Paley published his *Principles of Moral and Political Philosophy*. Paley received a complete philosophical system from his predecessors, and he acknowledged freely the debt he owed, in especial to Tucker's *Light of Nature Pursued*. But he applied and popularized their principles, and that so successfully that they are now associated almost exclusively with his name. His definition of virtue—'the doing good to mankind, in obedience to the will of God, and for the sake of everlasting happiness'⁶—lends itself easily to caricature. Though his views did not differ in any essential from those of the previous theological utilitarians, he emphasized more unpleasantly than any of his predecessors the selfishness of the moral motive, and the doctrine of rewards and punishments after death. He was consistent on obligation. 'We can be obliged,' he said, 'to nothing, but what we ourselves are to gain or lose something by.'⁷ It is possible, however, to make too much of the weaknesses of theological utilitarianism as found in Paley, and to forget the sound sense of most of his teaching. In computing the consequences of actions he taught that we must consider what would ensue if all men acted as the individual was acting. "'Whatever is expedient, is right.'" But then it must be expedient on the whole, at the long run.'⁸ The particular consequence of

forgery is a damage of twenty or thirty pounds to the man who accepts the forged bill: the general consequence is the stoppage of paper-currency.¹ And he brushed aside the specious argument that an act done in secrecy brings no general ill consequences. 'Those who reason in this manner do not observe, that they are setting up a general rule, of all others the least to be endured: namely, that secrecy, whenever secrecy is practicable, will justify any action.'² Paley analysed the commonly accepted morality of his time to prove that considerations of utility underlay it, and he applied the utility criterion to pressing problems of the age. He exercised very considerable influence, and his *Principles* became the standard text-book at Cambridge.

3. Empirical utilitarianism and the philosophical radicals.—i. *Ethical theory of Bentham*.—Jeremy Bentham was born five years after Paley, but he lived until 1832, Paley having died twenty-seven years before. Paley went to Cambridge, and Cambridge became the centre of his form of utilitarianism. Bentham went to Oxford, but it was in London that he gathered disciples round him and founded his school. The *Introduction to the Principles of Morals and Legislation* was printed in 1780, but it was not published until 1789, four years after Paley's *Principles* had appeared, and only then through the insistence of Bentham's disciples, jealous of their master's fame.

Bentham made little mention of his indebtedness to his predecessors, but of Hume's *Treatise* and of the treatment of utility in it he said: 'For my own part, I well remember, no sooner had I read that part of the work which touches on this subject, than I felt as if scales had fallen from my eyes.'³ Priestley also, according to his own account, influenced him. Apart from these acknowledgments, and those to French and Italian utilitarian writers, he states his ethical position as though it were original to himself. So far as his theory is concerned, the only originality lay in his treatment of the hedonistic calculus. At the same time utilitarianism will always be associated with the name of Bentham. There is no doubt that the hold it obtained on men's minds was largely due to his thorough application of the utility principle in the spheres of economics, jurisprudence, and politics, and to his gathering round him a devoted group of followers who applied, taught, and popularized his doctrines.

Bentham's ethical theory is found chiefly in three works—*A Fragment on Government* (1776); *The Principles of Morals and Legislation* (1789), where, however, the author's first concern is with jurisprudence rather than with ethics; and the *Deontology* published posthumously in 1834. J. S. Mill held that the *Deontology* had been considerably altered by John Bowring, who edited it. The crude egoism of Bentham's theory is more apparent in it than elsewhere, but there seems no reason to doubt that it substantially represents his views.

Bentham assumed dogmatically the hedonistic end, 'the greatest happiness of the greatest number.' His 18th cent. individualism led him to picture society as composed of a number of separate and largely antagonistic units. As J. S. Mill put it in his 'Essay on Bentham,' written at a time when he was emerging from the influence of Bentham:

'Bentham's idea of the world is that of a collection of persons pursuing each his separate interest or pleasure, and the prevention of whom from jostling one another more than is unavoidable, may be attempted by hopes and fears derived from three sources—the law, religion and public opinion.'⁴

Bentham's point of view with regard to sanctions was somewhat different from that of the theological utilitarians. They used sanctions to prove the ultimate harmony of the interests of each with the interests of all. For this reason they laid stress on the religious sanction. Bentham's attitude was that of a political reformer rather than a theorist. He strove for reform of the constitution and of law—for a system of penalties which would make it the interest of the individual to act for the general good. He did not attack the problem of cases where no system of legal rewards and punishments could bring about this coincidence.

The list and number of sanctions differed in the three ethical works, but in the *Principles* Bentham mentioned four. They are practically the sanctions of Gay—the physical sanction, or the material consequences of actions such as 'disease produced by dissipation'; the political sanction, or legal penalties and rewards; the moral sanction, or public praise and blame; the religious sanction, or the effect of religious hopes and fears. The last was of little importance: 'As to such of the pleasures and pains belonging to the religious sanction, as regard a future life, of what kind these may be, we cannot know. These lie not open to our observation.'¹ Bentham's teaching on sanctions is summarized by himself in the following passage:

'It has been shown that the happiness of the individuals, of whom a community is composed, that is, their pleasures and their security, is the end and the sole end which the legislator ought to have in view: the sole standard, in conformity to which each individual ought, as far as depends upon the legislator, to be made to fashion his behaviour. But whether it be this or any thing else that is to be done, there is nothing by which a man can ultimately be made to do it, but either pain or pleasure. . . . There are four distinguishable sources from which pleasure and pain are in use to flow: considered separately, they may be termed the *physical*, the *political*, the *moral*, and the *religious*: and inasmuch as the pleasures and pains belonging to each of them are capable of giving a binding force to any law or rule of conduct, they may all of them be termed *sanctions*.' In a footnote he adds: 'Sanctio, in Latin, was used to signify the act of binding, and, by a common grammatical transition, any thing which serves to bind a man: to wit, to the observance of such or such a mode of conduct.'²

Bentham, driven by the determination to have some weapon with which to attack abuses consecrated by custom, elaborated the hedonistic calculus. The morality of an act, he said, was to be decided not by 'intuition,' but by a scientific calculation of the consequences of the act in terms of pleasure. In order that the calculation should be scientific certain things must be taken into account, viz. the intensity and duration of the pleasure, its certainty, its propinquity (Sidgwick points out that this has no *locus standi* unless it affects the certainty), its fecundity, or 'the chance it has of being followed by sensations of the same kind,' and its purity, or 'the chance it has of not being followed by sensations of the opposite kind.' The extent of the pleasure, or the number of people affected, should also be taken into account and the whole so balanced that the total quantity of pleasure attendant on an act should be known.

Quite consistently Bentham disallowed any difference in quality in pleasure: Other things being equal, pushpin is as good as poetry. 'Each to count for one and no one for more than one' was the principle according to which pleasure should be distributed.

ii. *The practical movement*.—Bentham used his greatest happiness principle for the reform of the constitution of law, especially criminal law. His political theory was in harmony with his psychology. Members of Parliament, he held, must be restrained, and constrained, to act for the general good; so he urged that government should be put into the hands of all, and advocated universal suffrage, voting by ballot, and annual parliaments.

³ *A Fragment on Government*, i. xxxvi. footnote.

⁴ Mill, 'Essay on Bentham,' in *Dissertations and Discussions*, i. 362.

In 1776 Bentham's first work, *A Fragment on Government*, was published anonymously. Towards the end of his life the *Catechism of Parliamentary Reform* appeared, and *The Constitutional Code* was published posthumously. Not only political theory but also jurisprudence received attention at his hands. 'He found the philosophy of law a chaos,' Mill said, 'and left it a science.'

Bentham attracted a band of disciples and founded a school. It is to the efforts of his disciples that we owe the publication of the bulk of his works, for Bentham seems to have been indifferent to the fate of his writings. Among all Bentham's followers James Mill had the greatest ability. He joined Bentham in 1802. From that time the philosophical radicals were a group of men with a definite ethical, political, and economic faith. J. S. Mill said of this creed

'It was not mere Benthamism but rather a combination of Bentham's point of view with that of the modern political economy and with the Hartleian metaphysics. Malthus' population principle was quite as much a banner and point of union among us as any opinion specifically belonging to Bentham.'¹

Bentham and James Mill were contemporary rather than successive leaders of the school, as Leslie Stephen makes them out to be. Mill lived only four years after Bentham's death. A prominent part was also played by George Grote, the two Austins, and, last of all, J. S. Mill. In 1824 the *Westminster Review*, the organ of the school, was first published, and did much to spread its creed. Psychology was supplied by James Mill in his *Analysis of the Phenomena of the Human Mind*. Mill adopted the association psychology of Hartley, but discarded his cumbersome physiological theory. His theories of the self, the external world, and belief—largely Hume's position—were also accepted by the school. In economics the views of Ricardo and Malthus were adopted. As they held the theory of the iron law of wages, the only method of amelioration lay, they thought, in restraining the increase of population. Their general policy was one of laissez-faire, and this attitude was a contributory cause to their disappearance from politics. They returned some members to the first reformed parliament, but they were afterwards swallowed up by the Whigs.

iii. *John Stuart Mill*.—J. S. Mill spoke of his father as 'the last of the 18th century.' He himself was a transition thinker, and many of his inconsistencies are explained by his endeavour to reconcile hedonism and idealism—to reconcile Bentham and Coleridge, styled by him 'the two great seminal minds of England in this age.'

J. S. Mill gradually moved away from the position of Bentham and his father. In 1826 came what he called 'a crisis in my mental history,' when he fell under the influence of German idealism.

'I never, indeed, wavered in the conviction that happiness is the test of all rules of conduct, and the end of life. But I now thought that this end was only to be obtained by not making it the direct end. Those only are happy (I thought) who have their minds fixed on some object other than their own happiness; on the happiness of others, on the improvement of mankind, even on some art or pursuit, followed not as a means, but as itself an ideal end.'²

In 1835 Mill published in the *London Review* an answer to Adam Sedgwick's criticism of Paley. Under the influence very largely of Sedgwick and of W. Whewell the theological utilitarianism of Paley had lost its prestige in Cambridge. In his reply to Sedgwick Mill indicated what was his own theory of human nature—that man is originally altruistic. After his father's death he spoke out more plainly, and in 1838 there appeared in the *London and Westminster Review* his 'Essay on Bentham.' The substance of his criticism of

Bentham is that his reading of human nature was too narrow. He 'failed in deriving light from other minds.' Nor were his nature and circumstances such as to furnish him with a 'correct and complete picture of man's nature and circumstances.'¹ The influence of the idealism of Coleridge, Wordsworth, Carlyle, Sterling, and Maurice can be traced in the following paragraph:

'Man is never recognised by him as a being capable of pursuing spiritual perfection as an end; of desiring, for its own sake, the conformity of his own character to his standard of excellence, without hope of good or fear of evil from other source than his own inward consciousness. Even in the more limited form of Conscience, this great fact in human nature escapes him. Nothing is more curious than the absence of recognition in any of his writings of the existence of conscience, as a thing distinct from philanthropy, from affection for God or man, and from self-interest in this world or in the next.'²

In his small work *Utilitarianism* Mill united the two ends of pleasure and spiritual perfection by his theory of qualitative differences in pleasure, and conscience reappeared there as the internal sanction to be added to Bentham's external sanctions. In an essay published in the *Westminster Review* in 1852, entitled 'Dr. Whewell on Moral Philosophy,' Mill, probably under the influence of Mrs. Taylor, whom he had just married, reverted to the narrower and more orthodox utilitarianism which he held in early life. This essay of Mill's, however, was only one move in the controversy between himself and the leaders of the school of 'Paley reversed.' That school, led by Sedgwick and Whewell, after superseding Paley in Cambridge, found itself confronted with a new Benthamism—a Benthamism which in the hands of Mill maintained its hold on men's minds by means of a wider interpretation of human nature.

Mill's defence of utilitarianism which appeared in *Fraser's Magazine* in 1861, and was published in book form in 1863, was largely directed against the Cambridge school.

'I must again repeat,' he said, '... that the happiness which forms the utilitarian standard of what is right in conduct, is not the agent's own happiness, but that of all concerned. As between his own happiness and that of others, utilitarianism requires him to be as strictly impartial as a disinterested and benevolent spectator. In the golden rule of Jesus of Nazareth, we read the complete spirit of the ethics of utility. To do as one would be done by, and to love one's neighbour as oneself, constitute the ideal perfection of utilitarian morality.'³

As Sorley says, Mill claimed for utilitarianism that 'it is not selfish, because it regards the pleasures of all men as of equal moment; it is not sensual, because it recognizes the superior value of intellectual, artistic, and social pleasures as compared with those of the senses.'⁴

Mill separated himself most completely from his predecessors in teaching that pleasures differ not only quantitatively but qualitatively. 'It is quite compatible,' he said, 'with the principle of utility to recognize the fact, that some kinds of pleasure are more desirable and more valuable than others';⁵ and again, in the oft-quoted words, 'It is better to be a human being dissatisfied than a pig satisfied; better to be Socrates dissatisfied than a fool satisfied'⁶—in all of which he really surrenders the utilitarian position and strikes a responsive note in the hearts of those who feel the inadequacy of a hedonistic ethic. For hedonism Bentham's position is the only consistent one: Quantity of pleasure being equal, pushpin is as good as poetry. If there are higher and lower pleasures—and common opinion would seem to agree with Mill here—some other standard than pleasure is set up. Pleasure is no longer the criterion. It would not, moreover, be correct to regard this as a passing phase in Mill's mental

development. In *Liberty* his mind was turning that way when he took for the motto of his third chapter von Humboldt's saying, 'the end of man is . . . the highest and most harmonious development of his powers to a complete and consistent whole.' His paragraph on qualitative differences in pleasure contrasts, however, with his statement a few pages earlier in the *Utilitarianism* as to the theory of life on which the utilitarian ethic was grounded—'namely, that pleasure, and freedom from pain, are the only things desirable as ends; and that all desirable things . . . are desirable either for the pleasure inherent in themselves, or as means to the promotion of pleasure and the prevention of pain.'¹

Mill departed from Bentham also in his emphasis on the internal sanction of conscience, which he defined as 'a feeling in our own mind; a pain, more or less intense, attendant on violation of duty.'² That the growth of conscience was largely dependent on right education—on the attaching of the appropriate sanctions to acts—that psychologically it was to be explained by association, Mill held with Bentham. But he also held that the core of conscience was the 'social feelings of mankind; the desire to be in unity with our fellow creatures. . . . The social state is at once so natural, so necessary, and so habitual to man, that, except in some unusual circumstances or by an effort of voluntary abstraction, he never conceives himself otherwise than as a member of a body.'³ Here he follows Hume and Hartley in attributing to man natural altruistic tendencies, in crediting him with 'sympathy,' as opposed to Bentham's theory of self-interest as the motive of action.

Mill's often criticized 'proof' of utilitarianism rested on the doctrine of psychological hedonism.

'The only proof capable of being given,' he said, 'that an object is visible, is that people actually see it. . . . In like manner, I apprehend, the sole evidence it is possible to produce that anything is desirable, is that people do actually desire it. . . . No reason can be given why the general happiness is desirable, except that each person, so far as he believes it to be attainable, desires his own happiness. This, however, being a fact, we have not only all the proof which the case admits of, but all which it is possible to require, that happiness is a good: that each person's happiness is a good to that person, and the general happiness, therefore, a good to the aggregate of all persons.'⁴

The word 'desirable' may mean 'what can be desired' or 'what ought to be desired.' If we interpret it in the former sense, Mill meant that it was psychologically possible to will 'general happiness.' It is more probable that he meant 'ought to be desired.' Sidgwick says:

'Mill must be understood to mean in saying that "the general happiness is desirable" that it is what each individual ought to desire. . . . But this proposition is not established by Mill's reasoning, even if we grant that what is actually desired may be legitimately inferred to be in this sense desirable—and this passing from the is to the ought is surely by no means an obvious step. He continues: "For an aggregate of actual desires, each directed towards a different part of the general happiness, does not constitute an actual desire for the general happiness, existing in any individual; and Mill would certainly not contend that a desire which does not exist in any individual can possibly exist in an aggregate of individuals."⁵

Thus Mill's attempt to prove that general happiness is the ethical end failed.

His account of sympathy also, though important, is not always consistent. From his statement of psychological hedonism it appeared that man was originally a wholly selfish being actuated by desire for his own personal interest. In that case sympathy would be originally selfish. Mill never admitted that. At times he laid the greatest stress on man's social disposition. But if man is social, he is sympathetic by nature.

For fuller account of the Mills see art. MILL, JAMES AND JOHN STUART.

The most distinguished of Mill's younger associates was Alexander Bain of Aberdeen. Bain was a thoroughgoing utilitarian. His most important work, however, was done in psychology: *The Senses and the Intellect* was published in 1855 and *The Emotions and the Will* in 1859. For associationism he said the last word that can be said. The point of chief interest in his ethics is his treatment of disinterestedness. 'To obtain virtue in its highest purity, its noblest hue,' he said, 'we have to abstain from the mention of both punishment and reward.'¹ 'So far as I am able to judge of our disinterested impulses, they are wholly distinct from the attainment of pleasure and the avoidance of pain. They lead us, as I believe, to sacrifice pleasures, and incur pains, without any compensation.'² Sorley says of Bain: 'He had no illusions—except the great illusion that mind is a bundle of sensations tied together by laws of association.'³ In the light of this metaphysical theory of the self—with slight variations the accepted theory of the utilitarians—it is easier to understand the utilitarian conception of an end which is a succession of pleasant feelings, 'a sum of pleasures,' and which left reason out of account.

4. Evolutional utilitarianism; Herbert Spencer and Leslie Stephen.—Spencer's ethical views are found chiefly in the first and last parts of the *Social Statics* and in *The Principles of Ethics*. The first part of the latter, *The Data of Ethics*, was published separately in 1879; the remainder of the *Principles* in 1892-93. The *Social Statics* was published in 1851, eight years before Darwin's *Origin of Species*. But even at that date the evolutionary hypothesis had taken hold of Spencer's mind—it was in the air. Then Darwin, by his investigations into the origin of species, by his researches into the variation of forms found in different natural surroundings, by his emphasis on the principle of natural selection as explaining these variations, gave a wide-spread currency to the evolutionary theory. Nor must the part which A. Russel Wallace played be forgotten. Darwin also saw, however, that natural selection alone would not explain evolved conduct, for the more evolved conduct is, the smaller a part does natural selection play, because civilized society protects the unfit and does not allow them to be exterminated. This difficulty was overcome by the—now largely discredited—hypothesis of the transmissibility of acquired characters. Evolution by natural selection—or, in his own phrase, 'survival of the fittest'—and by means of the transmission of acquired characters was for Spencer the explanatory and synthesizing principle of all knowledge.

Ethics, however, was Spencer's main interest. Everything else led up to this. For his ethics see art. SPENCER, HERBERT, 2 (5). Our concern here is with the relation of Spencer's ethical system to utilitarianism. We have to see why he himself called it 'rational utilitarianism' as opposed to the empirical utilitarianism of Mill, and why it is generally known as evolutional utilitarianism. Spencer's opposition was directed against the method of utilitarianism, not against its greatest happiness principle. He accepted pleasure as the good, though even here he was not consistent. 'Life is good or bad,' he said, 'according as it does, or does not, bring a surplus of agreeable feeling.' 'The good is universally the pleasurable.' Pleasure is the end and is 'as much a necessary form of moral intuition as space is a necessary

form of intellectual intuition.' But Spencer was an evolutionist as well as a utilitarian, and at other times we find the good defined as 'preservation of human society' or 'quantity of life measured in breadth as well as length.' It is true that he stated that conduct tending to preservation of life was good because life involved a 'surplus of agreeable feeling.' 'The implication . . . is that conduct should conduce to preservation of the individual, of the family, and of the society, only supposing that life brings more happiness than misery.'¹ This supposition is never proved. At times he emphasized progress and pictured an ideal society, rather than happiness, as the ethical end. At times the emphasis was on being, at other times on happiness or well-being.

It was the method, however, rather than the end of empirical utilitarianism that Spencer opposed. His object was to find 'for the principles of right and wrong in conduct at large, a scientific basis.' He criticized specifically the hedonistic calculus of Bentham, and emphasized the value of general rules (as indeed had been done by most utilitarians with the exception of Bentham) rather than particular decisions in individual cases. He wrote to Mill:

'The view for which I contend is that morality properly so-called—the science of right conduct—has for its object to determine *how* and *why* certain modes of conduct are detrimental, and certain other modes beneficial. These good and bad results cannot be accidental, but must be necessary consequences of the constitution of things; and I conceive it to be the business of moral science to deduce, from the laws of life and the conditions of existence, what kinds of action necessarily tend to produce happiness, and what kinds to produce unhappiness. Having done this, its deductions are to be recognized as laws of conduct; and are to be conformed to irrespective of a direct estimation of happiness or misery.'²

To get the premisses whence deductions could be made Spencer turned his attention to 'absolute ethics' as opposed to 'relative ethics'—absolute ethics being the ethics of an ideal society where conduct was perfectly adapted and produced pleasure unalloyed with pain. Spencer did not seem to appreciate the fact that, if such a society existed, the question of morality would not arise, for by hypothesis all conduct was perfectly adapted to social environment—there was no conflict of desires. From study of this ideal society Spencer considered it possible to deduce general rules as to what 'conduct must be detrimental and what conduct must be beneficial.' He had then to consider further how these general rules were applicable to existing society. By this method relative ethics would be derived from absolute ethics. The extraordinary artificiality of this is apparent. Spencer himself admitted that the method had not turned out to be so fruitful as he expected. The four principles which he found for the guidance of conduct cannot be said to be derived from absolute ethics. They were justice, negative beneficence, positive beneficence, and enlightened self-interest. Justice was non-interference.

'Every man has freedom to do all that he wills, provided he infringes not the equal freedom of any other man.'³ This principle owed its origin to Spencer's pronounced individualism rather than to any study of absolute ethics. Negative beneficence required that each man must perfectly fulfil his own nature 'without giving unhappiness to other men in any direct or indirect way.'⁴ Besides positive beneficence there was enlightened self-interest which demanded that, 'whilst duly regardful of the preceding limitations, each individual shall perform all those acts required to fill up the measure of his own private happiness.'⁵

Spencer's system is not held, at least in Spencer's form, by any thinker of the present day.

In 1882 Leslie Stephen published *The Science of Ethics*. In the preface he associated himself with the utilitarians in the words 'writers belonging

to what I may call my own school, to Hume, Bentham, the Mills, G. H. Lewes, and Mr. Herbert Spencer.'¹ He did not follow Spencer in defining the good as length and breadth of life; he defined it as the 'health of the social organism.' 'Society may be regarded as an organism,' he said. This organism implied 'a social tissue, modified in various ways so as to form the organs adapted to various specific purposes.' The working of evolution could be seen in the social organism.

Leslie Stephen was opposed, like Spencer, to the hedonistic calculus. 'Life is not a series of detached acts,' he said, 'in each of which a man can calculate the sum of happiness or misery attainable by different causes.' Like Spencer he held that the evolved state was necessarily a happy one. The radical criticism of Stephen's theory, as of all evolutionary theories of ethics, is that he took what is, namely the trend of evolution, and identified it with the ideal, with what ought to be.

5. Rational utilitarianism; Henry Sidgwick.—E. Albee in his *History of English Utilitarianism*, published in 1902, spoke of Sidgwick's *Methods of Ethics* as 'the last authoritative utterance of traditional utilitarianism.' Though a utilitarian, Sidgwick differed in some ways from all his predecessors. He was 'a Utilitarian,' but 'on an Intuitionist basis.'² He found in certain fundamental 'intuitions' the basis of his system, whereas the earlier utilitarians were opposed to all forms of intuitionism, though in J. S. Mill a new spirit of understanding and appreciation of the rival school had begun to show itself. Sidgwick, further, though an ethical hedonist, discarded psychological hedonism, which had formed part of the stock-in-trade of preceding utilitarian writers, including J. S. Mill.

Sidgwick's analysis of the nature of desire was very similar to Butler's. 'Our conscious active impulses,' he said, 'are so far from being always directed towards the attainment of pleasure or avoidance of pain for ourselves, that we can find everywhere in consciousness extra-regarding impulses, directed towards something that is not pleasure, nor relief from pain.'³ He naturally discarded also the utilitarian theory that extra-regarding impulses were not primary but were due to 'association' and 'translation.'

'So far as we can observe the consciousness of children, the two elements, extra-regarding impulse and desire for pleasure, seem to coexist in the same manner as they do in mature life. In so far as there is any difference, it seems to be in the opposite direction; as the actions of children, being more instinctive and less reflective, are more prompted by extra-regarding impulse, and less by conscious aim at pleasure.'⁴

By ridding utilitarianism of psychological hedonism Sidgwick did good service. And he cleared the ground of the psychological difficulty as to how the individual can will the pleasure of others when it conflicts with his own pleasure. Only the form of the difficulty, however, was changed, not the reality; for, though Sidgwick saw the possibility, he found himself, at the end of his analysis, unable to see the reasonableness of gratifying a desire for the happiness of others when opposed to individual interest. The problem took the following shape for him. A fundamental moral intuition (at one time called a deduction from two intuitions and expressed differently at different times) directed a man to prefer his own lesser good to the greater good of another. This was the formal principle of benevolence (formal because the nature of the good was not yet known) which provided the 'proof' of utilitarianism. Sidgwick's further 'proof' that the nature of the good was pleasure

amounted to little more than the acceptance of what purported to be the verdict of common sense. He arrived too rapidly at the conclusion that the good was desirable sentient life, and from that it was no great step to define it as pleasure.

Sidgwick found a second principle—the maxim of prudence, that 'one ought to aim at one's own good on the whole'—to be as fundamental as that of benevolence. This maxim, when one's own good or pleasure is emphasized rather than good 'on the whole,' brought confusion into Sidgwick's theory. He admitted that there were times when a choice had to be made between individual and general pleasure and when all mundane sanctions failed to reconcile them. To rationalize his system a harmony between universal and particular reason had to be shown. This harmony depended on the existence of a supernatural Being. Unable to accept the Christian faith and gaining no positive assurance from psychical research of an all-good and all-powerful Being, Sidgwick left his system with the dualism in it unresolved. For a further account of Sidgwick's ethics see art. SIDGWICK (HENRY).

6. Present-day utilitarianism.—Little has to be said about utilitarianism after the time of Henry Sidgwick. To-day it is not a theory of paramount importance in ethics. As J. S. Mackenzie says, it is still the dominant view among writers on economics, but it has ceased to have much hold on English ethical thought.¹ Two schools can be distinguished. One contains Sidgwick's disciples. E. E. Constance Jones, who may be taken as representative of this school, has under the title *Rational Hedonism* re-stated Sidgwick's position and met objections to it.² Another school, that of the rationalist utilitarians, has found a spokesman in J. M. Robertson. In his *Short History of Morals* Robertson calls Sidgwick's ethical logic inconclusive, 'leaving as it did that earnest thinker conscious of a need for a future state.'³ There is, however, an unresolved antagonism in Robertson's own theory. For, while accepting the greatest happiness principle as the ethical end, he says, 'there can be no stronger "obligation" than that of following your own happiness as you see it.' The two ends, he thinks, would often be in harmony owing to the individual's natural altruistic tendencies, or to pressure exerted by society or the working of conscience. A man 'cannot, unless he is abnormally selfish, escape discomfort in knowing that he has practised injustice or failed in reciprocity.'⁴ But what of the 'abnormally selfish' man? In Robertson's theory, no blame, in the ethical sense, attaches to him for his failure to act for the common good. He is what he is through no fault of his own. The criminal is the result of 'pathological conditions,' or a 'product of malediction or stress of circumstances.'⁵ Free will is demolished and with it moral responsibility. 'For the critical utilitarian . . . the bad character remains bad, baseness remains baseness, the liar a liar, the thief a thief; and his task is simply to try to guard himself and society against each form of evil in the best way, as society guards against the madman, in whose case even the free-willer recognizes the physical causation.'⁵ And what of the man, not necessarily abnormally selfish, who in spite of the discomfort of conscience, acts contrary to the interests of others, doing what appears to himself to be for his own pleasure? He is, on Robertson's principles, doing that which is his own strongest 'obligation'; nor does any blame

attach to his action, for by hypothesis he cannot act otherwise than he does—which does not seem to leave much room for either ethical theory or moral conduct.

III. CRITICAL.—1. The utilitarian theory of duty.—Utilitarianism failed signally in dealing with duty. It tended to 'identify duty with coercion; to change the "ought" if not into a physical "must," at least into the psychological "must" of fear of pain and hope of pleasure.'¹ This was the natural outcome of the psychological hedonism on which the ethical theory was based. Bentham said of pleasure and pain that it was for them alone not only 'to point out what we ought to do' but 'to determine what we shall do.'² On this basis he was consistent in adding in the *Deontology* that it was 'very idle to talk about duties,' and that 'ought is a word that ought to be banished from our vocabulary.'

According to psychological hedonism, all desire was desire for pleasure, and the strongest desire excited by the keenest pleasure moved to action. Bain said:

'Wherever two present sensations dictate opposite courses, there is an experiment upon the relative strength of the two. The resulting volition discloses the stronger, and is the ultimate canon of appeal.'³

On such a foundation as this no place is left for the concept of moral obligation.

But the consciousness of duty could not be ignored—the consciousness of something higher than and conflicting with inclination, in the light of which inclination 'ought' to be suppressed. Utilitarians accordingly dealt with the duty consciousness empirically by explaining its genesis and function. It owed its origin, they said, to sanctions external or internal; pleasures and pains so attached to acts that the individual forbore to follow his first inclination and to act for his own selfish interest, and acted for the interests of all. Now there is no doubt that an individual is brought to a consciousness of moral obligation and to a knowledge of particular duties through social influences. It is not here, but in its account of the ultimate nature of moral obligation, that the utilitarian explanation is inadequate.

Later utilitarianism, as represented by Sidgwick and his school, was not hampered by psychological hedonism. Sidgwick said:

'It seems then that the notion of "ought" or "moral obligation" . . . does not merely import (1) that there exists in the mind of the person judging a specific emotion . . . nor (2) that certain rules of conduct are supported by penalties which will follow on their violation. . . . What then, it may be asked, does it import? What definition can we give of "ought," "right," and other terms expressing the same fundamental notion? To this I should answer that the notion which these terms have in common is too elementary to admit of any formal definition.'⁴

Sidgwick thus refused to resolve the 'ought' into anything else. As we have seen in the account of the views of J. M. Robertson, rationalist utilitarianism has no place in its system for moral obligation. The 'ought,' as understood by the ordinary moral consciousness, is excluded from any determinist system. For this reason, it is not certain that on a thoroughgoing analysis of the system of Sidgwick and his school any logical place would be found for the concept of moral obligation.

2. Motive and intention.—The controversy as to whether the proper object of moral praise and blame is 'motive' ('spring of action') or 'intention' (the 'object of desire') is a historic one. 'An action done from duty,' Kant said, 'derives its moral worth, not from the purpose which is to be obtained by it, but from the maxim by which it

is determined.¹ In opposition to this we have the utilitarian position. 'There is no such thing,' Bentham said, 'as any sort of motive that is in itself a bad one.'² And J. S. Mill: 'The morality of the action depends entirely upon the intention.'³ 'Intention' Mill defined as 'what the agent wills to do,' as opposed to motive, 'the feeling which makes him will so to do.' It is important to note that Bentham and the Mills were entirely consistent in holding that moral quality did not lie in motive. On their own theory, that pleasure was the only motive, they could have come to no other conclusion.

'Let a man's motive be ill-will; call it even malice, envy, cruelty; it is still a kind of pleasure that is his motive: the pleasure he takes at the thought of the pain which he sees, or expects to see, his adversary undergo. Now even this wretched pleasure, taken by itself, is good.'⁴

The sharp line drawn by utilitarianism between motive and intention has had a considerable influence. It has tended to induce other moral theories which rested on a truer psychological basis to make a separation between motive and intention, attributing moral quality to one only. Secondly, it has tended to make morality external. With regard to the first point the truer attitude seems to be to regard motive and intention as distinguishable but not separable—as the affective and ideational sides of the same thing—and to hold that moral judgment belongs to the two taken together, to the whole moral act. Dewey's definition of motive and intention puts this well: 'Intention is the outcome foreseen and wanted; motive, this outcome as foreseen and wanted.'⁵

With regard to the second point, utilitarianism, finding moral quality to reside in consequences, though in 'attempted' consequences, made morality an external thing. According to Mill:

'The morality of the action depends entirely upon the intention—that is, upon what the agent *wills to do*. But the motive, that is, the feeling which makes him will so to do, when it makes no difference in the act, makes none in the morality: though it makes a great difference in our moral estimation of the agent, especially if it indicates a good or a bad habitual disposition—a bent of character from which useful, or from which hurtful actions are likely to arise.'⁶

The last part of this paragraph seems to point to character as the final object of moral judgment, and to make it a good in itself. This, however, is illusory. At the end of ch. iv. Mill states the position clearly in the following words:

'This state of the will [will to do right] is a means to good, not intrinsically a good; and does not contradict the doctrine that nothing is a good to human beings but in so far as it is either itself pleasurable, or a means of attaining pleasure or averting pain.'⁷

3. The hedonistic calculus.—J. M. Robertson says that the great task which faces moralists to-day is a system of 'applied ethics.'⁸ Utilitarianism professes to supply a scientific calculus—the hedonistic calculus of Bentham—which renders this system of applied ethics possible.

Bentham summed up his schema of mensuration in the lines:

'Intense, long, certain, speedy, fruitful, pure—
Such marks in pleasures and in pains endure.

⁶ *Utilitarianism*¹³, p. 27, footnote.

⁷ *Ib.* p. 61. The controversy between the utilitarian and the intuitionist is perhaps the most far-reaching of ethical discussions, and Spencer's reconciliation is a false one, while Sidgwick's position is really a confession that both are true but irreconcilable—a dualism. James Martineau is the greatest modern exponent of intuitionism, as against either utilitarianism or evolutionism, and there can be little doubt that in general men of high moral sense feel that 'because right is right to follow right were wisdom in the scorn of consequence.' As Mill agreed, it makes a great difference in our estimation of the person what motive he acts from, and our estimation of the person is the main factor in the case.

⁸ *Short Hist. of Morals*, p. 429.

Such pleasures seek, if private be thy end:
If it be public, wide let them extend.
Such pains avoid, whichever be thy view:
If pains must come, let them extend to few.'¹

While still adopting Bentham's calculus, most of his successors plead not for a fresh inquiry into every act but for rules founded on well-considered utility.

Is the utilitarian calculus *theoretically* possible? Some moralists, including J. S. Mackenzie, have denied that it is. The calculus implies that a quantitative judgment is applicable to pleasures, that a certain intensity can be balanced by a certain duration of pleasure. The difficulty about the calculus, however, is not theoretical but practical. There is no known unit of mensuration. Further, pleasure-pain values vary according to persons, times, and circumstances. Albee says that the one really fatal objection to the calculus in his opinion is that urged by Spencer in the *Social Statics* that 'there would necessarily be an important shifting of the scale of hedonic values with every stage of intellectual or moral progress (or decadence), whether on the part of the individual, the community, the nation, or the race.'² This practical difficulty, the lack of scientific precision, is intensified when we remember that the pleasure-pain consequences have to be estimated for all 'whose interests appear to be concerned.'³ Who are these? Our own family? Our fellow-countrymen? The present generation? Or must we act so as to promote the welfare of future generations? J. S. Mill did not limit happiness to mankind. The good act is one by which happiness is 'to the greatest extent possible, secured to all mankind; and not to them only, but, so far as the nature of things admits, to the whole sentient creation.'⁴ This widening of the scope of the calculus is in keeping with the modern conception of organic life as a whole. In practice, however, utilitarians have narrowed the scope of the calculus, which seems to point to its failure as a scientific rule.

4. Pleasure the ethical end.—Against those utilitarians who said that pleasure was the only thing which could be desired some critics of utilitarianism have held that pleasure cannot be the object of desire at all, and that, if not an object of desire, it cannot be the ethical end. It seems, however, truer to hold that pleasure may be desired, and further that pleasurable things may be, and often are, desired because they are pleasant. Nor should we, with Green, deny the possibility of a 'sum of pleasures' as the ethical end, for by this is meant no more than pleasure lasting as long as possible and as intense as possible.

The first criticism of pleasure as the ethical end that must be made is that it lacks the *quality of virtue* which the moral consciousness demands in the good and affords no explanation of the essence of the particular virtues. Huxley's statement, 'If it can be shown by observation or experiment that theft, murder, and adultery do not tend to diminish the happiness of society, then, in the absence of any but natural knowledge, they are not social immoralities,'⁵ has simply to be denied.

J. S. Mill's admission of a qualitative difference in pleasures is really an admission that for moral conduct one must transcend pleasure as either the supreme standard or the supreme good. Further, as Green said, there must be permanence in the ethical end. Pleasure does not fulfil this requisite. 'And after all it does seem a pretty definite and

important point to take, that transient pleasures have in them no element of progress, contribute nothing to the permanent interests which unify (or, in fact, constitute) a life.¹ And it is too simple. Utilitarianism attracts by its simplicity, but it is simple because it fails to do justice to all the facts of life. Man's nature cannot be explained in terms of feeling only.

Again, pleasure lacks *motive efficiency*. Utilitarianism has dispensed with the categorical imperative, and in itself it has no driving power.

Is there no truth, then, in the theory that the good is pleasure? There is the truth that the good must be pleasant, otherwise it cannot be an object of desire. The nature of the good is not pleasure, and yet pleasure is a result and accompaniment of the good. 'Man's chief end is to glorify God,' but those who glorify God will experience pleasure in the highest degree. They 'enjoy Him for ever.' And the glorifying of God involves the promotion of the well-being of humanity, which is not inconsistent with the promotion of pleasure. Kant

based his argument for immortality on the fact that reason demands the harmony of pleasure and virtue, and since they do not always or ever perfectly unite here they must on the ground of rational congruity be at one somewhere.

Utilitarianism as an ethical theory is weak, but as a principle of political action it is not without its working value.

LITERATURE.—In addition to the books referred to in the article, mention may be made of the following: W. L. Courtney, *Constructive Ethics*, new ed., London, 1895; C. Douglas, *John Stuart Mill*, Edinburgh, 1895; *The Ethics of John Stuart Mill*, do. 1897; T. H. Green, *Prolegomena to Ethics*, Oxford, 1906; C. B. VAISĀLI.—The ancient city of Vaiśāli (Viśālā of *Rāmāyaṇa*;² Pali Visāli; Chinese Fei-shê-li) was equally sacred to the Jains and the Buddhists long ago. It is now represented unquestionably by the village named Basār or Basārḥ (not Besarḥ or Bēsārḥ, as in nearly all books), situated in the Hājipur subdivision of the Muzaffarpur District of the Bihār and Orissa Province, in 25° 59' N. and 85° 8' E. The site of the city occupies a space about ten miles in circuit, which includes several villages besides Basārḥ and many ruined mounds. The most interesting group of remains, situated near the village of Bakhīrā at the north-west corner of the site, probably stands outside the line of the city walls, which, so far as is known, appear to have been built of mud, not masonry. The largest and most prominent mound, evidently the site of the fortified palace or headquarters of the local ruler, stands in the south-east corner of the city area and is called Bisālgarḥ, 'the fort of Rāja Bisāl,' the eponymous hero of the place. The village of Basārḥ is on the south and south-west of that mound. The identity of Vaiśāli with the group of remains associated with the village of Basārḥ is conclusively proved by the survival of the ancient name with only slight modifications; by geographical bearings taken from Patna and other places; by topographical details as compared with the description recorded by Hiuen-Tsiang (Yuan-Chwang), the Chinese pilgrim in the 7th cent.; and by the finding on the spot of sealings of letters inscribed with the name Vesāli. The documents, which were addressed to officials and other residents, have totally disappeared. The sealings found number about 1000, of which two or three bear the name of the town. The collection ranges in date from about 200 B.C. to A.D. 500, and is of much interest for many reasons, but need not be further described here, as it gives no information concerning the history of religion.

¹ H. Barker, in *Mind*, 1904, p. 418.

² I. i. 47, st. 13 in Schlegel's text.

Although the site of Vaiśāli has been visited and described by three professional archaeologists, Cunningham, Bloch, and Spooner, their explorations, owing to limitations of opportunity, have been extremely slight and superficial, so that in reality very little is known concerning the local remains of antiquity. The area of the city seems to offer tempting possibilities for future inquirers. No distinct local tradition of the ancient glories of the city has survived. The identity of the site has been completely forgotten by the people, and is known only to a few students of Indian antiquities. No pilgrims visit the ruins, and no considerable modern temple or shrine exists among them. Yet few places in India have stronger claims upon the veneration of both Jains and Buddhists. Vardhamāna Mahāvira, commonly spoken of as the founder of the Jain Church, belonged to a noble family of Vaiśāli, where he was born and spent all his earlier life. After he had entered upon the ascetic career, he is said to have resided in his native town or the immediate neighbourhood for twelve rainy seasons, during which travelling was unlawful for persons of his profession. The Jain scriptures often mention Vaiśāli.¹ The archaeologists have not sought for Jain remains on the site, and nothing in their reports would lead the reader to suppose that the Basārḥ area was the birthplace of Jainism, as it is known to moderns.

Brāhmanical tradition ignores Vaiśāli almost completely, and no remarkable event in the history of orthodox Hinduism seems to be connected with the locality, although in the 7th cent. the territory of which Vaiśāli was the capital contained several scores of Hindu temples, besides hundreds of Buddhist monasteries, mostly dilapidated and deserted. The Jain establishments at that time were still numerous, and remains of them must survive. Nobody has thought of even looking for them. Such attention as the site has received has been bestowed almost exclusively on efforts to trace Buddhist holy places described by Hiuen-

¹ The best account of the life of Mahāvira is that in ch. iii. of Mrs. Sinclair Stevenson's *The Heart of Jainism*, which gives a summary of the conflicting legends of the various sects. See also H. Jacobi, *Jaina Sūtras*, pt. i. (*SBE* xxii.), and art. AJIVIKAS.

Tsiang. The discovery of the sealings mentioned above was accidental in the first instance. The earlier Chinese pilgrim, Fa-Hian, who visited Vaiśālī at the beginning of the 5th cent., mentions only a few of the most notable sacred buildings which were then standing. His account implies that in his time the city was inhabited and that the holy places were maintained. The sealings establish beyond doubt the fact that during the reign of Chandragupta II. (c. A.D. 375-413), at the time when Fa-Hian was travelling, Vaiśālī was an important place, governed by a prince of the imperial Gupta family. It was in the province of Tira or Tirabhukti, the modern Tirhut. The decay of the city and the gradual desertion of the Buddhist institutions took place in the interval between A.D. 405 and 637, the approximate respective dates of the visits of Fa-Hian and Hiuen-Tsiang. The ruin of the city may be ascribed to the decline of the Gupta power and the troubles connected with the Hun invasions of the 5th and 6th centuries. Nothing is known concerning the local history between the days of Buddha, about 500 B.C., and the visit of Fa-Hian nine centuries later.

In the time of Buddha Vaiśālī was the capital of the Lichchhavis, a tribe, people, or nation who were regarded as a section of the Vṛjī (Pali Vajji) nation. But Hiuen-Tsiang distinguishes the Vaiśālī territory from the Vṛjī country to the north-east, roughly equivalent to the modern Darbhanga District. The origin and affinities of the Lichchhavis, who certainly were foreigners, afford much room for speculation. Spooner seems to suggest that they were domiciled Persians. The writer of this article believes that they were of Mongolian race, akin to the Tibetans and other Himalayan peoples. They had many peculiar customs, quite different from those of ordinary Hindus. Manu¹ treats them as Vṛātya Kṣatriyas, who did not observe fully Hindu *dharma*. They lived under the government of an aristocratic oligarchy or senate, of which the president was called king. The legendary splendours of their capital are often mentioned in Buddhist books. The *Dulva*, or Tibetan *Vinaya*, thus describes them:

'There were three districts in Vaiśālī. In the first district were 7000 houses with golden towers; in the middle district were 14,000 houses with silver towers; and in the last district were 21,000 houses with copper towers: in these lived the upper, the middle, and the lower classes, according to their positions.'

The city was imagined as a kind of earthly paradise, beautified by splendid buildings and charming parks, in which countless birds made melody. The Lichchhavis were believed to have lived in a round of continuous festivities. The chiefs waged war with both Bimbisāra and Ajātaśatru, the kings of Magadha with whom Buddha had dealings. The city, according to an early tradition in the *Dulva*, was reckoned among the six great cities, the other five being Srāvastī, Saketa, Champā, Varānasi (Benares), and Rājagṛha.

The political pre-eminence of Vaiśālī at an extremely ancient period is indicated by the strange story in the *Bhadda-Sāta Jātaka*.²

We are told that the wife of Bandhula, commander-in-chief of the Srāvastī kingdom, felt a longing incident to the condition of pregnancy, and insisted on her lord taking her to Vaiśālī, because, she said, 'I desire to go and bathe and drink the water of the tank in Vesālī City where the families of the kings get water for the ceremonial sprinkling.' Although it is impossible to explain the allusion fully, it is clear that the water from a particular tank at Vaiśālī was essential for the lawful consecration of 'the kings,' whoever they may have been. The Lichchhavis resisted Bandhula and were all killed.

Vaiśālī stood on the ancient royal road leading from Pāṭaliputra (Patna) to Nepāl, the line of which is marked by four Aśoka pillars and other

notable ancient remains. The city thus was in direct communication with the imperial capital and with many places of high importance in the olden time. The distance from Patna is about 27 miles in a direction a little west of north. The Lichchhavis and their city disappear from view for about eight centuries from 500 B.C. to A.D. 300, when they reappear as the source from which Chandragupta I. (q.v.), the founder of the imperial Gupta dynasty, derived his power. That chief married a Lichchhavi princess, and his powerful son, Samudragupta (c. A.D. 330-375), habitually described himself as the 'son of the daughter of the Lichchhavi.' Probably the Lichchhavis of Vaiśālī had been subject to the suzerainty of the Kushans, had become independent when the Indo-Seythian dynasty waned, and then had made themselves masters of Pāṭaliputra. Their own city certainly held an honourable position in the reign of Samudragupta's successor, Chandragupta II. (q.v.). At a later date we hear of a Lichchhavi dynasty of Nepāl. The city then vanishes again from history. When Hiuen-Tsiang visited it about A.D. 637, it was almost deserted, and he had to lodge in a small monastery occupied by a few monks of the Lesser Vehicle. They showed him all the sites of the Buddhist holy places according to the notions they had adopted 1100 years after the events of Buddha's lifetime. Among the show-places was the site of the meeting of the Second Council.¹

The group of remains near Bakhirā at the north-west corner of the city alone can be identified satisfactorily with objects described by Hiuen-Tsiang. It is impossible to doubt that the Aśoka lion-pillar still standing is that seen by him, or that the tank beside it is his 'monkey-tank.' If the locality should ever be explored properly at any future time, as the site of Taxila is being examined by Sir John Marshall, many interesting discoveries may be anticipated, and further identifications of monuments may be possible.

LITERATURE.—Vaiśālī is mentioned eight times in the Pali *Jātakas* (see Eng. tr. ed. E. B. Cowell, Cambridge, 1895-1913, Index vol., s.v.). Other Buddhist literature frequently refers to the town in connexion with the Second Council (see art. COUNCILS (Buddhist)), the residence of Buddha (q.v.), and the distribution of his relics (see art. RELICS (Eastern)). The accounts of the Chinese pilgrims Fa-Hian (ch. xxv.), and Hiuen-Tsiang (Yuan-Chwang) may be read in any of the tr. with variations. The statements of the Tibetan *Dulva* are tr. by W. W. Rockhill, *The Life of the Buddha*, London, 1884. The copious Jain literature about Mahāvira is cited by A. F. R. Hoernle, annual address in *Proceedings ASB*, 1898, and H. Jacobi, *Jaina Sūtras*, pts. i. and ii. (*SBES* xxii. [1884], xlv. [1895]). See also A. Guérinot, *Essai de bibliographie Jaina*, Paris, 1906, and 'Notes de Bibliographie Jaina,' in *JA*, 1909, pp. 47-148. Ch. iii. ('The Life of Mahāvira') in Mrs. Sinclair Stevenson, *The Heart of Jainism*, London, 1915, supplies particulars not available elsewhere.

The geographical position, topography, and ancient remains of the site are discussed in *IGI* vii. [1908] s.v. 'Basārā'; A. Cunningham, *Archaeol. Survey of India Rep.*, i. (Simla, 1871), xvi. [Calcutta, 1883]; T. Bloch, *Ann. Rep. Archaeol. Survey of India for 1903-04*, Calcutta, 1906, pp. 73-122, with survey map; D. B. Spooner, *ib. for 1913-14*, do. 1917, pp. 98-185; V. A. Smith, 'Vaiśālī,' *JRAS*, 1902, pp. 267-283; and F. E. Pargiter, *JASB*, vol. lxvi. pt. i. [1897], p. 89.

For the Lichchhavis (al. Nichchhavi, Litsabi) see V. A. Smith, 'Tibetan Affinities of the Lichchhavis,' *IA* xxxii. [1903] 233-236; and S. C. Vidyabhusana, 'The Lichchhavi Race of Ancient India,' *JASB* lxxx. [1902], no. 2; but the subject needs further investigation.

VINCENT A. SMITH.

VAISESIKA.—The name of one of the six philosophical systems of the Brāhmanas. Just as we are able to establish a close relationship between the two oldest systems, the Sāṅkhya and the Yoga, and between the third and fourth, the Mīmāṃsā and the Vedānta, a third pair is formed by the Vaiśeṣika philosophy in connexion with the Nyāya, the latest of the systems. Both the Vaiśeṣika and the Nyāya teach the origin of the universe from atoms (*aṇu*, *paramāṇu*, *kaṇa*), and

¹ See art. COUNCILS (Buddhist).

¹ *Laws*, x. 22.

² No. 465 of Cambridge tr., vol. iv. p. 94.

therefore introduce an entirely new element into the world of Brāhman thought. Further, both systems have in common the precise definition and arrangement of logical ideas upon which their influence and fame depend. These common characteristics have led to a complete fusion of the two systems in the later philosophical literature of India, and to a failure to distinguish Vaiśeṣika and Nyāya doctrines on the part of earlier European students of Indian thought. Now, however, for a long time access to the original sources has enabled us to determine the originally distinctive character of the two systems. The Nyāya used to be regarded erroneously as the earlier, and it is only recently that the priority of the Vaiśeṣika has been recognized.

Its founder bears the name of Kaṇāda, Kaṇabhakṣa, or Kaṇabhuj. All three names have the same meaning, viz. 'devourer of atoms'; whence it follows that these titles must have been originally terms of mockery bestowed on account of the atomistic character of the Vaiśeṣika doctrines. Such harmless nicknames, which in course of time have become real names, are often met with in the Indian world of letters.

Kaṇāda is supposed to have composed his textbook, the *Vaiśeṣikasūtras*, between 200 and 400 A.D. In it he proposes to teach the true discernment of all that may be known, and for that purpose assumes six categories, which in his judgment comprehend all existing things. In discussing these categories and their subdivisions, he treats of the most diverse problems, especially in cosmology and psychology, so that a complete system of philosophy is built up upon his doctrine of the categories. The following are the categories: 1. substance (*dravya*); 2. quality (*guṇa*); 3. movement or action (*karman*); 4. association (*sāmānya*); 5. difference (*viśeṣa*); 6. inherence (*samavāya*).

To the category of substance are assigned: earth (i.e. all organic bodies and all inorganic substances with the exception of the remaining four elements), water, fire, air, ether, time, space, soul, and the organ of thought (*manas*). To begin with, it appears to us strange that time and space are included among substances. Kaṇāda's conception of substance, however, is wider than ours; he intends by it that which has qualities and movement, and is the immediate basis of phenomena. The difficult question as to the nature of time and space, to which Kant was the first to give a final answer, is discussed, strangely enough, only incidentally and occasionally, in the whole of Indian philosophy. In this respect the Sāṅkhya philosophy has made a distinct advance, in that it regards time and space as two qualities of the eternal matter regarded as a unity.

The exposition of the category of substance affords Kaṇāda the opportunity of setting forth his atomic doctrine, which is derived from Buddhist sources. This has been shown by W. Handt in his treatise on the Vaiśeṣika philosophy.¹ According to the doctrine of Kaṇāda, the atoms of earth, water, fire, and air are eternal and uncreated. Although they themselves have no extension, their heterogeneous nature is the cause of the extension and visibility of the combinations of atoms. How this is to be understood, and where the visibility of these combinations begins, on these points Kaṇāda himself—to judge from the silence of the *Vaiśeṣikasūtras*—does not seem to have propounded any definite views. Later teachers of the school set forth the theory that an aggregate of three atoms (*try-anuka*)—others say, of three double atoms (*dvy-anuka*)—possesses extension, and that it is visible in the shape of

the dust mote (*trasareṇu*) dancing in the sunlight.

The whole of this doctrine is vigorously combated in the philosophical works of the Vedānta and Sāṅkhya, and indeed for reasons obvious on both sides. The adherents of these two systems assert that, if the individual atoms do not possess extension, the aggregate cannot be extended; for every quality of a product is determined by the similar quality of its material cause.

The cosmogony of the Vaiśeṣika system depends upon its theory of the atoms. It is also dominated by the wide-spread Indian conception, that periods of creation and destruction of the universe follow one another in regular order; and on each occasion the evolution and decay of the universe are effected in the same way and by the same causes. The following explanations are in conformity with the exposition of W. Handt,¹ only that they do not begin, as he does, with the dissolution of the universe, but with its development.

During the period of dissolution, by which, however, the three infinitely great and therefore eternal and unchanging substances, ether, space, and time, are unaffected, no combination of the four elements of gross matter takes place, nor any union between the numberless individual souls and the atoms. But the souls retain their merit and demerit in a latent condition in the shape of dispositions. When the retributive force of merit and demerit with all its inevitable consequences, which here also, just as in the other systems of Indian philosophy, is the power that urges the universe on its course, is again aroused, the period of dissolution comes at once to an end. The souls therefore unite afresh with the atoms; and by this means a movement is started in the atomic elements which marks the beginning of a new creation of the material universe. This movement first originates in the atoms of the air, giving rise to double atoms, and through them to the gross material air which rushes forth and fills space. Thereupon within the elements of air the atoms of water combine together, whence in the same way the great ocean of the universe is produced. Within this ocean again the earth atoms come together, and form after the rise of double and triple atoms the solid mass of the firm earth. Finally, the element of fire comes into being, its atoms also combining in the same way within the water. Its origin is effected within the water, which in a certain sense represents the guard that restrains the destructive force of the fiery element, in order that its destroying power may be prevented from interfering with the organic course of the evolution of the universe. After the material universe has thus come into being, empirical existence begins afresh for the souls. These unite with bodies in accordance with the consequences of their work, still unexhausted from the preceding world-cycle; and in a new series of existences heap up for themselves merit and guilt, and earn reward and punishment until the cycle comes to an end. In the Sāṅkhya philosophy no cause is assigned compelling the dissolution of the universe; but in the Vaiśeṣika the process of its dissolution is accounted for in a very remarkable way. By their continual wandering through numberless bodies the souls are so weakened and exhausted that they need a long period to recruit. Just as living creatures upon earth after the sufferings and toils of the day sink at night to sleep, and remain for a time unconscious and without experience of pleasure or pain, so a universal night spreads over the universe, wherein the individual souls may recover from the sufferings of the *samsāra*. It is evident that so remarkable an explanation was not possible in a system which,

¹ Die atomistische Grundlage der Vaiśeṣika-Philosophie nach den Quellen dargestellt, Rostock, 1900.

¹ Op. cit. pp. 56-58.

like the Sāṅkhya, maintained that souls were destitute of qualities. Only a soul that actually experiences, wills, and knows could be thought of as in a condition of exhaustion. That, in fact, the Vaiśeṣika philosophy does conceive of souls as endowed with qualities of their own will be understood from a consideration of the second category.

The process of the dissolution of the universe goes on, then, in the following manner. The affections disappear which are evoked by the action of merit and demerit in the individual souls, and which form the bond between body, the senses, and the external world. The motive force therefore is restrained which maintains the cycle of existence. The bond is consequently broken which exists by the power of merit and demerit between the material atoms and individual souls. The four atomic elements are now dissolved in regular succession, the earth in water, the water in fire, the fire in air. The process of the dissolution of the atomic elements is effected in the reverse order to that of the formation of the material products from the atoms, affecting first the triple atoms, and after their destruction, when only double atoms remain, seizing in turn upon these, so that finally each of the four elements maintains its existence in the form of isolated atoms.

From this statement of the cosmology of the Vaiśeṣika system, which the original texts present in connexion with the category of substance, we turn to the category of *quality*. This category comprises the ideas of colour, taste, smell, touch (together with temperature), number, extension, individuality, connexion, separation, priority, posteriority, knowledge, joy, pain, desire, aversion, and will. This list Sāṅkaramiśra enlarges in his commentary on *Vaiśeṣikasūtra* i. i. 6, with seven other qualities, which, though included in the seventeen preceding, yet in his opinion deserve special mention. They are weight, fluidity, adhesiveness, sound (the characteristic quality of the ether, which is the medium of the undulations), after-effect (or self-reproduction, *samskāra*, manifesting itself in three ways, as continuance of movement in obedience to a given impulse, elasticity, and memory), finally, merit and demerit.

It will be seen that this enumeration comprises mental as well as material properties. This affords Kāṇāda an opportunity under the category of quality of developing his psychology. Contrary to the philosophical teaching of the Vedānta and Sāṅkhya, mental qualities according to the Vaiśeṣika system are attached directly to the soul, as has been indicated above, but only in the form of dispositions. For no psychological process is possible for the soul that finds itself in an isolated condition. It is only in consequence of the soul's union with the organ of thought (*manas*) that its faculties are capable of activity. Both souls and the organ of thought are eternal substances; but the soul is all-pervading, *i.e.* not bound down to time and space, while the organ of thought is an atom. The latter is the intermediary between the soul and the senses, since urged by the soul it betakes itself on each occasion to that sense through which the soul desires to perceive or to act (for the capacities of walking, speaking, etc., are, according to the Indian view, comprised under the idea of the senses; a distinction is therefore made between the senses of perception and action). Thus the organ of thought continues to move as long as it is actuated by a process of perception or a bodily activity. If it rests motionless in the soul, the union of the latter with the senses ends, and no perception or act or experience is possible.

Kāṇāda declares the organ of thought to be an atom, because in his view different perceptions or other psychological processes do not take

place simultaneously, but always one after the other, though frequently in exceedingly swift succession. On account of its minute size as an atom the organ of thought can unite at any given instant only with a single sense, and can only convey the idea of a single object. If the organ of thought were omnipresent like the soul, or if the soul could enter into immediate relation with the objects of knowledge, all objects would be simultaneously perceived. As the organ of thought, on the one hand, imparts the quickening power to the soul, so, on the other, it acts as a kind of check by preventing the soul from exercising more than one function at the same time.

The subdivisions of the third and fourth categories, those of movement (or action) and association, are of little significance. Difference, the fifth category, on the contrary, holds an important place in the Vaiśeṣika system, inasmuch as by virtue of it the difference of the atoms renders possible the formation of the universe. The name, therefore, of the entire system, *Vaiśeṣika*, is derived from the word for difference (*viśeṣa*).

From the very beginning, the sixth category, inherence (or inseparability), the enunciation of which reflects great credit on the insight of Kāṇāda, attracted the attention of Sanskrit scholars. This conception is clearly distinguished from that of occasional or separable connexion, which is regarded as a subdivision of the category of quality. The relation expressed by inherence subsists, for example, between the whole and its parts, the genus and the species, the particular object and the general idea with which it is associated, between a thing and its properties, between movement and that which is moved.

Later teachers added to these six categories a seventh, *non-existence*. This conception is one which has proved very injurious not only to the development of logic, but also to philosophical speculation in the later works of all schools. Bearing in mind the negative tendency of all Indian thinking, we can readily understand how Indian philosophers were led to work out this idea with ever-increasing refinement. Of this the division of the category of non-existence into four subdivisions furnishes a ready proof. Instead of 'future existence' the Indian says 'prior non-existence'; 'posterior non-existence' for 'past existence.' The simple relation existing between two things that are not identical (to give the usual example, between a pot and a cloth) is described as 'mutual (or reciprocal) non-existence,' and the actual impossibility of a thing (as of the son of a barren woman) as 'absolute non-existence.'

VAISNAVISM.—1. Introductory.—The term 'Vaiṣṇava' is applied to that Hindu sect the members of which worship in a special way Viṣṇu, as contrasted with the two other greater sects, the Śaiva, or worshippers of Śiva, and the Śākta, or worshippers of Śakti, the female personification of energy. Their worship is not to be confounded with the orthodox worship paid by the higher classes of Hindus to Viṣṇu as their individual patron deity (*iṣṭa-devatā*). Like Śaivism, Vaiṣṇavism is a form of monotheism, the setting aside of the triune equality of Brahmā, Śiva, and Viṣṇu in favour of a single god.

No attempt has been made at the more recent enumerations to collect statistics of the numbers of these sects. Few of the rural classes follow any

distinctive sect, and it has been found impossible to record the numbers of their adherents with any approach to precision.¹

2. The development of the worship of Viṣṇu.—Since the Vedic period the development of the cult of Viṣṇu has undergone many modifications. Though he is an important deity in the mythology of the *Brāhmaṇas*, Viṣṇu occupies only a subordinate position in the *Rigveda*, his essential feature being that he takes three strides, interpreted by some authorities to mean the rising, culminating, and setting of the sun, but more probably meaning the course of the solar deity through the three divisions of the universe.² The later development of his personality has been fully investigated by R. G. Bhandarkar, who traces its stages as follows: in the 5th cent. B.C. a religious reform arose like that which gave origin to Buddhism and Jainism, but based on theistic principles; this soon assumed a sectarian type in the form of the Pāñcharātra or Bhāgavata religion;³ this, again, was combined with the cult of Nārāyaṇa, 'the resting-place or goal of gods'; soon after the Christian era the Ābhira tribe of shepherds contributed to it their tribal hero Kṛṣṇa; in the 8th cent. this faith, the predominant feature of which was *bhakti*, or love, came into contact with the doctrine of spiritual monism and world-illusion promulgated by Sankarāchārya (*q.v.*); the hostility to spiritual monism gathered to a head in the 11th cent., when Rāmānuja (*q.v.*) made strenuous efforts to displace it by the religion of *bhakti* in a re-invigorated form; he was followed in the north by Nimbārka, who advocated the cow-herd element and enjoined the cult of Rādhā, mistress of Kṛṣṇa; the same policy was continued in the 13th cent. by Madhva or Ānandatīrtha, who established the doctrine of pluralism and brought into prominence the name of Viṣṇu as supreme god; in the north Rāmānanda added the cult of Rāma, and his successor Rāmānuja that of Nārāyaṇa; Kabir in the 15th cent. preached strict monotheism, the cult of Rāma, and condemned idolatry; Vallabha in the 16th cent. founded the erotic cult of Kṛṣṇa and Rādhā, and Chaitanya in Bengal that of the boy Kṛṣṇa and Rādhā, a corruption which led to the degradation of Vaiṣṇavism; in the Deccan Nāndev and Tukārām discarded the worship of Kṛṣṇa-Rādhā, cultivated a more sober type of worship, disseminated their ideas not in Sanskrit but in the vernacular languages, preached pure love of God, and laid stress on personal purification of heart and morals as necessary to salvation.⁴

3. Viṣṇu and his incarnations.—Vaiṣṇavism has thus developed on several distinct lines according as the object of devotion, Viṣṇu, varies in his manifestations, incarnations, or 'descents' (*avatāra*). This theory tends towards syncretism, the absorption of the lower animal-gods or totems of the more primitive tribes into the Brāhmanical pantheon. The incarnations of Viṣṇu are sometimes enumerated as six, ten, or twenty in number; but the most important are those of Kṛṣṇa and Rāma.⁵ The cult of Rāma goes back in the *Vāyu Purāna* to about the 5th cent. B.C.; in the *Rāmāyaṇa* of Vālmiki, which in its original form is based on pre-Buddhistic materials, while its kernel was probably composed before 500 B.C., and the more recent portion was probably not added

till the 2nd cent. B.C. and later,¹ Rāma is depicted as a high-souled hero, and thus with his faithful wife Sītā he won the affections of the Indian people. But it was not till the 11th cent. of our era that his cult was fully developed. This cult is described in the *Viṣṇu Purāna*, which seems to go back to the Gupta period (A.D. 320-455).² The tenth book of the *Bhāgavata Purāna* has exercised a more powerful influence than any other work of its class, was translated into Hindi by Lallū Rām Kāvī under the title of *Prema Sāgara*, 'The Ocean of Love,' and is now the most popular manual of the cult of Kṛṣṇa.³ The cult of Vāsudeva-Kṛṣṇa seems to be mentioned by the Greek traveller Megasthenes; and, if it prevailed in the period of the first Maurya emperors, it must have originated long before that time, and probably owes its development to that stream of thought which began with the *Upaniṣads* and culminated in Buddhism and Jainism.⁴ Kṛṣṇa seems to have been a local deity known as Gopāla, 'cow-herd,' or Govinda, probably a later form of Govid, 'finder of cows,' which was an epithet of Indra.⁵ He was worshipped by the Ābhira shepherds, who wandered with their flocks over the region from Mathurā to Dvārka. With this pastoral deity, by a process of syncretism, was combined the cult of an ocean-god of the western sea localized at Dvārka. How far this cult was influenced by Christianity, brought by nomad tribes like the Gurjaras from Central Asia, is still a question of controversy.⁶ The imperfect combination of the cults of Mathurā and Dvārka is shown by the vagueness and inconsistencies of the legends which were invented to account for the later Kṛṣṇa cult.

4. The subdivisions of the Vaiṣṇavas: influence of the creed: sacred places.—The subdivisions of the Vaiṣṇavas follow the teaching of the great missionaries, of whom an account has elsewhere been given.⁷ The most important is that of the Śrī Vaiṣṇavas, founded by Rāmānuja, the followers of whom are more numerous in Southern than in Northern India. The second school is that of Madhva, or Ānandatīrtha, who preached the doctrine of duality (*dvaita*), in opposition to the non-duality of Sankarāchārya. The third follows the teaching of Rāmānanda, whose characteristics were that no distinction was made between the Brāhmins and the so-called 'untouchables,' and the use of the vernacular tongues as the medium of his teaching. The fourth is the Vallabhāchārya, whose worship of the *guru* has led to much scandal.⁸ Vaiṣṇavism is essentially monotheistic, while Śaivism is often ultimately pantheistic or, rather, is apt to relapse into pantheism, though it, too, is monotheistic.⁹

'Taken as a whole, one of the chief characteristics of the United Provinces population is a real and unaffected kindness. Vaishnavism would certainly appeal to them, and if adopted, would tend to enhance the very quality which would cause its adoption.'¹⁰

It represents to a large extent the Buddhistic

type of life and morals, in which regard for the sanctity of life (*ahimsa*), human and animal, is a predominant feature.¹ Tod records that the spread of Kṛṣṇa-worship among some of the Rājputs (who generally, being warriors, favoured the Saiva cult) exercised an ameliorating influence on their life and manners.² On the other hand, Dubois expresses a less favourable view of the sect in S. India.

¹The feeling of aversion which orthodox Brahmins entertain for Vishnavite Brahmins is shared by Hindus of all castes. A stigma of reproach appears to cling to them. It cannot be the case, however, that the disfavour with which they are regarded is entirely due to their worship of Vishnu. I think it must be largely imputed to their excessive pride and arrogance, their extreme severity, and their supercilious manners; for though all Brahmins share these characteristics, it is generally acknowledged that the Vishnavites display them in an intensified form.³

Again, the erotic tendency of some Vaiṣṇava literature, particularly in connexion with the cult of Kṛṣṇa and Rādhā, has aroused opposition among the more sober-minded Hindus, and it must be noted that the rival cult of Rāma is singularly free from excesses of this kind. Growse remarks on one set of their poems:

'If ever the language of the brothel was borrowed for temple use, it has been so here.'⁴

In Bengal the licentious habits of some orders are notorious.

²The Bairāgi and Bairāgan [male and female] Vaishnavas are of evil repute, their ranks being recruited by those who have no relatives, by widows, by individuals too idle and depraved to lead a steady working life, and by prostitutes. Vaishnavi or Boistubi, according to the vulgar pronunciation, has come to mean a courtesan.⁵

In N. India the cult of Viṣṇu or Kṛṣṇa is specially observed at Mathurā (*q.v.*) and the adjoining towns of Brindāban and Gokul (*qq.v.*); Viṣṇu is worshipped at Puri as Jagannāth (*q.v.*); he has a famous shrine at Badarināth (*q.v.*); in Gujarat Kṛṣṇa is worshipped at Dwārakā; at Pandharpur in the Sholāpur District, the Deccan, Viṣṇu is worshipped as Viṭhobā; in the south his chief seats are Conjeeveram and Tirupati. The Vallabhāchāryas have their chief temples at Gokul and at Nāthdwāra in the Mewār State of Rājputānā. Rāma-worship centres in the scenes described in the *Rāmāyaṇa*, Ayodhyā, Chitrakūt, and Nāsik.

LITERATURE.—Many of the authorities have been quoted in the article. The Vedic texts connected with Viṣṇu have been collected by J. Muir, *Original Sanskrit Texts*, London, 1858-72, iv. 2 [1873] 63 ff. The Vaiṣṇava sects are described by H. H. Wilson, *Essays and Lectures on the Religion of the Hindus*, London, 1861-62, i. 30 ff. On the connexion of Kṛṣṇa-worship and Christianity see J. Kennedy, 'The Child Krishna, Christianity, and the Gujars,' *JRAS*, October, 1907, p. 951 ff.; G. A. Grierson, 'Modern Hinduism and its Debt to the Nestorians,' *JRAS*, April, 1907, pp. 311-335, 447-503, with the discussion, and his art. VALENTINIANISM. —Valentinianism is a form of Gnostic teaching which originated with Valentinus, about the middle of the 2nd century. The term is a somewhat vague one, for Valentinus was generally regarded as the chief master of gnosis, and all the Gnostic schools were affected in some degree by his influence. His name was often attached to systems which had borrowed from him superficially, as well as to those which had grown directly out of his teaching.

1. Life and writings of Valentinus.—Of the life of Valentinus only a few scattered notices have come down to us. He was born on the coast of Egypt, at the end of the 1st or the beginning of the 2nd cent., and was educated at Alexandria. For some time he worked in that city as a Christian teacher, but eventually migrated to Rome, where he lived during the period between the episcopates of Hyginus and Anicetus (A.D. 137-166). He must have come forward as a Gnostic teacher before his arrival in Rome, for Justin mentions him among the conspicuous heretics,¹ and appears to have discussed his theories in the *Syntagma*, written about A.D. 160. Epiphanius states that he first became the head of a sect in Cyprus, and that he broke with the Church because he was passed over in the election of a bishop. A personal grudge of this kind is, however, commonly imputed to famous heretics in the controversial writings, and there is no reason to doubt that Valentinus advanced towards his later position by a natural process of reflexion, which would be stimulated by the Gnostic atmosphere of the Alexandrian Church. It is more than probable that he never formally detached himself from orthodox Christianity.

Valentinus was the author of a number of writings which have now perished, with the exception of a few fragments. His works included hymns, homilies, epistles, and possibly a treatise entitled *Sophia*. A late tradition makes him the author of a Gospel, but of this there is no evidence. His adversaries themselves pay tribute to his eloquence and intellectual power, and their testimony is fully borne out by the meagre specimens of his own writing which have been preserved. His system as a whole is known to us only from hostile witnesses, whose acquaintance with it had been formed at second hand; but through this obscuring medium it is still possible to recognize in Valentinus the foremost of the Gnostics, and one of the most gifted and versatile minds of the early Church. He was at once a poet, a philosopher, and a great religious teacher. Out of the chaotic materials of Gnostic tradition he constructed a harmonious body of thought in which there are not a few elements of real speculative value.

2. Sources.—Of the patristic accounts of Valentinus the earliest was that of Justin, and an outline of it has possibly been preserved in Irenæus, *adv. Hær.* i. xi. 1-3. Hippolytus described the system in an early work which is now lost, but can be partially reproduced from pseudo-Tertullian, Philaster, and Epiphanius. Our remaining sources are Irenæus, Tertullian, and the *Philosophumena* of Hippolytus; but Tertullian is for the most part directly dependent on Irenæus. Hippolytus and Irenæus—the two cardinal authorities—are broadly in agreement, but their differences are sufficient to prove that they worked independently. Preference has often been given to the account of Hippolytus, which is shorter, clearer, and more symmetrical. But a number of indications make it almost certain that Irenæus is closer to original sources, although he has presented his material with little discrimination, and has confused the teaching of Valentinus himself with that of his disciples. The notices of the controversial writers are supplemented by the *Excerpts from Theodotus*, a selection of passages from an early Valentinian writer which is appended to the *Stromata* of Clement of Alexandria. The value of this source is much impaired by the difficulty of arranging the detached sentences in any intelligible order, and by the intrusion of comments which cannot with certainty be distinguished from the text. A curious problem arises from the similarities in thought, and occasionally in lan-

¹ *Trypho*, 35.

guage, between the *Excerpts* and the account in Irenæus. A direct connexion is not probable, but there is reason to believe that the writer quoted by Clement and the main authority consulted by Irenæus have made use of the same document. In addition to the sources enumerated, we have the *Fragments* of Valentinus himself, by which we are enabled in some degree to check and interpret the evidence of the patristic writers. A number of fragments have also been preserved from the works of later Valentinian teachers—notably the Letter of Ptolemæus to Flora, which is quoted at full length by Epiphanius,¹ and the extracts from the commentaries of Heracleon, which are given by Clement and Origen.

3. The system of Valentinus.—It is stated by Irenæus² that Valentinus adapted the principles of current Gnosticism to a doctrine of his own; and his system clearly betrays this dependence on earlier phases of the Gnostic movement. At Alexandria he can hardly have failed to come into personal contact with Basilides, and the influence of the older teacher is apparent in various details of his system (*e.g.*, the multiplication of æons, the doctrine of the passions as alien spirits invading the soul, the conception of the hebdomad as the sphere of the Demiurge). To Basilides, too, he may have owed the impulse to build a philosophical theory on the basis of Gnostic tradition. For the most part, however, he reverts from Basilides to the older Gnostic constructions. It seems to have been his purpose to form a comprehensive system which should gather up in itself the more valuable elements of all previous gnosis. To this we may attribute the complexity of detail which marks the system, and which has sometimes been set down to later elaboration. From this too we can best explain the remarkable diffusion of Valentinian gnosis. All the Gnostic sects were able to recognize in it their own characteristic tenets, brought into a larger context, and impregnated with a deeper meaning. As Valentinus borrowed from the earlier types of Gnosticism, so he adopted many suggestions from those Eastern religions which lay behind the whole Gnostic movement. The division of æons into groups of eight, ten, and twelve recalls the similar grouping of divinities in the Egyptian religion. The conception of the Pleroma as made up of thirty æons has its obvious counterpart in the thirty supreme gods of Zoroastrianism. Some of the details in the history of Sophia and the Soter appear to be taken directly from the Syrian and Phrygian myths of the mother-goddess rather than from their Gnostic analogies. But, while thus elaborating the mythological framework, Valentinus informs it, to a far greater extent than any of his predecessors, with a philosophical significance. Hippolytus may be right in his contention that the system is largely indebted to the Pythagorean theory of numbers; but the chief philosophical influence (as Hippolytus himself acknowledges) is undoubtedly that of Plato. Valentinus endeavours in his own fashion to work out the Platonic conception of an ideal world reflecting itself in the world of visible things. His doctrine of the soul as longing to be restored to the kingdom of light from which it has fallen is ultimately derived from Plato. The Gnostic mythology, as remoulded by him, partakes in some measure of the character of the Platonic myths. His æons are no longer separate divine beings but aspects of the nature and activity of God. They spring from one another not by a process of birth, but by one of emanation. The traditional episodes of the Gnostic history of redemption are more than half allegorized into inward experiences in the life of the soul. Gnosticism in the hands of Valentinus attempts to trans-

form itself into a real philosophy, offering a solution of the metaphysical problems of the origin of evil, the relation of spirit to matter, the creation of the world, the nature and destiny of man.

With Valentinus the distinctively Christian element is much more pronounced than in earlier Gnosticism. He had begun his career as a Christian teacher, and perhaps never regarded himself as alienated from the Church. So far as can be ascertained, he instituted no peculiar rites or sacraments to mark out his following as a separate sect. All through his system we can trace the desire to bring his thought into as close relation as possible to the Christian teaching, and with this intention he makes a continual appeal to Scripture. In no recorded instance does he fall back on the esoteric writings which were favoured in Gnostic circles. His practice is rather to make use of the Scriptures acknowledged by the Church, OT and NT alike, and to read the esoteric meaning into them by a forced application of the allegorical method. But, while he thus appeals to Scripture in order to commend his teaching to orthodox Christians, he regards it as at best a secondary source of revelation. This is apparent as well from his highly subjective mode of interpretation as from his explicit statement:

"Many of the things written in the public books are found also written in the Church of God. . . . The law written in the heart is the people of the Beloved" (*i.e.* the spiritual race has come from God, and is itself an immediate source of divine knowledge).¹

Not only does Valentinus accept the Christian Scriptures, but in his scheme of redemption he makes room for Christian believers as the 'psychical' class, intermediate between the 'pneumatic' and the 'hylic.' Earlier Gnosticism had allowed only for the higher class, predestined to life, and the lower, in which all spiritual potentialities were lacking. In the Valentinian system the third class is also capable of salvation, although in an inferior degree. This estimate of the 'psychic' natures was not due, as the Fathers complain, to arrogance and exclusiveness, but to a genuine solicitude for the mass of ordinary Christians. But the Christian affinities of the system are most clearly discernible in its central motive; for its various speculations all converge in a doctrine of redemption, in which the chief place is assigned to Jesus. The redemption is conceived, in the first instance, as the deliverance of the spiritual element from matter, but it was connected, at least in Valentinus's own teaching, with a pure and lofty ethic.

"The heart is cleansed by the expulsion of every evil spirit; . . . and when the only good Father visits it, it is sanctified, and gleams with light; and he who possesses such a heart is so blessed that "he shall see God."²

It would be too much to say that with Valentinus Gnosticism joined hands with Christianity, but we may fairly credit him with a sincere endeavour to mediate between the two forms of teaching. He sought, on the one hand, to bring Gnosticism into closer sympathy with the Church and, on the other, to secure the Church's recognition of the elements of truth in Gnosticism.

The Valentinian system as described by the Fathers, whose evidence is consistent, in the main, with that of the *Fragments*, falls into two clearly marked divisions: (1) the events within the Pleroma, (2) the history of the creation and redemption. One difficulty, however, which has often been considered as of paramount importance, meets us at the outset. According to Irenæus, the æon who stands at the head of the Pleroma has a female consort, while Hippolytus, who is here supported by the *Fragments* and the *Exc. Theod.*, speaks of one supreme principle who is the

¹ *Frag.*, quoted in Clem. *Strom.* vi. 6.

² *Id.*, in *Strom.* ii. 20.

¹ *Her.* xxxiii. 3.

² *i.* xi. 1.

source of all being. Irenæus himself admits that on this point there was difference of opinion among the Valentinian schools. The discrepancy is not, perhaps, so serious as might appear at first sight, especially when we remember that for Valentinus the æons tend to be little more than metaphysical abstractions. He apprehends the supreme principle as a unity, but as still containing within itself the possibility of distinction. This, indeed, is the presupposition of the whole system—that the original unity was capable from the first of a self-unfolding into the multiplicity of being.

The supreme æon, whether conceived as monad or as dyad, is moved by an inner necessity of love to impart his fullness, and by a process of emanation there arises the series of æons which constitutes the Pleroma. Bythos and Sige put forth Nous and Aletheia, from whom proceed the two pairs, Logos-Zoe and Anthropos-Ecclesia. These four pairs, or 'syzygies,' make up the ogdoad, which is complete in itself—a Pleroma within the Pleroma. The process of emanation is then continued by the two lower pairs of the ogdoad. Logos and Zoe project the five syzygies of the decad: Bythos-Mixis, Ageratos-Henosis, Auto-phues-Hedone, Akinetos-Syncrasis, Monogenes-Makarìa. From Anthropos and Ecclesia proceed the six syzygies of the dodecad: Paracletos-Pistis, Patrikos-Elpis, Metrikos-Agape, Ainous-Synesis, Ekklesiastikos-Makarìotes, Theletos-Sophia. When the Pleroma is thus constituted, it is enclosed within itself by Horos (the boundary), which, according to Irenæus, is also interposed between Bythos and Sige and the remaining æons. The doctrine of the Pleroma is borrowed by Valentinus from older Gnosticism, but is modified in the light of metaphysical principles. Absolute Being goes forth from itself in the æons of the ogdoad, while in the decad and dodecad the powers immanent in these higher æons are drawn out and determined, first on the ontological, then on the more active, side. It will be noted that in these lower pairs the male is designated by an adjective, the female by a substantive—in keeping, apparently, with the Valentinian doctrine that the female contributes a vague substance, on which the male imposes form. The harmony of the Pleroma is broken by the presumption of Sophia, the youngest æon, who aspires, by one account, to comprehend the unknowable Father, by another, to create like the Father in virtue of her sole activity. She produces an abortion, but, on the prayer of the other members of the Pleroma, two new æons, Christos and the Holy Spirit, are put forth by Nous and Aletheia, and separate Sophia from her formless offspring. It falls out of the Pleroma, but is sought out by Christos and the Spirit, who endow it with form and then return. As a thank-offering for the restored harmony the thirty æons in fellowship put forth a new æon, Jesus.¹

The second part of the system is concerned with the events outside of the Pleroma, after the departure of Christos from the lower Sophia (called in Irenæus by the Aramaic equivalent 'Achamoth'). Bereft of her helper, she is afflicted by the four passions of fear, grief, perplexity, and supplication; and Jesus, the common fruit of the Pleroma, is sent forth to be her consort and deliver her. Her passions are detached from her and become independent principles—the fear changing into psychic, the grief into hylic, the perplexity into demonic, substance, while the supplication takes the form of a path of repentance. (A simpler type of the myth derives the four material elements from the passions of Sophia.) The psychic sphere is called, as in Basilides, the hebdomad, and is presided over by the Demiurge, while below this sphere is the cosmos, and lowest of all the chaos of unformed matter. From the Demiurge proceed the souls of men, but he is controlled, unawares to himself, by his mother Sophia, and as a result of this twofold influence certain souls are spiritual, others psychic, the rest belonging wholly to the element of matter in which they are incarnated. For the redemption of human souls Jesus is produced by the immediate power of Sophia, and is born of Mary. It was assumed by all Valentinian schools that his body was non-material, and Valentinus compares it, in one of the extant *Fragments*, to water conveyed by a canal. As to the nature of his body, however, there was a divergence of views which led, as will presently be noted, to important consequences. The redemption accomplished by Jesus extends to all souls that are not hopelessly estranged from the higher world, but the pneumatic and psychic partake of it in different mode and measure. The former belong by their nature to the higher sphere, and require nothing for their deliverance but the moulding influence of gnosis imparted by Jesus. Their goal is an ascent into the Pleroma, where they are finally mated with angelic beings. Psychic souls attain to salvation by faith and good works, by which, with the aid of Jesus, they make up for their inherent deficiency; and the sphere to which they are raised is the heaven of the fallen Sophia. In each of the three worlds, therefore (the Pleroma, the lower heaven, the cosmos), a deliverance is necessary, and is effected in each case by a different redeemer.

¹ A variant account in Iren. i. xi. 1 (apparently supported by the *Ecc. Theod.*) makes Sophia herself fall from the Pleroma, and give birth to Christos, along with a kind of shadow. Christos separates himself from his mother and returns to the Pleroma, and Sophia, left with the shadow, produces another son, the Demiurge.

Sophia is saved by Christos, her offspring by Jesus, the fruit of the Pleroma, while Jesus, the son of Mary, redeems the souls of men. It may be inferred from several indications in the *Ecc. Theod.* and the earlier account of Hippolytus that the three Saviours were sometimes conceived as aspects of a single redeeming power, and this may have been the original teaching of Valentinus.

From this brief survey of the system it is evident that Valentinus conserves, and even accentuates, the mythological traits of older Gnosticism, while seeking, as far as possible, to rationalize them. Instead of unmeaning names, the æons bear designations which imply intellectual or religious qualities. The several stages of the history are determined not by astral conceptions but by a speculative scheme, carefully thought out, though in many respects obscure. Valentinus, moreover, has made a deliberate attempt to overcome the dualism implicit in all Gnostic thought. The cause of Sophia's fall, and of the consequent origin of evil, is not so much a sin as a presumption, due to an impulse in itself good. Her fall takes place within the Pleroma, where she continues to abide. The Pleroma no longer stands in sharp opposition to the lower world but is linked up with it and is the ground of its existence. The Demiurge, though an inferior power, is imperfect rather than evil, and his work is capable of being transformed into something higher. The worlds without the Pleroma are copies of it on a lower plane, and at each descending stage its history is repeated. One of the most significant of the changes due to Valentinus is the addition of Horos to the Gnostic cosmogony. For the Oriental conception of two opposite realms of being he substitutes the Greek one of a limit, preserving all existences in their due place and order. To a Greek instinct we may likewise assign the pervading thought that the divine activity, at each stage of the cosmic process, impresses form on formless substance. But with all his effort Valentinus does not succeed in resolving the dualism which lay at the foundation of Gnostic theory. It is tacitly assumed that from the beginning there existed along with God a world of alien matter or not-being. This is capable, in varying degrees, of being moulded by the divine Artist, but in the end there is a residuum with which He can do nothing. The world of utter chaos is left over to the demons; the 'material' souls can look for no participation in the Redeemer's gift.

4. Underlying purpose of the system.—Valentinus is at once a philosopher and a religious teacher, and from this double point of view we must consider the underlying purpose of his system.

(1) On the one hand, he seeks to bring the abstract and inaccessible God into relation to the actual world. The Pleroma is the first outgoing of God from Himself, the manifestation of the Absolute in a sphere of being which is still, in some sense, one with Him. This process of self-unfolding is continued on an ever-descending scale until at last the divine principle is merged in the depths of matter. A hymn of Valentinus, preserved by Hippolytus, gives vivid expression to this normative idea.

'I behold all things suspended by spirit; I perceive all things borne on by spirit—flesh suspended from soul, soul upheld by air, air suspended from æther, and fruits produced from Bythos, and the child born from the womb.'

Matter, it is here implied, is linked with the cosmos, the cosmos with the lower heaven, this with the Pleroma, and this again with Bythos, from which absolute source all being has its birth. In another striking passage¹ Valentinus compares the world to an imperfect image of God, which is inscribed, however, with the name of Him whom it represents so as to authenticate it:

¹ Quoted in *Strom.* iv. 13.

'The form is not exactly to the life, but the name supplies what is wanting in the effigy; the invisibility of God co-operates with that which has been fashioned.'

Thus the whole universe is conceived as an infinite gradation of being, instinct, though ever more faintly, with the power which has called it forth. Valentinus, in other words, is struggling with the idea which had hovered before the minds of Greek thinkers ever since the days of Plato, and which finally received its classical form in Plotinus. His thought is disguised and hampered by the Gnostic imagery in which he clothes it, but from the philosophical point of view he may be classed as one of the chief precursors of Neo-Platonism.

(2) The philosophical interest is, however, subordinate. Valentinus was primarily a theologian, and it was in the effort to solve religious problems that he was led to the speculations on which he bases his system. The controversial writers, who are intent on exposing the absurdities of the heretical teaching, are chiefly occupied with these strange speculations; but they are far less prominent in the surviving utterances of the Valentinians themselves. The *Fragments* and the *Exc. Theod.* only touch on them incidentally. Heracleon, in the extracts from his commentaries which we possess, makes hardly any reference to the Pleroma, and the questions which he discusses are intrinsically as much Christian as Gnostic. His suggestions are considered seriously and sometimes accepted by Clement and Origen. The Valentinian theology, like that of the Church, has its centre in the problem of redemption, but this is approached from the metaphysical, instead of the ethical or mystical, side. Redemption, as understood by the Gnostic thinkers, is the deliverance of spirit from the material element in which it has become entangled. How is this fall of spirit out of its native sphere to be explained? No answer is possible except that some disaster has taken place in the spiritual world, and the Gnostic sets himself to discover its nature and origin. Not only so, but he is required to show how the primal error has been corrected. There can be no redemption for men on earth unless we have the assurance that order has been re-established in the upper world; the restoration, like the fall, must begin from above. Valentinus, therefore, sets out from the doctrine of the Pleroma, and the redemption achieved in heavenly places after Sophia, by her error, had destroyed the original harmony. But these speculations form only the background of the system. They supply a prologue in heaven, which is not to be mistaken for the real drama, although it provides the key by which it must be interpreted. Valentinus, like the orthodox teachers, is occupied all along with the redemption accomplished by Jesus, and differs from them chiefly in his endeavour to correlate it with a universal redemption. This involves him, however, in further differences, which affect his whole religious attitude. In spite of his desire to construe the universe as the harmonious unfolding of a single principle of being, he is compelled, like other Gnostic thinkers, to fall back on an ultimate dualism. The fall of spirit cannot be metaphysically explained unless it is assumed that from the beginning there existed something alien to God. This duality reveals itself in the world of men as well as in the cosmos generally. Souls differ from one another in kind, and are not capable of the same redemption. Valentinus makes a genuine effort to break through the exclusiveness to which all previous Gnostics had stood committed. At the risk of inconsistency he recognizes the intermediate class of 'psychical' men, and it is one of the chief objects of his system to find a place for them within the scope of the redeeming process.

But in the end he is driven back on the traditional Gnostic doctrine that only the spiritual can be truly saved, and that their salvation is nothing else than the inherent prerogative of their nature.

'Ye are originally immortal, and children of eternal life, and ye would have death distributed to you, that ye might spend and lavish it, and that death may die in you and by you; for when ye dissolve the world, and are not yourselves dissolved, ye have dominion over creation and all corruption.'

In this remarkable saying Valentinus appears to hint at a lofty doctrine of the obligation resting on 'spiritual' men in virtue of their privilege. They are placed in this world of death, or have voluntarily entered it, in order that they may co-operate with the higher powers, and that through them the dominion of death may at last be utterly destroyed. In the light of such a saying it is impossible to doubt the noble religious temper of the great Gnostic. The very doctrine which in other leaders of the movement had served to foster a spirit of egoism and of contempt for the inferior mass of men is transformed by him into a supreme motive for human service. Yet the conception of one class of men who are marked out as essentially different from others is none the less made prominent. These higher natures alone are destined to a true redemption, and for them the work of a redeemer is hardly necessary. Like others they acknowledge Jesus as their Saviour, but what they receive from him is little more than the apprehension of their own native excellence as the children of light. It is this failure on the part of its noblest representative to reconcile the Gnostic teaching with Christian ideas that stamps it most unmistakably as alien, in its fundamental character, to the gospel.

5. Subsequent history of Valentinianism.—The history of Valentinianism after the founder's death is very imperfectly known to us, but there is evidence that the sect extended itself rapidly, and found adherents in Italy, Gaul, N. Africa, Egypt, Syria, and Asia Minor. Tertullian describes it as in his time 'frequentissimum plane haereticorum collegium.' According to Hippolytus, it came to be divided at an early date into two schools—the Eastern, or Anatolic, and the Western, or Italic—and the fact of this division is confirmed by the *Exc. Theod.*, which purport to give the doctrines of 'the so-called Eastern Valentinianism.' The schism, we are told, was brought about by a difference of opinion as to the nature of the earthly body of Jesus. The Easterns maintained that he assumed a pneumatic body, while the Westerns taught that his body was psychical, the Spirit descending on him at his baptism in the likeness of a dove. Both of these views are represented in the *Exc. Theod.*, and from this it has been inferred that the division cannot have been so sharp as Hippolytus affirms, or that it must have followed some other line of cleavage. Clement, however, may have made his extracts from several writers, belonging to different schools, or Theodotus himself may have quoted from other Valentinians, with whom he was not in full agreement. Why the dispute should have turned on an issue that appears so secondary and artificial it is difficult to say. It may be that the Christological controversy which was to rend the Church a century later was anticipated in some fashion by the Gnostic thinkers. More probably the question as to the nature of the Redeemer's body served merely to focus some radical difference of view as to the scope and purpose of the redemption itself. At all events, it is significant that the sect was divided on a matter that concerned not the speculative construction, but the doctrine of the Person of Christ. We have here a strong confirmation of the view that Valentinianism was much more closely allied to

1 Strom. iv. 13.

orthodox Christianity than the records of the Fathers might lead us to suppose. This conclusion is further borne out by the extant writings of the two leaders of the school who were next in influence to Valentinus himself, and both of whom appear to have been his personal disciples—Ptolemæus and Heracleon.

(a) *Ptolemæus*.—In his system as a whole Ptolemæus adhered closely to Valentinus—so much so that Irenæus has made little effort to discriminate his separate teaching. He added, we are told, new and more complicated details to the æonology, and thought of the æons as personal beings, not merely as modes and aspects of the divine nature. In his doctrine of redemption he laid peculiar emphasis on the relation of the work of Christ to that of the Demiurge. But besides the notices in the Fathers we possess the Letter of Ptolemæus to Flora—the one document of 2nd cent. gnosis which has come down to us complete. In writing to a Christian of whom he hoped to make a convert, Ptolemæus would no doubt present his views with studied moderation, but his Letter, however we regard it, must be taken as an authentic statement of Valentinian doctrine. It deals with the specific question of the validity of the Law, and distinguishes (1) a Law given by God Himself, (2) a Law proceeding from Moses, (3) a Law appended by the elders to this Mosaic code. In the Law given by God three elements are likewise distinguished: (1) spiritual precepts, which are of permanent value and were endorsed by Jesus; (2) commandments, which were only for a time and were abrogated by Jesus; (3) ordinances that must be interpreted in a typical or symbolic sense. The teaching of Jesus is accepted throughout as the one criterion of truth. Ptolemæus betrays his Gnostic presuppositions by identifying the God of the Law with the Demiurge, whom he conceives as an inferior and imperfect God, just rather than absolutely good. But the Letter is evidence that the Valentinians not only were interested in Christian problems but also could discuss them with a sober and critical judgment which we too often miss in the orthodox theologians.

(b) *Heracleon*.—The name of Heracleon is attached by Epiphanius to a fantastic mythological system, but this account of his teaching may confidently be set aside, in view of the considerable fragments which have been preserved from his own commentaries. It may be gathered from these that he accepted the Valentinian construction, but that he employed it chiefly as a background for understanding the redemptive work of Jesus. Like Valentinus, he recognizes three classes of men, and makes the salvation of the 'spiritual' consist in an inner enlightenment by means of gnosis. He appears to concede, however, that even the spiritual natures are capable of a fall. He holds, too, that after being saved themselves they must re-enter the world and help to redeem the 'psychic.' In his conception of the Person of Christ he adopts a strongly docetic position.

(c) *Marcus*.—If Ptolemæus and Heracleon stand for a Valentinianism which had much in common with orthodox Christianity, a different tendency is represented by Marcus, who flourished about the same time. For the doctrines of Marcus we have practically no other source than Irenæus, whose account of their superstitious and immoral character is perhaps coloured by prejudice. None the less it is evident that Marcus developed the ideas of Valentinus in a one-sided fashion and thereby distorted them. The characteristic feature of his system is number-symbolism. From the numerical values of divine names he seeks to dis-

cover the nature and order of the æons and the mode by which the world has come into being. The Valentinian theory of redemption is connected by Marcus with the ideas of contemporary magic and astrology. He formed a sect which seems to have stood quite outside of the Church, with institutions of its own and special baptismal rites, accompanied by exorcisms. From such a development as that of Marcus it was manifest that the Valentinian system, in anything like its original form, could not long maintain itself. In the hands of the master and his more enlightened disciples it was capable of serving a genuine philosophical and religious interest. But it had been evolved by an artificial process from the crude speculations of primitive Gnosticism, and reverted in course of time to the earlier type.

For several centuries Gnostic sects continued to arise which called themselves Valentinian, and which preserved the language and occasionally some of the ideas of Valentinus. The *Pistis Sophia* and the other Coptic writings may on this ground be assigned to the Valentinian school, although their connexion with it is otherwise remote. We hear of Valentinians in Italy about A.D. 360, and in Spain at the end of the 4th century. But these late survivals belong to the general history of the decline of Gnosticism, and the true Valentinian movement had exhausted itself within two or three generations of the founder's death.

LITERATURE.—The subject of Valentinianism is discussed in all the general works bearing on Gnosticism (*q.v.*). The *Fragments of Valentinus* were first collected in J. F. Grabe, *Spicilegium SS. Patrum*, 2 vols., Oxford, 1714, which is still valuable. They are reproduced, with commentary, in A. Hilgenfeld, *Ketzergesch. des Urchristentums*, Leipzig, 1884, in which the patristic accounts of the system are also fully discussed. One of the ablest of modern accounts of Valentinianism is that of E. de Faye, *Gnostiques et gnosticisme*, Paris, 1913, pp. 29-245. The relation of the *Exc. Theod.* to Irenæus is discussed by F. W. Dibelius, *ZNTW* ix. [1908], x. [1909] 230 ff. G. Heinrici, *Die Valentinianische Gnosis und die heilige Schrift*, Berlin, 1871, and R. A. Lipsius, art. 'Valentinus,' in Smith's *DCB* iv. 1076 ff., are still indispensable. The most useful work on later Valentinianism is A. E. Brooke, *The Fragments of Heracleon newly edited from the MSS.*, Cambridge, 1891 (= *TS* i. 4). E. F. SCOTT.

VALHALLA.—See BLEST, ABODE OF THE (Teutonic).

VALIDITY.—I. *Introductory*.—The notion of validity (from Lat. *validitas*, *validus*, *valere*, 'to be strong') is largely employed in modern post-Kantian thought, and receives a wide and various application. A comprehensive discussion of the notion is a desideratum, and would form a useful introduction to the philosophical and scientific disciplines, including philosophy of religion. In treating of it one must reckon with the fact that validity is a 'nebulous phrase'¹ in philosophical usage, so that it is difficult to invest it with a clear and unambiguous meaning. The terms with which it appears to be most frequently associated, with which indeed it is often identified, are those of truth and value. Thus the validity of a judgment has been described as its corrected value,² the validity of an argumentation or inference its truth-producing virtue,³ or—as it might otherwise be expressed—its truth-conveying capacity. Lotze's valuable and suggestive treatment of the term⁴ has done much to fix its use in philosophy; and it seems to the present writer that an examination of Lotze's discussion will serve to bring out the general nature and scope of validity. An examination, further, of the distinction between

¹ F. H. Bradley, *Appearance and Reality*, London, 1897, p. 376.

origin and validity will illustrate the application of the notion.

2. The datum of thought.—With Lotze the discussion of validity belongs to the doctrine of thought, and the problem of validity arises first in connexion with the ideas or rudimentary concepts composing the material with which thought sets out upon its work of reflexion. The first operation of thought is to convert impressions (its ultimate antecedents) into ideas or meanings, so as to prepare 'logical building-stones'¹ for its subsequent structures. As a result of this operation each impression receives a certain objectivity or validity.

Thus 'green' or 'red,' e.g., remains an object for consciousness as such after the cessation of the external stimulus which produces the impression. We no longer present it to ourselves 'as a condition which we undergo, but as a something which has its being and its meaning in itself, and which continues to be what it is and to mean what it means whether we are conscious of it or not.'²

Moreover, its validity or objectivity of meaning for ourselves is confirmed and tested in the experience of others.³ But the validity or objectivity of an idea, meaning, or thought-content is not validity or objectivity in the sense of some kind of real existence independent of thought. Logical objectification, which converts subjective impressions into objective ideas, cannot give external reality, or reality beyond thought; so that no question of ontological as distinguished from logical validity is here raised. Indeed it is matter of indifference whether certain parts of the world of thought indicate something 'which has besides an independent reality outside the thinking minds, or whether all that it contains exists only in the thoughts of those who think it, but with equal validity for them all.'⁴

In his discussion of the Platonic world of ideas⁵ Lotze offers a sharper representation of the nature of validity, describing it as an ultimate and undervivable conception designative of reality apart from existence and occurrence. The reality of an idea or thought-content is similar to that which belongs to truths and laws; and, though wholly unlike the reality belonging to things or events, it is a form of reality which the mind cannot but acknowledge.

'We all feel certain in the moment in which we think any truth, that we have not created it for the first time but merely recognized it; it was valid before we thought about it and will continue so without regard to any existence of whatsoever kind, of things or of us.'⁶

The idea or thought-content is thus essentially eternal or timeless, being independent of its manifestations in the reality of existence or of its realization in the reality of thought (as occurrence or event). So Plato taught. It is true that Plato ascribes existence to the ideas or universal notions, but it is Lotze's contention that he does not thereby seek to hypostatize their eternal validity into an existence at all resembling the existence of things or events. Here the traditional interpretation of the Platonic doctrine is affirmed to be on wrong lines.⁷ Plato's supercelestial world of ideas, without local habitation, and composed of pure intelligence, has no sort of affinity with what we ordinarily call the real world (and Plato may be said to indicate this in the very sublimity of the language in which he describes its wondrous landscape).⁸ But the traditional interpretation, though false, is not without excuse. For in the Greek tongue there was no technical equivalent for validity or reality not inclusive of existence, and it was impossible for Plato to predicate reality of

the ideas without at the same time substantiating them, or subsuming them under the general denomination of substance, existence, or real being (*τὸ ὄν, οὐσία*). Even Aristotle was forced to attribute to the ideas a secondary sort of existence (*δευτέρα οὐσία*). From all which it should appear that validity may be regarded with Lotze as the designation in modern philosophy of reality apart from actual existence—yet predicabile of the existent.

The doctrine of validity, as we may have gathered, grows in the course of Lotze's discussions, and attaches in its developed form to the product of thought, but our chief interest in it under this head is in relation to the datum of thought, or the object of thought as such; and the question may now be asked, Can we accept the test by which Lotze would recognize the validity of the idea or thought-content—the test or mark, as already noted, of being a self-identical object for all consciousness? The sameness of the presentation of the idea is declared to be the sufficient criterion of its validity. This is, at any rate, the consistent Lotzean doctrine, and it goes hand in hand with the notion that thought is equipped at the outset of its reflective task with a systematic body of ideas or concepts. But, just as this notion is vigorously assailed in recent logical theory, so also is the aforesaid criterion of validity. Validity belongs to an idea, it is urged, not because it is an identical object or content of thought for all consciousness (any subjective construction like the 'chimæra' or the 'centaur' might be made to acquire validity according to the Lotzean measure of it), but because it is a determining factor in controlling or directing the movement of experience. 'Validity always refers to rightfulness or adequacy of performance in an asserting of connection—not to the meaning as detached and contemplated.'¹ Or, as it is otherwise put, the meaning or idea as such possesses its validity in its 'dynamic' and not its 'static' reference.

3. The process of thought.—The problem of validity is here concerned with the relation of thought as a logical process or activity to thought as a product or issue. The distinction involved is depicted by Lotze, in a well-known metaphor, as the distinction between the winding ascent and the clear prospect.² According to Lotze, the thinking act or process is essentially subjective, and the formed product essentially objective. This he illustrates, on the one hand, from the variety of the paths leading to the summit and, on the other, from the sameness of the scene which eventually unfolds itself before the eyes of the wayfarers. But is it a purely formal or subjective validity that belongs to logical forms and laws? A purely formal validity, implying no kind of relation between the logical activity and real existences and events is—as we may well agree—inconceivable. No single logical operation could be carried through, even as a mere subjective process of thought, 'unless the object upon which it is exercised contained in itself some characteristic which invited or at least allowed it.'³ As the tool must fit the hand, so it must also fit the thing.⁴ The forms and laws of thought cannot be 'mere singularities of our mental organisation,' but must exhibit 'a constant and regular adaptation to reality.'⁵ Or—to recur to the former metaphor—just as the ascent and the summit are comprised within the same geographical territory as the landscape which opens at length to the traveller's gaze, so there must be some sort of relationship between the logical operation and

what takes place in the object-matter¹—unless the sceptical contention holds that, for aught we know, the process of thought may not mediate a valid knowledge of reality at all.

But, while the subjective processes of thought are more than merely formal, they are not to be regarded as constitutive of the valid world. In forming conceptions, in classification, in judgment and inference, we do not go through processes which take place in things.

'The world of valid truth does not' in Lotze's view of it 'undergo a series of contortions and evolutions, paralleling in any way the successive steps and missteps, the succession of tentative trials, withdrawals, and retracings, which mark the course of our own thinking.'²

The activity of the various logical processes is not of a constitutive but of a strictly intermediate and instrumental value. The winding path is only a means to the attainment of the prospect, and must be left behind; the scaffolding³—to cite another well-known illustration—is only a means to the construction of the building, and must be taken down to allow the full view of the result. In each case, however, it is a necessary and indispensable means. This illustrates Lotze's contention that, despite the subjectivity of the thinking process, its results may still be objectively valid. Although the principle of reality is not discoverable in the process, it may still be present in the product. How this may be Lotze is hard put to it to show; but that it is so, that subjectivity does not necessarily imply invalidity, is one of his 'most invincible convictions.'⁴

The difficulties that beset Lotze in his endeavour to interpose between the scepticism that could not admit the validity of thought for reality and the idealism that in making thought determine reality seemed to find an ultimate identity between them were largely due to the externalism of his representation of the relation between the thought-process and the thought-product; and one sympathizes with the plea of the 'genetic logic' that the activity and the content of thought should be viewed more historically, from the standpoint of their generating conditions in the movement and readjustment of experience. 'It is no mere accident of language that "building" has a double sense—meaning at once the process and the finished product.'⁵ The product of thought is simply the process carried on to its completion. There can be no possible divorce or separation between the formal and the material in thought. In the activity of thought we are not cast loose from dependence upon material conditions and circumstances. It is only when thinking is improperly regarded as a merely formal activity, having validity or meaning in abstraction from the actual content of experience, that the general problem arises of the validity of the thinking process.

4. The product of thought.—What now of the validity of the ideas which result from the reflective process, after the work of thought has been done upon them, and they have been harmonized and made coherent with the rest of experience? That it is a real validity we do not doubt, though Lotze's test of it—namely, sameness of presentation for all consciousness—remains unconvincing. But is it a real validity in more than a logical sense? Is it ontologically or metaphysically real? It must be freely admitted that on Lotzean principles the final product of thought belongs still to the sphere of ideas and falls short of the reality of existence. If the reality of existence is not found in the logical forms of the concept, judgment, or

inference, no more is it to be found in the logical thoughts themselves.

Lotze's failure to bridge the gulf between the world of organized ideas and the reality of existence, so that 'no shade that wanders in that realm which is valid without existing, can take upon itself the body of actuality, and be,'¹ may be chiefly traced again to the externalism involved in his initial assumptions. For, in discovering the sole material for thought in the inner world of ideas, he makes a separation in the very beginning between thought and real existence. Thus it is the externalistic relation, not of the process of thought to the product, but of the datum of thought to reality, that is now in question. On Lotzean principles the realm of thought is, as it were, an inviolate continent that reality cannot invade, only surging and breaking upon its coast. Or, rather, reality is the inviolate continent, and thought is the surging sea. Accordingly, in the end thought must still be confined in its operations to the inner world of ideas, and the ideal remain separated from the real—although, as already noticed, Lotze himself clung resolutely, even in face of the principles of his logic, to his belief in the ontological reference in the subjective idea. But it is left to other faculties than thought—to perception, experience, intuition, feeling—to be the means of enabling the mind to establish contact with reality and attain objective truth.

From the 'genetic' standpoint in logic it is maintained that this twofold objective reference, in the beginning and the end of the work of reflexion, should be interpreted historically, 'as indicating a particular place of generation and a particular place of fulfilment in the drama of evolving experience.'² Again, from a standpoint of metaphysical idealism according to which the relation between thought and reality is organically conceived it is maintained that reality must be present in the beginning of the thinking process if it is to be reached at the end, and must co-operate with the activities of thought in the production of results.³

5. Origin and validity.—(a) *Introductory*.—A consideration of the question of origin and validity should throw further light upon the notion of validity. From the revolutionary standpoint of pragmatism it may be a 'musty old antithesis'⁴ that is here involved, but the distinction between origin and validity is generally regarded as one of real importance in philosophy, and as worthy of fresh discussion in the light of the new emphasis upon development or evolutionary growth.⁵ In the thought of D. G. Ritchie it was a distinction of cardinal significance, and it received a many-sided application at his hands.⁶ R. R. Marett⁷ offers a statement of the distinction in application to ethical theory. But his statement may readily be generalized; when generalized, it might run thus: origin represents the point of view from which judgments are explained by reference to their historical development, validity is the point of view from which they are explained by reference to their present worth and significance. There appears to be fairly general agreement among recent writers that, while the difference between the two points of view is not to be glossed over, there is a danger of falsifying judgments in abstracting from conditions of origin and development.

(b) *In logic.*—First consider the distinction between origin and validity as applied to logic, taking logic as designative of the whole philosophical discipline which has to do with the question of validity in knowledge. Here the problem of origin and validity is that of the relation between psychology and logic in respect of the treatment of thought. A clear distinction between the two disciplines used to be drawn in this respect. Psychology, it was said, describes the conditions under which thought originates as a psychical process; logic views thought apart from such conditions and in reference to the standard of truth and reality. In other words, psychology was held to be a purely descriptive science, and logic purely normative or regulative. To psychology fall questions of genesis and history; to logic questions of authority, worth, value.

¹ Logic is not concerned with the manner in which the elements utilized by thought come into existence, but with their value, when they have somehow or other come into existence, for the carrying out of intellectual operations.¹

But in the recent logical movement there is a strong tendency to supersede or dispose of this antithesis between origin and validity, or, as it is expressed less epistemologically, origin and value. It is said that judgment, with conception and inference, depends for its significance, for the measure of its validity, upon the stage of organization in which it begins; and, accordingly, the appraisal of the claim to validity should not be made in abstraction from the actual conditions and circumstances of origination.² Psychology should enter into logical evaluation.

None the less 'philosophical logic' abides by its essential position. While acknowledging the importance of genetic and historical considerations, it still affirms with Lotze that psychological analysis fails to reveal the complete significance of the operations of thought. The problem of validity or worth transcends the natural history of mental products. Indeed, as B. Bosanquet puts it, natural selection is not at all interested in natural history. 'It is being equal to the whole situation' (i.e. to the situation not of yesterday but of to-day) 'that is the criterion for logic as for morals.'³

(c) *In ethics and politics.*—From the above it would appear that in logic there is no irreconcilable difference between the 'genetic' and the 'philosophical' theorists, between the standpoints of origin and of validity; and one is prepared for a similar conclusion in ethics and politics. The tendency to dispose of the distinction between origin and validity certainly here exists, and again reflects the recent emphasis upon the genetic and historical. But, if the study of ethics and politics means only 'translating the present into terms of the past,'⁴ then we need not be astonished at the prevalence in our time of ethical and political scepticism. To trace the ancient pedigree of an idea or institution is not, however, to explain it fully or really, much less to explain it away, and empty it of all ideal meaning. The line of ethical development, e.g., may be traced from the lowest stage of customary morality to the recognition of the inherent goodness of the moral life,⁵ without thereby necessarily affecting the question of the validity of the moral judgment. A pernicious custom or fantastic belief may be the antecedent and the partial cause of a moral rule now rightly regarded as binding. Sociological fact spells in

philosophy neither validity nor invalidity.¹ On the other hand, it may be contended from the side of philosophy that but for the immanence of the ideal in the historical process there would be no ethical and political, i.e. no sociological development at all. The evolution of society is only properly interpreted in teleological as distinguished from mechanical terms—in terms of the *vis a fronte* rather than the *vis a tergo*. Validity is to be put before origin, intuition before evolution. But, while this is said, we are not compelled to recognize with the intuitionist or formalist in ethics, or with the 'natural rights' theorist in politics, the existence of any *a priori* norm independent of the life of society. To recognize such a norm or standard would indeed reduce to confusion the notion of moral or political personality. The categorical imperatives of intuitionism in ethics and of the theory of 'natural rights' in politics are not immediate self-evident data, but possess the mediate validity attaching to moral and political ideals which must be shown to be constitutive of ideal society.²

(d) *In religion.*—The distinction between origin and validity should be maintained also in religion, if at the same time the effort should be made, as in logic, ethics, and politics, to reconcile the two standpoints. Recent study in the history and psychology of religion has accentuated the tendency to neglect or confuse the distinction between the origin and the validity of religious ideas. Religion is traced in its historical development from its beginnings in the animism or spiritism of tribal religion,³ through the polytheism of national religion, to the monotheism of universal or spiritual religion; and it is sometimes thought that the history of the evolution of religious belief is its sufficient explanation. Or, again, religion is investigated in its psychological origin and stated in terms of human need, emotional, cognitive, practical; and, again, it is sometimes thought that the psychological genesis of the religious experience is its sufficient explanation. But the question of validity is not superseded by the historical and psychological methods of study. Religion no more than morals or logic is to be handed over to the historian or the psychologist. Their explanations are provisional, their interpretations but working hypotheses. The last word on religion is not with the historian or psychologist as such, but with the metaphysical philosopher. And, even if the metaphysician can find no place for religion within the system of his thought, it does not follow that the idea of God is false and the religious consciousness an illusion.

If we are truly to interpret the historical religious development of mankind, must we not again postulate—as in the history of morals—the immanence and directing activity of the ideal? And, if we are truly to interpret the nature of religious experience, must we not postulate a reality corresponding to the object of faith? At every stage of religious culture the object of faith and worship is claimed to be trans-subjectively real. Inasmuch, however, as the reality of religion transcends the mundane order of experience, this ontological claim is incapable of scientific proof. But the cognitive element implied in religious faith should not on that account be ignored or its claim disallowed. Apart indeed from belief in the validity of the objective reference of religion the values of the religious experience can hardly

¹ See, further, on origin and validity in ethics, W. R. Sorley, *Moral Values and the Idea of God (Gifford Lectures)*, Cambridge, 1918, pp. 54-72.

² Cf. R. Latta, in Ritchie, p. 41.

³ For a pre-animistic or non-animistic theory of the origin of religion see R. K. Marett, *The Threshold of Religion*, London, 1909.

be maintained. 'Faith divorced from reality, like the flower severed from its roots in the earth, is doomed to wither and die.'¹

Where the objective reference of religious faith is held to be a reality and no illusion, it must still be allowed to the standpoint of origin that it is impossible to make a rigid separation between psychological fact and logical meaning. Just as in secular and scientific knowledge a judgment having the appearance of immediate certainty is often found to involve subjective experience, so a palpable element of subjectivity enters often into the judgments of religion. *E.g.*, when the mystical visions of the mediæval saint shape themselves into direct and immediate revelations of the transcendent mysteries of Catholic dogma, we can hardly fail to detect the influence of the subjective or psychological factor in experience, especially if we have followed the course of the dogmatic development in Christendom.² A parallel might be cited in the claims of modern 'spiritualism,' whose communications from the dead—even granted that they have a real foundation—are sometimes quite obviously the product of a liberal Protestant eschatology.

Yet, when all allowance is made for subjectivity in religious experience, the consciousness of the Beyond—of the Beyond that is within—still remains, with the problem attaching to it of the validity of religious knowledge. While we have asserted that the ontological postulate implied in the religious consciousness is not scientifically verifiable, we do not thereby confess the invalidity or irrationality of the analogical mode of reasoning which religious philosophy has perforce to adopt in common with scientific theory, but of which it makes a more characteristic use. We must not here enter into a defence of the method of analogy in theistic argumentation, and in particular of the application to divine reality of the anthropomorphic ideas of personality, purpose, and value. It is a merit, to our mind, of the personalistic trend in recent philosophical thought that it finds the only possible clue to the interpretation of God and divine things in the analogy of human experience at its best and highest. But we may be permitted to observe that in the modern theistic use of the *analogia hominis*, which is reflective and critical, only a general agreement and correspondence, and not an identity, is affirmed between God and man in their personal aspects. Nor does it follow from the vindication of the analogical method in religious philosophy that any particular analogy is ultimately valid. Beyond the general logical or epistemological question, Is the method of analogy capable of conveying religious truth?, lies the ontological inquiry, Does the method of analogy actually convey it in such and such a case? Thus here, as in connexion with the process of thought in general, the problem of validity passes into the wider problem of truth.³

WILLIAM FULTON.

VALLABHA, VALLABHĀCHĀRYA.—The strength of Hinduism lies in its many-sidedness, its power of adapting itself to the various tendencies of human nature, both the good and the evil. Of this we have a conspicuous illustration in the numerous sects that arose in the course of the development of the Vaiṣṇava form of this religion.¹ Already in Śaivism (*q.v.*) the same desire to appeal to different sides of human nature had been manifested in the various aspects in which the character of the god Śiva had been presented—as the impersonation of the dissolving processes of nature as well as of its eternal reproductive power, as the typical ascetic and as the learned sage. But this variety in the characters ascribed to the god does not appear to have resulted in a corresponding variety of sects of the type that is seen in Vaiṣṇavism (*q.v.*). In Vaiṣṇavism, with its worship of a god who was believed to have manifested his sympathy with the world's suffering by frequent descents upon the earth (*avatār*), the masses of the people found the elements of a religion that seemed to bring God near to their faith and love. The personal element in religious life began to have fuller play, and with this the tendency to split into subdivisions or sects speedily revealed itself. Notwithstanding its rigid conservatism in religion regarded as a social institution, the Hindu mind has always shown a marvellous receptivity of new doctrine, provided the new teacher fulfils the Hindu idea of a religious leader and does not place himself in antagonism to the social system with which Hindu life is bound up. Of this type were Rāmānuja (*q.v.*) and Madhva (*q.v.*) of S. India, and the founders of the two earliest sects of Vaiṣṇavism, Vallabha in Upper and Western India, and Chaitanya (*q.v.*) in Bengal. The teaching of the former two was based on distinctive philosophic views as to the ultimate problem of the relation of the Supreme Spirit to the human spirit and to the material world; the latter two, while also holding their own distinctive doctrines in regard to the philosophical question, made devotion to Kṛṣṇa and his worship the real centre of their systems. The sects founded by these four teachers are the principal sects of Vaiṣṇavism. In addition to these many other minor sects came into existence such as the Rāmāndis (*q.v.*), or Rāmāwats. Among the Vaiṣṇava sects are also included reforming movements such as that of Svāmi Nārāyaṇa, whose teaching was a protest against the revolting immoralities of the Vallabhāchāryans, while the theistic Kabīrpanthis (*q.v.*) and the Sikh sect founded by Nānak (*q.v.*) find a place in the same list.

1. Life of Vallabha.—The Vallabhāchārya sect owes its foundation to Vallabha, who, together with his direct descendants who succeeded him in the headship of the community, was regarded as an incarnation of Kṛṣṇa or as embodying a portion of Kṛṣṇa's essence. The story of Vallabha's birth has come to us with many legendary accretions intended to enhance his authority as a religious teacher and to increase the reverence of his followers.

Vallabha was born about A.D. 1479. He was the second son of a Tāilinga Brāhman named Lakṣmaṇa Bhaṭṭ, who along with his wife fled from Benares, where a violent dispute had taken

¹ See art. Sects (Hindu).

place between Muhammadans and Sannyāsīs. They found themselves in a wild spot called Champāranya, and here the child was born. The legend narrates how a palace of gold sprang up on the lonely spot where the child was born, how the gods showered down flowers, and how divine music filled the air. The parents, trusting in the promise of Kṛṣṇa that their child should be one of his incarnations, left their infant to the protection of the god. On their return journey, after peace had been restored at Benares, they again passed through the place where they had deserted the helpless infant. They found the child alive and well, playing in the midst of a flame of sacrificial fire. They brought him to Benares and gave him the name of Vallabha. When the child reached the age of six or seven, he was placed under the tuition of Nārāyaṇa Bhaṭṭ. The legend, which is written in Brjbhāṣā, goes on to describe the rapidity of his apprehension, which enabled him in the course of four months to master the four *Vedas*, the six *Śāstras* (schools of philosophy), and the eighteen *Purāṇas*. At the age of eleven he lost his father, and, bidding farewell to Gokul, a village on the left bank of the Jumnā, he started on a pilgrimage through India. At a certain town in the south of India he made a rich merchant of the place, named Damodarās, a convert to his doctrine. These two travelled thence to Vijayanagar, where the ancestors of Vallabha on his mother's side lived. At the court of Kṛṣṇa Dēva, the king of the place, Vallabha engaged in a religious disputation with the Saivas. The king was so pleased that he bestowed on Vallabha rich presents of gold and silver, one portion of which he devoted to the manufacture of a handsome golden waist ornament for the image of the deity in a temple in the city, another to the discharge of debts incurred by his father, retaining only a fourth for his own use.

His success in disputation led to his being elected by the Vaiṣṇavas as their chief with the title of *āchārya*. From this dates the rise of his great influence. He continued his pilgrimage for nine years throughout different parts of India, accomplishing a journey of over 12,000 miles. Returning to Brindāban, he is said to have been honoured by a visit from the god Kṛṣṇa in person, who enjoined him to introduce the worship of Bala Kṛṣṇa, the infant Kṛṣṇa, Kṛṣṇa in his adolescence, which subsequently became widely diffused under the name of Rudra Sāmpradaya.

Vallabhāchārya ultimately settled at Benares. Among the works which he produced there during this residence or during earlier visits to the city was a commentary on the *Bhāgavata-Purāṇa*. During his lifetime Vallabhāchārya is said to have made 54 devoted proselytes to his doctrine.

2. The Mahārājā Gosāinji. — Vallabhāchārya was succeeded in his *gādi*, i.e. his position as *āchārya*, by his son Viṭhālnāth, his eldest son having died soon after his father. This Viṭhālnāth, the second *guru* of the sect, proved an able successor. Like his father, he made long journeys, visiting the same places and in addition extending his travels to Dvārka, through Cutch, and to Mālva and Mevār. Turning southwards, he came to Paṇḍharpur, the seat of the worship of Viṭhoba among the Marāthās of the Deccan. He is said to have made 252 disciples. His proselytes came from many classes — Banias, Bhāṭṭias, Kunbīs, Sutārs, Lohārs; a few Brāhmins and Musalmāns were also among his adherents. All, though of various castes, enjoyed the privilege of eating together at the same table—a privilege that was soon rescinded.

Viṭhālnāth, who was known by the name Gosāinji, took up his residence at Gokul, the birthplace of Kṛṣṇa, and was frequently designated Gokul Gosāinji, a name adopted by his male descendants. After his death each of his seven sons established his own *gādi*. They dispersed themselves throughout India in order to diffuse their doctrines. Each claimed to be an incarnation of Kṛṣṇa and made numerous proselytes.

The fourth son, Gokalnāth, was the most celebrated of these propagators of the new doctrine. He infused vitality into the tenets of the community both by his teaching and by his writings, and his descendants have always claimed pre-eminence among the members of the sect. They keep themselves separate from the other communities, while these profess equal veneration for all. It was probably about this period of the dispersion of the sons of Viṭhālnāth that those religious heads first acquired the title of Mahārājā or Mahārājā Gosāinji. The descendants of these Mahārājās now number probably over 70, of whom about ten have their seats in Bombay and one

or two at each of the following places: Surat, Ahmadabad, Nagar, Cutch, Porabandar, Amreli, Jodpur, Bundi, Koti. Only two or three of them have any knowledge of Sanskrit; the rest are grossly ignorant and indulge in the worst forms of luxurious living. They endeavour to live up to the title which has been given them in respect of costly apparel and dainty viands. They aspire to the acquisition of wealth and property, and, as their votaries are drawn very largely from the wealthier and more luxurious communities and are for the most part very scrupulous in the observance of religious custom, and as the Mahārājās, on the other hand, are not modest in their exactions, the opportunities of the latter for fulfilling their worldly ambitions are ample. At their various seats they possess temples with residences attached. There they celebrate daily their special worship in the presence of crowds of followers, men and women, and indulge in those licentious practices which have won for them, especially in later times, a shameful notoriety.

The process by which this development was reached is profoundly instructive to the student of Indian religion and is in strict analogy with the history of many other religious and spiritual movements.

3. Hedonistic tenets. — The Vallabhāchāryans have often been called the Epicureans of India, and the history of their cult can be traced through stages similar to those which marked the development of Epicurean morals. Epicurus started from a particular view of the constitution of the world. On it he based his conception of the *summum bonum* as *ārapaṣṭa*, freedom from anxiety and mental disturbance, but having no explicit association with grossness and sensuality of life. In the hands of his successors these features soon revealed themselves in the coarsest type of hedonism—a result which might have been anticipated from the hedonistic root of the founder's teaching. As of Epicurus, so of Vallabha it may be said that there is no reason to believe that he held the doctrine or sanctioned the practice which by a natural process evolved themselves in the teaching of his successors. His life was not unlike those of the other founders of religious sects in his time. His personal activity was that of a teacher of religion. He made long pilgrimages and gathered, through the influence acquired by his life and teaching, devoted disciples. But his teaching contained the hedonistic root from which all subsequent evils were to spring. He too started from a specific conception of the relation of the Supreme Spirit to the finite spirit. His philosophical tenets have been traced back to the teaching of Viṣṇu Svāmī, a commentator on the texts of the *Veda*; Vallabha taught that individual human spirits were like sparks from the Supreme Spirit and, though separate, identical in essence with it.

On this he based his view that asceticism was not the way by which man should commend himself to God. He maintained that God was not to be worshipped by fasting and self-mortification, that the individual soul was entitled to reverence as a portion of the Supreme Soul, and that the body which enshrined it should be fostered and not subjected to the austerities enjoined in ascetic systems. The 'way' which he advocated was summed up in the name *pushṭi-mārga*, the way of eating, drinking, and enjoyment.

It has been already indicated that the Vallabhāchārya cult attached itself to Kṛṣṇa, *avatār* of Viṣṇu, and especially to Kṛṣṇa in his adolescence, Bala Kṛṣṇa, whose amorous sports with the *gopīs*, or cowherdesses, of Mathurā, the modern Mattra, are the theme of the tenth book of the *Bhāgavata-Purāṇa*. This book was translated from Sanskrit

into Brjhbhāsā under the name of *Premśāgar* ('Ocean of Love'). It was selected by Vallabhāchārya as the foundation of his system. The original purpose of the book was, it is held, to symbolize spiritual devotion under the figure of earthly love; but in its interpretation by succeeding Mahārājās of the sect it was converted into a code of vicious immorality, not only sanctioning, but enjoining, the most hideous sensuality.

4. Cult of the guru.—The *Siddhānta Rahasya*, ascribed to Vallabhāchārya and claimed by him as a direct revelation from God, deals with themes of a different order. It contains the doctrine of the origin of sin and the mode of its expiation. It consists of only about a dozen lines in Sanskrit, in the course of which we find a characteristic suggestion as to the supreme importance of the *guru*, the Gosāinji, the mediator between God and the sinner :

'The offering which has (in the first instance) been enjoyed by its owner is not acceptable by the god of gods. Therefore, in the first instance, in all doings everything should be dedicated.'¹

The dedication in the first instance, here referred to, is that which takes place when the offering is made to the *guru*, through whom it reaches Kṛṣṇa, of whom he is the manifestation. Of the terrible use made of this doctrine evidence is given below. Another writer of this school is even more explicit in his assertion of the lofty claims of the Gosāinji :

'Whoever holds his *guru* and Śrī Thākurji [the god] to be different and distinct shall be born a *sichāna* [a kind of bird]. Whoever disobeys the orders of his *guru* shall go to Aśipatra and other dreadful hells and lose all religious merits.'²

Śrī Gokalnāth, that fourth son of Viṭhalnāth above referred to, in his *Vachanāmṛt* ('Nectar of Precept'), in his exposition of the *puṣṭi-mārga*, dwells with even more precision on the fate of those who disobey their preceptors :

'He who getting angry in his heart maligns his *guru* and utters harsh terms towards his *guru* becomes dumb, and after that he becomes a serpent. He is then born a creature of the region of the vegetable kingdom, and after that he is born a creature of the region of the dead. As he remembers Śrī Bhagavān [god], in the same way he remembers and repeats in his mind the name of his *guru*.'³

Another of the books of the sect runs riot in its laudation of Śrī Gosāinji or Viṭhalnāth, the second in this dynasty of *gurus*.

'He is possessed of all virtues; he is the very personification of the most excellent being [God]; he is all incarnations. He is himself the creator of the endless crores of worlds wherein his glory is diffused all over.'⁴

In the *Gurusevā*, another production in the same line, it is said :

'When Hari [God] is displeased with any one, the *guru* saves him [the sinner] from the effects of the god's displeasure. Therefore a Vaiṣṇava should serve his *guru* with his body and money. The principal *gurus* are Śrī Āchāryaji and Śrī Gosāinji and the whole family called the Vallabha family. The worship of the *guru* is to be performed in the same way as the worship of God.'⁵

This high claim made on behalf of the *guru* is not confined to this one sect. The attitude of many Hindus towards their chosen *gurus* is often marked by a similar reverence; the peculiarity of the claim made on behalf of these Vallabhāchārya *gurus* is that it is put forth on behalf of a family line, a kind of religious dynasty, not of a *guru* chosen in each case by the devotee, but of one who is set over him in virtue of the right of birth and natural succession. — This is quite in keeping with the title borne by these Mahārājās and the worldly ambitions with which it was associated. It may also

³ *Vachanāmṛt*, quoted in *Hist. of Sect of Mahārājās*, p. 82.

⁴ Brjhbhāsā MS, entitled *Astākohar Tika*, quoted in *Hist. of Sect of Mahārājās*, p. 83.

⁵ *Gurusevā*, quoted in *Hist. of Sect of Mahārājās*, p. 84.

be said to be the root of all the degeneracy and moral corruption that have made their name and the name of their sect so notorious.

5. Initiation rites.—In all Vaiṣṇava sects there is a special ceremony of initiation into the community accompanied by the repetition of a formula expressing reverence for either Kṛṣṇa or Rāma. In the Vallabhāchāryan sect this rite may be administered at the early age of three or four years. In some parts of India it is performed at a somewhat later age. A rosary or necklace, called *kanthi*, of 108 beads made of *tulsi*-wood is passed round the neck of the candidate for initiation, and he is taught the use of the eight-syllabled prayer: '*Śrī Kṛṣṇaḥ sarvaṇam mama*,' 'The blessed Kṛṣṇa is my refuge.'¹

There is a second initiation called *samarpaṇa*, or dedication, which, in the case of males, takes place in the eleventh or twelfth year, and, in the case of females, upon marriage or shortly before it. This rite is also called *Brahmasambandhu* ('union with Brahma'). The formula repeated on this occasion begins with the eight-syllabled formula of the first initiation and continues thus :

'I who am suffering the infinite pain and torment produced by enduring for a thousand measured years separation from Kṛṣṇa do to the worshipped Kṛṣṇa dedicate my body, organs of sense, life, heart and other faculties, and wife, house, family, property with my own self; I am thy slave, O Kṛṣṇa.'

There is nothing in this formula that goes much beyond the expressions of devotion that one meets with in other forms of Hindu worship. In form it does not go beyond the '*tan, man, and dhan*' that enters so constantly into the expression of Hindu devotion. But the sense in which this dedication was enjoined and accepted by the Vallabhāchāryas is made clear in a commentary on Vallabha's *Siddhānta Rahasya*. The commentator, who was no other than the celebrated Gokalnāth, the grandson of Vallabha, the famous fourth son of the second *guru*, Viṭhalnāth, thus expounds the formula :

'Therefore in the beginning, even before ourselves enjoying, wives, sons, etc. [*putrādī* includes daughters along with sons] should be made over because of the expression *sarva vastu* ['all things'] occurring in the text. After marriage, even before using her ourselves, the offering of her [the wife] should be made with a view to her becoming usable [by ourselves].'

6. Sensual practices.—In this conception we have the *fons et origo* of the gross sensuality that is bound up with the religious practices of this sect. The amorous deeds of the adolescent Kṛṣṇa, who is the object of its worship, were understood in their literal carnal sense, and union with Kṛṣṇa was sought through carnal union with the *guru*, or religious head, who claimed to be the incarnation of the god, through whom alone the god was accessible to the worshipper. It is only when one realizes the hold which this interpretation of the above-quoted formula of initiation took of the blind votaries of these *gurus* that one can conceive the possibility of the debauchery that has so long disgraced the religious exercises of this community, through so many generations. The husband who regards with complacency the desecration of the virtue of his wife, the father who consents to the violation of his daughter by these debauched pretenders to religious sanctity, is obsessed with the monstrous delusion that spiritual gain can come to him and his through the sensual indulgence of his spiritual guide. The male worshipper is himself eager to submit to any degradation that appears to do reverence to these high-priests of defilement. He drinks with avidity the water that has been wrung out of the wet garments of this filthy being, eats with relish the remnants of his meals, chews over again the *pān supāri* (leaf with betel-nut) which has been spat out of the mouth of this divine *guru*.

¹ Monier-Williams, *Brahmanism and Hindūism*⁴, p. 135 f.

The immorality of the temple-worship quickly spread itself into the whole life of the community. The *rās mandalī* (carnal love-meeting) became a well-known institution in many places. The purpose of these gatherings was to re-enact the scenes of the mythological story of Kṛṣṇa's amorous sporting with the *gopīs* by the waters and in the woods of Mathurā.

Doctrines and practices such as have been described were bound to call forth, sooner or later, protests from within the community itself. With the spread of education and other enlightening influences some of the better spirits awoke to shame and indignation. One of these was Karsandas Mulji, a resident of Bombay, who in 1856 raised his voice and in the columns of the *Satya Prakāsh* ('The Light of Truth'), a weekly paper, began to fulminate against the exactions and corrupt practices of the Vallabhāchāryān Mahārājās. The Mahārājās had at that time suffered a few set-backs to their pretensions. These furnished an opportunity to the dissatisfied in the community. The Mahārājās had begun an attack on the Brāhmins, of whose influence with the people they appear to have become jealous. Those of their own community who were eager to see abuses among themselves corrected undertook to assist the Mahārājās in their conflict with the Brāhmins on condition that they would reform their own practices. The Mahārājās, yielding to this pressure, agreed to accept the proposed reforms, which, among other things, demanded the cessation of the adulterous behaviour of the Mahārājās towards the women of their families, especially in the winter temple-service at four o'clock in the morning, and of the violation of the young girls of the community. The reformers aimed also at relief from the heavy money exactions which the Mahārājās knew so well how to levy by means of threats of their displeasure. To these and to some other demands of a minor character the alarmed Mahārājās gave an unwilling consent, stipulating that the agreement should not come into operation for a year. Further, the Mahārājās had been worsted in their attempt to secure exemption from appearance in courts of justice, their objection to appear in person being due to the idea that it would be a degradation to them to sit lower than a European. The High Court of Bombay refused to entertain their claim. When, during an action, a litigant proposed to subpoena the Mahārājās as witnesses, they closed their temples, and their followers, who could not take their meals without paying the morning adoration to the Mahārājās and the image, were kept without, fasting. These fasting followers were released from their unhappy plight only on their subscribing a bond which pledged them to obey the Mahārājās and to undertake in no circumstances to summon them to a court of justice. All this gave rise to a large amount of newspaper criticism, which tended to weaken the prestige of the Mahārājās.

In 1860 the Mahārājā of Surat came to Bombay and, by presiding at the distribution of prizes at the Gujarātī Girls' Schools, appeared to place himself on the side of social reform. Invited to a meeting at which the question of the remarriage of widows was to be discussed, the Mahārājā appeared among the opponents of the suggested reform and apparently got the worst of it in this public discussion. The editor of the *Satya Prakāsh* then challenged the Mahārājā to a discussion in the press. The Mahārājā ventilated his views through the columns of the *Svadharmavardhak* ('Promoter of our Religion'), a paper published under his patronage. The editor of the *Satya Prakāsh* replied in an article entitled 'The Primitive Religion of the Hindus and the Present Heterodox Opinions,' which set forth the heterodox character of the sect of the Mahārājās. In the course of this article he made certain allegations regarding the Mahārājās which became the subject of an action for libel. This article appeared in the year 1860. In the following May the Mahārājā filed an action for libel against the editor and the printer of the paper. The leading men of the Bhāṭṭīa community, at the instigation of the Mahārājā, attempted to

interfere with the course of justice by resolving that none of the caste, under pain of excommunication, should give evidence against the Mahārājā. This action on the part of the leaders of the community led to a charge being brought against them for conspiracy, on which they were found guilty and sentenced to heavy fines. The Mahārājā libel case came on for hearing on 26th Jan. 1862. This *cause célèbre* occupied the High Court during 24 sittings spread over a period of 40 days. Thirty witnesses were examined for the plaintiff and the same number for the defendant (Karsandas Mulji), some of the latter being men of learning and eminence in the community. The case excited the most profound interest among the different communities in the city. It led to a complete exposure of the lives and practices of the Vallabhāchāryān Mahārājās. The verdict was in favour of the defendant on the main issue of justification, with costs, and for the plaintiff on the defendant's plea of 'not guilty,' without costs. With respect to this part of the plea the Chief Justice took the view that a public writer could not make an attack on the character of an individual in his private capacity, although he might be depraved and an adulterer, and besides that the defendant was not justified, without previous knowledge of the plaintiff's misconduct, in publishing an attack on him, although the allegation subsequently turned out to be true. The Puisne Judge, on the other hand, held that the article was an attack not on the private character of the plaintiff, but on his character as a Mahārājā, or religious preceptor, and that the defendant was quite aware of the existing practices of the sect. The issue of the trial was a complete success for the defendant reformer, an important victory for the cause for which he stood, and a crushing exposure of licentiousness in the high places of religion.

Many who witnessed this trial more than fifty years ago must have hoped that the death-blow had been given to the prestige and to the licentious practices of the Vallabhāchāryān Mahārājās. But the astounding fact is that the Vallabhāchāryān Mahārājās still continue to flourish. About twenty years after the trial a Mahārājā of the sect was found guilty of complicity in a mail robbery and sentenced at Rajkot to a term of imprisonment. One might have expected that the entire Vallabhāchāryān community would have been shocked by this revelation of depravity in a religious leader. This aspect of the case seems to have affected them little. The sentence to imprisonment moved the community on other and quite different grounds. They were stricken with horror at the thought of the danger to the caste of their Mahārājā that was involved in his being condemned to eat the prison food. Leading merchants in Bombay organized a meeting at which it was resolved to petition the Government to relax the prison rules in favour of this sacred personage! Needless to say, their petition was unheeded. Probably in no other country than India would it have been possible for any system to survive such exposure.

This episode in the history of the Vallabhāchāryās has been narrated here for these reasons, that it led to the full disclosure of the real character of the teaching of this sect and of the width of the gulf which lies between morality and religion in the current conceptions of multitudes of the people of India, and that it also illustrates the powerlessness of public opinion, as it exists in India, to grapple with social customs that rest on religious sanctions having their roots deep down in the amorphous soil that is the product of ages of pantheistic thinking.

LITERATURE.—A clear statement of the place of the Vallabhāchāryās is contained in M. Monier-Williams, *Brāhminism and Hindūism*, London, 1891. A very full history of the sect, with a detailed account of the Mahārājā libel case, will be found in a *Hist. of the Sect of Mahārājās or Vallabhāchāryās in W. India*, London, 1865. The chief authority of the sect is the *Bhāgavata-Purāṇa*, the tenth book of which, containing the history of Kṛṣṇa, was translated into Brjhbhāṣā with the title *Premśāgar* ('Ocean of Love'). Among the books of the sect are the following: the *Bhāgavat Tīkā Subodhini*, the *Siddhānta Rahasya*, both ascribed to Yallabha, the *Vachānāmṛt* ('Nectar of Precept'), ascribed to Śrī Gokalnāth (a kind of commentary on the *Puṣṭi-mārga*), *Gurusevā* ('Guru-worship'), *Vīrchīta Bhakti Siddhānta Vīrtī* (a commentary by Gokalnāth on the above *Siddhānta Rahasya*, the work of his grandfather), the *Puṣṭi Pravāha Moryādā Tika* by Hararāja, the *Vīṭhalesha-ratnavivarana*, and numerous minor tracts in Sanskrit ascribed to the chief founders of the sect.

D. MACKICHAN.

VALUE.—1. The nature of value.—Value is one of the last of the great philosophic topics to have received recognition, and even now the *Encyclopædia Britannica* has an article only on economic value. Its discovery was probably the greatest philosophic achievement of the 19th cent., but opinions on the subject are not yet crystallized, and it is still one of the growing points of philosophy and one which seems likely to overshadow older issues. Reflexion at present commonly starts from the antithesis of 'fact' and 'value,' and the difference between the standpoints of 'description' and 'appreciation.' It is widely held that consciousness of value differs in kind from consciousness of fact. It is posterior to the latter, and represents a reaction upon fact. It is an attitude assumed towards fact, a weighing of fact in relation to an agent, and his feelings, desires, interests, purposes, needs, and acts; and it expresses his appreciation (approbation) or reprobation (depreciation) of it in this relation. It follows (1) that a certain subjectivity, or, better, a relation to personality, is inherent in all values; (2) that values arise out of the mind's practical attitude, when it reacts upon stimulation, and that for a purely theoretic or contemplative view no values would exist; (3) that values are something super-added upon the other qualities of objects by the mind, in order to express their relation to its purpose and acts, and do not inhere in objects *per se*. Indeed they seem to be even more subjective, variable, and personal than the 'secondary' qualities of objects, and hence are often called 'tertiary' qualities. Nevertheless they are also objectified and projected into objects, when these are regarded as valuable objectively and *per se*, or when the 'validity' of actual valuations and of existing values is called in question. Hence 'superpersonal' or 'over-individual,' and even 'eternal' and 'absolute,' values are recognized by many philosophers. Moreover, the genesis of values and their relations to the objects of desire to which they refer, to the value-feelings which accompany them, and the *valuation-processes* and value-judgments by which they are reached, instigate to a number of psychological inquiries, while their validity raises the deepest questions of epistemology, metaphysics, and religion. All the questions raised, moreover, are complex and contentious, and have had a history which it is not easy to unravel.

2. The history of the notion.—Historically the importance of the problem of value has been recognized very slowly, gradually, and grudgingly, and, moreover, its philosophic history is obscure, no early philosophy having made it central, or even expressly considered it. In the light of subsequent developments, however, we may trace its emergence to the Platonic doctrine (in *Republic*, vi.) of the Idea of Good. When Plato conceived the Good as the culmination of the Ideal world and as the principle which was to unify, systematize, and organize all the other 'forms,' he was really putting 'value' above 'being,' conceiving it as the supreme principle of explanation, and expressing the same thought as Lotze, when he declared that the beginning of metaphysics lies in ethics. For he was proposing to view all being teleologically, and to make its relation to a 'good' or end (an ethical notion) essential to its being. This was to affirm not only the objective validity of the 'tertiary' qualities, but also their supremacy over the others. Plato, however, did not himself develop this line of reflexion, nor succeed in inducing philosophers in general to investigate the problem of values. To the more naturalistic they seemed all too human to be attributed to ultimate reality. Spinoza's wholesale repudiation of their objectivity, at the end of bk. i. of his *Ethic*, is

typical in this respect. The modern developments of the subject proceed from Kant, who, however, came upon it rather incidentally at the end of his philosophic career, and apprehended its significance very imperfectly. Kant's philosophizing had ended in the theoretic *impasse* that certain vitally essential beliefs (in God, freedom, and immortality) could not be scientifically justified. Yet they had to be presupposed, he believed, for purposes of action; *i.e.*, to carry on life it was necessary to act *as if* they were true. He devised therefore the notion of a practical postulate, which was to be practically imperative without being theoretically cogent, attaching it to the Moral Law of unconditional obligation, and endowing it with objects of 'faith,' which were to be carefully distinguished from objects of knowledge. He thus established (1) a dualism between faith and knowledge which had obvious interest for theology, and (2) a supremacy of the practical over the theoretic reason, which was more fruitful, because less naive, than Plato's. The latter result tended to raise 'values' above 'facts,' though the former at first masked this consequence, and it took subsequent philosophy a long time to overcome the Kantian dualism. Both, however, were prolific of further developments, divergent from the main line of post-Kantian speculation, which was too intellectualistic to notice that, just as the existence of fact must be conditioned for us by our knowledge, so our knowledge must in turn be conditioned by our interests and the prospective value of the objects of our cognitive endeavours. For a long time the investigation of value was carried on only in Germany, and even there progress was slow. The first (probably) to see that here was a new problem was F. E. Beneke (1797-1854), the only empirical psychologist among the German philosophers of his time, and hence a victim of Hegel's intolerance. Already in his *Grundlegung zur Physik der Sitten* (1821) he sees that, if the science of morals is practical, the notion of value lies at the root of it. He lays it down that the value which we attribute to a thing is determined by the pleasure which it has excited in us, and he makes the whole of ethics depend on feelings of value. In his *Grundlinien des natürlichen Systems der praktischen Philosophie* (1837-40) he makes it more explicit that valuations arise in the mind as reactions upon stimulations and depressions produced by the things of the external world, distinguishes between subjective and objective valuation (*Wertgebung*), and traces the growth of 'dispositions' to value and to desire. R. H. Lotze (1817-81) revived the Platonic idea that good ranks above being, wanting metaphysic to show that what *ought* to be conditions what *is* (*Metaphysik* of 1841), and that 'Nature is directed to the accomplishment of Good,'¹ and interpreted the 'ontological' proof of the existence of God as meaning that the totality of value cannot be utterly divorced from existence. In the endeavour to vindicate value he had the sympathy of his theological colleague at Göttingen, Albrecht Ritschl (1822-89), who agrees with him that the facts of concrete experience are the source of our general notions, and not, as Platonism has always held, pale reflexions of the latter. Hence personal experience is not deducible from metaphysics, but *vice versa*.² Ritschl, however, started rather from the Kantian dualism of faith and knowledge and tried to differentiate them still further. Faith he equipped with distinct objects, those of religion—an independent method, which it shared with ethics and æsthetics—distinct from that of metaphysics and science, and formulated in value-judgments, differ-

ent in kind from theoretical judgments, though equally capable of validity and certainty. It was therefore to misconstrue the essential meaning of religious affirmations to take them as expressions of theoretic insight rather than of moral trust. It is mainly to Ritschl that is due the current antithesis between value-judgments and judgments of fact, and the attempt to regard the sciences as different in kind according as they use the one or the other. Ritschl, however, recognized that this separation could not be really carried through. He observes:

'All continuous cognition of the things which excite sensation is not only accompanied but also guided by feeling' (pleasure-pain, as indicative of value for self, by way of enhancement or inhibition), and 'in so far as attention is necessary to attain the end of knowledge, will become the vehicle of the purpose of exact cognition; the proximate motive of will, however, is feeling, as expressing that a thing or an activity is worth desiring. . . . Value-judgments therefore are what determine all connected knowledge of the world, even when it is carried out in the most objective fashion. Attention during scientific observation . . . always declares that such knowledge has a value for him who exercises it.'¹

This seems to render all theoretic judgments dependent on, and subordinate to, value-judgments; but Ritschl distinguishes between concomitant and independent value-judgments. In the sciences value-judgments accompany the theoretic, whereas 'independent value-judgments are all cognitions of moral ends or impediments thereto in so far as they excite moral pleasure or displeasure, or otherwise set the will in motion to appropriate goods or to ward off evils.' The religious also are composed of such independent value-judgments expressing man's attitude towards the world. From Ritschl's position it was easy to pass to that of W. Windelband (1848-1915), who, while sharply distinguishing between judgments and evaluations or judgments about judgments (*Beurteilungen*), emphasized that the latter are involved in every judgment in that it affirms or denies, approves or disapproves. Logic, therefore, becomes a science of values, a third normative science, along with ethics and aesthetics, and like them aims at the discovery of universally valid 'norms.' Philosophy becomes the critical study of the universally valid values; their recognition is its duty and its aim.² Windelband was followed by H. Rickert³ and H. Münsterberg (1863-1916).⁴ The Austrian schools of C. von Ehrenfels (1850-) and A. Meinong (1853-1920) devote themselves to the discussion of the objects and sorts of values, and their relation to desire and will, the laws of the valuation-process, and the accompanying feelings, and apply to all values the economic law of marginal utility. The rise of pessimism and the influence of Schopenhauer (1788-1860), by raising the question of the value of life as a whole, emphasized the importance of values. F. W. Nietzsche (1844-1900) effectively drew attention to the transformations of values, and set himself, before he went mad, to bring about a 'transvaluation' (*Umwertung*) of all the accepted values. Josiah Royce (1848-1917) acclimatized the distinction between appreciation and description in the English-speaking world with his *Spirit of Modern Philosophy* (1892), and since then there has been a good deal of (rather unsystematic) discussion of the problems of value, especially in America, though the intellectualistic bias of the dominant 'idealism' has been unfavourable to it. The pragmatists, however, were glad to recognize the presence of valuations in cognitive processes, as a proof of the fictitious nature of 'pure' thought and 'absolute' truth. They em-

phasize the human, purposive, and personal character of value, tend to regard all values as relative, primarily to the particular situation which is valued, and declare the existence and efficacy of values to be plain, empirical facts.

3. Sorts and criteria of value.—As the result of this historical development it is generally admitted that distinct species of value exist, though there is no agreement as to what they are. However, it is clear that several sciences have been specialized to study them. Thus (1) *economic* value has long been recognized as a fundamental notion of political economy, which, ever since Adam Smith, has divided it into value in use, *i.e.* the utility of objects for human purposes, or, as J. S. Mill said, their 'capacity to satisfy a desire or serve a purpose,' and value in exchange, *i.e.* their power to induce or compel people to pay (other valuables) for the use of them. The former is simply teleological value, which refers to the relation of means and end; the latter arises when an object is not only useful but also difficult to procure, and is the special concern of economics (*q.v.*).

(2) That *ethics* deals with values is also agreed, though there is much dispute as to what the specific ethical values are and how they are related.

(3) *Æsthetic* values are also beyond dispute.

(4) *Pleasure* must be regarded as a positive and *pain* (unpleasantness) as a negative value, since even the most ascetic do not really succeed in holding that pleasure is, or in denying that pain is, as such bad. The opposite doctrine, that all values are ultimately reducible to pleasure-pain, is commoner, but need not disturb the classification of values. For, even if the question whether objects are valuable because they give pleasure or give pleasure because they are desired (valued) were decided in favour of the former alternative, it would still be true that the other values are at least relatively independent. Consciousness of value does not directly imply consciousness of pleasure-pain, nor vary concomitantly with it; *e.g.*, in conscious wrongdoing an ethical value which is felt not as pleasant, but as painful, is nevertheless recognized. Similarly the æsthetic value of a work of art may be recognized, which is yet declared to give no pleasure and to leave the spectator 'cold.'

(5) It has been mentioned that, according to the school of Ritschl, the objects of the *religious* consciousness are really values, and affirmations about them are essentially value-judgments. And, though other theologians dissent from it, this view gets considerable support both from the psychology of religion, which interprets religious beliefs as expressions of spiritual needs, and from every theological admission that faith, as well as reason, is operative in the apprehension of religious truth.

(6) There are good reasons for recognizing the distinctiveness of *biological* or *survival*-values. For they are capable of objective scientific study, and cannot be simply represented, as Herbert Spencer thought, by the hedonic values. Pleasures are not always conducive to life, nor are all pains evil. The relations of survival to pleasure-pain are complex; so are its relations to the ethical values, as is vividly brought out by the ethics of pessimism. Moreover, the survival-values enter into all other values: the value of every being, belief, and institution is affected by its survival-value—between the limits of such a high degree of positive value as to compel universal assent and so high a negative value as to entail complete extinction and universal reprobation.

(7) Several schools of philosophy hold that logic is the science of *cognitive* values, and that truth is the positive, error the negative, value; and this

¹ *Die christliche Lehre von der Rechtfertigung und Ver-söhnung*, Bonn, 1896-1900, iii, 194 f., Eng. tr., Edinburgh, 1900, p. 204.

treatment is often implied also where it is not avowed. It would seem to be borne out by the far-reaching analogy between logic, ethics, and aesthetics as 'normative' sciences, and proved by the conformity of logic with the criteria generally used to distinguish values.

As criteria two primary oppositions appear to be used: (1) that between existence and value, the 'is' and the 'ought.' Even though there are in man natural tendencies to approve of what has succeeded in establishing itself, and to bring into being what is considered worthy of being—*i.e.* both to realize ideals and to idealize the actual—there remains a considerable discrepancy between the existent and the valuable. It cannot (ordinarily) be argued that, because a thing exists, it is valuable, or that, because it is valuable, it must exist. What is need not be what ought to be, nor need what ought to be exist. Hence the 'laws' of a science of values are not natural uniformities, but 'norms,' *i.e.* precepts or imperatives; they formulate not what actually does happen, but what ought to happen 'normally,' *i.e.* if the persons concerned recognize and submit to the order proper to the subject.

(2) Values appear to be positive and negative. As they express the attitude of a subject to an object, they indicate the acceptance or rejection, pursuit or avoidance, of the former, the attractiveness or repulsiveness of the latter. They occur therefore in couples of antithetical predicates, both admitting of degrees of intensity. Hence values may compensate, cancel, or neutralize each other, and the final value of an object may vary according to the balance between its positive and negative value, or become practically *nil*. A state of consciousness which is 'neutral,' and an object which is 'indifferent,' are cases of such zero values.

(3) All values are disputable. They involve a relation to a valuer whose valuation need not be correct, and need not be accepted. The allegation of a value, therefore, is not equivalent to its validity. All values are to be understood as primarily claims to value, which may be allowed, disallowed, or reversed, when other values are considered. In some cases such reversal is normal: thus, if *A* and *B* are enemies or have opposite interests, what is 'good' for *A* is normally 'bad' for *B*, and *vice versa*.

With the aid of these criteria the following kinds of value can now be enumerated. (1) *Hedonic* values are the pleasant (positive) and the unpleasant or painful (negative). (2) *Aesthetic* values are the beautiful (positive) and the ugly (negative); also the attractive-repulsive, the fitting-improper, the noble-vulgar, the elegant-coarse, and many others. (3) *Utility* values are the good (positive) and the bad (negative); also the useful-useless. These last, though they properly have reference to the relation of means and ends ('the good'), naturally pass over into ethics, when this science is conceived 'teleologically,' *i.e.* as the science of the final end or supreme good. (4) Other *ethical* values, relative to other conceptions of ethics, are marked by the oppositions of 'good' and 'evil,' 'right' and 'wrong,' 'ought' and 'ought not.' 'Good' and 'bad' seem sometimes to be used absolutely in ethics, but this usage hardly proves the existence of 'absolute' values. On closer inspection, the meaning is seen to be good or bad *for* the ethical end, however that is conceived. (5) *Religious* conceptions reveal their character as values by the frequency of such dualistic antitheses as God-devil, salvation-damnation, election-reprobation, holy-sinful, sacred-profane; also by the frequency with which religious arguments turn out to be postulates of faith. (6) *Logic* falls into line with the values 'true' and 'false,' 'truth'

and 'error.' These also claim to be absolute; but whether what is believed true is so may be disputed, just as whether what is believed good, or right, or beautiful, or valuable, or conducive to survival actually has the value which it claims. Even what is felt as pleasant is not always conceded to be a 'true' pleasure, nor is every 'imaginary' pain said to be 'real.' This illustrates also a further confirmation of the whole doctrine, that the various value-predicates are freely transferable from one species of value to another.

4. **Value and fact.**—The recognition of logic as a science of values entails a radical revision of the antitheses between fact and value, existence and value, the 'theoretic' and the 'practical.' If all 'truths' are values, there can be no absolute separation of the practical, the sphere of values, from the theoretic, the sphere of facts. Facts, being the objects of truths, must all imply values, and it must be vain to search for any existence which is wholly free from valuations. Now this is precisely what history shows. (1) The search for 'true reality' in pure and unadulterated 'fact,' uncontaminated by any work of the mind, in an unconditional datum which has merely to be recognized, has always been vain. Only the moral to be drawn is not, as idealism supposes, that reality is the work of 'pure thought.' The thought which cannot be rooted out is a valuing thought, which is aiming at ends and selecting means, and accepting, rejecting, and variously manipulating the data presented to it in the whole process of 'recognizing' reality. Thus the absolute antithesis between fact and value collapses, because fact without value cannot be found. (2) The very fact that it is considered so desirable to find it proves that it is impossible to do so. For the importance attributed to the discovery of fact, and the eulogistic sense in which 'reality' is opposed to 'appearance' or 'illusion,' are, in fact, values. This comes out especially in doctrines about the 'degrees of reality,' which are plainly degrees of value, or about the distinction between 'reality' and 'existence.' (3) It is not psychologically possible to reach any 'fact,' except by a process permeated throughout by values, *viz.* a purposive endeavour to attain an end ('good') by a choice of the 'right' means, which implies selective attention, preferences for what seems valuable, and the influence of concomitant value-feelings and of a variety of prejudices and forms of bias. (4) Lastly, it seems a conclusive logical reason for holding that every 'fact' alleged must contain a latent value, that it claims not only to be 'true' but also implicitly to be better than any other judgment it was possible to make under the circumstances. Its maker was probably aware of this, and consciously preferred it to all alternatives that occurred to him; but, even where he did not think of any, they remain logically conceivable, and hence the actual judgment is only justifiable by its logical claim to be the best. Hence the value-relation and attitude can never be eradicated from even the merest and most stubborn 'fact.'

Nor, conversely, can a recognition of fact be wholly eliminated from knowledge. Pure value exists as little as pure fact. It would be pure fancy or sheer postulation, and neither fancies nor postulates are elaborated without regard to fact. They are made to be realized, and, when they are recognized as impossible, their value is destroyed or impaired. It is said to be 'no use' to postulate the impossible or to cherish utterly unrealizable ideals. This recognition of fact, however, is always relative to the existing state of knowledge, and may be modified as knowledge grows. Knowers are often conscious of this, and assume their facts for the purposes of an inquiry or a science, hypo-

thetically and experimentally. Hence it is not to be supposed that what is taken as fact, and formally is 'fact,' must remain so. It may turn out to be only a methodologically convenient 'fiction.' In general it may be concluded that, since values inhere in all the 'facts' that are recognized as such, they are themselves facts, and that the antithesis between values and facts cannot be made absolute. Values are not simply fortuitous and gratuitous additions to facts, which are merely subjective and should be eliminated by strict science, but are essential to cognitive process and compatible with any sort and degree of objectivity. Facts too are always reactions—upon prior facts—and are generated by their evaluation; and, moreover, these prior facts may have been merely hypothetical constructs recommended by their prospective value.

5. Value and existence.—It would seem to follow from the relations between value and fact that values cannot be denied existence in any world that can exist for man, and this in several senses. (1) They are operative in and on human minds, and find expression in human acts and embodiment in human institutions; (2) they can occur in, and relatively to, any universe of diction, however fanciful; (3) hence also in ideals and fictions, both of which are sometimes said to be incapable of real existence, and cited as objections to the connexion of values with existence. But both must be so related to real existence as to be applicable to it and to conduce to its successful manipulation. Otherwise they become false ideals and futile fictions. Also an ideal which is recognized as impossible appears to lose *pro tanto* its obligatoriness and power of attraction. 'Ultra posse nemo obligatur.'

Whether it is possible to infer the existence of a valuable object from a recognition of its value alone is a question of great importance for religion. For the objects of the religious consciousness appear to be largely or wholly of this kind, and the religious 'proofs' of their existence to be ultimately such inferences. They are, moreover, stubbornly persisted in, in spite of the protests of common sense against their validity, and have an important function also in the other sciences, in which they are not recognized so openly, but masquerade as 'axioms' and '*a priori* truths.' In discussing then in its generality this inference from value to existence, we should remember that all values are initially claims, which may fail of validation; hence it will hardly seem valid to rest the reality of the valuable objects on what may be an unsound claim, viz. on the demand for them alone, unsupported and unconfirmed by experience. Logically they are to start with nothing but postulates. It may be legitimate to take them as methodological principles, but even then they must be regarded as hypotheses to be assumed experimentally, until they have adequately approved and verified themselves by their applications to the actual problems which they concern. For example, it may be legitimate to extract from the actual pursuit of ends and of happiness by men the methodological assumptions that all things are to be regarded as tending towards a supreme all-embracing end and towards universal happiness; but can it be maintained that *therefore* such an end is actually operative, or that perfect happiness (*i.e.* everlasting and unalloyed pleasure unaccompanied by pain) is possible? To justify such inferences two further assumptions would seem to be required, viz. that the whole of reality is conformable with human nature and bound to satisfy its demands. Now these assumptions, traditionally described as the axiom of the ultimate rationality of existence, are evidently themselves nothing but values for which existence is postulated, and,

if they are to be admitted as axiomatic truths on their own assurance, it is difficult to see what limits can be set to the postulation of objects of desire. Even as it is, methodological postulates are given great, and perhaps undue, facilities in verifying themselves, because, so long as they work at all, their failures can always be ascribed to the imperfection of our knowledge, and so are not counted against them. Thus nothing short of total failure to predict the course of events need lead us to abandon the postulate of their 'causal connexion.' Hence the testing of a value-postulate always, in a sense, presupposes its truth—though not in any sense that makes this presupposition alone a sufficient reason for regarding it as absolutely true; still it is better to get a postulated value confirmed by experience than to accept the mere recognition of value as an adequate guarantee of its existence. What kinds and amounts of experimental confirmation are to be considered adequate to verify the existence of postulated objects of value will naturally depend on the specific subject-matter, and, as in addition the various values sought and got need not be in harmony with each other, and some may prefer one sort and others another, and as, moreover, the relevance of some of the values found to the existences to be proved may be called in question, opinions will probably long continue to differ on these matters.

6. Value and validity. — It follows from the above that the transition from value to validity is by no means a matter of course, though this is often assumed, both as regards ethical and as regards logical values. In both cases the motive is the difficulty of validating value-claims, which is a long, and indeed theoretically an unending, process. Hence the temptation to allege absolute and self-proving values which are independent of their working in experience. The absolute values alleged, however, are only formal claims, as comes out very clearly in Kant's account of the absolute value of personality and of the 'law' of duty. The declaration that every person should be treated as an end in himself is merely a recognition of the formal claim that every person makes to be so treated (even though he never is so treated, and apparently could not be, in the actual order of things), which may serve as a definition of personality; while the moral 'law,' that duty should be unconditionally fulfilled, is merely a paraphrase of the obligatoriness of the ought-value; in neither case is any light thrown on the questions how, concretely, any one should be treated, or what, concretely, his 'duties' are. Similarly every judgment formally claims to be true, absolutely and unconditionally, and, as it mentions no restrictions to its claim, it may be said to be so; but, as this is so, however false a judgment may turn out to be, it establishes no presumption in favour of its real truth. Thus it is quite possible, and indeed necessary, to inquire whether the values claimed are really possessed, and to question the validity of the values actually recognized. This indeed is one of the chief occupations of a critical philosophy. It means that the problem of value occurs also in the sphere of values; the antithesis of 'ought' and 'is,' which was supposed to differentiate value and fact, arises again over the value of values, when they are taken as facts for the purpose of assessing their value. The explanation perhaps is that error and failure are possible in all human operations, and hence also in the estimation of values. The values which are claimed are subject to revision and correction, and, if it is decided that they are, but ought not to be, they can be called either 'false' or 'wrong'; for it is intrinsically as legitimate to use the value-

predicates of logic as those of ethics to describe their failure.

The difficulty of determining the precise connexion between value and validity is, however, largely due to the obscurity of the notion of validity itself. We are accustomed to regard validity at first as an absolute and (theoretically) unquestionable degree of value, and to illustrate it from the ideal validity of logic and of ethics. On examination, however, this sense of validity appears to be merely formal, and to be nugatory or null as a guarantee of real value. For in both these sciences the valid and the valuable fall apart. Neither is the valuable necessarily valid, nor is the valid necessarily valuable. Every moral order makes extensive use of inferior moral motives; every science uses probable but invalid reasonings. Whether the ideal validity is ever reached, or would be valuable if it were, seems more than doubtful. Hence it seems proper to reduce the meaning of validity to a high, or generally recognized and practically indisputable, degree of value, and to make value determine validity, and not validity value.

7. **Value and valuation.**—If value is conferred upon an object by a personal attitude towards it, it is clear that all objects can be valued by being included in a valuation-process. Many objects, however, are so variously valued according to circumstances, or are so rarely important enough to be valued at all, that they are conceived as neutral or indifferent *per se*. So it is only if an object is constantly valued in a particular way that its value adheres to it and it comes to seem intrinsically valuable. For it then emancipates itself from the personal valuation and makes its valuation look like a mere recognition of an already existing value. Values acquire objectivity in other ways also. Thus the personal reaction expressed in a value-judgment carries a formal claim to universality, since every one initially regards himself as the measure of all things, until he is instructed by the dissent of others. This claim therefore maintains itself only while it is not disputed, and should not be taken as more than methodological. By the comparison of value-judgments it appears that different persons value very differently; hence many value-judgments, being in dispute, are regarded as 'merely subjective.' About others many or all are found to agree, and these may thereby acquire every degree of 'objectivity.' Thus objects which have obtained social recognition as valuable come to rank as objective values. A value that has risen to be objective may then maintain itself without continuing to be valued, and even though, under the circumstances, its value may have been converted into the opposite. Thus, once a literary work is ranked as a 'classic,' its value remains uncontested, even though few care for it or even read it, except for examination purposes; and King Midas no doubt continued to think gold most valuable in spite of his inability to digest it. It cannot always be assumed therefore that, because a value is current and is recognized, it is fully functional, any more than that it is right.

There are then plenty of objective values, which any valuer encounters and has to recognize as given. But they may nevertheless all be conceived as products of valuation-processes, and as presupposing prior value-judgments. For when the valuation of an object has been repeated and has grown familiar, the conscious and reflective value-judgment becomes superfluous, and an immediate apprehension of value results, just as immediate perception supersedes judgment about familiar objects of cognition. In other cases, it is true, this process does not occur in the history of

the individual, but it can then be traced in that of the race, whose achievements the individual inherits. An object may, *e.g.*, be apprehended as pleasant, beautiful, or right, without a judgment or process of valuation; but the immediacy of its value-claim is no bar to any inquiry into why it is so valued, how it has come to be so, and whether it ought to be so, and really is as beautiful, right, or pleasant as it seems to be. Hence the values which are psychically data, and psychologically immediate, may always be logically mediated and made objects of valuation-processes and explicit value-judgments. They then function as facts to be evaluated.

8. **Transvaluations.**—The process of reflective reconsideration of given values continually leads to changes in their status. Hence 'transvaluations' must be regarded as normal and entirely legitimate occurrences in every sphere of values, though they are not everywhere as socially prominent as in the annual changes of the fashions.

As Dewey says, 'All valuation is in some degree a revaluation. Nietzsche would probably not have made so much of a sensation, but he would have been within the limits of wisdom, if he confined himself to the assertion that all judgment, in the degree in which it is critically intelligent, is a transvaluation of prior values.'¹

One sufficient reason for this is that, strictly speaking, it is not psychologically possible to repeat a valuation. The second time the valuation has lost its novelty, and the delight of discovery is gone; it is acquiring familiarity and beginning to breed contempt or indifference; or again it is growing easier, and the resistance to it is diminishing, as habituation renders it less repugnant. Moreover, valuations necessarily vary according to the changes in the organic needs which condition them. His tenth penny bun will neither taste as good nor be valued as highly by a hungry boy as his first. No doubt these changes in value are little noticed because many of them are slight, unimportant, and ephemeral; but they would anyhow be obscured by the general bias in favour of stability. Unless it is discounted, it will hardly be recognized that stable values are exceptions rather than the rule. They bulk large because they are attended to and selected. Their stability is always more or less a construction for methodological purposes, like the extraction of stable objects out of the flux of happenings. It is always to some extent a fiction, because it is never absolute, and because there are no eternal values, none that endure unchanged and untransformed by new valuations for ever, unless it be life itself—so long as that lasts. It may even become a dangerous illusion, if its character is not understood, and it is made an obstacle to salutary and necessary changes. In such changes the old values always condemn the new, and *vice versa*, often with tragic results. Transvaluations are the stuff out of which heroes and martyrs of 'reform' or 'loyalty' are made, at every step in human progress. The question of what is the right value is unanswerable for the time being, because it is precisely the question which is being fought out. But we can predict that such changes will always be opposed, for there is always a conservative and a progressive party with respect to any change. These party attitudes are essentially valuations, as any one can discover from himself, if he is open-minded, and also distracted, enough to have a 'cross-bench mind' and to feel the force of both the opposite contentions. Nor are these the only conflicts which may lead to a change of values. Every society, and nearly every soul, is full of conflicts between opposing valuations, and any variation in their relative strengths may entail a change in values. The chief agency which blinds

¹ *Essays in Experimental Logic*, London, 1916, p. 386.

us to these transvaluations is the stability of words; for these change their form much less rapidly than their meaning.

9. **Conclusions.**—The above survey of the problems of value may be regarded as confirming most of the preliminary points noticed in § 1. The philosophic importance of the subject has been attested by the great variety and universal prevalence of values. The provisional definition of value as essentially a personal attitude, as a recognition of the supremacy of the category of personality, has maintained itself and proved a clue to the labyrinth of values. It also renders somewhat nugatory the psychological debates of the schools of Meinong and von Ehrenfels as to whether values are rooted in feeling, will, or desire. For a personal attitude is a concern of the whole man and not of psychological abstractions. If, however, it is thought necessary to pick one among such psychological phrases, it is probably best to say that value is a personal attitude, of welcome or the reverse, towards an object of interest. For few are likely to dispute that 'interests' are relative to personality. This relativity, however, is not to be regarded as importing any objectionable subjectivity into values, just because it proves to be the source also of their objectivity. For it turns out that all objects are pervaded by values and constituted for man by valuations, and hence their avowed values may just as rightfully belong to them as the values latent in their other qualities. Accordingly the opposition between value and fact breaks down. 'Facts' are themselves values, values established in the endeavour to analyse out the factor of givenness contained in experience, and presupposing purposive manipulation of apparent 'facts.' They are thus 'made' things, though they are not made out of nothing, but out of previously recognized facts which are subjected to criticism to determine what they 'really are.' Values are also acts in so far as they presuppose valuations, purposive manipulations of data, and judgments; also in that they have prospective reference to action, and are intended to guide it. Accordingly, the belief that values belong to the practical side of life is well founded, and even truer than it seemed; for in ultimate analysis logic also is a science of values. Its 'theoretic' values presuppose purposes, selections, choices, and judgments which are acts, and do not differ in kind from those which are openly 'practical.' It is clear also that the notion of value as something gratuitously superadded upon fact must be modified, if it is interpreted as meaning that values are something unreal, artificial, and optional. Reality in its fullness contains and exhibits values, and they are ejected from it only by an effort of abstraction, which is relative to certain restricted purposes, and is never quite successful. Values therefore are not to be regarded as gratuitous additions to reality, made out of the superfluity of human perversity, but as its highest qualities and the culminating points of its significance for us.

LITERATURE.—The literature is extensive but scattered, and often raises the questions about value only incidentally and in connexion with other problems. The historical part of it has been mentioned above in § 2; the modern is still largely contained in periodicals, in English especially in the *Journal of Philosophy and Psychology* (from 1915), in discussions conducted between W. M. Urban (vol. xiii. [1916] nos. 17, 25, xiv. [1917] 12, 26, xv. [1918] 15), J. Dewey (xii. [1915] 19, xv. 10), H. W. Schneider (xiv. 8, 26), R. E. Perry (xiv. 7), D. W. Fisher (xiv. 21), F. C. S. Schiller (xii. 25, xv. 19), W. R. Wells (xv. 18), etc. In *Mind* artt. by S. Alexander (new ser., i. [1892] 31 ff.), J. S. Mackenzie (iv. [1895] 425 ff.), O. C. Quick (xix. [1910] 218 ff.) may be mentioned. From the German literature on 'axiology,' A. Meinong, *Psychologisch-ethische Untersuchungen zur Werththeorie*, Graz, 1894, *Ueber Annahmen*, Leipzig, 1902; C. von Ehrenfels, *System der Werththeorie*, 2 vols., do. 1897-98; J. C. Kreibitz, *Psychologische Grundlegung eines Systems der Werththeorie*, Vienna, 1902; G. Simmel, *Einführung in die Moralistische Wissenschaft*, 2 vols.

Berlin, 1892-93, and *Philosophie des Geldes*, Leipzig, 1900; H. Maier, *Psychologie des emotionalen Denkens*, Tübingen, 1903, must be mentioned. In English W. M. Urban, *Valuation: its Nature and Laws*, London, 1909, is as yet the only work expressly and solely devoted to the theory of values, but the importance of the subject is being recognized in all quarters. Cf. E. Bosanquet's Gifford Lectures, *The Principle of Individuality and Value*, London, 1912, and *The Value and Destiny of the Individual*, do. 1913, for the absolutist attitude towards the subject; H. W. Stuart, in *Studies in Logical Theory*, by J. Dewey and others, Chicago, 1903, and in *Creative Intelligence*, New York, 1917; H. M. Kallen, 'Value and Existence in Philosophy, Art and Religion,' *ib.*; F. C. S. Schiller, *passim*, esp. in *Humanism*², London, 1912, chs. i, iii., and ix., for the pragmatist; also J. Ward, *Psychological Principles*, Cambridge, 1918, ch. xvi. § 2; and C. T. H. Walker, *The Construction of the World in Terms of Fact and Value*, Oxford, 1919.

F. C. S. SCHILLER.

VAMPIRE.—1. **Introduction.**—A vampire may be defined as (1) the spirit of a dead person, or (2) his corpse, re-animated by his own spirit or by a demon, returning to sap the life of the living, by depriving them of blood or of some essential organ, in order to augment its own vitality. This forms a particular aspect of the general belief that ghosts, or spirits sent by sorcerers, can annoy the living in various ways, or cause their sickness or death.¹ The vampire is often one who has died an untimely death, or whose after life is unhappy, or a dead sorcerer, wizard, or other obnoxious person. Blood being a well-known soul- or life-vehicle, it was supposed that ghosts (or vampires) were eager to obtain it, as is seen from the well-known example of the shades for whom Odysseus sacrificed sheep on his visit to Hades,² as well as from the custom of pouring blood upon graves. Tylor suggests that, when it was seen how certain persons grew thin and bloodless day after day, the easy explanation was that a nocturnal ghost or demon was sucking out their life.³ Hence the vampire belief might originate. The superstition is also connected with the fear which is aroused by the dead, partly because they are often seeking or calling the living, and, in those aspects of it which concern the return of the revitalized corpse, it is an extension of what may have been a primitive conception, viz. that the dead have a life of their own in the grave, which was, in fact, often erected as a kind of house, more elaborate than the houses of the living. Many tales both from savage and from barbaric peoples show that the dead are still living in the tomb and can encounter any intruder upon it (as in Scandinavian belief), or come forth from it to talk and feast with the living or to cause them annoyance. It was also held that a malicious spirit might take possession of a corpse and vitalize it for sinister purposes. The boundary-line between life and death seems to have been but vaguely defined. To prevent the return of the dead, whether bodily or as a ghost, many precautions were in use—e.g., enclosing the grave with a high fence, piling heavy stones upon it, diverting the course of a stream in order to bury in its bed and then permitting it to flow as before, binding the corpse securely (though this was done for other reasons also) or mutilating it.⁴

2. **Range and examples of the vampire superstition.**—While the most gruesome examples of this superstition (the vampire as a revitalized corpse) are to be met with among the Slavic peoples, in modern Greece, and in China, it is found in many other parts of the world and has been entertained in remote ages. It is not easily separated from

¹ See, e.g., *ERE* i. 540.

⁴ Numerous examples are given by J. G. Frazer, 'On Certain Burial Customs as illustrative of the Primitive Theory of the Soul,' *JAI* xv. [1888] 65; and in art. *DEATH AND DISPOSAL OF THE DEAD* (Introductory), § XI., *INDONESIANS*, § 12; J. Déchelette, *Manuel d'archéologie*, Paris, 1905-10, i. 471; H. F. Osborn, *Men of the Old Stone Age*², London, 1916, p. 271.

other beliefs of a like kind. Not only the dead, whether in bodily or in ghostly form, prey upon the living, but demons also, who sometimes have originated from ghosts, suck the blood of the living or feed on corpses.

Beliefs of this kind regarding spirits of certain dead persons are found sporadically in Polynesia, Melanesia, Indonesia, in India, and among African and South American tribes. Among higher races traces of the idea of the dead feeding on the living are found among the ancient Babylonians and other Semites, and in Egypt regarding the *khu*. In ancient Scandinavia the idea that the dead were alive in their barrows gave rise to the belief that they might become unhallowed monsters of the vampire kind, as is seen from the *Grettis Saga*. Parallels occur in Saxon England and among the early Teutons and Celts. In modern Greece the vampire belief has prevailed for many centuries, but largely moulded by Slavic influences.¹ The Slavic superstition holds that various persons become vampires after death. The corpse is revitalized and thirsts for blood. Its ravages begin with relatives, then it attacks other victims, and these in turn become vampires. When the grave of a suspected vampire is opened, the corpse is found undecayed, the lips stained with blood. Its ravages occur by night: the grave must be re-entered by cock-crow, else the vampire must remain wherever he is, stiff and helpless. A great epidemic of vampire superstition occurred in Hungary in the 18th cent., which was investigated by a royal commission.² In China a vampire belief exists, and offers a curious parallel to that of the Slavs.³

3. Rites of riddance.—Among the Slavs, when a grave is opened and the corpse is found to be fresh, swollen with blood, and life-like, it is transfixed through the region of the heart with a stake of aspen or maple (Russia), blackthorn or hawthorn (Serbia), but this must be done with one blow, for two blows would restore it to life. A suspected corpse is also buried in this way. A vampire at Laibach in 1672 is said to have pulled out the stake and thrown it back.⁴ A person who committed suicide was often buried at cross-roads, the body transfixed with a spear or stake, in Britain and elsewhere, in order that the ghost might not walk, but perhaps in earlier superstition lest it should become a vampire. This was forbidden in England by law in 1824.⁵

Sometimes also the head of the vampire was cut off.⁶ The heads of murderers whose spirits the living feared were also cut off and destroyed, or set between the legs or beneath the body. Another effectual way was to burn the corpse to ashes, but care was taken to drive back into the fire every creature which might come from it—worms, snakes, beetles, birds, etc.—lest the vampire should have embodied itself in one of them, and so resume its foul work. This was done among the Slavs, and in Bulgaria a sorcerer armed with a saint's picture is supposed to drive the vampire into a bottle containing some of its foul food, and, when corked up, the bottle

is thrown into the fire.¹ In Greece any corpse which is found not to have suffered dissolution, as well as any suspected of being a vampire, was, and even now still is, exhumed, cut to pieces, and burned, to prevent its further wandering as a *revenant*. Boiling water or oil was poured on the grave, and the heart was torn out of the body and dissolved in vinegar.² This is a reversion to the old pagan custom of cremation of the dead, and, in spite of Slavic influences, the Slavic method of staking the body is not in use.

In China suspected corpses were allowed to decay in the open air before burial, or, when buried, were often exhumed and burned. In the absence of the corpse from the grave, the coffin-lid was removed, thus letting in fresh air, which prevents the body from re-entering it. When the corpse was roaming about, rice, red peas, and pieces of iron were strewn round the grave; it could not pass these, and was found stiff and dead on the ground, and could then be burned.³

To guard against the attacks of vampires, various charms, amulets, sacred symbols, and magic herbs are commonly used in the various countries where the belief exists.

4. Love motive in the vampire belief.—Sometimes the vampire may have intercourse with the widow or other woman. This is part of a widespread belief that the dead or ghosts can have sexual union with the living, and, as far as revitalized corpses are concerned, this motive is found in the ancient Greek story of the girl Philinon, who after her death was found with the youth Machates in her father's house as his lover, leaving him at dawn.⁴ In such stories as this the vampire is linked to the ghostly *mahr*, or nightmare, in its erotic aspect on the one hand—the *mahr* comes into a room through the keyhole, as the vampire does—and to the mediæval *succuba* on the other, in so far as the latter, like other erotic demons, preys upon the vital powers of man, so destroying them.

The vampire-lover theme is also illustrated by the 'Dead Rider' cycle, as in Burger's *Lenore* or Scott's spirited version, *William and Helen*. Burger's poem is based on the folk-belief that a dead man appears to those dearly loved—lover, wife, or child—because they sorrow so much, or in order to draw them to the grave. The living person rides with him on horseback or follows him, ignorant that he is really dead. Usually they reach the churchyard. The corpse sinks into his house—the grave—and the living barely escapes being entombed, or sometimes dies at the grave. Of this there are Scandinavian, Icelandic, Albanian, Breton, Scots, and English versions, and it is even found among the Araucanians as a purely native tale.⁵

5. Vampire and wer-wolf.—Attention has been drawn elsewhere⁶ to the connexion between the kindred superstitions of the vampire and the wer-animal. The main links are that the dead may become wer-wolves or other wer-animals and prey on the living,⁷ and, as in Greece and among the

⁷ Cf. also *ERE* v. 527b.

Slavs, that the man who was a wer-wolf in his lifetime becomes a vampire after death.

A further link of connexion is found in the fact that both vampires and wer-wolves are believed to cause storms, drought, famine, and cattle-plague; both are killed by an aspen stake; and the vampire is sometimes the offspring of a witch and a wer-wolf (or the devil).¹ While the wer-wolf is often a witch or wizard who has assumed animal form, both of these are often blood-suckers and eaters of human flesh, with all the perverted tastes of a vampire.²

The earth personified, occasionally as Cerberos, was sometimes supposed to be an eater of the dead.³ Demonic beings of the under world were also represented as eaters of the dead—Chimæra, Erynnos, the Egyptian 'eater of hearts' or 'eater of the dead,' etc.⁴

6. The vampire in literature.—Such a superstition has naturally attracted some attention in literature. Byron has an effective passage referring to it in *The Giaour*. His prose work on the subject (unfinished) was completed by Polidori and dramatized by Charles Nodier. Hoffmann introduces it in one of the tales in *The Serapion Brethren*. It is also the subject of Théophile Gautier's *La Morte amoureuse*, and of a story in J. S. Le Fanu's *Green Tea*. But the whole superstition has received the most effective treatment, with the greatest verisimilitude, from Bram Stoker in his *Dracula*,⁵ which embodies in a striking manner all that is believed on the subject in Transylvania.

J. A. MACCULLOCH.

VANCOUVER ISLAND INDIANS.—The Indians of Vancouver Island are not a homogeneous people, but belong to three clearly defined groups. The northern part of the island is occupied by tribes of Kwakiutl speech; they are closely related to tribes occupying the mainland of British Columbia to the east and for a considerable distance north of Vancouver Island. The south-eastern part of the island is occupied by Coast Salish tribes. These are but a comparatively small section of the widely spread Salish stock, who are distributed south into the United States as far as the lower Columbia Valley. The remainder of the island—roughly speaking, the southern two-thirds of the west coast—is inhabited by a group of tribes variously known as Nutka (from one of the best known tribes of the group) or Aht. These Indians are almost entirely confined to Vancouver Island; the extreme north-western part of Washington, however, in the neighbourhood of Cape Flattery, is occupied by the Makah Indians, an offshoot of the Nutka group. The Kwakiutl and Nutka tribes are quite clearly, if somewhat remotely, related in speech.

Dieterich, *Nekyia*, Leipzig, 1893, p. 49 ff. For other examples see *ERE* iii. 207. Cf. A. N. Didron, *Christian Iconography*, tr. M. Stokes, London, 1886, ii. 141.

⁵ London, 1897.

The Salish languages may also prove to be related to Kwakiutl and Nutka, but only remotely so at best. These three groups of tribes exhibit numerous interinfluences, the dominant position, on the whole, being held by the Kwakiutl Indians of the north. In this article the religion of the Nutka Indians will be taken as the type for the aborigines of Vancouver Island. Data on the other tribes will be found in art. SALISH.

Beliefs and practices of a more or less definitely religious character enter so largely into almost every phase of Nutka life that it is not altogether easy to mark off religion as a separate subject for ethnologic treatment. For practical purposes the subject of Nutka religion may be considered as embracing the beliefs in supernatural beings of various sorts, prayer, the acquisition of 'power' either by means of amulets and the help of definite beings or by means of the performance of secret rituals of predominantly magical content, shamanism and witchcraft, beliefs in souls, tabus of various sorts and other beliefs of more or less clearly religious reference, and public rituals.

1. Supernatural beings.—It is very difficult to classify the various beings of a supernatural order that are recognized in Nutka belief. They range all the way from a Sky Being, who seems almost on the point of becoming comparable to our own conception of a Supreme Being, down to patrons or guardian spirits (*genii loci*) of specific objects, such as individual cedar trees or house-beams. The line between beings endowed with a more or less distinctive personality and mere amulets is strangely difficult to draw, as, midway between these two types, there are a considerable number of monsters whose only *raison d'être*, so far as humanity is concerned, is that some part of their body can be utilized for amuletic purposes. On the whole, the personality of the majority of Nutka supernatural beings cannot be said to be very firmly defined. As regards their relation to humanity, they might be classified as objects of prayer, beings capable of granting 'powers' of a great many different sorts, beings that are impersonated in rituals, generally in ritualistic dances, beings that figure in myths and family legends, and beings that are visibly represented, by those privileged to do so, as crests. This classification is not a mutually exclusive one, however, as many supernatural beings appear in more than one connexion.

Thus, the Wolf is important in ritual, legend, and crest representation, and is believed to grant 'powers' or 'medicines.' On the other hand, the Whale is important as a crest and mythological being, but does not figure in public ritual, while hunting powers and other gifts are bestowed by him in legends and by virtue of inheritance of such legendary gifts rather than directly in the actual present. Differing from the Whale is the Thunder-bird, in that he is not identified with an actual animal species, and that he is very frequently, perhaps most frequently of all beings, impersonated in ritual performances. Again, such a being as the Ahlmakoh, a kind of demonic wood-spirit, plays an important part in ritual and as an amulet-dispenser, but is never represented as a crest (his mask is used only in connexion with a ritual).

It is difficult in some cases to tell whether a particular type of being is conceived of as a single personality, like the more important gods and goddesses of the Greeks, or as embracing a class of numerous individuals, like our fairies. The latter is probably far more often the case, though true examples of individualized beings undoubtedly also occur. Sometimes the Indians themselves seem to waver between contradictory conceptions, as in the case of the Thunder-bird. He is generally, it seems, thought of as a distinct individuality (legend has it that there were originally four Thunder-bird brothers, but that three of them were destroyed by the Woodpecker), yet the tendency to localize his home on some particular mountain-peak and the necessarily different localizations current among the different tribes have led in the

minds of some to the rationalizing conclusion that there is more than one Thunder-bird in existence.

In a class by himself is the Sky Chief, who enters hardly at all into the life of the natives except as an object of prayer. He is believed to dwell in the sky and to be, in a general way, the dispenser of life and happiness to mortals. He is not represented either pictorially or in rituals, and never, so far as known, occurs as a character in the mythology, not even as creator or transformer. So pale is his personality that one might be tempted to look for Christian influence, were it not for the obviously standardized form, and hence presumably great age, of the prayers addressed to him.

As in all Indian mythologies, a large number of animals are represented as human or semi-human characters in Nutka myths, many of them being endowed with supernatural powers. Few of these, however, can be considered as of interest in a purely religious connexion; the attitude of the Indian towards many of them is comparable to our own in reference to the fantastic characters of a romance or fairy-tale or even, not infrequently, to the purely human characters of a modern novel. The Raven, *e.g.*, while important in some of the more northern Pacific Coast tribes as a creator or transformer, plays the part in Nutka mythology purely of a greedy trickster or buffoon, comparable to the European Reynard the Fox. The belief that animals are descended from human-like beings of the mythological period finds its counterpart in the belief that animals to-day, when out of sight of people, divest themselves of their animal blankets and look, talk, and act like ordinary human beings. Most of the animals represented in the mythology and a large number not so represented are impersonated, by means of face paints, masks, and ceremonial regalia, in the dances of the Wolf ritual (a few of these dances are the Raven, the Woodpecker, the Sea-gull, the Wasp, the Halibut, the Octopus, and the Deer). Even in this connexion, however, it is doubtful if the animal beings themselves, as a whole, have further religious significance than that their representation has become associated with a ritual which is charged with the quality of religious emotion. The animal dances as such seem to be of interest largely as pantomimic performances. Among all these animal beings, however, there are at least some that have a degree of religious importance. 'Powers' may be obtained (or were legendarily obtained) from the Wolf, the Whale, the Hair-seal, the Sea-otter, the Shark, the Beaver, and others. Of particular importance among these is the Wolf. The Wolves are believed to form a supernatural community of their own, with four special fast runners of the chief and the Raven as news-teller. They are looked upon with great reverence—an attitude that finds its fullest expression in the Wolf ritual, founded, according to its origin legends, by the Wolves themselves.

In the mythology we also meet with a number of human-like figures that belong to the supernatural world without being identified with either animals or monsters. Here belongs the creator Kapkimiyyis, who created the first man out of the thigh of the first already existent woman, made the island of Tsisha, the home of the Tsishaath tribe descended from them, and assigned them the various foods, animal and vegetable, that they and their descendants were to use. Kapkimiyyis is evidently a purely local figure, and he is doubtless paralleled by local creators in the other Nutka tribes. Another important figure in the mythology is Kwatiyat, a sort of creator or, better, transformer, who experienced many curious adventures and did much to give the world its present shape. The rock-carvings in the interior of Vancouver

Island are believed to be his work. He is still alive, but it is not known where he resides. With him is often associated his brother, who, like the Raven, is a trickster. Another transformer is known as Causing-everything-to-be-different. His work consisted chiefly in transforming various maleficent monsters into the relatively harmless animals that we know to-day.

We need no more than refer to a few of the host of powers with which the Nutka Indian peoples the land, the sea, and the air. The Heitlik, 'Wont-to-glide-to-the-ground,' is a snake-like, scaly being who darts out lightning with his red tongue. He is generally represented as gliding on the rocks, coiling up or down a tree, or coiled like a belt about the Thunder-bird. When seen, a bit of his tail should be lopped off and preserved as an amulet for success in whaling and other sea-mammal hunting. The Yaai are fairy-like folk that dwell on the summits of mountains. They wear feathers on their heads and are associated with fire and the *aurora borealis*. They are peculiarly elusive beings, frequently dissolving into foam. A supernatural bird, the Mikhtach, said to resemble a female mallard duck, is a potent source of luck in hunting. The Ahlmakoh, already referred to, is a kind of forest ogre, evidently related to the Nutlais, or Fool-dancer, of the Kwakiutl; his nasal mucus is valued as an amulet for invulnerability. The Chiniath are brownie-like woods-folk who do all sorts of strange things, such as hunting for sea-cucumbers as though they were seals; they give power to those who are fortunate enough to see them. The Pokumis are wild and elusive beings, transformed from human beings that have become estranged from human ways or overcome by intense cold. The Pokumis are often represented in the pantomimic dances of the Wolf ritual. The Shishchikuhl is a large animal-like monster who lives inside a mountain and whose red hair is a powerful amulet for success in war. A two-headed being, the Totohtsaktso, reddish in colour and with a tail attached to each of his heads, is particularly virulent as 'medicine'; a small part of his body is a powerful amulet in both war and hunting. He is doubtless the Nutka equivalent of the Sisiutl so often represented in the art of the Kwakiutl Indians. The Tsatsokhta is an enormously strong being with red, shaggy hair and with his right foot large, his left extremely small. The earth of his tracks is a strengthening 'medicine.' One of the most important of Nutka supernatural powers, in ritual and legend as in the acquirement of 'medicine,' is the Hena, a class of beings conventionally represented by, but not actually believed to be identical with, quartz crystals. They have the power of incredibly rapid flight and make a loud, whizzing noise. They have become closely associated in Nutka belief with the Wolf ritual, their characteristic sound being identified with the supernatural whistling that is believed to emanate from the wolves and that is imparted to the initiates of the ritual. It is therefore not surprising that the quartz-like Hena is held to be found also in the body of a wolf, of whom it forms a sort of subsidiary soul.

It is remarkable that the power emanating from most of the supernatural beings of the Nutka is intimately bound up with some amulet-like or fetish-like object, generally some part of his body that is, often with considerable violence, taken from him. The conception of a benevolent attitude towards the seeker after 'power' and of a spiritual guardianship over him—a conception that prevails among so many American Indian tribes—is, on the whole, signally absent here. It is present in some degree in the legendary accounts of ancestral experiences of the acquisition of power, yet even here the chief emphasis is always placed on the supernatural object acquired and handed down or on the privilege of ceremonially representing such an experience, not on the notion of a mystic relationship.

2. Prayer.—Prayer is often held to represent religious feeling at its purest, particularly when the prayer is individual and of unstandardized form. Among the Nutka Indians prayers are, so far as known, always of strictly standardized form. They are either sacred songs sung at a ritual by a group or by an individual in the presence of the community (such prayers, *e.g.*, are addressed to the Wolves of the Wolf ritual or in the rite of exorcism in the same ritual) or they are private, and indeed secret, spell-like formulæ addressed to the Sky Chief in the course of the important secret rituals referred to below. The feeling that animates the former class of prayers is perhaps more intensely emotional; it may be characterized as fear or awe glorified into exaltation. The latter class have more of a magical

than purely religious connotation, and this in spite of the fact that they are addressed to the nearest approach that the Nutka have to a generalized Supreme Being. They are self-seeking in tone; more often than not they directly plead for a superiority in success at the expense of others.

Generally the secret ritual prayers are for some specific gift, as wealth, success in hunting or fishing, good luck in love, proficiency in the performance of a ritualistic act, or whatever else, good or evil, one may desire the fulfilment of. As a rule, however, the specific prayer is preceded by a more general *tichsimich*, or prayer for life.

A typical example of such a 'life prayer' is: 'Look down on me, O Chief, have pity on me. Cause me to be alive. Cause to be sent back whatever evil words may be said of me by any one. If at any time one prays in secret for my death, may I cause his curses to recoil on himself; may I cause him to swallow his own [evil words]. Cause me to be without affliction, O Chief. Grant me, O Chief, thy wealth [or whatever else one desires]. . .'

While the private prayers of the Nutka are strictly standardized in form, the texts of the prayers seem to differ considerably according to the varying family traditions. Here, as throughout Nutka life, family exclusiveness in matters of privilege and secret lore is much in evidence.

3. Acquisition of power; secret rituals.—Like so many other primitive peoples, the Nutka feel the necessity of continuous supernatural assistance in the pursuit of the ends of life. The individual must, whenever possible, eke out his own powers by the support of some of the mysterious influences that surround him. Prayer can do much for him; the mere possession of an amulet or fetish or 'medicine' probably more; still more efficacious is a token resulting from an encounter with a supernatural being. The handling of all such tokens, as well as of all supernatural objects or animals not actually identifiable with specific beings, is regularly hedged about by various tabus. Generally fasting and a period of sexual continence are required, also absence from the home. A token may not be lightly rejected, if disaster is to be avoided. One must also know beforehand just how it is to be utilized, what one must do or say in order to secure the benefits of its supernatural influence. Frequently one must be careful to take only the right half. Frequently, also, it may not be taken into the house, but must be kept in a secret spot in the woods. Its power may be communicated by rubbing or other handling, or a small piece of it may be directly used as an amulet; thus a bit of it may be inserted in the cedar-bark wrapping of a sealing or whaling harpoon. Every Indian possesses a considerable number of 'medicines,' for various purposes and of different degrees of potency. Their possession is generally a secret to all but the immediate heirs of their acquirer or inheritor; certain 'life medicines' may even be kept entirely secret until the approach of death. It is interesting to note that the mere possession of secret or magical lore is itself 'good medicine.' As one parts with knowledge, his power of resistance to adverse influences is lessened.

It is not always possible to secure the special assistance derived from supernatural helpers or inherited fetishes. Hence the main reliance of the Nutka Indian for the success of his hunting, fishing, or other ventures is on the punctilious performance of certain private magical ceremonies that we have termed 'secret rituals.' There is an astonishing number and a bewildering variety of such rituals. Every family possesses, by secret inheritance, enough to guide it safely through life. Sometimes several versions of a magical ritual—one derived, say, from the paternal, the other from the maternal, tradition—are known by an individual, but they may never be combined or

confused. The secret rituals are always performed in a hidden spot at a considerable distance from the house; for the more elaborate rituals the various families have prepared spots deep in the woods, often near pools or in caves. The rituals range in complexity from comparatively simple magical performances, prayers, and spell-pronouncements lasting but a single night to elaborate ceremonies extended over a month or more. The former are either abbreviated versions of more elaborate rituals or relate to the easier quests, such as salmon-trolling; the latter are concerned with the more hazardous or exacting pursuits, such as whaling, sea-lion hunting, or sealing. Each secret ritual is in effect a prayer and magical compulsion toward some desired end—success in trapping fish, spearing cod, harpooning sea-otter, whaling, acquiring wealth, gaining love, bewitching an enemy; even the satisfaction of such unusual desires as success in stealing or the learning of a raven's speech may be compassed by the performance of a magical ritual. The details of each ritual differ according to specific family tradition and the nature of the end sought. The constant features seem to be prayer, the pronouncement of spells, the observance of tabus, rubbing with 'medicines,' bathing and rubbing down with hemlock branches (until the skin peeled, in the practice of the hardier aspirants for success), the wearing of cedar-bark and feather regalia and the laying on of symbolic face-paints, and, most important of all, the performance of magical actions. In principle these actions are dominated by the philosophy of sympathetic magic and by the symbolic efficacy of imitation and the handling of effigies.

Thus, the aspirant for success in whaling may spend hours diving into a pool and coming up to the surface and blowing in imitation of a whale or, bent over the ground, in humping his back like that of the whale; or he may make out of twigs rude effigies of a whaling canoe, its occupants, harpoon and floats, and the hunted sea-mammal.

The magical practices not infrequently included bizarre or revolting features, such as rubbing with the skulls of one's ancestors or the use of a newborn babe that had been stolen, killed, and had its eyes gouged out (a symbolic representation of the whale that is blind to his pursuer and allows himself to be caught). Needless to say, these secret rituals have little or no purely social bearing. The magic ritualist may, however, be accompanied by a close relative, say a son or nephew—frequently, in the more elaborate types, by his wife. Not the least interesting thing about the secret rituals is their dependence for success on a proper calendric placing. The most auspicious season for their performance is the period between the winter and summer solstices, when the days are progressively longer; during a given month it is the days of the waxing moon that should be chosen. The symbolism of this is as obvious as it is world-wide. Indeed, there is every reason to believe that what little precision of solar and lunar observation the Nutka Indians attained was conditioned by the necessity of correctly delimiting the span of auspicious days.

4. Shamanism.—The Nutka shaman, or medicine-man, is such by virtue of supernatural power personally acquired by him or, at least theoretically, by right of inheritance from an ancestor who had himself (or herself) acquired such power. Properly speaking, the acquirement of shamanistic power¹ is on a par with the acquirement of any other type of supernatural power, as for hunting or fishing. In either case the possession of power may be due to the magic inhering in the performance of a secret ritual, to the acquirement of a supernatural token or amulet-like object ('medicine'), with or without the inter-

¹ See art. SHAMANISM.

position of a supernatural being, or to the inheriting of a family 'medicine.' What distinguishes the medicine-man is the function exercised by his power, the class of being from whom it is derived, and the manner of holding and exercising this power.

The main functions of the medicine-man are the location of disease, generally conceived of as a worm-like malefic object that has been lodged in the body of the sufferer by an ill-wisher, the detection, if required, of the causes of the disease, and its removal. The divining, in a trance-like state, of future or distant events and the supernatural causation of disease are also frequently within the province of the medicine-man, but need not be.

The supernatural beings and 'medicines' that bestow shamanistic power are rarely the same as those that give power for other purposes. There is a long list of eerie or unusual objects whose discovery and retention are believed to make a man a shaman—at least to a limited extent, for a really powerful shaman has generally a number of sources of supernatural guidance. The specific beings that grant shamanistic power belong to two classes, 'birds' and 'fish.' Certain birds—*e.g.*, ducks—certain land animals, and certain fish are believed to be powerful shamans themselves and to meet once a year in a doctoring contest. The leader of the 'birds' is a supernatural bird known as Khwini, or Khwili, who is said to belong to the Sky Chief; the leader of the 'fish' is a small eel-like marine fish. The former has the greatest shamanistic power of all. The shamanistic being (animal) bestows power not so much by way of a dream, as so commonly in aboriginal America, as by the amuletic virtue of his own body. This is in accord with the general materializing tendency that pervades Nutka religion.

The power of the 'medicine' amulet or being is, in the case of the Nutka shaman, exercised by virtue of its actual presence in his body. A shaman's supernatural power (*manitu* [*q.v.*]) is not a mystic influence that guides him, but resides in a concrete object that he is believed to keep inside his hand or chest. A powerful shaman may have half-a-dozen or more such 'medicines' in his chest, in supernaturally reduced form. These are never made visible to the laity except on special occasions, such as at a very severe illness or during the *tsayek* ritual, when the shaman may hold them up for inspection. The shamans are believed to have the power of causing their 'medicines' to fly through the air to any place or person desired. The wide-spread conception of the 'flying' or 'shooting' of disease-causing substances seems, by an easy transition, to have been transferred to the Nutka materializations of the *manitu* concept. The *modus operandi* of the Nutka shaman differs according to circumstances. The usual methods are: sucking of the part affected (actually or supposedly), manipulation after rubbing the fists against the hands, resuscitation by uttering certain syllables in a conventional manner, and the singing of specific medicine songs. These songs are often dreamed during the performance of a secret ritual for the attainment of shamanistic power.

5. Soul beliefs and supernatural phenomena.—The Nutka Indians say that the course of life is like the walking of a man on a straight line as thin as a hair. If he misses a single step, he drops down and dies. The soul or living essence of a human being is conceived of as a wee mannikin, a shadowy doublet, which can be held in the palm of a shaman. It may leave the body through the crown of the head, but may either return of its

own accord or be brought back through the ministrations of a shaman. If it fails to return, it means that it has reached the land of disembodied spirits, that its possessor, in other words, is dead. It is then referred to by a term, *cheha*, which may be rendered 'ghost,' but which is more freely used to refer to any discarnate spirit and even to any eerie or highly unusual being, such as an elephant. The ghost is always thought of as evil, and great efforts are taken to rid of its malign influence a house in which a person has died.

Distinct from the soul is the *hlimaksti*, often translated 'heart.' This is not the anatomical heart, but the mind or 'soul' in its psychological, not theological, sense. It is the seat or principle of intelligence characteristic of human beings alone, and is generally localized in the heart or breast.

According to one legend, the creator Kapkimiya made a vertical column of ten faces, stuck close together, and put it into the breast of the first man as his seat of intelligence. This is the *hlimaksti* of to-day. If all ten faces look in one direction, the man's will is strong; if five look one way, five the other, he is in a state of evenly-balanced hesitation. The first woman had no *hlimaksti* put inside of her; hence women are believed to be more flighty and less intelligent than men.

The life after death is supposed to be located in an under world, which is divided into a 'good' and a 'bad' section. In the 'good' quarter are little streams in which spring-salmon run and form the food of the ghostly inhabitants. The spring-salmon of the world of the living are believed to be sent up here by departed spirits. The occupants of the 'bad' quarter of the underground world eat lice. In the opinion of some Indians, the dead turn into wolves or owls. This belief does not necessarily exclude the other.

As among all primitive peoples, there is a vast number of beliefs current among the Nutka in regard to supernatural phenomena and relations. Only a very few of these need be touched upon here. An eclipse of the sun or moon is caused by a supernatural being known as Codfish-in-the-sky, who holds the luminary in his month. During an eclipse each of the Indians would rush off to perform a secret ritual for trolling fish. The magical concept at the basis of this practice is evident: the fish eventually trolled for was to bite just as the Codfish was biting the eclipsed sun or moon. Another very curious belief is referred to by the term 'going off to another place.' The Indians believe that at two unknown periods during the year a big tide comes in at night and shifts about everything in the village, houses and all. After a short time, during which it is difficult to keep awake, everything is shifted back to its proper place. Should one be lucky enough to keep awake during this periodic shift, and be engaged in a secret ritual, he is certain to prove successful in whatever he is praying for.

Perhaps the most interesting belief concerning the relation of human beings to the supernatural world is that which regards twins as salmon incarnations. So much is this taken as a matter of course that it is believed that a twin child involuntarily bursts into tears when it sees a salmon being treated cruelly. Both twin children and their father are subject to many onerous tabus, and the children are not expected to live long. The significant thing about twin fatherhood is that it makes of the father a mere instrument of the salmon-world. The appearance of twins is looked upon as a harbinger of an unusually big salmon run, and the father devotes all his energies during the fishing-season to the singing of songs, the performance of secret rituals, and the observance of tabus intended to propitiate the salmon and provide his fellow-villagers with a maximum catch. Should he disregard the injunctions of the

salmon-world implied by the birth of twins, dire misfortune is certain to befall him.

6. **Rituals.**—Ceremonialism, both social and religious in character, is very prominent in Nutka life. It is somewhat arbitrary to divide ceremonies into the two classes, as, on the one hand, a religious quality (some sort of legendary or supernatural background) is rarely absent from even the most matter-of-fact or casual ceremony (say, a naming feast or invitation ceremony), while, on the other, every more properly religious ceremony, such as the elaborate and peculiarly sacred Wolf ritual, is given the setting of a secular *pollatch* (giving feast) and regularly contains numberless features that have a purely social, not religious, significance. The two major ceremonies of primarily religious connotation are the Wolf ritual (known by the natives as *tlolkwana*) and a shamanistic performance termed *tsayek*. The former undoubtedly has a native Nutka nucleus, but has been much influenced by the winter feast of the Kwakiutl Indians. The latter ceremony is primarily at home among the more southern Nutka tribes; it is also found among the Coast Salish and Quileute (north-west coast of Washington).

The Wolf ritual differs considerably among the various Nutka tribes in its origin legend and in its ceremonial details. In essence it is a quasi-dramatic representation, at least in native theory, of certain legendary occurrences.

Just as a young man or woman, in the legendary past, is believed to have been carried away by the wolves to their supernatural home, to have been taught many religious dances and songs, and to have returned to his people with these immaterial gifts, so, in the ceremony of to-day, the novices, who are to be initiated into the ceremony, are represented as seized by wolves that break into the village and as carried off into the woods, there to be taught particular dances, which, after they are rescued by the villagers and exorcized, they perform among their own people in a state of religious frenzy. The dances vary greatly in character, but are largely pantomimic, referring either to animals, occupations, or supernatural beings. Many of them are inspired by a spirit of savage recklessness that may take the form of self-torture or ceremonial killing. The association of all those (novices and old initiates) who dance a particular dance into a "secret society" is a very much more weakly developed concept than among the Kwakiutl. On the other hand, the individuals who are banded together throughout the ceremony as wolf-performers, by hereditary right, may be looked upon as constituting a true confraternity.

In a rather vague way the Wolf ritual may be interpreted as a kind of placating of the powerful supernatural beings that appear to us as wolves, but there can, in actual fact, be no talk of a definite function of the ceremony. It is a complex historical growth that serves as a traditional setting for the public expression of religious emotion (awe and exaltation) and for the satisfaction of certain artistic needs. Even the spirit of ribald humour finds expression in it. To a large extent, also, the purely religious and artistic motives are overlaid by the desire, so characteristic of West Coast culture, to enhance one's social prestige by display and a lavish expenditure of wealth. As usual with great tribal ceremonies, it undoubtedly means different things to different temperaments.

The *tsayek* ceremony is ostensibly undertaken, like so many other great tribal ceremonies among American Indians, for the cure of a sick person who has not profited by ordinary shamanistic treatment. The main feature of the ceremony is the singing of a peculiar type of songs, accompanied by beating of sticks and certain conventional gesticulations and jumps. Each Indian that takes part in the ceremony sings a number of such *tsayek* songs that have become his property by family inheritance. Novices who are to be initiated into the *tsayek* ceremony sing these songs for the first time. In the course of the ceremony another and more advanced type of initiation takes place—that of those who have had some supernatural shamanistic experience, or who have a hereditary shaman-

istic right, into the formal status, often theoretical rather than actual, of shaman. This part of the ceremony offers suggestive parallels to the well-known Midé'wiwin of the Ojibwa and other Algonquian tribes. Indeed, the two types of initiation, *tsayek* proper and shamanistic, may be looked upon as constituting a series of degrees not unlike the more intricately developed system of shamanistic degrees current among the Algonquian tribes.

LITERATURE.—The information in this art. is based on the author's MS notes. For further literature on Nutka religion see: F. Boas, 'The Nootka,' in *Sixth Report on the North-western Tribes of Canada, Report of the British Association for the Advancement of Science*, Leeds meeting, 1890, pp. 582-604, 'The Nootka' (religious ceremonials), in *The Social Organization and the Secret Societies of the Kwakiutl Indians (Report of the United States National Museum, 1895)*, pp. 632-644; E. EDWARD SAPIR.

VANNIC RELIGION.—See ARMENIA.

VASUBANDHU.—Vasubandhu (c. A.D. 420-500), the second of three brothers of a Kauśika Brāhman family, was born at Puruṣapura (Peshawar) in Gandhāra (Kandahar), and is one of the most prominent figures in the history of Buddhism. His not less celebrated elder brother, Asanga, is well known as the first propounder of the Yogācāhāra school of Buddhism, i.e. Buddhist idealism. Of the youngest brother, Viriñchivatsa, we know nothing.

1. **Life.**—There are three different traditions concerning Vasubandhu's life: (1) *The Life of Vasubandhu*, translated by Paramārtha into Chinese;¹ (2) *passim* in *Si-yu-ki* ('Records of the Western Countries') by Hsien-Tsiang, (3) the Tibetan tradition in Taranātha, etc. The general drift of them is as follows:

Vasubandhu, a contemporary of Vikramāditya (=Skanda-gupta, A.D. 465-480), and his son Bāladitya (c. 485-) took orders in the Sarvāstivāda (realism) school, having studied under Buddhāmitra (Mañoratha, according to Hsien-Tsiang) the whole of the sacred books, i.e. the three collections (*Tripitaka*), of the school to which he belonged. Afterwards he studied the doctrines of the Sautrāntika (the school which accepts the *Sūtra* as its sole authority), thinking them more reasonable, in many points, than those of his own school, and he determined to formulate an eclectic system out of the two lines of doctrine along which his mental activity had been directed. In order to do so, it was indispensable for him first

¹ B. Nanjio, *Catalogue of the Chinese Translation of the Buddhist Tripitaka*, Oxford, 1883, no. 1463.

to acquire a thorough knowledge of the Sautrāntika doctrines. With this object he went to Kāśmīra (Kashmir), the headquarters of the study of the doctrine, carefully disguising himself and assuming a false name, lest the scholars of that country should be jealous and refuse to instruct him. There, for many years, under the guidance of Saighabhādra, he studied the doctrine, against which he would, however, frequently dispute, basing his objections on the teachings of the Sautrāntika itself. Skandila, the teacher of Saighabhādra, had his suspicions aroused by the extraordinary ability of the unknown student, and at last ascertained that he was none other than Vasubandhu, whereupon he advised him secretly to go back to his own land, lest some factious people should kill him. Vasubandhu therefore returned to his home, where he composed a poem of 600 verses called the *Abhidharmakośa*,¹ a compendium of *Abhidharma-mahāvibhāṣā*,² and sent it to Kāśmīra. The king of Kāśmīra and the scholars were at first delighted with it, imagining that he was expounding and propagating their doctrine; but, on the advice of Skandila, who knew that the compendium was not quite favourable to their sect, the author was asked to write an explanation. So he expounded the verses in a prose commentary, with the addition of seven verses and one chapter on the non-Ego. These verses together with the commentary are called *Abhidharma-kōśa-śāstra*.³ Vasubandhu afterwards travelled to Ayodhyā (Oudh) and was converted by his brother Asaṅga to the faith of the Mahāyāna, and composed many treatises in defence of his new creed, with commentaries on various Mahāyāna works. He died there (in Nepāl, according to Tibetan tradition) at eighty years of age.⁴

2. Works.—Vasubandhu's first literary undertaking seems to have been the composition of his *Paramārthasaptati* ('Seventy [Verses] on the First Principle'), in which he refuted and destroyed all the ground principles of the Sāṅkhya philosophy as put forth in the *Sāṅkhya-śāstra* by Vinḍhyavāsa, by whom Buddhāmītra, Vasubandhu's teacher, had been defeated in an ecclesiastical dispute. This fact gave general satisfaction, and King Vikramāditya rewarded him with three lacs of gold.

Before turning to his Buddhist works, we may make a few additional remarks. First, it must be borne in mind that about the 2nd cent. B.C. Kātyāyanipuṭra founded the Sarvāstivāda school and composed the *Jānaprasthāna* ('First Steps to Knowledge'), a simple catalogue *raisonnée* of the technical terms of his doctrine as contained in previously published 'six-branch-treatises' (*ṣaṭ-pāda-śāstra*). At the beginning of the 2nd cent. A.D. a very detailed commentary on this work, called *Abhidharma-mahāvibhāṣā* ('Thorough Discussion of the *Abhidharma*'), was composed by 500 *arhats* of Kāśmīra. In this work we have not only a detailed explanation of the text, but also a minute discussion of each topic, so that the commentary became immediately a mine of dogmatics and the sole authority for the sect, by whom it was widely studied in Kāśmīra. Hence its special name *Kāśmīra-vaibhāṣika* ('Vibhāṣa-follower of Kāśmīra'). This Sarvāstivāda doctrine is realistic and teaches a direct perception of external objects. Its rival doctrine is that of the Sautrāntika, which, though also realistic, asserts an indirect perception instead of a direct one. The two doctrines were the most influential in Hinayānism. Vasubandhu, though originally a Sarvāstivādin, was a free-thinker, and did not blindly follow either his orthodox tenets or his lately adopted Sautrāntika ideas. Scholars designated his guiding principle 'a preference of reason,' and his eclecticism is shown in his celebrated work *Abhidharmakośa*, called by native scholars 'the ingenious treatise.'

It is divided into eight treasure-houses (*kośasthāna*):

- | | |

Puḍgala-viniśchaya ('Exposition of Personality'), is devoted to the argument of the non-Ego. This he composed when invited by the Kāśmīrean Vaibhāṣika to explain the object of his work. To the first chapter a dogmatical explanation of the word *Abhidharma* is prefixed. It says that *Abhidharma* means 'confronting the thing,' i.e. insight. The thing to be confronted is of two kinds. The one aimed at is *nirvāṇa*, or final beatitude; the other mediated by is the four verities, or immanent characters of things. This confronting of things, i.e. insight, is called pure. It is the final *Abhidharma*. This pure insight can be called into existence by preliminary insight and teaching; the former consists in innate, acquired, and exercised insight; the latter implies the use of many standard works of the sect indirectly conducive to the origination of pure insight. These preliminary elements are called the conventional *Abhidharma*. As Vasubandhu in his work sums up the essential contents of the *Abhidharma* literature of his predecessors, and as this literature is the main source of his treatise, his work is entitled *Abhidharmakośa* ('Repository of the *Abhidharma*'). In this way he set forth concisely all noumena and phenomena and the *rationale* of the non-Ego, derived chiefly from the sources of the Sarvāstivāda school, but some tenets were taken from the Sautrāntika school and sometimes he introduced his own views.

Although Vasubandhu sympathized in his work with the Sautrāntika and showed his preference for it as the more reasonable, he was by no means satisfied with these realistic speculations, in which he was immersed until he came to the second stage of his philosophical development. When converted to Mahāyānism, he adopted the subjective idealism of that school, which he completed and systematized in his not less celebrated epitomic composition *Vijñaptimātratā-triṃśaka* ('Thirty [Verses] on "Mere Idea"').¹ The philosophical school based on this treatise teaches that all phenomena, both material and non-material, originate in mind, which is divided according to its action into eight 'ideas' (*vijñānāni*), viz. (1-5) five ideas belonging to the five sense organs, (6) idea of mind (*mano-vijñāna*), (7) mind-idea (*mano-vijñāna*), or stained mind-idea (*kliṣṭa-mano-vijñāna*), (8) receptacle-idea (*ālaya-vijñāna*). The seeds (*bija*) or possibilities of all phenomena are retained in the eighth idea, whence comes the so-called objective world, in consequence of which we are disturbed and rove about in painful efforts after peace. If we once fully understand that nothing else exists but mind, then the objective world ceases to exist for us, and those eight confused ideas are turned into eight kinds of enlightened wisdom (*jñāna*) by means of which we can unite in the *tathatā* ('thusness') which transcends speech and thought.

The *Abhidharmakośa* and *Vijñaptimātratā-triṃśaka* are the two most celebrated of Vasubandhu's twenty odd works, and represent the successive development of his philosophical views.

It seems that towards the end of his life he reached a quite different phase of belief. He composed 24 verses entitled *Longing for the Birth* (in Sukhāvātī, i.e. the Paradise of the West), being a summary of the *Aparimitāyus-sūtra*,² to which he subsequently added a commentary. These verses with the commentary, regarded as one work, are called the *Aparimitāyus-sūtrōpadeśa*.³ From them we see that he believed in the Amitābha (*alias* Aparimitāyus) doctrine, i.e. the doctrine of salvation by the grace of the Author, while in the two former phases of Buddhism through which he had passed no such idea occurs, nor is the name of Amitābha even mentioned.

VEDAS.—See LITERATURE (Vedic and Classical Sanskrit), VEDIC RELIGION.

VEDĀNTA.—*Vedānta* in Sanskrit signifies the 'end or final aim of the Veda.' The word was employed at first to denote the older *Upaniṣads* (see art. UPANIṢADS), but generally serves as the name of the most wide-spread of the six philosophical systems of the Brāhmins (*i.e.* Sāṅkhya, Yōga, Mīmāṃsā, Vedānta, Vaiśeṣika, Nyāya). In the Vedānta the pantheistic doctrine of the Brahman, the All-One, is systematically developed, and placed on a philosophical foundation. The founder of the Vedānta, or rather the first teacher who made a formal presentation of it (in the *Vedāntasūtras* or *Brahmasūtras*) was Bādarāyaṇa.¹ Since, however, his treatise is set forth in the form of aphorisms—precisely like the *sūtras* or 'clues' of the other philosophical schools of India—which in themselves are completely unintelligible, it is impossible to gain a satisfactory knowledge of the system from his work alone. This is first supplied by the expositions of the numerous native commentators, of whom the most important was the renowned Vedāntist Śaṅkara, who lived c. A.D. 800. Besides expounding the *Brahmasūtras*, Śaṅkara composed a large number of commentaries on the *Upaniṣads*, and wrote several independent treatises on the Vedānta philosophy. It is reasonable to suppose that the conceptions of Śaṅkara agree in all essentials with the views set forth by Bādarāyaṇa. Nearly all educated Hindus in modern India, except in so far as they have embraced European ideas, are adherents of the Vedānta; and three-fourths of these accept Śaṅkara's interpretation of the *Brahmasūtras*, while the rest are divided among the varying explanations of the system offered by one or other of the remaining commentators.

The fundamental proposition of the Vedānta philosophy is in agreement with the doctrine of the ancient *Upaniṣads*, viz.: 'the ātman (*i.e.* our self or our soul) is identical with the Brahman, the All-Soul.' Since, then, the eternal and infinite Brahman, the power that works in everything, cannot consist of parts, or be subject to change (for everything that consists of parts, and is liable to change, is perishable), it follows that every one is essentially not a part or an emanation of the Brahman, but is Brahman entire and indivisible. Nothing real exists besides Brahman; 'there is one only, without a second.' Therefore in India the Vedānta doctrine in the form in which Śaṅkara has presented it is called the 'doctrine of non-duality.'

In opposition to the fundamental thought of the Vedānta, as thus set forth, is arrayed not only experience, which teaches the existence of a manifold variety of persons and things, but also the ceremonial law of the Veda; for the latter is based upon the belief in transmigration and retribution, and therefore takes for granted a multitude of individual souls. This twofold contradiction is refuted by the assertion that both experience and the ceremonial law of the Veda depend upon the 'ignorance' (*avidyā*) natural to every man, by which the soul is prevented from distinguishing itself from the body, the psychical organs and other controlling influences, and from recognizing that the empirical universe is an illusion (*māyā*). In truth, the entire world of phenomena is merely a delusion, comparable to a *fata morgana*, which disappears on closer examination; or like a dream-image, which seems real only to the sleeper, but vanishes in waking hours.

There is only one thing in the universe which is unaffected by this power of illusion—our self, the

¹ For a remark regarding his date see art. MĪMĀṂSĀ.

soul. This self admits of no proof, but it also stands in no need of proof, for it is in itself the basis of all argument, and therefore is already established antecedent to any possibility of proof. Similarly, also, it cannot be denied, for every one in denying it assumes and testifies to its existence. The self, moreover, cannot be anything distinct from Brahman, since Brahman alone exists. Everything that is asserted of the Brahman—pure, spiritual nature, omnipresence, eternity, etc.—holds good, therefore, of our soul. Here in our inner self we must look for knowledge. In himself alone, in the depths of his own being, can man find the solution of the riddle of the universe, and know the only true real.

When 'ignorance' arises, by which the true condition of things is hidden from us, the Vedānta philosophy does not inquire. It tells us only that ignorance is removed by 'knowledge' (*vidyā*), or 'universal perception' (*sāmyag-darśana*). If this universal perception has been attained, and there by the illusory nature of everything that is not soul, and the absolute identity of the soul with Brahman understood, the determining conditions for the earthly existence of the soul are removed. For this earthly existence is itself indeed only an illusory appearance. He who knows 'I am Brahman' has gained emancipation from the *saṁsāra*.

Since Śaṅkara recognizes the unconditional authority of the *Upaniṣads*, he is compelled to take account of their entire contents, which to a considerable extent are in opposition to the doctrine here set forth. He accomplishes this by setting up two systems side by side with one another—(1) the higher or esoteric knowledge (*parā vidyā*), which adopts the metaphysical standpoint, and proclaims the doctrine of the non-dualistic Brahman, as it has just been stated, to be the absolute truth; and (2) the lower or exoteric knowledge (*aparā vidyā*), which takes its stand at the popular empirical point of view, and offers a popularly religious explanation of the universe. While in the 'higher knowledge' the Brahman is free from all attributes and qualities (*nirguṇa*), in the 'lower knowledge' it appears endowed with the attributes of personality (*saḡuṇa*). It is owing to ignorance that these attributes are ascribed to the Brahman, for men who cannot rise to the height of the metaphysical standpoint need an object of worship. In the lower knowledge, therefore, the Brahman appears as a personal God, who creates and rules the universe, and rewards or punishes men according to their deeds. The universe also is looked upon as real, and the statements of the *Upaniṣads* with regard to the wandering of the soul through innumerable bodies hold good. The lower knowledge teaches that the soul is constrained by the psychical organs, the bodily senses, the vital principle, and the moral determination, that under such limitations it completes the cycle of metempsychosis, and that by believing worship it may attain to the lower personal Brahman. Union, however, with the lower Brahman, the Brahman of attributes, is merely an inferior temporary lot. Complete deliverance is attainable from the metaphysical point of view solely by the knowledge of the higher Brahman, the Brahman without attributes. Everything that is taught in the lower knowledge is worthless for him who has learnt to know himself as the eternal indivisible Brahman; for he understands that the lower Brahman is a product of ignorance, that qualities are attributed to it merely for the purposes of worship which do not really belong to it, and in the light of the supreme knowledge are seen to be an illusion. He who has attained to this knowledge is no

longer led astray by the delusive appearance that surrounds him. In complete indifference towards the course of the world he awaits the end of his life, the continuance of which is explained on exactly the same principles as in the Sāṅkhya (see the art. SĀṆKHYA). At death the wise man is lost in Brahman.

Among the commentators who dissent from Śaṅkara's interpretation of the Vedānta, and who represent one or other of the philosophical and religious standpoints of various sects, the most renowned is Rāmānuja, who lived in the 11th cent. after Christ. Rāmānuja (*q.v.*) in his exposition of the system approximates to the lower exoteric knowledge of Śaṅkara, and as an adherent of the Pāncarātra doctrine introduces into Bādarāyaṇa's treatise views which are nearly related to the Christian standpoint, but are alien to the true Vedānta doctrine. In his view the individual souls are not identical with the supreme soul, *i.e.*, as he represents it, with God, but are separate and distinct as in the Sāṅkhya-Yoga. The cause of their earthly existence is not 'ignorance,' but unbelief; and deliverance is union with God, to be gained not by 'knowledge,' but by believing love (*bhakti*) towards God. In the history of the Vedānta philosophy, therefore, the same theistic tendency makes its appearance which may be observed under the form of the system of Yoga in the further development of the Sāṅkhya doctrine.

LITERATURE.—In his *Bibliography of the Indian Philosophical Systems* (Allahabad, 1859) F. E. Hall enumerates no fewer than 310 Sanskrit works on the Vedānta; and even in the most recent times no year passes without the appearance in all parts of India of numerous treatises on this philosophy written partly in Sanskrit and partly in the vernaculars. The best and most detailed presentation of the Vedānta doctrine as interpreted by Śaṅkara is to be found in P. Deussen's *System des Vedānta*, Leipzig, 1883; cf. also A. Barth, *Religions of India*³, London, 1891; F. Max Müller, *Six Systems of Indian Philosophy*, London, 1899, ch. iv., and *Vedānta Philosophy*, London, 1894; M. Monier-Williams, *Indian Wisdom*⁴, London, 1893; H. Haigh, *Leading Ideas of Hinduism*, London, 1903; P. Deussen, *Philosophie der Upanishads*, Leipzig, 1899, Eng. tr., Edinburgh, 1906; *Vedānta-Sūtras*, with commentaries of Śaṅkara and Rāmānuja, tr. by G. Thibaut in *SBE*, vols. xxxiv. xxxviii. xlviii.; P. Deussen, *Die Sūtras des Vedānta*, tr. Leipzig, 1887; *Sarva-dāśana-saṅgraha*, tr. by Cowell and Gough, 2nd ed., London, 1894, ch. xvi.; M. Walleser, *Der ältere Vedānta*, Heidelberg, 1910.

R. GARBE.

VEDDAS.—**I. Geographical distribution and mode of life.**—The Veddas, the aboriginal inhabitants of Ceylon, are to be regarded as the island representatives of the short, long-headed, pre-Dravidian jungle tribes of India. Formerly they extended over the whole island (for there is no reason to doubt that the Yakkas of the *Mahāvamsa* were Veddas); now the few surviving relatively pure-blooded Veddas who do not practise agriculture are to be found in the park country of Uva, while communities carrying on a rough cultivation, whose members have more foreign blood in their veins, exist in the poorer part of the Eastern Province and that part of the North Central Province known as Tamankaduwa.

At the present day the Veddas may be divided into three classes, *viz.* forest, village, and coast Veddas, each showing certain characteristic social features. The forest Veddas, reduced in number to a few families in the wildest parts of the island, have alone kept up their old mode of life. Living on game, honey, yams, and fruit, they are still able to collect these in sufficient quantity not only to support life, but to leave a surplus to barter with the 'Moormen' on their annual visits or to take into the nearest Sinhalese village to exchange for iron, cloth, pots, and occasionally rice and coco-nuts. So long as this sort of life is possible, communities are necessarily small and the old mode of habitation in caves and rock

shelters persists, but where the country is less wild the Sinhalese have killed down the game to such an extent—even where they have not settled—that the Veddas have been obliged to take to cultivation, and for this purpose they have organized themselves in villages and at the same time have commonly intermarried with the Sinhalese. It is in this way that the second class of Veddas, the village Veddas, have originated; indeed the process has been going on for hundreds of years, and there is evidence that centuries ago there were 'Vedda' communities—*i.e.* communities with enough Vedda blood to be called Veddas by their contemporaries—politically organized and having chiefs who were in constant relation with the Sinhalese court. This process of contact metamorphosis has had as its most striking result the complete loss of the original Vedda (non-Aryan) language, while the identity of the relationship systems of the Veddas and Sinhalese is presumably to be attributed to the same cause. The coast Veddas are Veddas settled in the coastal area of the Eastern Province who have intermarried with the local Tamils, whose physical type they have acquired and whose beliefs they largely share. In the following account the term 'Vedda' must be taken to mean forest Veddas, unless village Veddas are specifically mentioned.

The Veddas have never been metal workers, and, although they have no traditions concerning the use of stone implements, the quartz artefacts described by the cousins Sarasin and others must, at least provisionally, be attributed to them. The iron blades to their arrows, their axe-heads and irons for 'flint and steel' strike-a-lights, are the only metal tools they use. These arrow heads and axes were noted in the 17th cent. by Robert Knox, who mentions the silent trade for metal in exchange for flesh and honey practised by the wilder Veddas.

Apart from their skill as hunters the Veddas have but the bare beginnings of a few arts and crafts. They make no pottery except where they have learnt it from the Sinhalese. Personal ornaments scarcely exist, yet the rocks of some of the caves bear very rough drawings of men and animals and the skin bag in which honey is collected. They are drawn by women and were said to have no religious or other special significance. The Veddas have no musical instruments, but during their dances they frequently beat time with their hands on the abdomen; and C. S. Myers, who has examined phonograph records of their songs, considers that they are simpler in structure than any other native songs hitherto published, and indeed represent the very beginning of melody-building.

2. Social organization.—The Veddas have a clan organization with descent in the female line; the clans are exogamous, though this rule is not strictly adhered to. Two intermarrying clans, the Morane and Unapane, are considered superior to the others, with whom they should not intermarry. Monogamy is the rule and divorce is unknown, the correct marriage being the cross cousin, especially with the daughter of the mother's younger brother. A high standard of sexual morality is maintained in both the married and unmarried. There is close comradeship between a man and his wife's father; an unmarried man assists his mother's brother, his actual or potential father-in-law, in most activities, and this association continues after marriage. A man's *baena* (sister's son, daughter's husband) is always welcome to hospitality in cave or hut, when other relatives would not intrude. Though descent is in the female line, inheritance is in the male line. A Vedda has little personal property, his axe and bow and arrows being his most important possessions, but land, or, more strictly speaking, hunting and fishing rights, the tenancy of certain caves, as well as the right to the combs of the rock bee on definite tracts of land, descend from father to son, or are presented to a son-in-law on his marriage.

The Veddas have no regular chieftainship, but the eldest man of each small group exercises considerable authority, the importance of such men being enhanced by the Sinhalese and other officials,

who naturally make a point of dealing with the most intelligent and authoritative member of a group.

3. Religion.—The basis of the Vedda religion is the cult of the dead, and the Vedda point of view can be best appreciated by considering the customs observed when a death takes place. When a man, woman, or child dies, the body is left in the cave or rock shelter in which death from sickness occurred. The body is not washed, dressed, or ornamented in any way, but is allowed to lie in the natural supine position and is covered over with leaves and branches. The cave is then deserted for some years, and, if any bones are left when the Veddas return, they are thrown into the jungle. When an attempt is made to discover the reason for the desertion of the place of death, the usual answer is to the effect that 'if we stayed we should be pelted with stones,' and some Veddas, including the least contaminated, definitely stated that it was the spirit, or *yaku* (fem. *yakini*, pl. *yaku*), of the dead man who would cause stones to rain on anybody staying near the corpse. Although fear of the dead (expressed by leaving the site of death) occurs among all the wilder Veddas, a few old men were by no means confident that all men on their death became *yaku*; no doubt the spirits of important and influential men survived, but whether this applied to quite ordinary individuals was more doubtful, and in one community there was a special ceremony the object of which was to settle this point.

Each Vedda community consists of a small number of families who, since cousin marriage prevails, are doubly related by blood and marriage; the *yaku* of the recently dead, called collectively the Nae Yaku, are supposed to stand towards the surviving members of the group in the light of friends and relatives who, if well treated, will continue to show loving kindness to their survivors, and only if neglected will show disgust and anger by withdrawing their assistance or even becoming actively hostile.¹ Hence it is generally considered necessary to present an offering to the newly dead, usually within a week or two after death, though a few Veddas stated that they would not hold a Nae Yaku ceremony until they specially required the help of the *yaku*, or until misfortune threatened or overtook them. Among most Veddas the offering must consist of cooked rice and coco-nut milk, the food that every Vedda esteems above all others; but betel-leaves and areca-nut are often added, and the oldest survivor of a small group of 'wild' Veddas said that this offering would in the old days have consisted of yams and water, if, as was often the case, coco-nuts and rice could not be obtained.

In each community there is one man, called *kapurale* or *dugganawa*, who has the power and knowledge requisite to call the *yaku*; and in the ceremony of presenting the offering called *Nae Yaku Natanawa* (literally, 'the dancing of the Nae Yaku') this man calls upon the *yaku* of the recently dead man to come and take the offering. The *kapurale* (who may conveniently be spoken of as the shaman) becomes possessed by the *yaku* of the dead man, who speaks through the mouth of the shaman in hoarse, guttural accents, saying that he approves of the offering, that he will assist his kinsfolk in hunting, and often stating the direction in which the next hunting party should go. Besides the shaman,

one or more of the near relatives of the dead man may become possessed, but this, though common, is not invariable. The *yaku* leaves the shaman soon after he has promised his favour and success in hunting, the shaman always collapsing as the spirit goes. After the ceremony all the men, women, and children of the group who are present eat the offering, usually on the spot on which the invocation took place, though this is not absolutely necessary. It was clear that this eating of food which had been offered to the *yaku* was an act of communion, and an essential part of the ceremony which was thought to bring health and good fortune; for some communities even anointed the heads of their dogs with the milk of the offering, explaining that this was done because of their value.

Besides the *yaku* of the recently dead there are other important *yaku*, chief among whom are Kande Yaka and his brother Bilindi Yaka. Kande Yaka is the spirit of an ancestor, a mighty hunter in his day; he is invoked to give success in hunting, and during the ceremonial dance given in his honour a realistic pantomime of tracking and killing a deer is performed. Spirits of the dead were believed to go to Kande Yaka and become his attendants, and immediately after death it was necessary for a spirit to resort to Kande Yaka in order to obtain permission to accept offerings from his living relatives, and to obtain power from him to assist them in return for their offerings, or to cause them injury in the event of their bad behaviour. Thus Kande Yaka, who is of especial assistance in hunting, becomes lord of the dead. We have, however, little doubt that to the majority of Veddas Kande Yaka is especially the *yaku* who gives success in hunting, and that his relation to the dead does not leap to their minds on the mention of his name as does the idea of his helpfulness in hunting; for Kande Yaka was essentially a friendly and helpful *yaku*, who, unlike many other *yaku* usually beneficent, never sent sickness; in fact, Kande Yaka the spirit scarcely differs as patron of hunters from Kande Wanniya the mighty hunter, still living and showing kindness and helpfulness towards the people among whom he dwelt.

The Nae Yaku, Kande Yaka, Bilindi Yaka, and certain other *yaku* doubtless belong to the primitive Vedda culture, and to this day these are the important *yaku* among the wilder Veddas. But centuries of contact with Sinhalese and Tamils have led to the recognition of a number of Sinhalese and Tamil demons (or gods) as *yaku*. Thus, running roughly parallel with the three conditions of Veddas mentioned in § 1, three stages of development can be recognized in the Vedda religion: (1) the cult of the dead, including the cult of the spirits of recent ancestors, *i.e.* of the Nae Yaku and the *yaku* of certain Veddas who have been long dead and may well be regarded as heroes; the most important of these is Kande Yaka; (2) the cult of foreign spirits, who have become naturalized and have taken the friendly protective nature of the Vedda *yaku*; the cult of the *yaku* of a number of named 'Vedda chiefs' may be considered to belong to this stratum; one of these, Panikka Yaka, is the canonized spirit of one Panikki Vedda, *i.e.* Panikki the Vedda, who is mentioned in a 16th cent. manuscript; this man, who seems to have been the chief of a group of mixed Vedda and Sinhalese blood, was in fairly intimate contact with the Sinhalese court; (3) the cult of foreign spirits who, though not generally regarded as such, have retained their foreign nature and are, in the main, terrible or even hostile. Another feature of this stratum of thought is the endowment of true Vedda *yaku*

¹ The benevolent nature of the Vedda *yaku* is very noticeable and contrasts with the malignant character of almost all Sinhalese *yaku*. The Sinhalese attitude towards the spirits of the dead generally is fear, while that of the Veddas may be called love; there is certainly a desire for, and belief in, the possibility of companionship and communion with the kindly dead on appropriate occasions.

with foreign attributes. The god Skanda, or Kanda Swami, as he is often called in Ceylon, is worshipped at Kataragam in the south of the island, chiefly by Tamils. There are no Veddas in this district now, but formerly the forests in the neighbourhood were inhabited by Veddas who were known as the Kovil Vanamai Veddas, *i.e.* 'Veddas of the temple precincts,' and they cannot but have been much influenced by the worship at the great temple. In the Eastern province the present writers met some Veddas who were known by the same name, and witnessed a dance performed seven days after the death of a member of the community. Here the *yaka* of the dead man was said to go to 'the Kataragam God' before joining Kande Yaka. Among most village Veddas Indigollae Yaka had taken the place of Kande Yaka; he gives good fortune in hunting and is invoked in the Nae Yaku ceremony. Gale Yaka was also important among village Veddas, but possibly in some localities this is only another name for Indigollae Yaka. Among the wilder Veddas Gale Yaka was never mentioned, and Indigollae Yaka, if known at all, was looked upon as a foreign spirit attendant upon Kande Yaka.

The *kriamma*, literally 'the grandmothers,' are the spirits of Veda women; many are named and seem to be specially associated with rocks and hill-tops. From one aspect they have a malignant character, for, though they are said to love children, they often steal them and cause their death through sickness. Veddas gathering rock-honey will usually propitiate them by an offering of honey.

The worship of the *yaku* consists essentially of ceremonies during which the shaman or chief performer dances himself into an ecstasy—a condition, we have no doubt, of genuine dissociation of consciousness—during which he is thought to be possessed by the *yaka* whom he invokes. These dances are often pantomimic, and, though in different localities the ceremonial varies, especially as regards elaboration, the ritual of each dance is fixed by tradition. Various objects are proper to certain *yaku*, the most important being the *avde*, a ceremonial representation of an arrow, the blade from 8 to 16 inches long, hafted into a wooden handle considerably shorter than the blade. Ordinary arrows are also used in dances, while for some ceremonies an elaborate set of properties is required. It was noticed that, once an article was used in connexion with the *yaku*, it was not placed on the ground. The *kirikoraha*, literally 'milk bowl,' a vessel filled with the white juice squeezed from coco-nut meat, was a necessary part of the ceremonies in which Kande Yaka, Bilindi Yaka, or the Nae Yaku were invoked, and the main features of the dance centred round this bowl. No attempt is made here to describe any of these ceremonies;¹ it may, however, be mentioned that women never take part in the dances, though they are always present, and may become possessed by the *yaku*.

The method of invocation of the *yaku* is essentially the same in all Veda ceremonies; an invocation is sung by the shaman and often by the onlookers, while the shaman slowly dances, usually round the offering that has been prepared for the *yaku*. Sometimes the invocations are quite appropriate and consist of straightforward appeals to the *yaka* for help, or recite the deeds and prowess of the *yaka* when he too was a man. But at other times the words seem singularly inappropriate; probably in many of these instances they are merely the remains of old Sinhalese charms that are not only displaced from their proper position and function, but have become so mangled in the process as to have become incomprehensible. As the verses are recited over and over again, the shaman dances more and more quickly, he unties his hair, which falls over his face as he throws his head forward, his voice becomes hoarse, his speech staccato, his movements spasmodic, and his eyes take on a fixed expression; he is then possessed by the *yaka*, and, although he does

not lose consciousness completely and can co-ordinate his movements, he does not in his normal condition retain any precise recollection of what he has said and has only a general idea of the movements he has performed. When the shaman is in this condition, another member of the community always follows him, often with hands upon his waist, ready to support him if he should fall. This often happens, the shaman falling backwards apparently unconscious; the condition does not, however, last long, the performer suddenly regaining his feet and continuing to dance. Trembling and shivering—which certainly occurs—is said to mark the entry of the *yaku* into the shaman. When the *yaka* leaves the shaman, the latter always falls back exhausted. Partial collapse during the ceremony does not necessarily indicate the departure of the *yaka*.

The invocations by which the Veddas call upon the *yaku* fall into two main groups: the first, distinguished by their simple form, are straightforward requests to the spirits of the dead to provide game and yams, or to show their loving kindness by partaking of the food provided by their descendants; the second group, embracing a considerable range of beliefs, are all longer and more complicated and often contain references to events which happened before the spiritual beings to whom they are addressed attained their full power as *yaku*. In nearly all the invocations animals and articles of food are not mentioned by their usual name, but described by periphrases. Only the simplest invocations have been selected as examples; many are very complicated and undoubtedly show Sinhalese influence, while the Veddas themselves either give them meanings quite different from those of the texts or have lost the significance entirely and are content to intone sounds almost or quite meaningless to them. The two following invocations (nos. 1 and 2)¹ to the Nae Yaku are from a forest and a village community respectively:

(1) 'Salutation! Salutation! Part of (our) relatives! Multitude of relatives! Having called (you) at the (right) time (we) gave (you) white sambā (rice); (you) ate, (you) drank. Do not think any wrong (of us); we also eat (and) drink.'

(2) 'Our father who went to that world come to this world. Take the rice. Come quickly to place (for us) the sambar deer, to place the spotted deer. Take this betel leaf. Come very quickly. Come quickly my mother's people. Take the rice, take the rock honey, take the betel leaf. To place the sambar deer, to place the spotted deer, come very quickly.'

The next (no. 16) is an invocation to Kande Yaka, and the fourth (no. 24) is sung when collecting rock-honey:

(16) 'King of the Hills, who continues to go from hill to hill, cause rain. (He is) the Wanniyā of the Chief place of the hill, who causes to fall the hoofs of excellent sambar deer, from foot (print) to foot (print), from Rērannē Damanē (the grass plain of teals) to Kandē Damanē (the grass plain of the hill).'

(24) 'Lady New Goddess, (you) must show (me) a bee-hive to-day. Having chopped (it out) I will hide (it) and go.'

As already stated, possession by the *yaka* is to be considered as due to a dissociation of personality; the traditional movements, words, and music all tend to bring about a more or less automatic condition which seems to be more easily induced the longer the practitioner has been shamanizing. Nor must the somewhat prolonged training of the shaman be forgotten. The present writers are convinced that there is no trickery about these ceremonies.

The shaman invoking a *yaka* holds or exhibits the special object (*e.g.*, the *avde*) proper to that *yaka*, and it seemed to be thought that the *yaka* first comes to this and then enters the body of the shaman. Each *yaka* has his traditional mode of behaviour. The shaman possessed by Kande Yaka goes through the pantomime of tracking and killing sambar deer; Bambura Yaka spears a wild boar and is wounded by it before he succeeds in killing it; Dola Yaka smokes out rock-bees' nests and collects the honey. These pantomimes are often extremely dramatic. The *yaku* examine the offerings set out for them, and, if favourable, express approval, some straightway prophesying

¹ The numbers preceding the invocations here given refer to those in ch. x. of the present writers' monograph, where all the invocations collected are printed and their meaning discussed.

¹ See for these C. G. and B. Z. Seligman, *The Veddas*.

good hunting (each in his own department); for, though Kande Yaka is patron of all food supplies, there are other *yaku* each of whom is separately invoked for help in getting yams, rock-honey, and tree-honey. The *yaku* have their methods of showing approval of the offerings; usually they scatter some of the food, sometimes they feed a favoured member of the community or place leaves dipped in the sacred food upon his chest, or, putting his arms on his shoulders, the shaman, gasping and quivering, delivers a message of good omen from the *yaku*. Sometimes a *yaka* asks why he has been called. Is it because any one is sick? And, if any one is brought forward, he will feed him or anoint him with sacred food which is thought to cure the sickness.

The manifest object of most ceremonies is to obtain food, but there is no suggestion that any of them are performed to increase the food supply, as are the *ilichiuma* ceremonies of Australia. They are also performed to cure sickness, and it is in this connexion that the *Pata Yaku* ceremony may be mentioned. This ceremony is held for a pregnant woman, that she may have safe delivery. Masses of bast are used on all the various properties necessary for the *yaku*; hence the name, signifying 'bark *yaku*.' No reason could be given for any figure in the dance, nor was there any known tradition connected with it, as was the case with most other ceremonies. A noticeable feature of the dance was that it was necessary for the woman's father to take part in it and that he dropped an arrow on the ground several times and leapt over it. Certain Sinhalese demons known as the *Pata Yaku* personify disease, but these have no connexion with bast, and it is impossible to say why the *Pata Yaku* should have been taken over from the Sinhalese.

Apart from the tendency, already mentioned, of certain *yaku* to be associated with hill-tops, no definite locality is considered their home; on the other hand, they are certainly not thought of as being habitually in close proximity with the living. Magical practices play a very small part in the life of the Veddas; their charms we believe to have been taken over from the Sinhalese, and it certainly is no exaggeration to say that the Vedda conception of the supernatural is embodied in their *yaku* beliefs, to whose influence usual or unusual events are alike attributed. No creation traditions or myths referring to the natural features of the country could be discovered among the wilder groups of Veddas.

VEDIC RELIGION.—DEFINITIONS.—With a view to avoiding confusion, it is advisable to define at the outset the sense in which each of the three terms 'religion,' 'mythology,' and 'magic' (witchcraft) is to be employed in the present article. Religion means, on the one hand, the body of beliefs entertained by men regarding the divine or supernatural powers, and, on the other, that sense of dependence on those powers which is expressed by word in the form of prayer and praise, or by act in the form of ritual and sacrifice. Mythology means the body of myths or stories which give an account of gods and heroes, describing their origin and surroundings, their deeds and activities. Mythology is thus included in, though not coextensive with, that aspect of religion which is concerned with belief. Magic means that body of practices which, instead of seeking to gain the goodwill of divine, beneficent powers by acts of worship, is largely directed against demoniac and hostile agencies, and aims at affecting the course of things directly, without the intervention of deities. Magic as such, being essentially different from religion and represent-

ing a more primitive stage of belief, is excluded from the scope of this article except where, as is sometimes the case, it is inextricably mixed up with religious ritual.

1. MEANING AND IMPORTANCE OF THE SUBJECT.

By the general term 'Vedic religion' is here understood the religion of the Vedic period of Indian literature, which extends from some time after the Aryan immigration into the north-west of India, that is, from at least as early as B.C. 1300, down to about B.C. 200.

Vedic religion is peculiarly important as a branch of study. It is not only the earliest body of religious beliefs preserved in a literary form, but it also represents a more primitive phase of thought than is recorded in any other literature. It can, moreover, be traced step by step through the various stages of its development. It is, finally, the source of the religion of the modern Hindus, which can thus be historically followed up to its origin throughout a period of well over 3000 years. As a natural result of its value to the investigator of religious thought in general, the study of Vedic religion gave birth, in the latter half of the 19th cent., to the sciences of Comparative Mythology and Comparative Religion.

2. STAGES OF VEDIC RELIGION.

Three main successive stages may be clearly distinguished in the religion which is recorded in three corresponding phases of Vedic literature, viz. in (a) the Vedas, (b) the Brāhmanas together with the Sūtras, (c) the Upaniṣads.

(a) The religion of the four Vedas, regarded as a whole, is concerned with the worship of gods largely representing personifications of the powers of nature; the propitiation of demoniac beings comes only to a limited extent within its sphere.

The oldest and most important of the four Vedas, the R̥gveda, from which considerable portions of the others are borrowed, is a collection of metrical hymns containing a large mythological element. These hymns are mainly invocations of the gods meant to accompany the oblation of Soma juice and the fire sacrifice of melted butter. The polytheism of this Veda assumes in its latest hymns a pantheistic colouring. Only a very few of its hymns are connected with witchcraft.

The hymns of the Atharvaveda, on the other hand, consist largely of spells meant for magical application, while their religion is pronounced pantheism.

The contents of the two other Vedas are entirely sacrificial in purpose. The Sāmaveda is almost exclusively composed of verses borrowed from the R̥gveda to be applied in the ritual of the Soma sacrifice. The Yajurveda consists of ritual formulas, largely in prose, which, not being directly addressed to the gods, are practically of a magical type. The religious phase which it represents is, in spirit, identical with that of the Brāhmanas.

(b) The Brāhmanas are discursive theological treatises in prose dealing with the Vedic ritual; while the Sūtras, text-books composed in a very concise style, largely condense and systematize the contents of the Brāhmanas or add new material on domestic and everyday observances. The main difference in the mythology of the Brāhmanas, as compared with the R̥gveda, is their recognition of a father-god as chief of the deities; while the general character of their religious belief is explicit pantheism. As to cult, they represent a ritual system which, in complexity of detail, far surpasses anything the world has elsewhere known.

(c) Though generally forming a part of the Brāhmanas, as a continuation of their speculative side, the Upaniṣads really represent a new religion.

which is in virtual opposition to their ritual or practical side. This new, purely pantheistic religion is dominated by the doctrine of transmigration, a doctrine unknown to the Vedas, and only incipient in one of the Brāhmaṇas. A world-soul takes the place of the father-god of the Brāhmaṇas. Its nature is the main object of speculation; and the identity with it of the individual soul is the great fundamental doctrine of the Upaniṣads. The religious aim now is no longer the obtaining of earthly and heavenly happiness by sacrificing correctly to the gods, but the release, as a result of true knowledge, from re-birth by absorption in the world-soul.

3. VEDIC RELIGIOUS BELIEFS.

The following account of Vedic beliefs, which are almost entirely mythological, starts from the statements of the Rigveda, to which the subsequent developments of the Vedic period are, if of sufficient importance, in each case added.

(a) COSMOGONIC BELIEFS.—Judged by their fragmentary references to the origin of the world, the poets of the Rigveda usually regarded it as having been mechanically produced like a building, the material being wood, and heaven and earth being supported by posts. The agents in the construction are regularly either the gods in general or various individual gods.

The last book of the Rigveda, however, contains a few cosmogonic hymns which represent other views. One of these (x. 90), though among the latest of the period, preserves a very primitive belief. It accounts for the origin of the world from the body of a primeval giant, whom the gods sacrificed. His head became the sky, his navel the air, and his feet the earth; while from his various members the four castes were produced. This being, called Purnsa, or man, and interpreted pantheistically in the hymn itself as 'all this, both what has become and what shall be,' reappears as the world-soul in the Atharvaveda and the Upaniṣads.

There are, again, two cosmogonic hymns of the Rigveda which explain the origin of the universe, philosophically rather than mythologically, as a kind of evolution of the existent (*sat*) from the non-existent (*asat*). In another hymn of the same type, the agency of a creator (*dhātā*) is, after the evolution of the ocean through heat (*tapas*), introduced to produce in succession sun and moon, heaven and earth, air and ether. There is also a hymn (x. 121) in which heaven and earth and the great waters are described as the creation of Hiranya-garbha, the golden germ, who is said to have arisen in the beginning, to be the one god above all gods, and is finally invoked as Prajāpati, lord of all created things. It is to be noted that in the cosmogonic hymns the waters are commonly thought of as coming into existence first. In the Atharvaveda the all-god appears as a creator under several new names, especially as Skambha, 'support'; also as Prāṇa, 'breath'; Kāma, 'desire,' and others.

The cosmogony of the Brāhmaṇas requires the agency of the creator Prajāpati, who is not, however, always the starting-point. Sometimes the waters come first: on them floats the golden germ (*hiranya-garbha*), from which arises the spirit that produces the universe. This contradiction is due to the theories of evolution and of creation being combined. One cosmogonic myth of the Brāhmaṇas describes how the submerged earth was raised by a boar. The latter in post-Vedic mythology developed into an *avatār* of Viṣṇu.

(b) THEOGONIC BELIEFS.—Heaven and earth are ordinarily regarded in the Rigveda as the

parents of the gods in general. It is only very rarely that other gods are spoken of as parents of the rest; thus Dawn is once said to be the mother of the gods, and both Brahmanaspati and Soma are mentioned as their father. The cosmogonic hymns connect the origin of the gods chiefly with the element of water; but one of them describes the gods as born after the creation of the universe.

(c) ORIGIN OF MAN.—The Vedic beliefs regarding the origin of the human race were somewhat fluctuating; the ultimate source of man was, however, always thought to be divine. Agni, the god of fire, is at least once said to have begotten the race of men, and certain families of seers are regarded as independently descended through their founders from the gods. Usually, however, the human race is traced to a first man, either Mann or Yama, both of whom are sons of Vivasvat, a solar deity.

4. THE VEDIC GODS.

The Vedic Indian believed in the existence of a large number of supernatural beings, varying in character and power. They comprise two main groups: on the one hand, gods who are almost exclusively benevolent and receive worship; on the other hand, demons who are hostile and whose operations have to be counteracted by the help of the gods or by ritual expedients. The divine powers, again, may be classed as higher gods, whose power pervades the world and controls the great phenomena of nature; and as lesser divinities, whose activities are restricted to a limited sphere or are conducted on a smaller scale: for instance, tutelary deities and elves. The divine nature is further shared by men of days gone by: ancient heroes who are associated with the deeds of the gods, and ancestors who live with the gods and receive worship like them. Finally, at the bottom of the scale, we find many inanimate objects and implements which are deified, being invoked and worshipped like divine beings.

A. THE HIGHER GODS.

The gods are usually stated in the Rigveda and Atharvaveda, as well as the Brāhmaṇas, to be thirty-three in number; but there are occasional deviations or inconsistencies in regard to this belief. Troops of deities, such as the storm-gods, are, of course, not regarded as included in this number. The thirty-three are, in the Rigveda, divided into three groups of eleven, distributed in earth, air, and heaven, the three divisions of the universe. These three groups, now containing eight, eleven, and twelve deities respectively, appear in the Brāhmaṇas under the name of Vasus, Rudras, and Adityas.

Gods originally mortal.—The gods, as has already been shown, were believed to have had a beginning. But they were not thought to have all come into being at the same time; for the Rigveda occasionally refers to earlier gods, and the Atharvaveda speaks of ten gods as having existed before the rest. Certain deities are, moreover, described as the offspring of others. The Atharvaveda and the Brāhmaṇas also expressly state that the gods were originally mortal, adding that they overcame death by the practice of austerity. The same thing is implied in the Rigveda, where the gods are said to have acquired immortality by drinking Soma or by receiving it as a gift from Agni and Savitr. In the post-Vedic view, the immortality of the gods was limited to a cosmic age.

Their physical attributes.—The gods of the Veda are anthropomorphic in appearance. The parts of their bodies, which are frequently mentioned, are in many cases, however, little more than figurative

illustrations of the phenomena of nature represented by the deity. Thus the arms of the sun are nothing more than his rays; and the tongue and limbs of Agni merely denote his flames. Some of the gods appear equipped as warriors, especially Indra; others are described as priests, especially Agni and Br̥haspati. All of them drive through the air in luminous cars, drawn chiefly by steeds, but sometimes by other animals.

Their food.—The favourite food of men is also that of the gods, consisting of milk, butter, grain, and the flesh of sheep, goats, and cattle. It is offered to them in the sacrifice; this is either conveyed to them in heaven by the god of fire, or they come in their cars to partake of it on the litter of grass prepared for their reception. Their favourite beverage is the exhilarating juice of the Soma plant.

Their abode.—The home of the gods is described as heaven, the third heaven, or the highest step of Viṣṇu (the zenith), where, cheered by draughts of Soma, they live a life of bliss.

Their attributes.—The most prominent characteristic of the Vedic gods is power; for they are constantly described as 'great' and 'mighty.' They regulate the order of nature and vanquish the great powers of evil. They hold sway over all creatures: no one can thwart their ordinances or live beyond the time they appoint; and the fulfilment of wishes is dependent on them. Their omniscience, which is restricted within narrow limits, is seldom referred to. It is an attribute which is emphasized in the case of Varuṇa only. The Vedic gods are benevolent beings who bestow prosperity on mankind, the only one in whom injurious traits appear being Rudra. They are, moreover, moral according to the standard of an early stage of civilization. They are described as 'true' and 'not deceitful,' being friends and protectors of the honest and righteous, but punishing sin and guilt. They are not, however, above employing craft against the hostile, and occasionally practise deceit even without the justification of a good end.

Since, in most cases, the Vedic gods have not yet become dissociated from the physical phenomena which they represent, their figures are indefinite in outline and deficient in individuality. Having many features, such as power, brilliance, benevolence and wisdom in common with others, each god exhibits very few distinctive attributes. This vagueness is further increased by the practice of invoking deities in pairs—a practice making both gods share characteristics properly belonging to one alone. When nearly every power can thus be attributed to every god, the identification of one deity with another becomes easy. There are, in fact, several such identifications in the Rigveda. The idea is even found in more than one late passage that various deities are but different forms of a single divine being. This idea, however, never developed into monotheism, for none of the regular sacrifices in the Vedic period were offered to a single god. Finally, in other late hymns of the Rigveda, we find the deities Aditi and Prajāpati identified not only with all the gods, but with nature as well. This brings us to the beginning of that pantheism which became characteristic of later Indian thought.

Henotheism.—The practice of invoking individual gods as the highest, frequent even in the older parts of the Rigveda, gave rise to Max Müller's theory of the 'henotheism' or 'kathenotheism' of that Veda, which he defines as 'the belief in individual gods alternately regarded as the highest,' the god addressed being for the moment treated as an independent and supreme deity, alone present to the mind. Criticism has,

however, shown that we have here only to do with an exaggerated form of praise which does not amount to a distinct type of religious thought.

The Vedic gods may most conveniently be classified as deities of heaven, air, and earth, according to the threefold division suggested by the Rigveda itself.

1. CELESTIAL GODS.—The historically oldest among the gods of the sky, as going back to the Indo-European period and identical with the Greek Zeus, is Dyaus, Heaven. The personification here hardly went beyond the notion of paternity (Dyaus pitar = Ζεύ πάτερ, Jūp-piter). Dyaus is generally coupled with Pṛthivī, Earth, when the two are celebrated as universal parents. He is once described as armed with a bolt, and, in another passage, as smiling through the clouds in allusion to the lightning sky.

Another and much more prominent deity of the sky is Varuṇa, the greatest of the Vedic gods beside Indra. He, too, dates from an earlier period, for in name he is probably identical with the Greek Οὐρανός, and in character he is allied to the Avestic Ahura Mazda. Varuṇa is the chief upholder of physical and moral order (*rta*). By his ordinance heaven and earth are held apart; he regulates the course of sun, moon, and stars; he causes the rivers to flow and the clouds to fertilize the earth with rain. Omniscient, he witnesses men's truth and falsehood. He is angry with sinners, whom he severely punishes, binding them with his fetters. But he is gracious to the penitent, releasing men not only from their own sins, but from those committed by their fathers. The prayer for forgiveness of guilt is characteristic of the Varuṇa hymns, which in general are the most exalted and ethical in the Veda. With the development of Prajāpati as creator and supreme god in the later Vedas, the importance of Varuṇa waned, till in the post-Vedic period he retained only the dominion of the waters as god of the sea.

Five gods represent various aspects of solar activity. The oldest of these, Mitra, the 'friend,' probably a personification of the sun's beneficent power, is an inheritance from the Indo-Iranian period, being identical with the Persian sun-god Mithra, whose cult became so widely diffused in the Roman empire during the 3rd and 4th centuries A.D. In the Rigveda he has almost entirely lost his individuality, and is hardly ever invoked except in association with Varuṇa.

Sūrya, etymologically allied to the Greek Ἥλιος is the most concrete of the solar deities, this being the regular name of the luminary. He is the husband of Dawn. His car, often referred to, is generally described as drawn by seven steeds. He is the soul of all that moves or is fixed, all creatures depending on him. He prolongs life, and drives away disease. His eye and his all-seeing power are often spoken of; and he is besought to declare men sinless to Mitra and Varuṇa.

Savitṛ, the 'stimulator,' represents the quickening activity of the sun. Bestowing immortality on the gods as well as length of life on man, he also conducts the spirits of the dead to where the righteous dwell. To him is addressed the most famous stanza of the Rigveda (iii. 62. 10), with which he was in ancient times invoked at the beginning of Vedic study, and which is still repeated by every orthodox Brāhman in his morning prayers. It is called the *Sāvitrī* from the deity, or the *Gāyatrī* from the metre:

'May we attain that excellent

Glory of Savitr the god,

That he may stimulate our thoughts.'

Pūsan, the 'prosperer,' personifying probably the bountiful power of the sun, appears chiefly as a pastoral deity, who protects cattle and guides

them with his goad. He is a guardian of paths ; and, knowing the ways of heaven, he conducts the dead to the abode of the fathers.

Though occupying quite a subordinate position in the Rigveda, and less frequently invoked than the four gods just mentioned, Viṣṇu is historically the most important of the solar deities ; for he has become one of the two great gods of modern Hinduism. His three strides, typifying doubtless the course of the sun through the three divisions of the universe, constitute the central feature in his mythology. His highest step is heaven, the abode of the gods. He is frequently said to have taken his three strides for the benefit of man. This general trait is illustrated by the Brāhmaṇa myth in which Viṣṇu assumes the form of a dwarf as an artifice to recover the earth, now in possession of demons, by taking his three strides. Viṣṇu's characteristic benevolence was in post-Vedic mythology further developed in the doctrine of his *avatāras* ('descents' to earth), or incarnations for the good of humanity.

Uṣas (cognate to Ἠώς and *Aurora*), goddess of dawn, the daughter of Dyaus, is the only female deity invoked with frequency in the Rigveda, and is the most graceful creation of the Vedic seers. Being a poetical rather than a religious figure, she did not, like the other gods, receive a share in the Soma offering.

The *Asvins* ('lords of steeds'), twin gods of morning, sons of Dyaus, eternally young and handsome, are addressed in many hymns. They very frequently receive the epithet *nāsatya*, 'true.' Uṣas is born at the yoking of their car, on which their spouse Sūryā, daughter of the sun, accompanies them. They are characteristically succoring deities. Delivering from distress in general and from shipwreck in particular, they are also divine physicians. They have several traits in common with the two famous horsemen of Greek mythology, the *Διόσκουροι*, sons of Zeus and brothers of Helen. The origin of these twin deities is obscure ; it is perhaps most likely that they represent either the twilight, half dark, half light, or the morning and evening star.

2. ATMOSPHERIC GODS.—Indra is the dominant deity in the aerial sphere. While Varuṇa is the great moral ruler, Indra is the mighty warrior. Indra is, indeed, the favourite and national god of the Vedic Indian. An indication of this is the fact that more than one-fourth of the Rigveda is devoted to his praise. He is a mythological creation of an earlier period ; for Indra is a demon in the Avesta. Though he is more anthropomorphic than any other Vedic god, his original character is still tolerably clear. He is primarily the thunder-god, and his conquest of the demon Vṛtra is the central feature of the mythology which surrounds him. Hence *Vṛtra-han*, 'slayer of Vṛtra,' is his chief and specific epithet. Armed with his bolt (*vajra*), elated by copious draughts of Soma, and aided by the Maruts, or storm-gods, Indra engages in the fray. The fight is terrific ; for heaven and earth tremble with fear as the conflict rages. The constant repetition of the combat corresponds to the perpetual renewal of the phenomena of the thunderstorm which underlie the myth. The result of the victory is the release of the waters for man and the recovery of the light of the sun. Indra thus became a god of battle whose aid is constantly invoked in conflicts with earthly foes. He is often described as the protector of the Aryan colour, and vanquisher of the black race. One of his commonest epithets is *Sakra*, the 'mighty one' (which in the Pāli form of Sakka became his regular name in Buddhist literature). Certain immoral traits appear in Indra's character. He occasionally indulges in acts of capricious violence, such as

slaying his father or shattering the ear of Dawn. He is greatly addicted to Soma, which he drinks in enormous quantities to stimulate him in his warlike exploits. One entire hymn of the Rigveda (x. 119) consists of a monologue in which Indra, inebriated with Soma, boasts of his greatness and power. While Varuṇa, after the period of the Rigveda, gradually sank into obscurity, Indra in the Brāhmaṇas became the chief of the Indian heaven (*svarga*), and even maintained this position in the period of the Purānas, though, of course, subordinate to the trinity Brahmā-Viṣṇu-Siva.

Three of the less important deities of the air are connected with lightning. *Trita*, a somewhat obscure god with the epithet *āptya*, 'watery,' mentioned only in detached verses of the Rigveda, seems to represent the 'third' (*tritas* = Greek *τρίτος*) form of fire. He goes back to the Indo-Iranian period, both his name and his epithet occurring in the Avesta. In the Rigveda he appears as a presser of Soma, who aids Indra in slaying Vṛtra and the three-headed demon Viśvarūpa, or performs the latter exploit himself. He kindles the celestial fire, and even appears as a form of fire. His home is hidden and remote. As almost identical in origin with Indra, he was ousted by the latter at an early period. In the Brāhmaṇas he appears as one of three sons of Agni, the other two being Ekata and Dvita. In the epic poetry *Trita* survives only as the name of a human seer.

Apām napāt, 'son of waters,' also goes back to the Indo-Iranian period. Rarely mentioned in the Rigveda, he is described as clothed in lightning and shining without fuel in the waters. He thus represents the lightning form of fire as produced from the thundercloud.

Mātariśvan is referred to only in scattered verses of the Rigveda as a divine being who (like the Greek Prometheus) brought down the hidden fire from heaven to earth. He was originally, in all likelihood, conceived as an aerial form of Agni, with whom he is sometimes actually identified. His character then underwent a transformation ; for in the later Vedas, the Brāhmaṇas, and the post-Vedic literature he appears as a wind-god.

It is somewhat remarkable that *Rudra*, the early form of the post-Vedic *Siva*, who in the Rigveda occupies a very subordinate position, like that of Viṣṇu, should have risen to parallel pre-eminence with Viṣṇu in a later age. *Rudra* is usually described as armed with bow and arrows, but sometimes he appears with a thunderbolt and lightning shaft. He is fierce and destructive like a wild beast, being 'the ruddy boar of heaven.' The most striking feature of the hymns addressed to him is fear of his terrible shafts and deprecation of his wrath. For he slays men and cattle, and assails with disease. He is, indeed, the one malignant deity of the Vedas. His malevolence, however, unlike that of a demon, is not the only side of his character. For he is a healer as well as a destroyer, being even lauded as the greatest of physicians. Thus he is often besought not only to preserve from calamity, but to bestow welfare on man and beast. The euphemistic epithet *Siva*, 'auspicious,' which begins to be applied to him in the Rigveda, grows more frequent in the later Vedas, till it finally becomes his regular name in post-Vedic mythology. With the increasing use of this epithet, the malevolence of *Rudra* becomes more pronounced in the later Vedas. The White Yajurveda, which adds various disgraceful attributes, furnishes the transition to the terrific and repulsive *Siva* of Hindu mythology. The exact basis of *Rudra* is somewhat obscure ; but the inference from the evidence of the Rigveda seems to be justified that he originally represented the destructive agency of the thunderstorm. His un-

canny and baleful traits have, however, also been explained as starting from the conception of a deity of mountain and forest whence storm and disease attack man and beast.

The sons of Rudra and Prṣni (the 'mottled' cloud-cow) are the Maruts, or storm-gods, also often called Rudras, a group of thrice seven or thrice sixty deities, the constant allies of Indra in his conflicts. They are described as like fires at their birth, and as 'born from the laughter of lightning.' They are young warriors, armed with spears and battle-axes, wearing helmets and decked with golden ornaments. Their headlong course is often graphically depicted. They ride on golden cars which gleam with lightning: with their felines they rend the mountains and shatter the lordly trees of the forest. They share to some extent the destructive as well as the beneficent traits of their father Rudra. Their lightning-bolt slays men and kine. But they also bring healing remedies, apparently the rains with which they fertilize the earth.

The god of wind is not a prominent deity in the Rigveda. Under the more anthropomorphic form of Vāyu he is chiefly associated with Indra. As Vāta (the ordinary name of wind), he is described in a more concrete manner (often in connexion with the verb *vā*, 'to blow,' from which the word is derived), being coupled only with the less anthropomorphic god Parjanya.

A personification of the rain-cloud is Parjanya, son of Dyaus. He is not a prominent deity, being invoked in only three hymns of the Rigveda, which, however, describe his activity in the rainstorm very vividly. He quickens the earth with rain, causing abundant vegetation to spring up. He also bestows fertility on the animal world. He thus comes to be spoken of as 'our divine father.'

The waters, Apah, are praised as divine powers in four hymns of the Rigveda. They are celestial, abiding in the home of the gods. The aerial waters are the mothers of one of the forms of Agni, Apām napāt, son of waters. But, as flowing in channels and having the sea for their goal, the waters are also terrestrial (cf. 3). They are young wives, mothers, goddesses who bestow boons and come to the sacrifice. They not only bear away defilement, but cleanse from moral guilt, the sins of violence, cursing, and lying. They also grant remedies, healing, long life, and immortality.

3. TERRESTRIAL DEITIES.—Rivers are not infrequently personified and invoked in the Rigveda. Thus the Sindhu (Indus) is celebrated as a goddess in one hymn, and the Vipās (Biās) and Sutudrī (Sutlej), sister streams of the Panjāb, in another. The most important and oftenest lauded is, however, the Sarasvatī. Though the personification goes much further here than in the case of other streams, the connexion of the goddess with the river is never lost sight of in the Rigveda. In the Brāhmanas, Sarasvatī has become identified with the goddess of speech, and in Hindu mythology she appears further modified as the goddess of eloquence and wisdom, invoked as a Muse, and regarded as the wife of Brahmā.

Earth, or Pṛthivī, the broad, nearly always associated with Dyaus, is often spoken of as a mother. The personification is rudimentary, the attributes of the goddess being chiefly those of the physical earth.

By far the most important of the terrestrial deities is Agni, god of fire. Next to Indra, he is the most frequently invoked of the Vedic gods, being celebrated in about one-fifth of the hymns of the Rigveda. It is only natural that the personification of the sacrificial fire, the centre of the Vedic ritual, should engross the thoughts of the poets to such an extent. Agni-s (Lat. igni-s)

being also the ordinary name for fire, the anthropomorphism has not proceeded far. The bodily parts of the god have an unmistakable connexion with the various aspects of the sacrificial fire. Thus Agni is called 'butter-backed,' 'butter-faced,' and 'butter-haired,' with reference to the oblation of *ghī* (*ghṛta*) cast on the flames. His teeth, jaws, and tongues are associated with the action of burning. Agni is borne on a brilliant car, drawn by two or more steeds, which he yokes to bring the gods, for he is the charioteer of the sacrifice.

Beyond his sacrificial activities, little is said about the deeds of Agni. It is otherwise mainly his various births, forms, and abodes that occupy the thoughts of the Vedic poets. Agni is usually called the son of Dyaus and Pṛthivī, sometimes also the offspring of Tvaṣṭr and the waters. But owing to the daily production of Agni from the two firesticks, they, too, are his parents. He is then a newborn infant, also called 'son of strength' because of the powerful friction required to kindle the flame. He wakes at dawn, for the fire is lit every morning. He is thus the youngest of the gods; but he is also old, having conducted the first sacrifice.

As not only terrestrial, but sprung from the aerial waters and having been brought from heaven, Agni is often spoken of as having a triple character. This threefold Agni is the earliest Indian trinity, probably the prototype not only of the later Rigvedic triad of Sun, Wind, Fire, connected with the three divisions of the universe, but also of the triad Sun, Indra, Fire, which, though not Rigvedic, is still ancient. There may be a historical connexion between this triad and the conception of the later Hindu trinity of Brahmā-Viṣṇu-Siva. This triad of fires may, further, have suggested, and would explain, the division of a single sacrificial fire into the three which form an essential feature in the cult of the Brāhmanas.

As kindled in innumerable dwellings, Agni is also said to have many births. He assumes various divine forms and has many names; in him are comprehended all the gods, whom he surrounds as a felly the spokes. Though scattered in many places, he is one and the same king. It was probably from such speculations on the nature of Agni that an advance was made to the conception of a unity pervading the many manifestations of the divine which has been noted above (p. 603^a).

As the deity most intimately associated with the everyday life of man, Agni is spoken of as an immortal who has taken up his abode among mortals in human dwellings, and is constantly called a 'guest' and 'lord of the house.' Being the conductor of the sacrifice as well as the summoner of the gods, he is very frequently described as a 'messenger,' who moves between heaven and earth. Agni is, however, most characteristically called a 'priest,' usually by the generic terms *ṛtvij* and *vipra*; or specifically 'domestic priest' (*purohita*), oftenest of all 'invoker' or 'chief priest' (*hotṛ*). He is, in fact, the great priest among the Vedic gods, as Indra is the great warrior. Agni is a mighty benefactor of his worshippers, whose enemies he consumes. The benefits which he confers are chiefly domestic welfare and general prosperity, while those which Indra grants are mostly the rewards of victory.

Agni is frequently spoken of in the Rigveda as a 'goblin-slayer,' a trait surviving from what is perhaps the oldest phase of the cult of fire as warding off the attack of evil spirits.

Since the Soma sacrifice forms, by the side of fire-worship, the other main feature in the ritual of the Rigveda, the personification of the juice of

the Soma plant is naturally one of its most prominent deities. Judged by the number of hymns addressed to him, Soma is third in importance among the Vedic gods, coming next to Agni from this point of view. Since the plant and the juice are constantly before the eyes of the priests as they sing the praises of the god, the personification is vague. The imagination of the poets dwells chiefly on the processes of pressing and straining, which it overlays with chaotic imagery and mystical fancies of almost infinite variety.

As the most important of herbs, Soma is spoken of as 'lord of plants' or as their king, being also designated 'lord of the forest.' There are many references to Soma growing on the mountains. Heaven, however, is regarded as its true and original home; and the myth of its having been brought down to earth by an eagle (*śyena*) is often alluded to.

The mental stimulation produced by drinking Soma is expressed by one of the poets of the Rigveda with the words: 'We have drunk Soma, we have become immortal, we have entered into light, we have known the gods.' Its exhilarating power is, however, dwelt upon chiefly in connexion with Indra, whom it inspires in his mighty conflicts with the aerial demons. Soma thus came to be regarded as a divine drink, which bestowed immortality on the gods, being called *amṛta* (allied to Greek *ἀμβροσία*), the 'immortal' draught. Hence the god Soma places his worshipper in the imperishable world of eternal light and glory, making him immortal where Yama dwells. Healing power is similarly attributed to Soma. The juice is medicine for the ailing man, and the god heals the sick, making the blind to see and the lame to walk.

In some of the latest hymns of the Rigveda, Soma begins to be somewhat obscurely identified with the moon. In the Atharvaveda and the Yajurveda this identification is explicit in several passages. It is already a commonplace in the Brāhmaṇas, which explain the waning of the moon as due to the gods and fathers consuming the ambrosia of which it consists. One of the Upaniṣads, moreover, states that the moon is king Soma, the food of the gods, and is drunk up by them. In post-Vedic literature, finally, Soma is a regular name of the moon. This somewhat remarkable coalescence of Soma with the moon must have started from the exaggerated terms in which the poets of the Rigveda describe the celestial nature and brilliance of Soma. It was doubtless furthered by the imagery in which the poets of the Rigveda indulged. Thus Soma is spoken of as swelling in the waters (with which it was mixed), and Soma in the bowls is once even compared to the moon in the waters. Soma is often called *Indu*, or 'drop.' This word shared the fate of Soma, also becoming a regular name of the moon in the post-Vedic period.

Soma must already have been an important feature in both the mythology and the cult of the Indo-Iranian period; for the Avestan Haoma shows many points of agreement, in both directions, with the Soma of the Rigveda.

4. ABSTRACT DEITIES.—One result of the advance of thought, during the period of the Rigveda, from the concrete towards the abstract was the creation of abstract deities. Of the two classes which may be distinguished, the earlier and more numerous one seems to have started from epithets which were applicable to one or more older deities, but which came to acquire an independent value, as the want of a god exercising the particular activity in question began to be felt. When the type was once established, the creation of direct abstractions of this kind became possible. We

have here names denoting either an agent (formed with the suffix *-ṛ* or *-tar*, the Lat. and Gr. *-tor*, *-ter*), such as Dhātṛ, 'creator,' or an attribute, such as Prajāpati, 'lord of creatures.' The *agent gods* are nearly all of rare occurrence, appearing for the most part in the latest book of the Rigveda. Thus Dhātṛ, an epithet of Indra and Viśvakarman, appears also as an independent deity who creates heaven and earth, sun and moon. In the post-Vedic period Dhātṛ has become one of the regular names of the creator and preserver of the world. Of rarer occurrence are Vidhātṛ, the 'disposer,' Dhartṛ, the 'supporter,' Trātṛ, the 'protector,' and Netṛ, the 'leader.' The only agent god mentioned with any frequency in the Rigveda is Tvaṣṭṛ, the 'fashioner' or 'artificer,' though no hymn is addressed to him. He is the most skilful of workmen, having among other things fashioned the bolt of Indra, and a new drinking-cup for the gods. He shapes the form of beings and presides over generation. He is a guardian of Soma, which is called the 'mead of Tvaṣṭṛ,' and Indra drinks it in his house. He is the father of Saranyū, wife of Vivasvat and mother of the primeval twins Yama and Yamī. The origin of this deity is obscure. He may in the beginning have represented the creative activity of the sun; having then, because of his name, become the centre of attraction for myths illustrative of creative skill, he finally came to fill the place of a divine artificer in the Vedic pantheon. Oldenberg thinks that Tvaṣṭṛ, the 'artificer,' was originally a direct abstraction of artistic skill. He regards the solar deity Savitr, the 'stimulator,' whose name is similarly formed, as from the outset an abstraction of this type.

There are a few other abstract deities whose names were originally epithets of older gods. They are of rare and late occurrence in the Rigveda, their appellations being mostly compound in form and representing the supreme god who was being evolved at the end of the Rigvedic period. The historically most important among these is Prajāpati, 'lord of creatures.' Originally an epithet of such gods as Savitr and Soma, the name is mentioned in a late verse of the last book of the Rigveda as that of a distinct deity in the character of a creator. Prajāpati is often in the Atharvaveda and the White Yajurveda, and regularly in the Brāhmaṇas, recognized as the chief and father of the gods. In the Sūtras he is identified with Brahmā, his successor in the post-Vedic age. Similarly, the epithet Viśvakarman, 'all-creating,' appears as the name of an independent deity, to whom two hymns of the last book of the Rigveda are addressed. In the Brāhmaṇas, Viśvakarman is expressly identified with the creator Prajāpati, while in post-Vedic mythology he appears, doubtless owing to the name, as the artificer of the gods (like Tvaṣṭṛ in the Rigveda). Hiraṇya-garbhā, the 'golden germ,' once occurs in the Rigveda as the supreme god, described as the 'one lord of all that exists.' In the Yajurveda he is expressly identified with Prajāpati, and in the later literature his name appears chiefly as a designation of Brahmā. In one curious instance it is possible to watch the genesis of an abstract deity of this type. The refrain of a late hymn of the Rigveda refers to the unknown creator with the interrogative pronoun *ka*: 'What god should we with sacrifices worship?' This led to the word *ka* being used, in the later Vedic literature, as an independent name of the supreme god. In the Atharvaveda Rohita, 'the red one' (whose female form is Rohiṇī), has become a distinct deity in the capacity of a creator, the name having originally been an epithet of the sun. The only abstract deity of this type occurring in the oldest as well as the

latest parts of the Rigveda is Brhaspati, 'lord of the spell,' of whom Brahmanaspati is a frequent doublet. He has been regarded by Roth and other Vedic scholars as a direct personification of devotion (*brahman*). To the present writer it seems more likely that he is only an indirect deification of the sacrificial aspect of Agni, with whom he is often identified. As the companion and ally of Indra, Brhaspati has been drawn into the myth of the release of the cows, which he is frequently described as delivering from the demon Vala. His most prominent characteristic is, however, his priesthood. As the divine *brahmā* priest, he seems to have been the prototype of the god Brahmā, chief of the later Hindu trinity. The name Brhaspati itself survived in post-Vedic mythology as the designation of a sage, teacher of the gods and regent of the planet Jupiter.

The second and smaller class of abstract deities comprises personifications of abstract nouns. There are seven or eight of these occurring in the last book of the Rigveda. Two hymns are addressed to *Manyu*, 'wrath,' and one to *Śraddhā*, 'faith.' *Anumati*, 'favour' (of the gods), *Aramati*, 'devotion,' *Sūryā*, 'bounty,' *Asunīti*, 'spirit-life,' and *Nīrti*, 'decease,' occur in only a few isolated passages. These abstractions become commoner in the later Vedas. Thus *Kāma*, 'desire,' first appears in the Atharvaveda, where the arrows with which he pierces hearts are already referred to; he becomes in post-Vedic mythology the well-known flower-arrowed god of love. In the same Veda *Kāla*, 'time,' and *Skambha*, 'support,' are cosmogonic powers, while *Prāna*, 'breath,' and some other analogous abstractions are identified with Prajāpati. *Srī*, as a personification of beauty or fortune, does not begin to appear till the Brāhmaṇa period.

A purely abstract deity, often incidentally celebrated throughout the Rigveda, is Aditi, 'liberation,' 'freedom' (literally 'un-binding': *a-diti*), whose main characteristic is the power of delivering from the bonds of physical suffering and moral guilt. She, however, occupies a unique position among the abstract deities owing to the peculiar way in which the personification seems to have come about. She is the mother of the small group of deities called Adityas, often styled 'sons of Aditi.' This expression at first most probably meant nothing more than 'sons of liberation,' according to an idiom common in the Rigveda and elsewhere. The word was then personified, with the curious result that the mother is mythologically younger than some at least of her sons, who (e.g. Mitra) date from the Indo-Iranian period. The goddess Diti, mentioned only three times in the Rigveda, probably came into being as an antithesis to Aditi, with whom she is twice mentioned there and several times in the later Vedas. The Atharvaveda speaks of her sons, the Daityas, who in post-Vedic mythology are demons, enemies of the gods.

5. GODDESSES, in general, play an insignificant part in the Vedas, taking no share in the government of the world. The only one of importance is Uṣas (p. 604^a). Next comes Sarasvatī, who, however, ranks with only the least prominent of the male deities. Very few others are celebrated in even as much as one entire hymn. Such are *Prthivī*, Earth (p. 605^a); *Rātri*, Night, the sister of Dawn, conceived not as dark, but bright with stars; *Aranyāni*, goddess of the forest; and *Vāc*, goddess of speech. Others are only sporadically mentioned. Such are *Purandhī* and *Dhīṣanā*, goddesses of plenty. Less often referred to are *Rākā* and *Sīnivālī*, spoken of as bountiful goddesses; in later Vedic texts they appear as the presiding deities of full and new moon respectively. *Kuhū* is also mentioned in these texts as a personification

of the new moon. *Ilā* is a sacrificial goddess, the personification of the oblation of milk and butter. With her is also mentioned *Mahī* or *Bhāratī*, another sacrificial deity. The wives of the great gods are still more insignificant, being mere names formed from those of their consorts, altogether lacking in individuality. Thus *Agnāyī*, *Indrānī*, *Varuṇānī* are the names of the spouses of Agni, Indra, and Varuna respectively. *Rudrānī*, as the wife of Rudra, first appears in the Sūtras. The 'wives of the gods' (*devānām patnīs*), occasionally mentioned as a group in the Rigveda, have a special place assigned to them, apart from the gods, in the cult of the Brāhmaṇas.

6. DUAL DIVINITIES. — A peculiar feature of Vedic religion is the invocation of pairs of deities whose names are combined as dual compounds. About a dozen such pairs are celebrated in entire hymns, and about half a dozen more in detached verses of the Rigveda. By far the largest number of hymns is addressed to the couple Mitra-Varuṇa, though the names most frequently compounded in the dual are Heaven and Earth (*dyāvapṛthivī*). Most likely the latter pair, having been associated as universal parents from the Indo-European period onwards, furnished the analogy for this dual type. They are also often called the Two Worlds (*rodasī*) in the Rigveda.

7. GROUPS OF DEITIES. — Among the creations of Vedic mythology we also find a few more or less definite groups of deities, generally associated with some particular god. The Maruts who, as we have seen (p. 605^a), attend on Indra, form the most numerous group. Under the name of Rudras, they are also occasionally associated with their father Rudra. The smaller group of the Adityas, of whom Varuṇa is the chief, are constantly mentioned in company with their mother Aditi. Their number in the Rigveda is stated to be seven or, with the addition of *Mārtāṇḍa*, eight; while in the Brāhmaṇas and later it is regularly twelve. One passage of the Rigveda enumerates six of them: Mitra, Aryaman, Bhaga, Varuṇa, Dakṣa, Aṃśa; Sūrya was probably regarded as the seventh. A much less important group, without individual names or definite number in the Vedas, is that of the Vasus, whose leader is, in the Rigveda, generally Indra, but in later Vedic texts generally Agni. In the Brāhmaṇas their number is stated to be eight. There are, finally, the *Viśvedevās*, or all-gods, who are invoked in many hymns. It is an artificial sacrificial group, intended to include the whole pantheon, and thus to ensure the omission of no deity when all were meant to be invoked. But in spite of its name, this comprehensive group was, strange to say, sometimes conceived as a narrower one, associated with others like the Vasus and Adityas.

B. LESSER DIVINITIES.

1. ELVES, GENII. — Besides the higher gods already described, a number of lesser divine powers are known to the Rigveda. The most prominent of these are the Rbhus, a deft-handed trio who by their marvellous skill acquired the rank of deities. Among their five main feats of dexterity, the greatest consisted in transforming the bowl of Tvaṣṭr into four shining cups. The bowl and the cups have been variously interpreted as the moon with its four phases or the year with its seasons. The Rbhus further exhibited their skill in renewing the youth of their parents, by whom Heaven and Earth seem to have been meant. The myth of the Rbhus having rested for twelve days in the house of the sun is probably an allusion to the intercalation of twelve days at the winter solstice, so as to bring the lunar year of 354 days into harmony with the solar year of nearly 366 days.

Occasional mention is made in the Rigveda of an *Apsaras* ('moving in the waters'), a celestial water-nymph, the spouse of a corresponding genius named *Gandharva*. Occasionally more *Apsaras* than one are spoken of. In the *Atharvaveda* and later, the *Apsaras* form a class, regularly associated with the *Gandharvas*; and though they are still connected with the waters and clouds, their sphere is here, as well as in the *Yajurveda*, extended to the earth, where they haunt the different varieties of fig-trees called *Nyagrodha*, *Aśvattha*, *Udumbara*, and *Plakṣa*, in which the music of their cymbals and lutes is heard. In the *Brāhmaṇas* they appear as nymphs of great beauty, devoted to song, dance, and play. Several individual names of *Apsaras* are mentioned in the later Vedas, but the only one occurring in the *Rigveda* is that of *Urvaśī*. In an obscure hymn (x. 95) she engages in a dialogue with her earthly spouse *Purūravas*, whom she has forsaken. The myth of their alliance is told more fully in one of the *Brāhmaṇas*. *Gandharva* is, in the *Rigveda*, a single being (like the *Gandarewa* of the *Avesta*), who dwells in the aerial sphere, guards the celestial Soma, and is (as in the *Avesta*) connected with the waters. In the later Vedas the *Gandharvas* form a class associated with the *Apsaras* in a stereotyped manner, and are brought into relation with marriage and with wedding ceremonies. In the post-Vedic period the *Gandharvas* have become celestial singers.

2. TUTE LARY DEITIES.—There are a few divinities of the tutelary order, guardians watching over the welfare of house or field. One of these is *Vāstospati*, 'lord of the dwelling,' rarely mentioned in the *Rigveda*, where he is invoked to grant a favourable entry, to remove disease, and to bestow protection and prosperity. The *Sūtras* prescribe that *Vāstospati* should be propitiated when a new house is to be occupied. *Kṣetrasya pati*, 'lord of the field,' is besought in the *Rigveda* to grant cattle and horses and to confer prosperity. The *Sūtras* state that he is to be worshipped when a field is ploughed. *Sītā*, the 'furrow,' is once invoked in the *Rigveda* to dispense crops and rich blessings. In a *Sūtra* she appears as the wife of Indra. Here, too, *Urvarā*, the 'arable field,' with her garland of threshing-floors, is supplicated to bestow welfare.

C. HEROES.

The heroes of the *Rigveda* are all ancient seers or priests. (1) The most important of them is *Manu* or *Manus* (which also means 'man'), the ancestor of the human race, styled 'our father' by the poets, who also speak of the sacrificers of their own day as 'the people of Manu.' Regarded as the son of *Vivasvat*, he bears the patronymic *Vaivasvata* from the *Atharvaveda* onwards. He is thus a doublet of *Yama* as progenitor of mankind. He is represented as the institutor of sacrifice. Soma is said to have been brought to him by the bird, and Indra is described as drinking the Soma of *Manu* to fortify him for the conflict with *Vṛtra*. In the *Śatapatha Brāhmaṇa*, *Manu* plays the part of Noah, being saved in a ship from a deluge, which has swept away all other creatures, by a fish (in post-Vedic mythology an *avatār* of *Viṣṇu*). *Manu* then became the ancestor of the human race through his daughter *Ilā*, who was produced from his offerings. (2) *Atharvan* is frequently mentioned in the *Rigveda* as an ancient fire-priest, who practised devotion along with Father *Manu*. In the *Atharvaveda* he appears as a companion of the gods, being related to them and dwelling in heaven. The name is also found in the plural as that of a group of fathers. In the *Atharvaveda*, the

Atharvans are described as destroying goblins with a magical herb. (3) *Dadhyañc*, son of *Atharvan*, is a sacrificer who kindled *Agni* in the days of old. A myth told about him is that the *Asvins* gave him a horse's head, with which he proclaimed to them where the mead of *Tvaṣṭ* was to be found. *Indra* is also connected with this myth; for he is said to have discovered the horse's head, and with the bones of *Dadhyañc* to have slain ninety-nine *Vṛtras*. (4) *Atri* is one of the ancient seers most frequently mentioned in the *Rigveda*. The myth of his deliverance from a fiery chasm by the *Asvins* is often referred to. He is also said to have found the sun when hidden by the demon *Svarbhānu* and to have placed it in the sky. The *Atris* are a family of seers to whom the authorship of the fifth book of the *Rigveda* is attributed. (5) *Kaṇva* is another ancient seer and sacrificer often spoken of in the *Rigveda*. He is said to have been befriended by *Agni*, *Indra*, and the *Maruts*; and to have been specially aided by the *Asvins*, who restored his eyesight. Most of the hymns of the eighth book of the *Rigveda* are attributed to his descendants the *Kaṇvas*. (6) *Kutsa* is one of the very few Vedic heroes who exhibit warlike traits. He is chiefly connected with the *Indra* myth. Riding on the same car as *Indra* and acting as his charioteer, he is even invoked with *Indra* in the dual. He is especially associated with *Indra* in slaying the demon *Suṣṇa*. When *Kutsa* was pressed by his foes, *Indra* tore off the wheel of the sun to aid him. Nevertheless *Indra* sometimes appears as hostile to *Kutsa*, delivering him into the hands of an enemy. Several hymns of the first and ninth books of the *Rigveda* are assigned by tradition to the seer *Kutsa*. (7) Much less frequently mentioned in the *Rigveda* is the seer *Kāvya Uśanā*, whose characteristic feature is wisdom. He, too, is associated with *Indra*. He is said to have fashioned for *Indra* the bolt for slaying *Vṛtra*; and once joins him and *Kutsa* in slaying the demon *Suṣṇa*. (8) Some names, moreover, appear predominantly or exclusively in the plural as representing families or groups of ancient seers, who, if in some cases historical in origin, have become invested with mythological traits. A frequently mentioned group of this kind are the *Āngirases*, who are closely associated with *Indra* in the myth of the capture of the cows. They are described as seers who are the sons of the gods, and who by sacrifice obtained immortality as well as the friendship of *Indra*. They receive offerings of Soma, and are invoked like gods. When used in the singular, *āngiras* is nearly always an epithet of *Agni*, who is called the first seer *Āngiras* or the chief *Āngiras*. The word *āngiras* appears to be etymologically identical with the Greek *ἀγγελος*, 'messenger.' This points to the *Āngirases* originally having been regarded as messengers between heaven and earth, attendant on *Agni*. But if they were mythical in origin, they came to be regarded as an actual priestly family, the composition of the ninth book of the *Rigveda* being attributed to them. This is also indicated by the compound term *Atharva-āngirasaḥ*, 'the *Atharvans* and *Āngirases*,' a designation of the *Atharvaveda* which occurs in that *Veda* itself as well as later. (9) Another group of ancient priests are the *Bhrgus*, chiefly connected with the myth of the communication of fire to men. The Indian Prometheus, *Mātariśvan*, brought the hidden *Agni* from heaven to the *Bhrgus*, who established and diffused the sacrificial fire on earth. In two or three passages of the *Rigveda* they are referred to as if an actual tribe of bygone days. In the later Vedic literature, *Bhrgu* is the eponymous hero of a tribe, and regarded as a son of *Varuṇa*. (10) A definite numerical group of

ancient priests, but rarely referred to in the Rigveda, are the 'Seven Seers' (*sapta ṛṣayah*). They are associated with the gods and called divine. Their number may have been suggested by the seven technical priests, of whom they would then represent the prototypes. In the Śatapatha Brāhmaṇa they are regarded as the seven stars in the constellation of the Great Bear, and are stated to have themselves been originally bears. This identification was doubtless brought about by the sameness of number in the two groups, aided by the similarity of sound between *ṛṣi*, 'seer,' and *ṛkṣa*, which in the Rigveda means both 'star' and 'bear.' (11) The above groups are all spoken of as 'fathers,' and nearly all of them, besides a few others, are mentioned as races of ancestors to whom worship is paid. Those thus characterized in the Rigveda are the Navagvas, Vairūpas, Aṅgirasas, Atharvans, Bhṛguṣ, Vasiṣṭhas. The last four, whether mythical in origin or not, appear in the historical aspect of families to which the composition of the Atharvaveda and two books of the Rigveda was attributed.

D. ANIMALS.

Animals play a considerable part in the mythological and religious ideas of the Veda. (1) Among them the horse is prominent as drawing the cars of the gods. There are also mentioned in the Rigveda at least four individual steeds, probably all representing the sun, which are regarded as deities and objects of worship. The most notable of these is *Dadhikrā* or *Dadhikrāvan*, to whom four hymns are addressed. He is described as a swift and victorious steed, regularly invoked with Uṣas, occasionally with Agni, the Aśvins, Sūrya, and others. The divine horse *Tārksya*, addressed in one short hymn of the Rigveda, is a god-impelled mighty steed, a vanquisher of chariots, speeding to battle. In one or two later Vedic texts *Tārksya* is referred to as a bird; and in the epic and later literature he is identical with the swift bird *Garuda*, the vehicle of Viṣṇu. A third steed, several times mentioned, is *Paidva*, spoken of as white, a dragon-slayer, a conqueror invincible in battles, worthy to be invoked like the god *Bhaga* by men. Lastly, there is *Etaśa*, the swift steed who draws the bright form of the sun, but also contends in a race with Sūrya. (2) The cow, however, is the animal which occupies the most important position in Vedic mythology and religion. Cows, representing beams of light, draw the car of Dawn. Rain-clouds, especially in the Indra myth, are personified as cows; *Prṣni*, the mother of the Maruts, being an individualization. The bountiful clouds are doubtless the prototypes of the many-coloured cows, mentioned in the Atharvaveda, which yield all desires in the heaven of the Blest, and which are the forerunners of the Cow of Plenty (*Kāmadukh*) of post-Vedic poetry. The animal herself is already regarded as sacred in the Rigveda; for one of the poets impresses on his hearers that she should not be killed, and she is frequently designated by the term *aghnyā*, 'not to be slain.' She is even addressed as a goddess; and the divinities *Ilā*, *Aditi*, and *Prṥthivī* are sometimes conceived in the form of a cow. In the Atharvaveda the worship of the cow as a sacred animal is fully recognized. That the tendency to deification had already begun before the Aryans entered India is proved by the evidence of the Avesta, which shows that the sanctity of the cow is at least as old as the Indo-Iranian period. (3) In the Rigveda the goat is the animal that draws the car of Piśan. This is also the form of the divine being *Aja Ekapād*, 'the one-footed goat.' In the later Vedic literature we occasionally find the goat connected or

identified with Agni. (4) The ass appears in Vedic mythology only as drawing the car of the Aśvins. (5) The dog is met with in the form of the two brindled hounds of Yama, chief of the dead. (6) The boar has, in the Yajurveda, a cosmogonic character, as the form assumed by the creator *Prajāpati* when he raised the earth out of the waters. From this conception the boar incarnation of Viṣṇu was developed in Hindu mythology. (7) The tortoise has, in the later Vedas, acquired a semi-divine position; for in the White Yajurveda he is spoken of as 'lord of waters,' and in the Atharvaveda he appears under the name of *Kaśyapa*, beside or as identical with *Prajāpati*, receiving the epithet *Svayambhū*, 'self-existent.' In the Śatapatha Brāhmaṇa, *Prajāpati* is said, when producing all creatures, to have changed himself into a tortoise. This transformation became, in Hindu mythology, the tortoise incarnation of Viṣṇu. (8) A monkey named *Vṛṣākapi* appears in an obscure myth told in a late hymn of the Rigveda as a favourite of Indra. (9) Another late hymn contains a panegyric of frogs as bestowing cows and long life. (10) The bird frequently figures in Vedic mythology, as the eagle (*syena*) that brings the Soma to Indra. Noxious animals in Vedic mythology generally appear as demons or exhibit demoniac traits. (11) The serpent is here the most prominent. This is the form which the powerful demon *Vṛtra*, the foe of Indra, is thought to possess; for he is frequently designated as *ahi*, 'the snake.' The serpent, however, also shows a beneficent aspect in the divine being *Ahi Budhnya*, 'the dragon of the deep,' who is supposed to dwell in the fathomless depths of the aerial ocean. In the later Vedas, the serpents (*sarpāḥ*) are mentioned, along with the Gandharvas and others, as a class of semi-divine beings that dwell on earth, in air, and in heaven; and in the Sūtras, offerings to them are prescribed. In the Sūtras, we for the first time come across the Nāgas, human beings in appearance, but serpents in reality. In the Hindu period, serpent-worship is found all over India. Since there is no trace of it in the Rigveda, while it prevails widely among the non-Aryan tribes, the conclusion seems justified that, when the Aryans overspread India, the land of serpents, they found the cult diffused among the aborigines and borrowed it from them.

E. DEIFIED INANIMATE OBJECTS.

Besides the great phenomena of nature, various features of the earth's surface, as well as artificial objects, are treated as deities in the Vedas. This is a fetishistic worship of inanimate things chiefly regarded as useful to man.

1. *Mountains* are frequently addressed as divinities in the Rigveda, but only along with other natural objects, such as rivers and plants, or in association with gods. *Parvata*, 'mountain,' is even invoked with Indra in the form of a dual compound. Besides rivers and waters, already mentioned as terrestrial goddesses, plants (*osadhī*) are regarded as divine powers. One entire hymn of the Rigveda is devoted to their praise, chiefly with reference to their healing powers; the Atharvaveda refers to a medicinal plant as 'a goddess born on the goddess earth'; and the Black Yajurveda prescribes an animal sacrifice to plants for the obtaining of offspring. Large trees, called 'lords of the forest' (*vanaspati*), are also sometimes addressed as deities, mainly in association with waters and mountains.

2. Various sacrificial implements are deified. The most important is the *sacrificial post*. It is praised and invoked in a whole hymn of the Rigveda, in which posts set up by priests are described as gods. The *sacrificial litter* (*barhis*) is also dei-

fied, and the 'divine doors,' by which the sacrificial enclosure is entered, are goddesses. The *pressing stones* (*grāvan*) are addressed as deities in three hymns of the Rigveda; spoken of here as immortal, unaging, more mighty than heaven, they are invoked to drive away demons and destruction. The *mortar and pestle* used in pounding the Soma plant are invoked in the Rigveda. In the Atharvaveda divine power of the highest order is ascribed to *ucchiṣṭa*, the 'remnant' of the sacrifice, as well as to various sacrificial ladles. The agricultural implements named *śuna* and *sirā*, probably the ploughshare and the plough, are invoked in a few verses of the Rigveda, and, in the ritual, receive the offering of a cake.

3. *Weapons*, finally, are sometimes deified; armour, bow, quiver, arrows, and drum being invoked in one of the hymns of the Rigveda. The drum alone is also celebrated in an entire hymn of the Atharvaveda.

4. *Idols* seem not to have been known in the age of the Vedas; at all events they first begin to be referred to in the later additions to the Brāhmanas and in the Sūtras. One verse of the Rigveda, however, seems to allude to some image of Indra.

5. *Material objects* treated as symbols of deities are occasionally mentioned in the ritual literature. Thus the wheel (*cakra*) represents the sun in various ceremonies; and it appears in Hindu mythology as one of the weapons of the solar deity Viṣṇu. A piece of gold, sometimes in the form of a disk, also indicates the sun on certain ritual occasions. A symbol must have been used by the phallus worshippers (*śiśnādevāh*), who are mentioned with repugnance in the Rigveda. In the post-Vedic period the phallus or *linga* became typical of Siva's generative power, and its worship is widely diffused in India at the present day.

5. DEMONS.

a. The demons which are often mentioned in the Vedas are of two kinds. The higher and more powerful class, the aerial foes of the gods, are generally called *Asuras* in the Atharvaveda and later. This word, however, rarely means 'demon' in the Rigveda, where it usually preserves the older sense of 'being of mysterious power,' and denotes a god (*ahura* in the Avesta). The earlier notion of the conflict between a single god and a single demon, as exemplified by Indra and Vṛtra in the Rigveda, gradually made way for that of the hostility of gods and demons as two opposing hosts. This is the regular view of the Brāhmanas. Here the *Asuras*, no less than the gods, are regarded as the offspring of Prajāpati; here, too, the *Asuras* often vanquish the gods at the outset, being finally worsted only by artifice.

In the Rigveda the terms *dāsa* and *dasyu*, properly the name of the dark aborigines overcome by the conquering Aryans, are frequently used also to designate aerial demons, adversaries of the gods. A group of demons are the *Paṇis* ('nig-gards'), primarily the foes of Indra, who with the aid of Saramā tracks and releases the cows hidden by them.

Of individual demons, by far the most frequently mentioned is Vṛtra, the 'encompasser,' the formidable opponent of Indra. His mother being called Dānu, he is also sometimes alluded to by the metronymic term *Dānava* (which later becomes the name of a class of demons). Another powerful demon is Vala, the personified cave of the cows, which he guards, and which are set free by Indra and his allies, notably the Angirases. Other demon adversaries of Indra are *Arbuda*, described as a wily beast, whose cows Indra drove out; *Viśvarūpa*, son of Tvastṛ, a three-headed demon slain by both Trita and Indra, who seize his cows;

and *Svarbhānu*, who eclipses the sun (his successor in Hindu mythology being Rāhu). There are several other individual demons, generally described as *Dāsas*, and slain by Indra in favour of protégés: such are *Śuṣṇa*, *Śambarā*, *Pipru*, *Namuci*, *Dhūvi*, and *Cumuri*, besides some half dozen others who were originally, in all likelihood, terrestrial foes.

b. The second or lower class of demons are terrestrial goblins, enemies of men, as *Asuras* are of gods. By far the most common generic name for them is *Rakṣas*. They are nearly always mentioned in connexion with some god who destroys them. The much less common term *yātu* or *yātudhāna* (primarily 'sorcerer') alternates with *rakṣas*, and perhaps denotes a species. Terrestrial demons appear in the shape of various animals or birds, having also the power to assume human forms in order to deceive. With human shape they often combine some monstrous deformity; they are even described as blue, yellow, or green in colour; they are male and female, have families, and are mortal. Greedy for flesh and blood, they attack men by entering into them, thus causing disease and madness. As they prowl about at night, and the sacrifice is the main object of their malignity, Agni is naturally the god oftenest opposed to them, and most frequently invoked to burn, ward off, or destroy them. An important group of goblins, scarcely alluded to in the Rigveda but often mentioned in the later Vedas, are the *Pisācas*, eaters of raw flesh or of corpses. Besides some other groups of goblins of lesser importance, there were included in Vedic belief many other hostile agencies, such as those of disease, which it was one of the main tasks of magic to counteract. Only a few among the groups of terrestrial spirits were thought to be, after the manner of elves, helpful to men, as in harvest work, or in battle by terrifying the foe.

6. RELIGIOUS PRACTICE.

a. The cult of the Vedic Indian has three aspects. It endeavours, in the first place, to win the favour of the gods, who are almost without exception benevolent. It further aims at warding off the hostility of the demons, who are malevolent, here having recourse to practices which for the most part are not of a religious, but of a magical character. Lastly, its attitude towards ancestors is a combination of its treatment of gods and of demons; for, while ancestors receive worship as divine beings, means are taken to prevent them from unduly prolonging their uncanny presence among the living.

b. The worship of the gods has two sides, finding expression either by word or by act. Praise of their greatness and power, or prayer for welfare and forgiveness of sin is addressed to them on the one hand; sacrifice consisting of food and drink is offered on the other. Prayer and praise, which include frequent invitations to the sacrifice, are largely metrical in form, entirely so in the Rigveda. Prayer in the Vedas is almost entirely of the ritual type, intended to accompany a ceremony, or at least to form part of a liturgy. In the creative age of the Rigveda new prayers were produced for ritual purposes; but in the age of the later Vedas, with the development of a system which foresaw almost every desire and prescribed the offering to ensure its fulfilment, prayer was nothing more than the mechanical application of ready-made formulas. It is doubtful whether, even in the earliest period, much room was left, owing to the highly ritual type of the worship, for independent prayer. The latter could hardly in any case have gone beyond the expression of a concrete desire addressed to a particular

deity; it could certainly not have had the character of a communion of the worshipper with divine powers. Prayer was, however, by no means necessarily accompanied by a ceremonial act. Thus the hymns of the Rigveda addressed to Uṣas were recited without any attendant offerings; the same was the case, according to the ritual texts, with the prayers to Agni, Uṣas, and the Aśvins in the morning litany of the Soma sacrifice, as well as with the daily invocations muttered at the morning and evening twilight devotions.

As the hymns of the Rigveda, in addressing prayers to a god, aim at securing his goodwill, they are, in the first place and to a large extent, panegyrics which praise the greatness and power, the mysterious nature, and the exploits of the deity in question. The petition for the gifts hoped for, when the favour of the god has thus been won, is then briefly added. The benefits desired are almost entirely of a material, not of a moral, kind. They are mainly expressed by such general terms as treasures and blessings, protection and victory; when stated in detail they consist in long life and vigorous offspring, cattle and horses, cars and gold; or the punishment of enemies, niggards, and Brāhman-haters by their goods being taken away and bestowed on the pious. Rarely does the worshipper pray that his thoughts may be righteous, that he may refrain from doing what displeases the gods, that he may be reconciled to an offended deity, or delivered from the bonds of guilt; and his supplications lack the note of passionate appeal, deep aspiration, mental struggle, or humble submission to the divine will. As regards its efficacy, prayer was held to be scarcely less potent than sacrifice in gladdening and stimulating the gods. But a hymn had to be composed with faultless art, 'as a skilful workman constructs a car'; it had to be freed from imperfections 'as grain is winnowed with the flail.' Then it invigorated the god like draughts of Soma, stimulating him to new deeds; then it increased the mighty strength of Indra so that he slew the dragon. When prayer is thus thought, even in the Rigveda, to exercise the direct influence of a spell, magic is already beginning to encroach on the domain of religion. A similar tendency is observable in regard to the sacrifice which accompanied the prayers to the gods.

c. The general character of the Vedic sacrifice is essentially supplicatory, as it aims only at the obtaining of future benefits to be bestowed by the gods, and is not concerned with the past. What seem to be expiatory sacrifices are in reality of this order also, for they are accompanied by supplications that the guilt incurred should not be punished. Such expiatory sacrifices are of two kinds. They are either intended to mollify the wrath of a god aroused by the transgression of his divine will, being generally offered to Varuṇa, the guardian of moral order and punisher of sin; or they aim at removing guilt as a kind of impalpable substance much as if it were a disease, producing this result either by the aid of a god, especially Agni, or by means of fire, water, medicinal plants and spells, which are supposed to burn, wash, purge, or drive it away without the invocation of divine powers. This latter type belongs mainly to the sphere of the Atharvaveda, where magic supplants religious practice. Even a sacrifice made in fulfilment of a vow, after a god has granted a boon, is in reality only a supplicatory offering postponed, as when in the Atharvaveda Agni is promised an offering in the name of a lunatic, if the latter recovers his reason; or when, in the Brāhmaṇa story of Sunahṣepa, the childless king vows, if a son is

born to him, to sacrifice that son to Varuṇa. Thank-offerings in any true sense are unknown to the Vedic cult, the very verb 'to thank' not being found in the vocabulary of the language. An approach to the notion of a thank-offering is only to be found in a Sūtra passage, in which certain sacrifices are prescribed on a man regaining his health.

The conception of the effect of sacrifice which prevails in the Rigveda is that the offering wins the favour of a god and induces him to fulfil the accompanying prayer. The Soma offering satisfies, gladdens, strengthens the god, who loves the sacrificer and hates the niggard. The reward that follows is a voluntary act of the god, resulting from the benevolent attitude induced by the offering. It is not regarded as the repayment of a debt, though the sacrificer feels that the god cannot well help requiting him. While conscious of being in the presence of a mighty being, the sacrificer does not look on himself as infinitely far removed from the god, who is his old friend, and whose right hand he grasps. Even in the Rigveda, however, traces are already to be found of the notion that the sacrifice exercises compulsion not only over gods, but also over natural phenomena without requiring the co-operation of the gods. Here again we have the intrusion of magic into the domain of religion. In the ritual of the Brāhmaṇas we find that the latter has already been largely supplanted by the former.

d. The Vedic ceremonial was essentially based on the use of a sacrificial fire, 'the mouth of the gods,' into which the offerings were cast, and by which they were conveyed to the gods. Exceptionally only, fire was not the instrument of sacrifice. Thus the oblations to aquatic deities were cast into water, those to the dead were placed in small pits at the funeral sacrifice, while offerings to Rudra and demons were thrown into the air, hung on trees, buried, or disposed of in other ways. In the ritual there was beside the sacrificial fire a litter of grass (*barhis*), the soft seat on which the gods sat down to enjoy the offering. On this litter, according to the ritual texts, the oblations were deposited for a time, before being committed to the flames which conveyed them to heaven. Thus the gods were conceived as partaking of the sacrifice both on the litter and in their celestial abode. Agni is even invoked, in one and the same passage of the Rigveda, to bring the gods to the sacrifice and to take it to them in heaven (vii. 11. 5). This contradiction is doubtless to be explained by the survival of the litter in the ceremonial, from the time when offerings were presented on it alone. The burning of the litter at the end of the rite may perhaps originally have formed the transition to offering sacrifices in fire.

In the Vedic ceremonial, even of the earliest period, we have to distinguish between the simpler ritual of the single domestic fire and the more complicated and technical ritual conducted with the three fires, which are independent of the former, though they may originally have arisen by its division. The single domestic fire was maintained by every head of a family, who performed the rites connected with it himself. The three fires were set up only by men of position and wealth, becoming a centre round which the sacrificial activity of many Brāhmanas and priests revolved. Certain regular rites, such as the daily morning and evening sacrifice or the new and full moon ceremonies, were performed in essentially the same manner with the three fires as with the one, the ritual of the latter, however, being simpler. But the domestic rites were conducted with the one only, while the Soma sacrifice could be carried on with the three only. The chief of

the three fires, called Gārhapatya (doubtless representing the old domestic fire of the hearth), was the only one always maintained, the other two being taken from it for every sacrifice requiring their employment. It was used for the practical purposes of heating the vessels and preparing the offerings. The second, the Ahavaniya, situated to the east, was that in which the gods received their offerings. The third or Dakṣiṇa fire, placed in the south, the quarter specially connected with the souls of the dead and evil spirits, was used for offerings relating to those two classes of uncanny beings. About this fire and the pits dug around it, the ritual of the sacrifices to the manes chiefly moved.

When a fire was established for purposes of the cult, it was either produced by means of the fire-sticks (called *araṇis*, and consisting of a lower slab of soft and a drill of hard wood) or fetched from certain places, as the house of a rich owner of herds or of a great sacrificer. At the four-monthly sacrifices offered at the beginning of the seasons and at the Soma sacrifice, a new fire was rubbed and united with the old Ahavaniya, doubtless with the intention of giving it new vigour.

e. With regard to the material of the sacrifice, the Vedic Indian, as a general principle, offered to the gods what was his own favourite food. It comprised the chief produce of the dairy and of agriculture: milk, in its various forms, and butter, together with the two principal kinds of grain, barley and rice (the latter, perhaps, not being used in the earliest period), cooked or baked in different ways. Among these, the products of the cow were unmistakably believed to have a more sacred and mystical import. In the cult of the dead, libations of water were characteristic. As beef and goats' flesh, less frequently mutton, were the principal kinds of meat eaten, cattle, goats, and sheep were the usual victims in the animal sacrifice, the he-goat, it would seem, being regularly offered on all lesser occasions. On the other hand, animals the flesh of which was either not eaten at all or only exceptionally eaten, such as the pig, dog, deer, as well as fish and birds, were not sacrificed to the gods. It is true that, in the rare and costly horse-sacrifice, an animal was offered the flesh of which was never a regular article of diet. This is, however, to be accounted for by the intrusion of magic into the domain of sacrifice; for the intention underlying the ceremony was to transfer the swift power (*vāja*) of the horse to the royal sacrificer. This sacrifice was, indeed, akin to a peculiar tendency in the sacrificial ceremonial, to offer to a god what corresponded to his special individuality. Thus to the goddesses Night and Morning was offered the milk of a black cow having a white calf. In the animal sacrifice, a victim was often chosen which agreed with the deity not only in sex, but in colour and other qualities. The starting-point of this practice was probably the notion that the eater acquires the qualities of the animal he eats, and that his strength is increased most by eating the flesh of the animal most like himself. Thus the mighty Indra, who is constantly called a bull in the R̥gveda, commonly receives the sacrifice of a bull, as also of a buffalo, to which he is often compared. The sun-god Sūrya has a white he-goat offered to him.

The victim was killed by strangulation, and without bloodshed. With an evident desire of avoiding blood-guiltiness, it was addressed with such verses as 'Thou dost not die; no harm is done thee; thou goest to the gods by pleasant paths.' The ceremonial dealing with the disposal of the carcass was divided into two distinct sacrificial acts. In the first place, after an incision had been made, the caul (omentum) was extracted,

being thereupon cooked and solemnly offered to the gods. This rite was concluded by the distribution of presents to priests and by purifications. The second act of the ceremonial consisted in cutting up the carcass into parts, certain sections of which were offered to the gods, while others were eaten by the priests. What remained was distributed among sacrificers, priests, and Brahmans. A magical rather than a religious notion underlies the practice of men eating the remnants of the sacrifice of which the god has first partaken; for those remnants must have been regarded as of the nature of a medicine, which transfers to man the divine blessing connected with the sacrifice, or the particular power implied in the individual offering. The separate sacrifice of the caul was perhaps a relic of a time when that was the only portion of the victim which, owing to its agreeable odour, was presented as a burnt-offering to the gods. The blood of the victim was, in the Vedic ritual, not eaten, but was poured out as an offering to the Rakṣases or lower demons, who were regarded as fond of blood, and who similarly received the offal of the grain used in making baked offerings. Analogously, offerings made to beings thought to have an uncanny nature, such as Rudra or the souls of the dead, were not partaken of by the sacrificer. Thus a bull offered to Rudra might not be eaten or even brought into the village; and funeral cakes presented to the manes might only be smelt.

In connexion with the animal sacrifice, the interesting question as to whether the human sacrifice was known in the ritual of the Vedas suggests itself. The only certain trace of such a sacrifice is to be found in the important ceremony of building the brick fire-altar (called *agni-cayana*). Here it is prescribed that five victims—man, horse, ox, ram, he-goat—are to be sacrificed to different gods, and their five heads walled up in the lowest layer of the edifice. The object of this ceremony, which was a magical rite rather than an actual sacrifice, was to give stability to the altar. It is mentioned in the Śatapatha Brāhmaṇa as the custom of a not very remote past, for which other rites had been substituted. The human sacrifice (*puruṣa-medha*), which the ritual books describe in detail, was probably only an innovation invented to imitate the horse-sacrifice. But of any actual human sacrifice there is no certain trace in Vedic India. Neither the evidence of ancient stories, like that of Sunahśepa, nor the evidence of various Buddhist legends, is by any means conclusive.

Not only were food and drink presented to the gods to satisfy their hunger and thirst, but an intoxicant, of which the sacrificer also partook, was offered to them. This was the juice of the Soma plant, which was pressed, mixed with milk or other ingredients, and presented to the gods. Soma was certainly not the popular drink of the Vedic Indian, whose favourite intoxicant was called *surā*. How, then, is it to be accounted for that, in this case, he did not offer to the gods what he liked best himself? The explanation is that, having during the Indo-Iranian period been adopted in the cult instead of the earlier mead of the Indo-European age, it retained, by the force of tradition, its old-established position even in the Vedic cult.

Occasionally we find that objects which do not constitute food are sacrificed. Thus a man who desires the possession of deadly weapons sacrifices iron nails. Here again we see the intrusion of witchcraft; the sacrifice becoming a means of obtaining something analogous to the objects offered.

f. Priests.—Vedic India was already far removed from that primitive condition of things in which every man was his own priest, and did not require

the services of persons possessing technical knowledge as intermediaries between him and the divine powers. On the contrary, it is certain that, even in the period of the Rigveda, there already existed a priestly class qualified by special knowledge and magical qualities to act for others in the difficult and dangerous intercourse of man with gods and spirits. There were, indeed, already a number of sacerdotal families, like the Vasiṣṭhas and Viśvāmitras, in which the art of praying and sacrificing correctly was practised as a hereditary calling, all of them employing the same cult, notably that of the Soma sacrifice, practically in the same way. There were no public priests; for there was no public worship of a national, tribal, or even congregational character. Vedic worship was of an essentially private type, sacrifice being performed on behalf of its individual institutor (*yajamāna*) by the priests who acted for him and whose prayers belonged to him. This, coupled with the fact that idols were not used, accounts for the absence of temples in Vedic India.

Two sacerdotal types have to be distinguished in the Vedic cult: the domestic priest (*purohita*), whose function it was to superintend the worship of his employer; and the officiating priest (*ṛtvij*), who had to play a certain prescribed part in an individual sacrifice.

The Purohita was generally in the service of kings only, though Brāhmins occasionally appeared in an analogous capacity in the houses of men of high position. That the employment of a Purohita in a royal household was considered essential is indicated by a Brāhmaṇa passage which states that the gods would not eat the food of a king who had no Purohita. The domestic priest was appointed by the king, and held his office for life, being often succeeded by his son. In the ceremony accompanying the appointment, the same verse was employed as when the bridegroom takes the hand of the bride in the wedding rite. The Purohita was, in fact, the king's right hand man, giving the directions for all the royal ceremonies and sacrifices. Even in the Rigveda the whole prosperity of the country is said to depend on the Purohita, 'the guardian of the realm,' and the Purohita Devāpi at the sacrifice employs a spell to procure rain on behalf of his royal master, while in the Atharvaveda another Purohita uses spells to secure victory in battle.

Of the sacrificial priests there were several, with definite functions and technical names, the chief being the Hotṛ or 'invoker,' the Udgātṛ or 'chanter,' the Adhvaryu or officiating 'sacrificer,' and the Brāhman or superintending priest; in the period of the Rigveda the Hotṛ was the most important, later the Brāhman became so. The Purohita was probably not any one of these, though he might be employed to perform the functions of one of them; in the earlier period he sometimes appears acting as Hotṛ, in the later as Brāhman. Thus in the Rigveda the Purohita Devāpi is chosen as a Hotṛ, and Agni is called both a Purohita and a Hotṛ.

The Rigveda contains a list of seven kinds of sacrificial priests, and this was probably the regular number, not only then but in the Indo-Iranian period. Seven priests still appear in various parts of the sacrificial ceremonial in later times, though, with the development of the ritual, additional ones were otherwise employed. The Avesta, which has eight sacrificial priests, probably added one to the original number. It is, in any case, a striking fact that the Zaoṭar, the leading priest who recites the Gāthas in the Iranian Haoma sacrifice, corresponds, in both name and function, to the Hotṛ who recites the verses of the Rigveda in the Vedic Soma sacrifice. The most important of these seven Vedic priests were

the Hotṛ and the Adhvaryu. It was the duty of the former to recite the hymn which, in the chief libations of the Soma sacrifice, celebrated a particular god and invited him to drink Soma. When the hymns of the Rigveda were composed, their seers (*ṛṣis*) themselves doubtless played the part of the Hotṛ at the sacrifice; and that the latter was, in the earlier period, regarded as the leading priest is clear from his furnishing the type for Agni, the priest god. The Adhvaryu performed the practical part of the ceremonial, tending the fire and the litter, arranging and cleaning the utensils, pressing and offering the Soma. The remaining five acted as assistants to one or other of the two chief priests. The Agnīdh, or 'fire-kindler,' helped the Adhvaryu in tending the sacrificial fire. The Upavaktṛ or 'exhorter' (known also as Praśāstr, 'director,' and Maitrāvaruṇa, 'priest of Mitra and Varuṇa'), whose duty it was to give various orders to other priests, plays the part, in the animal sacrifice, of the only assistant, and in the Soma sacrifice, of one among the several assistants of the Hotṛ. The three other priests of the ancient list belong to the Soma ritual exclusively: the Potṛ, or 'purifier,' and the Neṣṭṛ, or 'leader,' became quite unimportant in the later Vedas, while the main function of the Brāhman was to recite hymns addressed to Indra, in the same way as the Hotṛ, whose assistant he was. In the later ritual this priest came to be called Brāhmaṇācchamsin, while the old name, Brāhman, acquired the technical sense of the priest who superintended the whole sacrifice, and whose duty it was to know the three Vedas.

g. *Sacrifices.*—The Vedic cult consisted of regularly recurrent or of occasional sacrifices. Our knowledge of the former is derived from the ritual literature, for there are only few and obscure traces of them in the hymns of the Rigveda, which is almost exclusively concerned with the Soma sacrifice. It is, however, probable that they were performed, at least in their main features, during the earliest Vedic period. These regular sacrifices are of three kinds, as connected with the course of the day, the month, and the year, being performed, respectively, twice a day, twice a month, and three times a year. Each of the first two kinds could be conducted, though without any difference in ceremonial form, either with the single domestic fire or with the three sacrificial fires. On the other hand, the annual sacrifices, which were celebrated at the commencement of the three seasons, required the greater ritual of the three fires. It was a general characteristic of all periodic sacrifices that they were never addressed to one single god.

The daily rites took place morning and evening. They consisted, on the one hand, of fire-offerings to the gods, and, on the other, of gifts of food presented to all beings. The latter comprised offerings placed on the threshold and elsewhere for the deities and spirits in and around the house; a libation to the souls of the dead in the southern quarter; food scattered for dogs and birds; and meat and drink given to needy human beings.

The monthly sacrifices, which were celebrated at new and full moon, consisted of cooked oblations or of cakes offered to the gods. Among the numerous deities receiving them, the most prominent was Indra.

The seasonal sacrifices were offered every four months, at the beginning of spring, of the rains, and of the cool weather. Throughout these the Maruts are the most prominent deities. In the ceremonial which inaugurates the rainy season, Karira fruits are offered with a view to procuring rain and consequent plenty. Then also two figures of dough covered with wool, and intended to represent a ram and a ewe, are sacrificed in order to

promote the increase of flocks. In these two offerings the influence of magical notions is clearly observable. With the seasonal celebration of the rains was combined a great expiatory sacrifice with which Varuṇa was specially associated.

In the ceremonial of the third or autumn sacrifice was included an offering to Rudra Tryambaka, intended to avert his attacks from the flocks and to conciliate his healing power. At a place where four roads meet, the abode of uncanny beings, a flat cake was deposited on or buried in a molehill, to indicate that it was presented to the mole as the animal of Rudra, who would thus refrain from injuring other animals. With this ceremonial was combined a great sacrifice to the dead, a kind of All Souls' festival.

We now turn to the extraordinary sacrifices, which are not limited to any fixed period. One of these is the independent form of the animal sacrifice. According to the ritual texts, it should take place annually; but the statements as to the time of year it should be performed are fluctuating and indefinite. Another form of the animal sacrifice is included in the Soma sacrifice.

Of all forms of cult the Soma sacrifice appears as the most important in Vedic literature. It was, however, probably not so important in actual life, as few could have possessed means sufficient for its performance. As compared with the recurrent sacrifices, it rather bore the character of an extraordinary act of liberality practised by the rich towards gods and priests. Though the time for its performance was not definitely fixed, later texts recommend the spring as the most suitable period. Soma was not offered to different gods according to circumstances, like a cooked oblation or an animal victim. On the contrary, it was offered, within the stereotyped scheme of the three pressings of Soma made at morning, noon, and evening, in honour of a prescribed series of gods intended to include all deities except perhaps Rudra. In this ceremonial the important gods were all addressed by name, the lesser ones being included in the comprehensive term *Viśve devāḥ*, or 'all-gods.' The Soma sacrifice, in fact, constituted a general carouse for gods as well as for priests. Indra was, however, the most important deity and the central figure of the whole ceremony; thus the Soma pressed at midday belonged to him alone in addition to his share of the morning and evening libation. The ceremonies of the Soma sacrifice were of a complex nature. Even the simplest and fundamental form of it, the *Agniṣṭoma* ('praise of Agni'), required the ministrations of sixteen priests. This rite occupied only one day; other Soma sacrifices lasted for several days, up to twelve; while another class, called *sattras* or 'sessions,' sometimes extended to a year. These prolonged Soma sessions formed an unimportant exception to the rule that every sacrifice was performed for a single individual; for here a number of Brāhmins combined in such a way that each, while officiating as a priest in the usual manner, was accounted a sacrificer (*yajamāna*). The texts which deal with the Soma sacrifice furnish sufficient details for a complete picture of its ceremonies, which in the main were doubtless the same in the period of the R̥gveda. Numbers of priests and lay spectators thronged the sacrificial ground, on which burned the three fires strewed around with sacrificial grass. Between the fires was the *vedi*, an oblong shallow excavation somewhat narrowed in the middle and covered with a litter of grass for the reception of the offerings to the gods. Scattered about were to be seen sheds, posts for tying up victims, the seats and fire-altars of the various priests, vessels containing water for various purposes, pressing implements, tubs, and bowls for

Soma. Among them moved about the officiating priests and their assistants, in whose midst were to be seen the sacrificer (*yajamāna*) and his wife, emaciated by initiatory asceticism. The priests were engaged in preparing or offering the sacrificial cakes and the libations of milk; in sacrificing eleven he-goats to various gods; in pressing, purifying, mixing the Soma juice; in pouring it into or out of various vessels, presenting it to the gods, or drinking their share. All these operations were accompanied by the calls, recitations, chants of the priests as they carried out the details of the ritual, which were far too numerous to indicate here.

The Soma sacrifice was preceded by a protracted ceremony of initiation (*dīkṣā*), which was undergone by the sacrificer and his wife, and was followed by another of purification (*avabhṛtha*). Both of these ceremonies were probably known to the R̥gveda. The *Dīkṣā* belongs to the ancient type of magical rites which were intended as a preparation for intercourse with gods and spirits by producing an ecstatic condition. It consisted in seclusion and various forms of asceticism (*tapas*) ending in physical exhaustion. Fasting was a chief element in the preparation for this as well as other rites. A preliminary bath was taken, as in the wedding ceremony, for the removal of injurious substances which would nullify the effects of the initiation. On the other hand, no bath might be taken during the course of the Soma sacrifice, for it would have been regarded as washing off the sanctity communicated by the *Dīkṣā*. As in the funeral and some other rites, the hair and beard were cut off and the nails pared, because they were considered impurities.

In the ceremony called *avabhṛtha* ('carrying down' to the water), with which the Soma sacrifice terminated, the black antelope skin and the sacred cord used by the sacrificer and his wife since the beginning of the *Dīkṣā* were thrown into the water along with the Soma shoots which had been pressed out and the sacrificial utensils which had been in contact with the Soma. Finally, the sacrificer and his wife, as well as the priests, descended into the water to wash off the supernatural powers which they had acquired, and on emerging put on fresh garments. The offerings and texts which accompanied the *Avabhṛtha* ceremony were chiefly addressed to Varuṇa, the god who delivers from guilt.

h. Rites of family life.—As the Vedic wedding ceremony had in its main features probably come down from the Indo-European period, it retained much that belongs to the domain of witchcraft rather than that of religion. Thus the act, on the part of the bridegroom, of taking the hand of the bride, was intended to place her in the power of her husband. The seven steps which the young couple took and the food which they ate together were meant to establish friendship and community. Future abundance and male offspring were aimed at when the bride, after being conducted to her husband's house, was placed on the hide of a red bull and took upon her lap the son of a woman who had borne only living male children. The worship of the gods, on the other hand, was somewhat in the background during this ceremony. It was chiefly concerned with Agni, the god most closely connected with domestic life. Thus the husband led his bride three times round the newly-kindled nuptial fire, which it was the duty of the couple to maintain henceforth throughout their lives as their domestic fire. The invocations addressed to the gods were mostly of the nature of benedictions. The long wedding hymn from the R̥gveda was also recited. Various offerings, moreover, were made, especially one of parched grain strewed by the bride with hollowed hands.

After sunset the husband led his bride out of the house, and, as he pointed to the pole-star and the star Arundhati, the young couple exhorted each other to be constant and undivided for ever. The wedding was followed by three nights of conjugal abstinence, meant doubtless to exhaust the patience and divert the attacks of hostile demons.

Similarly, in the rites performed both before and after birth for the welfare of children, the magical aspect predominated over the sacrificial. Thus a powdered drug was dusted into the nostrils of a pregnant woman to ensure the sex of her offspring being male; and unripe fruits of the Udumbara tree were attached to her in order to communicate to her child the exuberant maturity which that fig attains.

On the tenth day after birth, when the period of impurity was over, the ceremony of giving the child his name was performed. In the third year the rite of tonsure, accompanied by an oblation, took place. The boy's hair was cut and arranged so as to be worn in accordance with the custom of the family. The hair which was cut off was buried. A similar ceremony was performed when the beard of the youth at the age of sixteen was shaved.

But by far the most important rite connected with boyhood was that of initiation or 'introduction' (*upanayana*) to a religious teacher, which took place at the respective ages of eight, eleven, and twelve in the case of boys of the first three castes. Standing at the sacred fire, the preceptor invested the boy, whose head had been shaved, with a girdle, which he wound round his waist three times from left to right, at the same time pronouncing certain formulas. He then grasped the boy's hand and, placing his own on the pupil's heart, recited a verse indicating that he had assumed power over the boy's will. On this occasion the youth also received a garment, a staff, and a sacred cord to be worn over one shoulder and under the other arm. During the whole course of his subsequent apprenticeship, the religious pupil (*brahmācārin*) was required to practise elasticity, to refrain from certain kinds of food, to tend his preceptor's fire with fuel, and to beg food in the village. But his chief duty was to study the Veda and to learn the famous *Sāvitrī* stanza from the Rigveda as an introduction to that study. By the rite of initiation, which was regarded as a spiritual birth, the pupil had become one of the 'twice-born,' qualified to eat the remnants of sacrificial offerings. Though this ceremony is not even alluded to in the Rigveda, it must have been known at that time, for it can be traced back to a still earlier age. The evidence of the Avesta shows that among the ancient Persians a youth of fifteen was received into the community of Zoroaster with a sacred cord; and among primitive peoples similar rites have been found all over the earth to symbolize reception into the community of men as an entry into a new life. This ancient rite was in India transformed into a spiritual ceremony which gave admission to the community of those qualified for the study of sacred knowledge.

The period of apprenticeship was terminated by the ceremony called *samāvartana*, or 'return,' the main element of which was a bath intended to indicate symbolically that the quality of religious studentship (*brahmācārya*) was washed off.

The funeral rites, finally, belong to the sphere of the domestic ritual; it will, however, be more convenient to deal with them later as part of the ceremonial relating to death and the future life.

i. Rites relating to public life.—Even in ceremonies which assumed a public character because connected with the person of the king, the sacrifice

was still instituted by him as an individual; and though prayers for the country and the people might be incidental to it, there existed no form of sacrifice which was offered in the name of the tribe or the nation. In the royal ceremonial, magical practices were, as we found to be the case in the domestic ritual, more prominent than sacrificial acts. The first of these celebrations calling for description are the consecration (*abhīṣeka*) of the king and the royal inauguration (*rājasūya*). Neither of these is mentioned in the Rigveda, and they were probably developed in the later Vedic period; but the magical elements which they contain are most likely very old. Both these celebrations included Soma rites. In the consecration ceremony the king was seated on a chair covered with a tiger skin and made of the wood of the Udumbara, the tree which to the Indian was typical of plenty. A cup, also made of Udumbara wood, was filled with a fluid compounded of butter, honey, rain-water, and other ingredients. With this fluid the king was anointed or rather besprinkled. In the *Rājasūya* a similar besprinkling took place; but it was followed by a series of further rites intended to secure success of all kinds. These included a symbolical raid on a herd of cows; the discharge of arrows at feeble relatives of the king, who were plundered; and a game of dice in which a cow was the stake, and which was won by the king.

Another ceremonial, regarded as still more dignified and efficacious, was the *Vājapeya* ('draught of vigour'), a kind of Soma sacrifice, which might be performed not only by kings, but even by men of royal descent or of the *Brāhman* caste. Its most characteristic feature was a chariot race, evidently a magical rite intended to secure for the sacrificer the swift power embodied in the horse. It also included a rite called the 'ascent of the post' (*yūpārohana*). A wheel made of wheaten flour, and symbolical of the sun, was placed on the top of a sacrificial post. Mounting by means of a ladder, the sacrificer grasped the wheel as he uttered the formula, 'We have reached the sun, ye gods.' On descending to the ground he seated himself on a wooden throne and was besprinkled as in the inauguration ceremony. This part of the *Vājapeya* rite aimed at the attainment of exalted position.

The splendour of royal ceremonial, however, culminated in the horse-sacrifice (*aśva-medha*). It was not a thank-offering, as might at first sight be inferred from the words of the *Brāhmaṇa* description of each king who performed it, 'He victoriously traversed the earth and offered the horse-sacrifice.' It was in reality a supplicatory sacrifice offered, after military successes, for the fulfilment of the king's highest wishes in the future. According to the ritual texts, this sacrifice is addressed to the gods in the aggregate, but with special reference to *Prajāpati* (an evidently late trait); but there are indications that it may originally have been addressed to *Indra* the *Vṛtra*-slayer, an obvious god to associate with a rite which is a glorification of military heroism. The horse itself represents swift vigour, a quality which the king aims at obtaining and increasing in himself by means of this sacrifice. The ceremony was begun by bathing the horse, when a four-eyed dog (that is, one with two spots above its eyes) was killed with a club by a man of low origin. The horse, having been consecrated, was allowed to roam about free for a year, guarded by a retinue of armed youths. During the interval the sacrificial ground was the scene of various offerings and rites, while stories were recited, chants sung, and lutes played. High and low, young and old, took a share in the pomp of the ceremonial. At

length, when the year had come to an end, the horse was sacrificed during the course of a Soma offering of three days' duration. In the later Vedic ritual the horse is accompanied by a number of other victims; but in the Rigveda (two hymns of which are concerned with the horse-sacrifice) mention is made only of Pūṣan's he-goat, which announces the offering to the gods. Before the carcass was cut up, the chief consort of the king lay down beside the dead horse, while obscene conversations were carried on between the priests and the women of the royal household. Before the cauld was offered, the priests propounded and solved riddles among themselves, as they had already done at a previous stage of the ceremonial. The whole rite concluded with a purifying bath at the end of the third day.

7. DEATH AND FUTURE LIFE.

A. BELIEFS.—a. The soul, variously called *asu*, 'spirit,' *manas*, 'mind,' *ātman*, 'breath,' *prāṇa*, 'respiration,' was thought to be separable from the body during unconsciousness, and to continue its existence after the body had been destroyed by cremation or burial. But, though imperishable, it was not believed to prolong life as a mere spirit or shadow, but to retain its personal identity in a corporeal state; for the body, purified by the power of Agni and freed from all imperfections, shares in the existence of the other world. The doctrine of transmigration is not to be found in the Vedas; its beginnings are met with in the Brāhmana, where the notion of repeated births and deaths in the next world appears; but it shows itself fully developed even in the oldest Upaniṣads, and must have been generally accepted by 600 B.C., since Buddha would not otherwise have received it into his system without question.

The spirit of the deceased proceeds upward through the air on the path trodden by the fathers (*pitara*) to the realm of eternal light. It is natural that Agni, who burns the corpse, should have been regarded as the conductor of the soul on its journey. Arrived in heaven, where he recovers his former body in a complete and glorified form, the departed meets the fathers who revel with Yama, and receives from the latter a resting-place. According to the Satapatha Brāhmana, the dead, on leaving this world, make their way between two fires, which burn the wicked but allow the good to pass. The latter proceed either by the path which leads to the fathers or by that which leads to the sun. The Upaniṣads also hold that there are two paths for the good: by the one, those who possess complete knowledge of the world-soul go to Brahmā; by the other, those whose knowledge is imperfect reach the world of heaven, whence, after the fruit of good works has been exhausted, they return to earth to be born again. On the other hand, those who are ignorant of the self go to the dark world of evil spirits, or are reborn on earth. To illustrate the mystery of the future life, the Katha Upaniṣad tells the myth of Naciketā, who, on visiting the realm of death, is informed that those who have not enough merit for heaven and immortality fall again and again into the power of death and, entering upon the cycle of existence (*samsāra*), are born repeatedly with a body or as a stationary object; that he who controls himself reaches Viṣṇu's highest place; but that there is no hell for the unworthy.

b. Heaven.—The abode of the fathers and Yama is situated in the highest or third heaven, where is eternal light. It is also described as the highest point of the sun or the highest step of Viṣṇu. Here is a tree in the shade of which Yama drinks with the gods. In the Atharvaveda it is

stated to be a fig-tree (*aśvattha*). Heaven is believed to be the reward of the righteous, of heroes who risk their lives in battle, of those who practise rigorous penance, and, above all, of those who bestow liberal sacrificial gifts. The Atharvaveda is full of references to the bliss in store for the latter.

The deceased, on entering heaven, see again father and mother, wives and children. Sickness is left behind; bodily imperfections or frailties are unknown; and old age cannot prevail. There are neither rich nor poor, neither oppressors nor oppressed. The life of the blest is passed among the gods, more especially in the presence of the two kings Yama and Varuṇa. Here the sound of the lute and of songs is heard; streams of Soma, *ghī*, milk, honey, and wine flow; and there is spirit-food and satiety. Bright, many-coloured cows, which yield all desires, are at hand. The life in heaven is thus one of indolent material bliss, devoted to sensual joys. In the Upaniṣads the life in the heaven of the gods, being followed by re-birth, is a lower and transient form of bliss; only those who know the truth reach the higher stage, the condition of changeless joy and unending peace which results from absorption in the world-soul.

c. The blest who dwell in the third heaven are called *pitṛs* or 'fathers.' By these are generally meant early ancestors who made the paths by which those who have recently died join them. Different races of them are distinguished (p. 608), the Anṅirases being more especially associated with Yama. The fathers are also spoken of as lower, higher, and middle; as later and earlier; all being known to Agni, but a few only to their descendants. The fathers are fond of Soma, feasting with the gods and leading the same life as they do. Being immortal, they are even spoken of as gods. Great cosmical actions, like those of the gods, are sometimes attributed to them; thus they are said to have adorned the sky with stars, and to have placed darkness in the night and light in the day. As the burning of the corpse was in no sense a sacrifice, the corpse-devouring Agni was distinguished from the Agni who wafts the offering to the gods; and, similarly, the path of the fathers from that of the gods. The Satapatha Brāhmana goes further, discriminating between the heavenly world (*svarga loka*), that is, the world of the gods, and that of the fathers (*pitṛ-loka*). The fathers are prayed to like the gods, being entreated to hear and to protect their worshippers, and to refrain from punishing their descendants for any sin humanly committed against them. They are also besought to give riches, offspring, and long life to their sons; individual ancestors being sometimes invoked by name. Coming to the sacrifice on the same car as Indra and the other gods, they drink the pressed Soma as they sit on the litter of grass to the south (the quarter of the dead). They arrive in thousands and range themselves in order on the sacrificial ground. They receive oblations, which are, however, different from those offered to the gods.

d. The chief of the fathers is Yama, to whom three hymns of the Rigveda are addressed. He is only spoken of as a king who rules the dead, but it is implied that he is a god as well. He is, as is natural, specially associated with Agni, the conductor of the dead. Yama is the son of Vivasvat and of Saranyū, Tvaṣṭr's daughter. He was a mortal, who chose death and abandoned his body. Finding out the path for many, he passed to the other world, whither the ancient fathers have gone. Having been the first of mortals that died, he is called 'our father.' As a mythological creation, Yama goes back to the Indo-Iranian period, corresponding to Yima, son of Vivalhvant,

in the Avesta. The most probable conclusion to be drawn from the available evidence seems to be that Yama represents the chief of the souls of the departed, as having been the first father of mankind and the first of those that died. This conclusion is supported by the fact that in the Avesta Yima is the ruler of an earthly paradise. It is, perhaps, also borne out by the appearance of Yama and his sister Yamī in the character of twins in a hymn of the Rigveda, where the very repudiation of their incest points to the existence of a belief in the descent of mankind from primeval twins. Some scholars have, however, identified Yama with various phenomena of nature, such as Agni, the sun, or the moon. In the Rigveda Yama's foot-fetter (*padbīṣa*) is referred to as parallel to the bond of Varuṇa, and his messengers that seek the lives of men must have inspired feelings of dread. It is not till the Atharvaveda and the later mythology that Yama becomes more closely associated with the terrors of death, and assumes the character of a regular god of death; though even in the epic his domain is not limited to hell.

The owl and the pigeon occasionally appear as Yama's emissaries; but his regular messengers are two dogs, described as four-eyed, broad-nosed, brindled, brown, sons of Saramā. They guard the path to the other world or wander about among men, keeping watch on them; and they are besought to grant continued enjoyment of the light of the sun. Their functions seem to have been thought to consist partly in tracking out among men those who are to die, and partly in keeping guard on the path over those who are about to enter the realm of Yama. The conception of a watch-dog of the dead goes back to the Indo-Iranian period, as shown by the evidence of the Avesta, where a four-eyed hound is stated to keep guard at the head of the bridge which leads to the other world. If the epithet *sabalas* ('brindled') is identical with the Greek *κέρβερος*, the notion of a dog of death must go back even to the Indo-European age.

e. Hell.—As the virtuous, in the opinion of the Vedic seers, were rewarded in the future life, it is natural to suppose that they believed in some kind of abode for the wicked. The evidence of the Rigveda cannot, however, be said to go beyond showing that this was regarded as an underground darkness. But there can be no doubt that the belief in a regular hell exists in the Atharvaveda, which speaks of the house below, of black and lowest darkness, the abode of goblins and sorceresses, called *nāraka loka* as contrasted with *svarga loka*, the heavenly world of Yama. The torments suffered in this infernal region are also once described. It is not, however, till the period of the Brāhmaṇas that the notion of future punishment appears fully developed. Thus the Śatapatha Brāhmaṇa states that every one is born again after death and, being weighed in a balance, receives reward or punishment according to his deserts. Nothing is said in the Vedas of a final judgment or of a destruction and renovation of the world.

B. THE CEREMONIAL.—a. Funeral rites.—Cremation was the normal method of disposing of the dead in Vedic times. That burial was also practised to some extent is undoubted, though the ritual books have no rules regarding it, except in so far as the bones of the cremated are interred. The predilection of the Vedic theologians for the god of fire was most probably the reason for incineration having already become the almost universal practice among the Aryans in India. The beard and hair of the dead man were cut off and his nails trimmed; his body was anointed, decked with a garland, and dressed in

a new garment, which he was intended to wear in the next world. The corpse was then carried or driven to the burning ground; a bundle of twigs was tied to it, in order to efface the footsteps and so prevent death from making its way back to the living. The dead man was then exhorted, with verses from a funeral hymn of the Rigveda, to go by the ancient paths, past the two dogs of Yama, to the fathers. The widow, who had mounted the pyre and lain down beside the corpse, was now called upon to rise and take the hand of her new spouse (her husband's brother). That the ceremonial excluded the burning of the widow is undoubted; but the ritual act which was required to recall her to life shows that her ascent of the pyre was symbolical of the actual immolation of bygone times. Indeed, it must be assumed that this ancient custom, though not sanctioned by the Vedic ritual, survived through the Vedic period in the families of military chiefs. Having by their example gradually spread to other classes, it became, in later times, a universal practice throughout India. If the deceased was a warrior, his bow was taken from his hand, an indication that at one time it was burned with him; if he was a sacrificer, his combustible utensils were placed with him on the pyre. Here we have a survival of the ancient custom of providing the dead with the chief articles of their property for use in the next life. At the same time as the corpse was burned, a cow and a he-goat were sacrificed. These animals, however, did not represent property, but were intended as a means of deflecting the consuming power of fire to them as substitutes for the corpse; and, by a fiction, Agni was supposed not to burn the dead man, but to send him 'done' to the fathers.

The mourners, on returning from the burning ground, bathed, changed their clothes, and refrained from looking round. On entering the house of the deceased, they touched purifying or auspicious objects such as water, fire, or cow-dung; and finally removed the sacrificial fire of the dead man by some aperture other than the door.

A death was followed by a period of impurity, varying from three days to ten, according to the degree of kinship. As the return of the soul was feared during this time, the surviving relatives took constant precautions to avoid infection. Thus only food which was bought or presented by others was eaten, evidently to guard against introducing anything tainted into the system.

Generally on the third day, what remained of the bones of the cremated man was collected, placed in an urn, and temporarily buried, to the accompaniment of the Rigvedic verse, 'Approach thy Mother Earth.' During this ceremony the deceased was no longer thought of as in the realm of Yama, but as actually present. This inconsistency is no doubt due to a primitive belief surviving beside the more recent conception of life in the heavenly world.

Last of all—according to the Brāhmaṇas, after the lapse of years—a burial mound was erected, the bones being exhumed for the purpose of removal to a suitable spot. During the following night music was performed, cymbals being beaten and the lute (*viṇā*) played, the female mourners repeatedly going round the bones with their left hands towards them. On the following morning, the bones were taken to a place, out of sight of the village, where the ground was free from thorns but permeated with roots. A hole or furrow having been made, the bones were deposited and a mound of stone and earth was erected over them. Grain was scattered on the mound as food, while milk and water were poured into small pits dug around it, as drink for the deceased. When the mourners returned, various precautions were taken to pre-

vent death from following the living; thus a stone or a clod was deposited as a boundary. The Rigveda refers, in a funeral hymn, to the erection of a stone to divide the living from the dead.

Though the Vedic Indian retained many primitive beliefs in the ceremonial concerned with the future life, he had advanced far beyond the terrors which inspire the funeral rites of the savage. The verses which he employed in that ceremonial, while combined with much petty ritual and betraying much zealous care for his own well-being, at the same time reflect trust in the gods, as guardians of the dead, and filial piety towards ancestors. If we find here no traces of deep feeling and genuine sorrow, this is largely due to the fact that the impersonal formulas contained in the ritual textbooks are the only available evidence for this period.

b. Spirits.—The most striking contradiction in the Vedic view of the future life was the belief, though the Rigveda describes the deceased as conveyed direct to the fathers by the funeral fire, that the dead man did not join the fathers at once, but continued to lead a separate existence near the living for a year. The soul in this intermediate stage was distinguished by the name of *pretā*, 'departed spirit,' as opposed to the ancestral spirits fully recognized as *pitara*, 'fathers.' During this transitional state it did not receive the regular monthly oblation to the manes of the sacrificer, but was honoured individually with separate offerings. At the end of the period it was received into the community of the fathers with a special ceremony which, strange to say, has nothing to do with that accompanying the final burial of the bones. Vedic literature has nothing to say about ghosts in any other sense than that of Pretas. There is, however, a passage in the Yajurveda stating that one who sheds the blood of a Brāhman will be excluded from the world of the fathers; and the evidence of early Buddhist texts may perhaps justify the inference that, even in the Vedic period, there was a belief in ghosts as spirits in the exceptional state of suffering torments on earth in punishment of guilt.

c. Ancestor-worship.—It remains only to sketch briefly the cult of the Vedas in so far as it was concerned with the dead. The regular sacrifice to ancestors, offered to father, grandfather, and great-grandfather, was celebrated every month at new moon. It was called *śrāddha* or 'offering given with faith' (*śraddhā*). For the purposes of this rite, a space was marked off in the south-east, the region which was sacred to the manes, and which the performers faced during the whole ceremony. Then the sacrificial fire was fetched and the food for the dead, consisting mainly of rice, but also of other offerings, prepared. Three small pits, a span long and four fingers broad and deep, having been dug and bestrewn with Darbha grass, an odd number of Brāhman were seated, entertained, and received gifts. Libations to Soma associated with the fathers, and to Agni, conductor of the sacrifices to the dead, were also offered. A firebrand having been placed beside the pits to drive away demons who might have intruded themselves among the fathers, the latter were summoned to the offering and invoked to bestow wealth on their descendants. Jars of water were then set down beside the pits; the sacrificer took one with his left hand and, pouring water into the pits, mentioned the name of the ancestor to whom the offering was made. Grasping the sacrificial ladle also with his left hand, he placed one-third of the food in the form of a cake in each pit, invoking the fathers to partake of the offering. In conclusion, pieces of cloth were presented to the ancestors as clothing. The whole ceremony was interspersed with verses addressed to the fathers.

Our knowledge of this ceremonial is entirely derived from the ritual works of the Vedic period. There is nothing about it in the Rigveda, as it is not accompanied by hymns to the mighty gods with whom that Veda is concerned. Nevertheless, there can be little doubt that, in its essential features, it already existed in the earliest Vedic age; for its general character is extremely primitive; there is no trace of the souls of the dead abiding in heaven; the gifts offered to them are not sent up by the sacrificial fire, but are placed in the earth; and the spirit waits in or on the earth to be fed and clothed. The only details which probably do not go back to the times of the Rigveda are the offerings to Soma and Agni, as well as the presence of Brāhman.

A. A. MACDONELL.

VEGETARIANISM.—In this article an attempt is made to confine the discussion to those portions of the subject which ultimately have a practical bearing, even though the way may lie through the investigation of some rather complex ethical principles. The omission of all investigation into the history of vegetarianism is dictated not only by fidelity to this aim, but also by the consideration that in this particular subject no sound inferences as to modern problems can possibly be drawn from any records of the past. It is, e.g., interesting to learn that the poet Ovid wrote in favour of a vegetable diet as being natural to primitive man. But what we want to know is how far his words were effective. They may have been, and yet no one has recorded the effect; or they may have been dictated at first by dismay at the sight of great excess in flesh food. They are anyhow by themselves no evidence of vegetarian practice; and, if they were, we should be unable to connect it securely with the gradual decline of Rome. In short, at all times the important question has been, not the practice of an exceptional minority, but that of the mass of the population—just the large complex fact which has never been recorded.

That omission leaves two principal aspects of the question to be considered: (a) the physiological argument, which is treated as of subordinate importance, owing to the evidence to be gathered from facts being still very incomplete; and (b) the ethical argument, including our duty to the lower animals, the bearing of the example of Christ, and the question how far a non-flesh diet is a help to the higher life.

1. The physiological argument.—In several treatises on vegetarianism much has been written on the physiological effects of a flesh or non-flesh diet, but very little of any value. The truth is that before any scientific conclusion can be arrived at—in other words, before any broad inference can be drawn from experiments—the question must be so far simplified that it becomes abstract: that is to say, experiments have to be conducted under conditions which do not obtain in ordinary life.

It is impossible to make sure that any two sets of experiments deal with the same data; *e.g.*, no one could ascertain how great in any given case has been the influence of mind upon the bodily tissues. Wonderful records are given of endurance exhibited by vegetarians on a spare diet of fruit, and of prolonged effort not only of brain but of muscle. But it is quite uncertain whether the spirit of the individuals in question has not affected the result so as to make it useless as a guide in cases where such spirit is wanting. Again, the more the problem is considered, the more formidable grows the question of time. Supposing, *i.e.*, that a fair number of individual lives have been under observation and in all cases the health has been well maintained on a vegetarian diet, it is still open to a sceptic to insist that an examination of the next generation, or perhaps the next two or three, is required before the experiment can be deemed conclusive or scientific. If any one is convinced that the children of vegetarians are born infirm—in other words, that the human stock loses vigour if abstinence from meat becomes general—it is ridiculous to urge in answer that facts yield anything like a scientific disproof of the contention. No experiments which can pretend to be exhaustive have yet been made, and there is very little likelihood of any such being undertaken. Supposing—what is not easy to suppose—that some hundreds of adults allowed themselves to be subjects of experiment, there is no guarantee that similar results would be gained from people who were victims of compulsion or involuntary abstinences, or from enthusiastic votaries of a new cult, or from men and women of different antecedents and different occupations. Thus the condition of a convert to a particular diet at the age of 40 is not a sure indication of what would be the effect of a similar diet on another man of the same age, still less on another of 20, or on a child of 10 years old, or on a woman of any age.

Moreover, the question is obscured by the varieties of diet comprised under the title 'vegetarian.' Large numbers of people abstain from meat, but not from fish; others from brown meat, not from chicken; others eat meat once a week; others eat eggs, but no meat or fish, and so on. Then there is the complex question of starchy foods and sugar. A sound opinion seems to be that the mischief caused by too much starch is quite as serious as that due to the uric acid found in meat. Add to all these uncertainties the startling differences in different constitutions, anyhow for a time, and the incredible skill and delicacy required before any chemical analysis can certify food-values with any precision, and it is indisputably clear that the physiological question concerning diet is not at present advanced beyond the stage where rough probability is the only guide to conduct. In other words, we must be prepared to find that in the absence of sure knowledge there has been and is and will be a proportionate amount of dogmatism.

It is further noteworthy that, in this country at any rate, inquirers are debarred from what would seem a promising source of information, *viz.* the medical profession. For not only has there always been and is still a reluctance on the part of medical men as a profession to undermine the importance and prestige of science by preaching the sanative power of unassisted nature, but it appears that till quite recently the preparation for the practice of medicine has not included any study of dietetic questions or of food-values. Thus in a matter of great complexity, which for our enlightenment requires bold but very careful experiment and the most scrupulous observation of results, little or nothing has been done which could give promise

of a scientific induction. We are thrown back on amateur and haphazard experiments, and it may be said that such innovations on convention and tradition as have been effected have been introduced by outsiders and rather obstructed than favoured by medical opinion. To this professional attitude parallels from other professions could be easily adduced. Hence, when it is claimed for vegetarianism that the case in its favour is rooted in science and can be proved by experiment, no cautious student of the subject will yield a ready assent. The truth is that the strongest arguments for it are based on other considerations which are not, strictly speaking, scientific. That is to say, many individuals are convinced that their health has been permanently benefited by forgoing the eating of meat—nor has any one the right, scientifically speaking, to doubt the truth of their conviction—but, if the number of such were ten times what it is, it would still be illogical to argue that the residue of mankind would benefit to an equal degree. Among the complexities of the subject is the difficulty of ascertaining how far the experiment in any case has been fairly tried, at what age, after what antecedents, and, perhaps most important of all, with what degree of faith. For, along with other uncertainties, many individuals have experienced a varying amount of discomfort in the early stages of the new régime. Of those a considerable proportion, totally unable to face this or any discomfort, abandon the attempt and give themselves out as evidences of vegetarian failure—a testimony wholly worthless in reality, but quite sufficient to deter most of us from such an innovation in our habits. Equally fallacious are the indications afforded by the physique of foreigners, especially Orientals, though the crudest generalizations, based, if on anything at all, on nothing better than travellers' unverified gossip, frequently pass current as substantial evidence. Such facts, indeed, as have been accurately observed and reported can obviously give ground for nothing better than conjecture.

2. The ethical argument.—The appeal to human compassion in the matter of the treatment of animals, though logically cogent, has been made with very little success even in this country, where the sentiment of kindness towards animals is strongly developed, as compared with that of other European peoples. If man could prove that flesh-foods were indispensable to his existence, of course there would be nothing more to be said. Nor would it be denied that, if such food maintained him in rude health more certainly than any other, he is right to eat it. But humane vegetarians assert that neither of these contentions can be verified, that, on the contrary, so large a proportion of mankind has subsisted in vigour on fruits and herbs for many generations together that the plea of necessity breaks down in presence of admitted facts. If this be so, no defence is possible of the practice of taking the lives of animals. Moreover, as long as man accustoms himself to kill them for food, knowing or suspecting that he could live quite well if he spared them, his whole attitude towards them is vitiated by selfishness. Very few individuals can concern themselves seriously or for long together about the welfare of animals while they are conscious that society as a whole condones the slaughter of them for no other reason than that flesh foods are preferable, or that a certain amount of inconvenience would be caused by a change of diet. Till the ethical question is fairly faced, the general conscience is violated by the daily commission on the largest scale of an act which we uneasily suspect to be a crime. Further, unless there had been a conspiracy to hide the facts, the hideousness of the slaughter-house

system would long ago have roused public sentiment to a pitch of fury; and even now, assuming what is very doubtful, that the butchering is as painless as possible, there remains against man's whole treatment of his helpless fellow-creatures the broad indictment that to rob millions of them of life unnecessarily is a kind of murder.

It is difficult to say what answers to the above arguments are made, as public opinion is too lax on the question and custom is too strong to have allowed the matter to be fairly discussed. The truth is, an enormous majority of people are too much under the yoke of custom to be awake to the moral appeal. Many would readily admit that they cannot meet it, nor are they at pains even to excuse themselves save on the plea of convenience. Meanwhile it would be difficult to measure the mischief caused to our social life by this particular form of heedlessness. Compared with foreigners, Britons are peculiarly sensitive to the claims of the animal kingdom. Such kindness as we show is based on religion, but is also the outcome of an inherited sentiment, powerful to-day, but, it must be admitted, of somewhat recent growth. If, then, both sentiment and religion are flouted by any particular custom, and little or no protest is raised against it, the very foundations of our moral principles are assailed by a deadly form of insincerity, all the more deadly for being largely unsuspected. Indeed, if these considerations are sound, we, as a society, are under the ban of Christ's denunciation of the Pharisees, who were guilty in proportion as they were blind.

But there must be plausible arguments for a practice so general as the slaying and eating of animals. Probably the most prevailing is the idea that it makes on the whole for health. The physiological aspect of the question must be dealt with separately. Here it is only necessary to observe that, granted the fact, there need be no dispute as to the principle asserted. It may be conceded that man is on so much higher a plane than animals that his welfare must take precedence of theirs in all cases where there is a direct conflict. But that there is such a conflict is exactly what the humanitarians deny. They maintain that the evidence of fruits, cereals, etc., being sufficient to support human life in full vigour is abundant; and their main argument is not that men should suffer in order to spare animals, but that, as long as there is reason to believe that animal flesh is no better (indeed is inferior) as food for man than fruits and vegetables; it cannot be right to kill animals and eat them.

To this it is replied that, if abstinence from meat became general, intolerable evils would result, such as the means of livelihood being taken from millions of workers, and the loss of skins which are needed for clothing and which are supplied at present from animals bred or preserved for food. There would be a prospect also of large industries being destroyed and thousands of workers being thrown out of employment.

One obvious answer to these misgivings is that they are based on the assumption that a vast revolution in diet could come about suddenly. There is of course no reason to assume anything of the kind, least of all in a country where conservative prejudice on this subject is adamant. But that is not the kind of answer that touches the conscience. The truth is, the results of conduct in this case, as in many others, are far too uncertain to be worth arguing about. Nor would there be any need to forecast the future with the laborious precision which is often affected, if once it were made clear that obedience to divine law means obedience in spite of uncertainty as to results. The training of the Apostles was directed

to this end throughout, that they should walk by faith and not by sight. But to limit obedience to occasions of utility is to destroy its faithfulness. Thus, if man recognizes the claims of animals to good treatment, it is futile to defend the slaughter of them because the results of the opposite line of conduct are not easy to foresee. This is the point at which religious considerations supplement ethical. If we believe that God has committed animals to us, we are bound to treat them kindly, even if the results were likely to be far more inconvenient than they possibly could be. Indeed, the experience of food shortage has taught us that all the difficulties supposed to be inherent in vegetarianism are faced without hesitation as soon as the situation is understood. In other words, professing followers of Christ ignore what is admittedly a divinely sanctioned claim, but recognize it as soon as ever 'provision for the flesh,' against which St. Paul (Ro 13¹⁴) and our Lord (Mt 6²⁵) warn us, seems to be in question.

A more solid objection is advanced when it is urged that the Founder of our religion and the Pattern of our conduct did Himself habitually partake of animal food. How can humane-minded people take their stand on a divinely sanctioned law which the Son of God Himself disobeyed?

To face this objection fairly, it is necessary to point out that the oft-quoted parallel of Christ's silence concerning slavery is not at first sight applicable. Against slavery He did undoubtedly establish principles of charity between man and man which were certain, if followed, to overthrow the institution sooner or later. But it cannot be said that any teaching of His can be quoted which bears at all directly against the practice of slaying animals for food; and it is quite legitimate to argue that He had no such objection to the practice on humane grounds as He must have had against the practice of depriving a fellow-man of his liberty. Moreover, the question is not, 'Why did He refrain from denunciation?' so much as, 'Why did He participate in the practice?'

The explanation must take account of the main purpose which—as far as we can grasp it—the Saviour set before Himself in His work on earth. From no other point of view can the fragmentary character of Christ's ethical teaching be understood. But any adequate statement on such a theme would range far beyond the limits of this article. This much, however, may be said, that, in proportion as any interpretation of Christ's work falls short of the full doctrine of the NT as to His person, it will fail in explaining the gaps in the ethical teaching. In other words, if Jesus is regarded only as a divinely-gifted prophet, His life and teaching were not only abortive, but needlessly so. With slight precaution He could have escaped an early death and extended His teaching and the sublime example of His conduct for other fifty years. There is no way of meeting this criticism except by holding fast to the Christology of St. Paul and St. John. The task before the Lord was not to teach mankind, but to save them by His incarnation, death, resurrection, and the gift of the Holy Spirit from heaven. Now, while engaged on this task, He gave just enough time to evangelization to reveal what human life would be if men lived it in the full conviction and certainty of God's love and presence among them. The revelation was grievously misunderstood at the time and subsequently, owing to men's tendency to turn the gospel into a burden of moral law, more crushing than that of Moses because more spiritual and exacting. Therefore the teaching was in the main barren of precepts dealing with everyday conduct. The danger of literalism of interpretation was imminent, and we may con-

clude that, if Jesus had given us anything like a complete code of moral precepts, or even a full picture of a sinless life extended far into old age, our attention would have been diverted finally and completely from the difficult task of understanding His work of redemption to the far simpler but hopeless endeavour to live up to the level of His moral example—*i.e.*, to reject God's scheme of salvation owing to utter inability to rise up to its meaning. Hence the Saviour refrained from all attempt to guide His followers by rules, but gradually taught them—what they are still very slow to learn—that their lives were to be quickened by the Holy Spirit whose indwelling was to be to them their strength and inspiration for all time. In view of this prospect, we can understand why His ethical teaching was so suggestive but so paradoxical, so figurative, and incomplete. It was designed, not to save us from the trouble of thinking, but to turn our thoughts to the Comforter whom He promised to send.

But, in considering the moral example of Christ, we have to recognize the fact that He resolutely declined to gratify the expectation of the Jews that He should set before men a pattern of conduct to be imitated unintelligently. Not only the Pharisees but all mankind are ready to go through almost any unpleasantness if thereby they can escape the pain of recasting their ideas. From the beginning of His ministry, however, Christ set Himself sternly against this temper. His first word spoken in public (Mt 4⁷) was an echo of the Baptist's injunction: 'Change your minds: for the Kingdom of the Heavens is come nigh.' Clearly the Lord intended that deep principles should be learned by men, and that, as they were learned, human conduct should change. Supposing, then, that He had set Himself in opposition, not specifically to a principle of conduct, but to a social custom the meaning of which was widely misunderstood, that would have been an attempt, foredoomed to failure, to improve human life without human co-operation; for it is certain that moral improvement cannot be achieved if we do not know what we are doing and why we are doing it.

Therefore Christ taught principles based upon the fact of God's Fatherhood, one of them being that the human body was to be honoured. This was taught not by a formulated rule, but by the fact of the Incarnation as soon as it was accepted. Hence, in the course of the history of Christianity, social customs have to be considered and modified in accordance with the underlying principle of reverence being due to our bodies made in the image of God. Thus the question of the kind of food that we eat arises naturally as the Incarnation is gradually being better understood.

Further, Christ's life on earth was an exhibition of divine power triumphing in and through the uttermost of created weakness. By His endurance of that weakness He manifested His personal strength, inherent and inalienable, as the Son of God.¹ Now that strength was the strength of a Redeemer, a Transformer, an Uplifter. Christ found mankind sunk in evil prejudices and evil customs. He took upon Himself our poisoned nature, as it was, that He might cleanse and reinvigorate it; what He did not do was to better the conditions so as to make His task easier. He took on Himself all the disabilities which resulted from human blundering, to show how, not so much in spite of them but by means of them, He could triumph over Satan. Hence the freedom from temporary restrictions and the universality of His teaching.

It is therefore strictly relevant to the main

¹ R. M. Benson, *The War-Songs of the Prince of Peace*, London, 1901, i. 117.

question to ask what kind of food best helps us in our endeavour to show reverence to our bodies, while at the same time we assert our mastery over them. There is no dispute as to the latter duty, but there is much haziness of mind in regard to the former, due to ignorance which can be dispelled only by experience of the effects of a reformed diet. Vegetarians learn them with surprise, yet they all seem naturally to result from nothing more than the relieving of the body and the mind from constant injection of poison. One that is discovered, but remains for obvious reasons unpublished, is that a 'simple' diet, consisting principally of fruit, lettuces, and 'unstarchy' foods, secures *cleanliness for the inside of our bodies*, in contrast to the noisome defilement which in flesh-eating societies has come to be taken as a matter of course. Here there is no room for dispute. If a certain diet promotes cleanliness while another causes dirt, that is enough reason by itself for preferring the former. It is then a question of fact which can only be tested by experience. Again, vegetarianism favours moderation in diet; and if—as seems to be the case, and has indeed been certified by the restriction of diet in time of war—most people clog their energies by needlessly taxing their digestions, it remains that a diet free from poison is to be preferred. True, elaborate cooking encourages excess, whatever the diet be; but, as the poison of meat is a stimulant which is followed as usual by a reaction, and as the reaction is a certain languor which feels like hunger but has nothing to do with it in reality, there is a peculiar danger in a diet of flesh which vegetarians for the most part escape. It will be noticed that it is here assumed that excessive eating is common. We need not give all the evidence for this assumption. Perhaps the most distinct indications were given during the ration-time in 1917 and 1918 that the prevalent fashion of excess had been mainly among men who could afford superfluous food, between the ages of 40 and 60, when advancing years dictate the wisdom of a gradually diminishing diet, but when also it is quite easy to maintain by skilful cooking the craving of a palate-appetite almost at the level that it kept at 30 years of age. Our social customs, our prejudices, and our cooking all make real moderation in eating difficult; and among the influences that favour excess, meat-eating followed by a nerve-reaction that is mistaken for hunger must be numbered.

In this connexion, however, the most serious indictment against flesh-eating has still to be mentioned. Meat is a stimulant, and its heating properties act upon the system by increasing the power of the animal in man. By meat-eating, in other words, the temptation to sensuality of all kinds is strengthened.

No sooner is this affirmation made than it is traversed as follows: either (a) it is flatly denied, and instances of vegetarian or quasi-vegetarian yet sensual peoples are adduced; or (b) it is contended that, if any immunity from animalism is secured, it is at the cost of diminished bodily vigour.

(a) No arguments are more fallacious than those which rest on a false induction. The whole question is far too complex to allow of certainty. We can guide our conduct by probability only, and probability admits of degrees. If we confine our attention to ourselves—the British people—the evidence, as already remarked, yields no scientifically certain results. It is nevertheless very weighty and cogent as a guide to conduct. We know something about the temperament of our own people, practically nothing about foreigners' temperament, such as that of the Hindus or the Japanese. That is to say, while it is very difficult

to exclude other influences, such as heredity, religion, and social habits, even when we are considering ourselves alone, it is wholly impossible in the case of foreigners. In other words, evidence as to the physiological and spiritual effect of a certain diet in England is of some value for English people, but of less value for foreign white people, and practically of no value whatever for people so different from us as the yellow or the black races. The evidence, then, which it is worth while considering is that which is drawn from British people; and, further, it may be drawn from the experience of those who have made the experiment, while very little weight can be attached to the affirmations of those who have not. For, while a large majority of young men, all flesh-eaters, are troubled with strong sensual desires to which a huge proportion give way, the constant asseverations of those, the minority, who have made the change, to the effect that continence has forthwith become easier for them, remain uncontradicted in reality, no matter how often they are ridiculed.

Moreover, the benefit, it cannot be too often insisted on, is not only relief from certain troublesome physical sensations but a marked purification of thought and desire. 'Mali mores sunt mali amores,' said St. Augustine, and no cause of life-wreckage has been more fatally operative than the attempt to check bad actions without eradicating the desire. If, then, converts to vegetarianism who have tried both forms of diet are the only witnesses in possession of first-hand evidence, and if their testimony is practically unanimous and wholly unshakable in confidence as to the reform of their diet being to them an immense assistance to the higher life, we are bound to conclude that, in a difficult and complex question, we have here in good sooth a solid foundation on which to build, a real light in the darkness, a veritably guiding principle. Especially is this the case when we remember that the matter is far too personal to admit of publication. A little *a posteriori* evidence given confidentially outweighs all noisy *a priori* contradictions.

Nothing, however, is easier than that a principle admitted in theory should be denied in practice. If people meant what they say when they deplore the ravages of venereal disease, they would eagerly grasp at anything that held out any hope whatever of mitigating the power of the temptation, no matter if their personal convenience suffered thereby, or even if they themselves were called on to undergo real prolonged discomfort. No such excuse, however, is available. The only real obstacles to change are the most stubborn: hatred of change, positive dread of a new idea, both confirmed by deep and wide-spread misunderstanding.

(b) The objection that a non-flesh diet lowers the bodily vigour must be met with a flat contradiction, as very nearly all the evidence points to the contrary, except in abnormal cases. It is true that for a time a *sudden* change from a full meat diet to a régime of vegetables strictly so called may mean under-nourishment, if the foods are not carefully chosen. Or a still more disastrous blunder is made in substituting a huge amount of innutritious vegetables for beef and mutton—a sure way of inducing corpulence and lowering vitality. The right method is to make the change gradually and discover by experiment and counsel both the amount and quality of the nourishment required. Other benefits found in many cases to result from a non-flesh diet, especially if it avoids the danger of excess of starch and is diminished with advancing years, are as follows: (1) equability of spirits and immunity from depression, especially on waking in the morning—many

would admit that this evil is due to heavy feeding over night, but it is not generally known that it is chiefly due to the meat poison; (2) immunity from rheumatism, lumbago, and gout; (3) reduced requirements of sleep; (4) comparative indifference to cold; (5) cure or mitigation of sea-sickness, mountain-sickness, headache, languor, etc. It is asserted by vegetarians that all of these may be expected after an interval of time varying in different cases, from the change of diet, and that so-called failures are either abnormal cases or due to want of perseverance.

Other objections are advanced not because of their cogency but as excuses for maintaining the *status quo*. It is urged that a vast industry would be destroyed and many thousands of caterers deprived of their livelihood. The whole force of this argument rests on the absurd assumption that all classes of the community would make the change suddenly. What is far more relevant is the prospect of a great stimulus to the wholesome cottage industry of fruit-growing, allotments, and agriculture generally. But it should be borne in mind that, granted the cogency of the ethical arguments, Christians ought not to be in a hesitation as to the results. Faith in God means that, in the long run anyhow, suffering is diminished by right action and never increased.

Summary.—For the sake of establishing principles which might serve to guide conduct, the history of vegetarianism is of little use. Nor can it be contended that the physiological effects can be stated with anything like scientific cogency. Numberless individual testimonies in its favour could be quoted against a comparatively small number adverse. But the induction is too narrow to allow of any conclusions being drawn which can be reckoned more than very probable. Once, however, so much as probability is conceded, the ethical argument becomes irresistible. Two considerations alone would establish this assertion: (1) the slaughter of animals being unjustifiable unless its necessity can be proved; (2) the practical certainty that flesh foods are stimulative to the animal passions, especially of the adolescent male, unless the consumption of them is restricted to a level hardly possible of attainment. Other benefits of a fruitarian and light farinaceous diet concern such exceedingly important departments of life as interior cleanliness and, of course, health of body, and therewith the paying of due reverence to it; equability of spirits, and increased capacity for sustained hard work, both bodily and mental. Where a fair trial of the reformed diet has been given, it must be conceded that in these respects the individual testimonies in its favour are very numerous and convincing. Against all this, however, are custom, prejudice, misunderstanding, ignorance, and social inconvenience, much exaggerated but sufficient to demand thought and care. These forces, though for the most part inert, will probably check any considerable advance in the direction of change for many years to come.

LITERATURE.—The literature is extensive; the following is a selection: Anna B. Kingsford, *The Perfect Way in Diet*, London, 1885; A. F. Hills, *Essays on Vegetarianism*, do. 1893; Howard Williams, *Ethics of Diet*, do. 1896; Eustace H. Miles, *Failures of Vegetarianism*, do. 1902; A. R. Kenney-Herbert, *Vegetarian and Simple Diet*, do. 1904; H. S. Salt, *The Logic of Vegetarianism*, do. 1906; Eustace H. Miles and Mariella John, *Builders of the Body, or Lessons on Food Values*, do. 1907; J. L. Buttner, *A Fleshless Diet: Vegetarianism as a National Dietary*, New York, 1910; Eustace H. VIKRAMA ERA.—The era known by the name of Vikrama, or more fully Vikramāditya, or, according to the Jains, Vikramārka, is that commonly used by Hindus over all N. India, except in Bengal, where reckoning by the Saka era (*q.v.*) is preferred. It is commonly called *Samvat*, an abbreviation of *Sainvatsara*, 'year,' but that word is sometimes used in connexion with dates expressed in other eras. The Vikrama era is also current in Telingāna, or the Telugu country, and in Gujārāt. Most authors place its initial point in 57 B.C., but, according to Fleet, 58 B.C. is correct. The year is luni-solar, consisting of twelve lunar months, harmonized with the apparent motion of the sun by an elaborate system of intercalation and omission, which may be studied in the technical chronological works by Jacobi, Sewell, and other scholars who are cited in some of the publications mentioned at the end of this article. In N. India the Vikrama year begins in the month Chaitra or Chait (March–April), but in Gujārāt it begins seven months later in Kārtika or Kārtik (Oct.–Nov.). We also hear of localities where the year began either in Āśādhā or Āśārḥ (June–July), or in Mārgasiras, or Māgh (Jan.–Feb.). Another variation arises from the practice of sometimes reckoning the month to end with the full moon (*pūrṇimānta*), and sometimes taking it to end with the new moon (*amānta*). The year, in any case, never coincides exactly with a year A.D., so that no summary formula of conversion will give more than approximate results. Commonly the subtraction of 57 from a V.E. date gives the year A.D.; e.g., 1857 V.E. is equivalent to the period from 27th March, 1800, to 15th March, 1801 A.D., according to Cunningham's tables for a year beginning with the month Chait. Another complication is caused by the use in Rājputāna of a variety of the era called A-nanda, 'without *nanda*,' the term *nanda* being taken as equivalent to 90. An A-nanda year V.E. is converted roughly into a year A.D. by adding (90–57) 33. Thus 1857 V.E. A-nanda would be approximately 1890 A.D. instead of 1800, as according to the ordinary (*sa-nanda*, or 'with *nanda*') reckoning. The bardic poet Chand, who habitually uses the A-nanda form, was unjustly accused of erroneous dating until his practice was understood.

A Hindu date may be expressed in an 'expired' year, as, when we say a man is 70 years of age, we mean that he has completed 70 years; or it may be expressed in a 'current' year, as when we say that an article was written in 1918, meaning the unfinished year at the time of writing. The causes mentioned above, besides others, make the exact conversion of V.E. into A.D. dates a difficult business. Tables must be consulted, but they do not always agree, and detailed calculation of the equivalent of a date requires an expert.

The name Vikrama or Vikramāditya appears not to have been applied to the era until quite a late date, in the 10th or 11th century A.D. In Gupta times (5th and 6th cent.) the era was known

as that reckoned according to the practice of the Mālava tribe (*gaṇa*), who inhabited Mālwa, then including S. Rājputāna. Probably the era originated in that area, perhaps at Ujjain, the ancient capital, from which the Hindus reckoned longitude. At that period the years were sometimes called *krta* (lit. 'made'), apparently with reference to a Vedic 4-year cycle of which the first year was termed *krta*.¹ No record is known of any *rājā* Vikrama or Vikramāditya at Ujjain or elsewhere in 58 or 57 B.C., from whose accession the epoch of the era might be reckoned, as tradition affirms that it actually was reckoned. But it is possible that such a *rājā* may have existed, and the presumption is that the name Vikrama as applied to the era should be that of the king who established it. It is also possible that one of the later kings bearing the common title of Vikrama or Vikramāditya may have become associated with the era by erroneous tradition. The strongest candidate for the honour of being considered the original of the *rājā* Bikram (Vikrama) of popular legend is Chandragupta II. (*q.v.*), Vikramāditya (c. A.D. 375–413). Hoernle suggests Yaśodharman (c. A.D. 520), who may possibly have borne the same title. Both kings ruled over Mālwa. The origin of the era remains unknown, nor is there any clear evidence to show how, when, or why the name was changed from 'the era according to the practice of the Mālavas or the Mālava tribe' to 'the era of [King] Vikrama.' The subject has been much debated by archaeologists without positive result.

LITERATURE.—The following list gives the more important references, but the subject has been discussed or mentioned in many other books and articles. J. Prinsep, 'Useful Tables,' in *Essays on Indian Antiquities*, ed. E. Thomas, London, 1858, vol. ii.; A. Cunningham, *Book of Indian Eras*, Calcutta, 1883; F. Kielhorn, in *JA* xix. [1890], and xx. [1891], esp. pp. 397–414; D. R. Bhandarkar, *ib.* xlii. [1913] 163, *ASWI Progress Report for 1915–16*, p. 56, and 'Vikrama Era,' in *Bhandarkar Commemoration Volume*, Poona, 1917; K. B. Pathak, 'New Light on Gupta Era and Mihirakula,' *ib.*; Sten Konow, 'Indoskythische Beiträge,' *Sitzungsber. der königl. Preuss. Akad. der Wissenschaften*, 1916; J. F. VIRGIN BIRTH.—I. Ethnic.—(1) A wonder birth or a supernatural birth is one of the commonest ideas in folk-tale and myth. In not all of these, however, is there what can strictly be called virgin birth. The latter certainly does not occur where ancient myths of the birth of heroes, great men, or kings are concerned. In spite of direct evidence of true human descent, myth told how a god was their real father. Plato and Augustus were said to be sons of Apollo, the kings of Egypt sons of a god and a human mother. In these myths also the mother is already wedded, and the divine parent is father in a purely physical sense and has a material form, in that form taking the place of the husband. In many folk-tales and sagas where the conception of the child is supernatural, and due to contact with or to swallowing some substance, or to the breath or glance of a man or divine being falling on the woman, or to many other causes, the woman is already married, and the birth is not, strictly speaking, a virgin birth. In this aspect these stories are parallel to ritual customs in which married women desirous of having children make use of certain substances, certain means, certain rites, to aid or perhaps to cause conception.

¹ *Epigraphia Indica*, xii. 319.

There are, however, a number of stories, both from the lower and from the higher culture, in which a virgin bears a child because she has swallowed a pebble, a blade of grass, or some other substance.

Poshaiyänne, a hero of the Sia of New Mexico, was born of a virgin who had eaten two nuts. Fo-hi, who founded the Chinese Empire, was the son of a virgin who ate a flower which had clung to her garment when bathing.

Sometimes pregnancy is caused by mere contact with an object, by bathing, or by the sun's rays. But, while such stories regarding virgins or at least unmarried girls (and this distinction is an important one, considering the commonness of pre-nuptial unions) are fairly numerous in the lower culture, it is certainly an exaggeration to say that 'the Virgin-Mother myth is universal in Paganism.'¹

E. S. Hartland, in his work, *Primitive Paternity*, maintains that these stories, the corresponding rites to cause pregnancy, and many other factors have resulted from a former universal ignorance of the physical causes of conception, still alleged to exist among Australian tribes. While his arguments are weighty, it still remains doubtful whether this ignorance ever actually was so wide-spread. The universal existence of the couvade would seem to imply knowledge of fatherhood. Whether in supernatural or in virgin birth the child born is often the metamorphosed form of some substance swallowed by the woman, and that again is a man or hero who has taken the form of that substance, in order to be reborn. Yehi, the culture-hero of British Columbian tribes, frequently transformed himself into a small object which was swallowed by a woman, and he was then reborn. With the Arunta of Australia a spirit of a totemic ancestor enters a woman and is reborn from her. Conception, with the Arunta, is not supposed to result at all from intercourse, though that may prepare the way for it.² Perhaps, therefore, we may say (1) that it has been widely believed that sexual intercourse is a condition, rather than a cause, of birth or of conception;³ or (2) that conception might be due to more than one cause. In any case, in the stories which tell of a supernatural birth the stress is more often upon the metamorphosis of the substance swallowed than upon the miraculous birth.

On the other hand, the theories of the Freudian school with regard to the relation of myths and folk-tales to dreams in which there is 'wish-fulfilment,' and in which the unconscious supplies a symbolism and various sets of transpositions, afford an explanation of such legends of supernatural and virgin birth without reference to this hypothetical ignorance of the cause of conception.⁴ In support of this the mythical act of conception actually occurs in a dream in some of the stories in question—e.g., that of Buddha's mother and the white elephant and that of the mother of St. Molanus.⁵

(2) Although virgin birth has been asserted of Zoroaster, this is hardly supported by the accounts in the sacred books. A substance called 'the Heavenly Glory,' created by Ahura Mazda, mingled with all the stages of birth in Zoroaster's ancestral line. The sacred books tell how his father ate a plant containing the *fravashi* of Zoroaster, and how both his parents ate food containing his substance. But this leads up to his actual physical generation. So, also, when myth tells how the future saviour Saoshyas would be born of a girl, this is because some of the *semen* of Zoroaster, preserved through long ages, will enter her womb.⁶

(3) The myths of Buddha's birth came into being long after his historic existence, while, in being based on transmigration, they expressly contradict his own teaching. Buddha, existing in heaven, decides to be born again on earth for the enlightenment of men. For this purpose he chooses his father and mother, and this puts his virgin birth (also commonly asserted of him) out of court. His mother dreamt that, in the shape of a white elephant, he entered her womb. Next day this dream was interpreted by several Brāhmins, who told Suddhana that he would have a son, the

Buddha. The ordinary physical generation is implied, but to this is added the supernatural element of Buddha's pre-existence, as in the Arunta theory of birth. Later stories, however, alter the dream into an actual occurrence. It is nonsense to speak of his mother as 'Maya the virgin.'

2. The Virgin Birth of Christ.—The narrative of the Virgin Birth of Christ is found in Mt 1^{19f} and Lk 1^{26f}, i.e. in the only Gospels which profess to record the event of the Birth. The alleged silence of the rest of the NT is no necessary proof of its non-acceptance—e.g., by St. John or St. Paul. It was universally accepted without contradiction in the early Church, except among the Ebionites, even some Gnostic groups approving of it. Ignatius, soon after the death of St. John, witnesses to it most emphatically, and 'everything that we know of the dogmatics of the early part of the second century agrees with the belief that at that period the Virginity of Mary was a part of the formulated Christian belief.'¹ The first denials of it came mainly from Deistical writers in the 18th cent., and later objections come generally, though not wholly, from those who reject the 'supernatural' aspect of Christ's personality. The accounts in Matthew and Luke appear to be independent of each other, while they yet correspond as to the main fact. Matthew's narrative is written as if from Joseph's point of view, Luke's from that of Mary, and these, as the original repositories of the knowledge of the fact, have been regarded as the respective sources from whom the narratives were drawn. The story itself is apparently older than either of the accounts of it. The silence of Mark need not be viewed seriously, as it is no part of his purpose to relate the story of the Nativity, while he uses the significant phrase 'Son of God' (1¹).² This applies equally to John, though his language regarding the Incarnation has been thought to presuppose the Virgin Birth—e.g., 'the Word became flesh' (1¹⁴)—while his reference to believers being born 'not of blood . . . but of God' (v. 13) may presuppose the divine element in Christ's conception as the symbol of Christian regeneration. There is nothing to show that St. John repudiated the story.

The reading in some Patristic quotations which makes the passage itself refer to Christ, 'who was born . . .', has been accepted as the true one by some critics, but need not be pressed.

St. Paul's silence is regarded as weighty, yet he does not repudiate it, and, while its use might have added weight to his arguments for Christ's divinity and pre-existence, he does not formally refer to it, just as he makes scanty reference to any fact of Christ's earthly life, outside the Crucifixion and the Resurrection. Perhaps he wrote before it was generally known; certainly before it was known from the Gospels. Orr has argued with truth that St. Paul regarded Christ's entrance into the world as 'no ordinary act,' and his references to it have always 'some significant peculiarity of expression'—e.g., Ro 1^{3c} 5^{12a} 8³ ('God sending his Son'), Ph 2⁷ ('becoming [RVm] in the likeness of men'), Gal 4⁴ (*γενόμενον ἐκ γυναικός* instead of the more usual *γεννῆτός* elsewhere used by him).³ St. Paul's doctrines of Christ as the Second Man from heaven and of His freedom from the taint of Adam's sin almost imply belief in the Virgin Birth.

Orr also suggests a significant parallelism between the phraseology of Ro 1^{3c} and Lk 1³⁵.

The passages of Matthew and Luke are found in all the MSS and Versions, and cannot be regarded as interpolations. They do not differ in style from

¹ J. R. Harris, *The Apology of Aristides*=TS i. [1891] 25.

² The words are omitted in a few authorities, some of which are weighty; but they may be accepted as possibly genuine' (*The Gospel according to St. Mark*, ed. A. Plummer, Cambridge, 1915, p. 1).

³ J. Orr, *The Virgin Birth of Christ*, London, 1907, p. 114 f.

the rest of the Gospels,¹ and probably always formed an integral part of these. It has been suggested, however, that, if Lk 1³⁴ be excised, as a later insertion, the narrative reads smoothly, and the Virgin Birth drops out.² In view of the facts, and also with regard to other changes which require then to be made (in 1²⁷ 2⁹; cf. also 1³⁷, which implies that the announcement is of something wonderful), this purely subjective criticism seems arbitrary. Generally the arguments based on the form of the phraseology in Lk 1²⁸⁻³⁵ are grotesque;³ and no critic has yet shown, by himself writing a Virgin Birth narrative, what precisely was most fitting for Mary and the angel respectively to have said.

It has been argued that Mary and Joseph showed no consciousness of Christ's supernatural personality, as they should have done, granting the Virgin Birth. That consciousness, however, is found in Jn (2¹⁴), who does not mention the Birth. On the other hand, the verses Lk 2³³, 48⁴ are alleged to contradict any such consciousness. But do they? What more natural than that One who to all outward appearance was an ordinary infant and youth should momentarily be so regarded in spite of any profounder consciousness? The argument takes no account of human nature.

In Lk 2³³ the 'marvelling' may be a mere continuance of the wonder already excited. Note also the suggestion of Mary's consciousness of who her Son was in 2¹⁹⁻²¹. There is no evidence that she was one of the 'kinsmen' in Mk 3³¹ who thought Him 'beside Himself.'

The references to Joseph as father of Jesus in Mt 13⁵⁵, Lk 4²², Jn 1⁴⁵ 6⁴² represent current opinion (the Jews, Philip before becoming a disciple) which is merely reported, not endorsed. Legally Joseph was His father, and even Mary could so speak of him (Lk 2⁴⁸), as Luke (2²⁷, 41-43) speaks of His 'parents.' How else could they speak colloquially of one who stood *in loco parentis*? On the other hand, that Joseph was not actually His father may have been known, and this popular knowledge in the form of an aspersion on Mary's character⁴ (cf. Jn 8⁴¹) may be the source of the slanders in Celsus and Rabbinic works. In the earliest Gospel Jesus is 'the carpenter, the Son of Mary' in popular view (Mk 6³), and this was evidently a contemptuous reference, not as in the parallel passage in Mt 13⁵⁵, 'the carpenter's son' (cf. Lk 4²², 'the son of Joseph'). The references to Rahab, Tamar, and Bathsheba in the genealogy of Matthew may have an apologetic aspect. Such women 'played an honoured rôle in the history of the Davidic lineage. Mary's character, he proceeds to argue, was not irregular. How much less, therefore (the inference is), are Jewish objections to her and to Jesus justified!'⁵

The genealogies are alleged to contradict the Virgin Birth as showing the Davidic descent of Jesus through Joseph. The two genealogies are independent and have been adopted by the evangelists from existing documents. Do they represent more than a legal connexion? The writers who tell of the Virgin Birth see no contradiction in giving this descent, and in any case modify the genealogy by the phrases used in Mt 1¹⁶, Lk 3²³. Not impossibly Mary was also of Davidic descent and related to Joseph.⁶

Those who regard the Virgin Birth as mythical trace it to (a) Jewish, (b) pagan sources. (a) The

Jewish source is found in Is 7¹⁴. No Jew, however, ever applied this to the birth of the Messiah, though it was in accord with Matthew's method to use it as pointing to an event otherwise known to him. Other critics have conclusively proved that the myth of virgin birth was unknown to Jewish thought. (b) Many have therefore sought its origin in pagan mythology, some going so far as to assume an Oriental myth, for the existence of which there is no evidence whatever. The other mythical sources are those discussed in § 1, and it must be obvious that they have nothing whatever in common with the stories of Matthew and Luke: in these there is no idea of physical procreation as there is in Greek myths, and all such myths were regarded with abhorrence in Christian circles. Any comparison of Matthew and Luke with such pagan myths (notwithstanding that these show the human feeling that extraordinary personages should have an extraordinary origin) will prove that we are moving in a different atmosphere—in the one reticence, in the other lack of it and a piling up of mystery. Matthew and Luke give no explanation of the mystery. They feel that here is a fitting introduction to a life such as the world had never seen before, and to the events of that life they immediately pass on. With sublime simplicity they use no words but those of the angelic messenger (Mt 1²⁰, Lk 1³⁵). Divine power, the power of a spiritual God, causes the Incarnation through the Virgin Birth. The reticence is marked in comparison with the exuberant language of the Apocryphal Gospels, and, if the Virgin Birth narratives are mythical, no myth was ever expressed in such bald and restrained language. The comparison with pagan myths has been influenced by knowledge of the lack of reticence in later Christian art and theology, into which pagan elements have crept. What we find there is, however, quite foreign to the Gospels.

3. Doctrinal significance of the Virgin Birth.—Only the briefest statement is possible here. It has been held that belief in the divinity of Christ, in the Incarnation, is possible without a belief in the Virgin Birth. While this is not to be denied, the fact undoubtedly remains that those who reject the latter are generally those who in greater or less degree reject the former. It is impossible for any one to say, granting the Incarnation, that virgin birth may not have been necessary to it. An absolutely unique personality such as Christ's demands some new beginning, just as it was consummated on earth by the Resurrection. An Incarnation inaugurating a new humanity, itself to be creative in the lives of men, implies some new kind of birth, and the Virgin Birth is not out of harmony with this new step in development. The pre-existent Logos taking human flesh is a new event in history: the Virgin Birth adequately supplies the means to this, and no other method is even suggested in the NT. Such an Incarnation is itself so wonderful that the additional event of virgin birth hardly makes any further demand on faith.

While virgin birth is not the ground of Christ's sinlessness through the absence of human paternity—the handicap of a predisposition to sin being presumably as transmissible by motherhood alone—yet it is apparently connected with it through 'the power of the Holy Ghost,' in both Matthew and Luke. The miraculous conception is in direct relation to the subsequent personality and function—'It is he that shall save his people from their sins' (Mt 1²¹); 'that which is to be born shall be called holy' (Lk 1³⁵). The assumption is that the unique birth coupled with the dynamic and ethical power of the Spirit excluded the natural disposition to sin. The sinlessness of Christ was that of a

new Personality, human and divine, and it was fitting that such a Personality should be embodied in One whose earthly existence was uniquely conditioned. Whatever the link between sinlessness and virgin birth may be, 'a sinless man is as much a miracle in the moral world as a virgin birth is a miracle in the physical world.'¹

VIVISECTION.—Etymologically the term 'vivisection' denotes the cutting of living animals under any conditions and for any purpose. But it has come to be associated with experiments made on the vertebrates below man for the advancement of medical science, whether with or without pain. To define vivisection, therefore, as 'the infliction of real and serious suffering on a vertebrate living animal for scientific purpose'² is misleading.

1. The justification of experiments on animals.

—Experiments accompanied by pain were undoubtedly performed on animals before 1876 in this country, and in other countries more generally and perhaps less reservedly. Their ostensible object was to promote man's knowledge of physiology and pathology. A committee of the Royal Medical and Chirurgical Society, *e.g.*, made experiments before that date on a number of animals to discover some better means for the resuscitation of persons apparently drowned, in order to give assistance to the Royal Humane Society. In the course of these experiments animals were half-drowned and kept in water three, four, or five minutes.³ As a matter of fact, from the time of Galen of Pergamos (born A.D. 131) painful experiments on animals were practised, and from them unquestionably knowledge of anatomy as well as of physiology and pathology was gained. Thus Harvey was enabled to establish the circulation of the blood; Hunter its collateral circulation; Claude Bernard discovered glycogen in the liver; Sir Charles Bell laid bare the intricacies of the nervous system, and the names of Pasteur and Koch will always be associated with the most far-reaching of all pathological discoveries—those connected with micrococci. That pain accompanied the experiments by which these and other steps in medical science were reached, that prolonged pain

¹ A. B. Bruce, *Apologetics; or, Christianity defensively stated*, Edinburgh, 1892, p. 410.

² S. Coleridge, *Vivisection, a Heartless Science*, London, 1916, p. 3.

³ *Vivisection: the Royal Soc. for Prevention of Cruelty to Animals, and the Royal Commission*, p. xix.

was frequently inflicted, that medical students were taught by experiments made before them by their professors, and that they not infrequently experimented on their own account—all these facts are generally admitted. And the admission justifies the determined attempts to put an end to experiments on animals made in the past by 'the Victoria Street Society for the Protection of Animals from Vivisection' and other anti-vivisection societies. It is, however, only fair to add that during the thirty years immediately preceding 1876 the 'torture' of animals under vivisection had been materially lessened by the discovery and use of anæsthetics.

But, apart from the cruelty which was practised, a principle of importance was involved, viz. whether medical science was to depend for its progress on the casual observations of the doctor or was to be promoted by experiment also. In the former case progress would be minimized owing to want of control over the phenomena; in the latter case the time, method, and subject-matter would be determined by the investigator. No responsible person contests the fact that science advances mainly by selective experiments, or that all knowledge shows sooner or later the way to practical utility. There is no sense in reviling winter sowing because in April there are no crops. Experiments on animals have enabled us to fight the causes of disease, instead of dealing with the symptoms. If, in the process of acquiring knowledge by experiment, pain is inflicted in some degree, this must be counter-balanced, in forming our judgment, by the greater pain we thereby learn to prevent. Unfortunately this fact has been overlooked as a rule in the controversy about vivisection, and so the remark of Lord Justice Fletcher Moulton before the Royal Commission of 1906 was to the point:

'If you want to do good in a particular way, and want to know how you can do it effectively, give your heart a rest, and your brain a chance.'¹

2. Findings of the Royal Commission.—The year 1876 marks a turning-point in the history of vivisection. Since that year protests against the 'torture' of animals have become, in this country at least, an anachronism. A Royal Commission, consisting of Viscount Cardwell, Baron Winnarleigh, W. E. Forster, Sir John B. Karslake, T. H. Huxley, J. E. Erichsen, and R. H. Hutton, was appointed on 22nd June 1875 to 'inquire into the practice of subjecting live animals to experiments for scientific purposes, and to consider and report what measures, if any, it may be desirable to take in respect of any such practice.' The Commission issued its report on 8th Jan. 1876.

Its conclusion was that it is 'impossible altogether to prevent the practice of making experiments upon living animals for the attainment of knowledge applicable to the mitigation of human suffering or the prolongation of human life; . . . that by the use of anæsthetics pain may in the great majority of cases be greatly mitigated; that the infliction upon animals of any unnecessary pain is justly abhorrent to the moral sense of Your Majesty's subjects generally.'

The Commission finally recommended that the practice of experiments on living animals should be regulated by law and placed under the control of the Home Secretary.

The first result of the findings of the Commission was the passing of the Cruelty to Animals Act, 1876 (39 and 40 Vict. c. 77). By it all experiments on animals by an unlicensed person were prohibited, and ordinarily experiments were confined to a registered place; all licences were to be vouched for by one or more of the presidents of six great scientific bodies and by a professor; the use of curari as an anæsthetic was disallowed; invertebrate animals were excluded from the operation of the Act; and a series of restrictions on

¹ *Evidence of Lord Justice Fletcher Moulton*, p. 70.

experiments were imposed, especially one which insisted that 'the animal must during the whole of the experiment be under the influence of some anæsthetic of sufficient power to prevent the animal feeling pain,' this being modified by a subsequent section which allowed one series of experiments without anæsthetics on a prescribed certificate and for given reasons. One important fact had not come to light at the passing of this Act. Bacteriology as a science was but beginning its career. Hence all the evidence given before the Royal Commission dealt with current physiology, and when the Act was passed it was soon found that it made no provision for experiments by inoculation, which are now 95 per cent of the whole. Accordingly, these had to be allowed for, and they are brought under certificate A and certificate B.

3. **Legal regulation of experiments.**—Under the powers conferred by the Act of 1876 on the Home Secretary, certificates marked A, B, C, E, EE, or F are granted to licensed persons.¹ Certificate A allows experiments to be made without anæsthetics when anæsthesia would necessarily frustrate the object of the permitted experiment. As a matter of fact, no cutting operations are performed under this certificate; it sanctions inoculations, feeding, and similar procedures only, which involve no cutting; and the animal has to be killed under anæsthetics, if it be in pain, as soon as the result of the operation is ascertained. In view of the somewhat grotesque statements which are frequently made about the prevalence of cruelty under the existing law, it will be advantageous to state the nature of the 'pain condition' now prevailing. Additional safeguards against the infliction of pain have been provided, in accordance with the recommendation of the Commission of 1906, by strengthening the special condition (known as the 'pain condition') which is endorsed on the licence in respect of all certificates which either dispense with the use of anæsthetics or allow the animal to recover from the anæsthetic (provisos 2 and 3 of sec. 3). The 'pain condition' now runs as follows:

'If an animal, after and by reason of any of the said experiments under the said Certificate . . . is found to be suffering pain which is either severe or is likely to endure, and if the main result of the experiment has been attained, the animal shall forthwith be painlessly killed.

If an animal, after and by reason of any of the said experiments, is found to be suffering severe pain which is likely to endure, such animal shall forthwith be painlessly killed, whether the main result of the experiment has been attained or not.

If any animal appears to an Inspector to be suffering considerable pain, and if the Inspector directs such animal to be destroyed, it shall forthwith be painlessly killed.'

Certificate B allows an animal to be kept alive after the initial operation, where a more or less prolonged observation is necessary to the scientific success of the experiment. Certificate C allows experiments to be made in illustration of lectures, but under anæsthesia. Certificates E and EE permit experiments on dogs or cats, and certificate F on horses, asses, or mules.

The best proof that the administration of the Act has been satisfactory is afforded by the findings of the second Royal Commission on Vivisection appointed in 1906, which published its report in 1912. The report was signed by all the Commissioners; it recommended no change in the text of the Act of 1876, but suggested, without recommending, a special certificate for all experiments on dogs; it recommended certain increased restrictions and safeguards, which were adopted by the Home Office. It may be added that an unsuccessful attempt to pass a Dogs' Protection Bill was made in 1919 in the House of Commons.

4. **Practical conclusion.**—Few questions have
¹ Certificate D, which was based on section iii. subsection b. 4 of the Act allowing experiments 'for the purpose of testing a particular former discovery,' is no longer issued.

roused more embittered feeling than that engendered by the belief that lower animals were being callously and uselessly 'tortured' by medical men and others. Men felt that the humaneness inculcated by centuries of Christian teaching was being wantonly abandoned, and the outcry was in proportion to the nearness to man of the animals which were used for experiment. Invertebrate animals were passed over as being negligible, and it was with man's nearest friends, the dog, the cat, and the horse, that sympathy was most loudly expressed. Frequently, however, an adequate sympathy for the sufferings of man himself was wanting to supplement that felt for these lower animals. No sufficient recognition was made of the fact that without experiments on animals doctors would frequently have no option save to experiment on their patients, for want of the knowledge which experiments on animals could alone secure. And, as it is, much of the success attending treatment for diseases connected with the blood, with the alimentary canal and the digestion of food, and with the central nervous system, springs from knowledge gained by experiments on animals. Especially is this the case with diseases due to infection by microbes. As the Royal Commission of 1876 pointed out,

'It was by observation that Dr. Jenner discovered the immunity from small-pox of those who had contracted cow-pox. But it was by experiments upon cows that the origin of the cow-pox, a disease stated to be derived from "grease" in the horse, was ascertained.'

Pasteur's discovery of the activity of micro-organisms in fermentation was the beginning of antiseptic and aseptic treatment of wounds, by which thousands of human lives have been saved and indescribable suffering removed, and with which the name of Lord Lister will be always connected by a grateful world. The treatment of tuberculosis and diphtheria and the protective treatment against tetanus and rabies are dependent on knowledge gained by experiments on animals. In the same way the nature of cholera, bubonic plague, typhoid fever, epidemic meningitis, Malta fever, and other curses of mankind is now understood, and the road to their annihilation opened. When we weigh the suffering caused to hundreds of thousands of human beings by these plagues against that far less pain caused by inoculation to a comparatively small number of mice, rats, guinea-pigs, and rabbits, we realize how irrational it is to agitate for the total prohibition of vivisection. The method of regulation, not suppression, adopted in this country does justice at once to the unquestioned claims of the lower animals to kindly treatment and to the duty of man to his fellows—the duty of using his reason in the age-long task of diminishing and finally extinguishing that particular form of evil which goes by the name of disease.

VOLITION.—See **WILL.**

VOLTAIRE.—François Marie Arouet, who is known to us as Voltaire, was born either at Chatenay or in Paris in November 1694. His father, François Arouet, had been treasurer to the *Chambre des Comptes*, and his mother, Marie-

Catherine Daumart, was born, we are told, of a noble family of Poitou. Voltaire afterwards took his name from a small property in his mother's family, though it has been maintained that it was derived from an anagram on his signature Arouet L. J. ('le jeune'); but the fact that in the dedication to his *Œdipe* he signed 'Aronet de Voltaire' proves that he did not take a second name in order to cast the other into oblivion. Voltaire was thus born in a state of moderate affluence, and he was sent to the Jesuit College Louis-le-Grand, which bore the high reputation for learning possessed by schools of that order. Here he was not only distinguished intellectually but was pointed out by his tutor as the future 'coryphæus of deism in France.' On leaving college, he came into touch with the Abbé de Châteauneuf, who had been a friend of his mother, and who was his godfather; he brought him into relation with Ninon de l'Enclos. That remarkable woman, who had had the courage to reject Madame de Maintenon's offer of an invitation to the court on condition that she should become *dévoté*, was now very old, but she maintained her freshness of spirit, and she soon discerned the remarkable character of the boy and left him a legacy for the purchase of books. Already he deplored in verse 'his Jansenist of a brother' and declaimed a poem, called the *Moisade*, by J. B. Rousseau¹ (though the author attributed it to Voltaire), which portrays Moses as an impostor. Perhaps it was from Ninon that Voltaire first learned the lesson whose influence pervaded all his life, that the spirit of man is free, and that men are entitled to form their judgments for themselves. The society into which young Voltaire was launched was indeed a dissolute one. It represented a reaction against the hypocrisy and intolerance of the court of Louis XIV., and its wit was frivolous and its literary efforts trifling. The Abbé Chauvieu, a versifier of some merit, exercised much influence on Voltaire and typified the outlook of the society in which he moved.

Naturally M. Arouet, the father, was shocked at the company kept by his son, and by the fact that he began to write a tragedy instead of learning law. He finally dispatched him to the Marquis de Châteauneuf, brother to the Abbé, and French ambassador in Holland; but the young man became entangled in a love affair and the ambassador sent him home. The love, if such it was, was soon forgotten, but Voltaire, to the despair of his father, was determined to live in the world in which he had got a footing, mingling with the nobles and more bent on versifying than occupying an office-stool, in spite of the fact that he had matriculated as a lawyer. A friend of his father took pity on him and brought him to a château near Fontainebleau, where he became engrossed in the study of history—a study which resulted later on in the production of *La Henriade* and *Le Siècle de Louis XIV.* Louis XIV. died in 1715, and there followed an outburst of satires on the memory of the monarch who had enjoyed such adoration. One of these was termed *Les j'ai vu* and concluded, after describing the evils which in his short life the writer had seen, the crowded prisons, the unjust taxes, with 'And I am but twenty years old.' Though Voltaire was actually twenty-two, he was falsely accused of being the author, and in May 1717 he was cast into the Bastille, where he remained till April 1718, being allowed to return to Paris in the following October. This was not his first detention; he had been sent out of Paris as early as 1716, owing to verses that he had written regarding certain distinguished personages.

¹ Not to be confused with Jean Jacques Rousseau.

Confinement in the Bastille, which was perhaps not very severe, had little effect on Voltaire's spirits, for here he sketched out the poem of *La Ligue*, corrected his tragedy *Œdipe*, and even wrote gay verses on his misfortune. *Œdipe* was performed in 1718 with great success, and this was the first of his dramatic works, which were to follow one another in such marvellous succession. Before this he had written only fugitive pieces, including an ode which had vainly contested for a prize given by the French Academy. Afterwards he went on with his great work, the *Henriade*, and also wrote the tragedy of *Artémire* (1720), which was much more severely criticized than was the *Œdipe*. Everywhere the young poet was welcomed, though he appears to have again been banished for a season from Paris for his intercourse with the enemies of the regent, and more especially with Richelieu and de Gortz. With Madame de Dupelmonde he visited Holland and saw J. B. Rousseau at Brussels. Voltaire read his *Épître à Uranie*, and Rousseau recited his works to him, but the two men separated as irreconcilable enemies. Voltaire returned to France in 1722 and in 1724 produced *Mariamne*, which was on the same lines as *Artémire* under new names and plot; then came the famous *Henriade* under the name of *La Ligue*. Voltaire as author of this wonderful trilogy—*La Henriade*, *Œdipe*, and *Mariamne*—may be said to have made his mark in literature. The idea of being the eulogizer of King Henry IV. had inflamed his imagination since his twenty-first year, and he had begun to write in the Bastille. His idea was to dedicate the work to the king of France (Louis XV.), and the dedication was written, but there were difficulties in regard to censorship, and it did not appear. The book was issued in 1723 at Rouen after an abortive effort to get it published by subscription at The Hague. An English edition (1726) was dedicated to the queen of England, consort of George II. The poem is often compared with the *Æneid*, and it has a place in French literature which brings it into comparison with the classics of ancient days. The subject was a great one, and, while it adheres to historic facts, there is in the work a fine sense of morality, and above all that deep love of humanity and liberty which characterizes its author's best writings. Condorcet says that the *Henriade* was born in the century of reason, and the more progress made by reason among men, the greater will be its circle of admirers. Unfortunately for the truth of this dictum, life and dramatic power are also necessary to make a work such as this immortal, and these are lacking in the poem. Perhaps it was not possible for Voltaire to write a great epic: it required a depth of thought and concentration that was not his. Also the age was possibly too critical and superficial.

In 1722 Aronet the elder died, implacable to the last as regards his gifted son, who was now definitely known by his famous name of Voltaire. The latter was living a life of social pleasure, visiting country-houses,—those of Sully, Villars, etc.—composing verses *d'occasion*, arranging theatricals, and writing all the while with set and definite purpose. He loved the country, but dreaded the loss of precious time spent in country-house pleasures. Change of scene seemed necessary to him; he was ever passing from one place to another in a way that was astonishing in those days of comparatively fixed abode. It was a life of quick impressions, but not entirely one of self-indulgence, for Voltaire never forgot that his work claimed his first endeavours, and he never hesitated to speak his mind with perfect vigour. One would have imagined that that work would have given

him an established place in society and caused his person to be respected, but, if he himself might be tempted to think so, he got a rough awakening.

Voltaire was dining, as he often dined, with the Duke of Sully. There he met the Chevalier de Rohan, who took it amiss that Voltaire's sentiments did not agree with his own. 'Who is that young man,' he asked, 'who contradicts me in tones so loud?' 'My lord,' Voltaire replied, 'it is one who bears no great name but who wins respect for the name he bears.' A few days later the chevalier took revenge upon the young man by causing his lackeys to administer a caning to him at the duke's door. Sully refused to interfere, and, stung by rage, Voltaire obtained instruction in the use of the small sword and challenged de Rohan. The family of the latter prevented him from fighting, and Voltaire was thrown once more into the Bastille, where he was kept for sixteen days.

This was in April 1726, and on 2nd May he was allowed to leave for England, accompanied by an escort as far as Calais.

Voltaire's journey to England was not only a turning-point in his life, but a factor in the economic and intellectual history of France. One can imagine the spirit in which he went there, burning with indignation at the manner in which he had been treated by the laws or customs of his country. He passed into the country of Newton and Locke, of Shaftesbury and Bolingbroke, of Swift and Pope—a country which allowed men to speak without let or hindrance of what they had experienced or believed. Voltaire had become known as a writer of verse and tragedy; now he felt it to be his mission to become the liberator of his countrymen from bondage and false beliefs. 'Voltaire left France a poet, he returned to it a sage.'¹ Newton's careful examination of facts strongly appealed to the young man, and his mind was specially drawn towards the Newtonian theory of attraction as well as to Locke's appeal to experience as the basis of all knowledge. Metaphysics—even the metaphysics of Descartes—took on a new aspect to him. The *Lettres philosophiques, ou Lettres sur les Anglais* draw attention to the many matters in which the country in which he was living was in advance of that of his birth. He was but a refugee from the Bastille, and his country was still in a condition of feudalism with an aristocracy which was exempt from certain forms of taxation. In England, on the other hand, he saw intellectual eminence honoured and rewarded; even administrative posts were granted to distinguished men of letters, whilst the liberty of the press was absolute. We cannot wonder that the *Lettres* were publicly burned by decree of the French Parliament.

The tragedy of *Brutus* was the firstfruits of Voltaire's visit to England, expressing as it did the aspirations of an oppressed people. The next twenty years of Voltaire's life, between his leaving England and going to Berlin, were a prolific period. The dates of his most famous tragedies are as follows: *Brutus*, 1730, *Zaire*, 1732, *Mort de César*, 1735, *Alzire*, 1736, *Mahomet*, 1741, *Méropé*, 1743, *Sémiramis*, 1748, *Tancredé*, 1760. The *Mort de César* was a brave venture, for not only did it deal with ground well trodden by a greater dramatist than Voltaire himself, but it was a play without love scenes or women, and in three acts only, and thereby a complete innovation. Its republicanism, too, was sufficient to cause its publication to be at first prohibited in those days of tyranny. Its author came into further contact with the authorities over an attack he made on the excommunication of a celebrated actress, who on her death was refused burial rites. But, though Voltaire was ever ready to take up real causes of oppression, he was far too susceptible to any vulgar calumny, and his time and talents were used in petty quarrels unworthy of a man of intellect and position. His struggle was by his writings to win

for himself a place in public esteem which would secure for him the goodwill of the populace. *Ériphyle* was not a success, but *Zaire* had the tender note that appealed to the sentiments of the human heart. *Adélaïde du Guesclin*, though on similar lines, did not take the public fancy. It was followed by the *Temple du Goût*, a criticism of past and living writers. The *Lettres philosophiques* had been burned in 1734. There appeared in them certain notes, now well known, in criticism of Pascal, which were specially resented, and the causes mentioned before made it thoroughly detested. The *Épître à Uranie* its author felt himself constrained to disavow and ascribe to Chaulieu, now dead—an action impossible to justify. In 1729 Voltaire began that poem which has made his name famous or infamous, and which was his amusement for many years of his life. *La Pucelle d'Orléans* is an indefensible attack on the memory of a great deliverer of the writer's country, and it cannot be justified from either a historical or a moral point of view. It was constantly being quoted to eager listeners, and the publication of it was a constant peril hanging over its writer's head. Voltaire all this time was in constant trouble with his many critics, one of the chief of whom in 1735 was Défontaine, who attacked him in *La Voltairo-manie*. This was a reply to Voltaire's *Le Pré-servatif*. There was much personal abuse on Défontaine's part, in which Voltaire's private life and relationship to Madame du Châtelet were involved.

This was a time of persecution and humiliation for Voltaire, but it was also a time of happiness and prosperity, for the fortune which his enormous output, in addition to his speculations, brought him left him a liberty which he never before possessed. He wanted riches and independence, and he got them. Then between 1733 and 1749 he formed that connexion with Madame du Châtelet which proved such a strong influence on his life. It was a strange friendship—one of comradeship rather than passion. The 'divine Emily' was a student of a very serious type, and she made the kind of surroundings which Voltaire required for his very serious work, in the famous château of Cirey in the independent duchy of Lorraine. Here these two wonderful people—for Madame du Châtelet was a brilliant and accomplished woman—studied Newton, quarrelled sometimes, made friends again, worked literally day and night together, and even competed together for a prize offered by the Academy (on so uninspiring a topic as the propagation of fire), though taking, characteristically enough, opposite views on the subject. Voltaire wrote on the philosophy of Newton, and Madame du Châtelet co-operated with him. Voltaire was deeply interested in scientific questions, but he had no real aptitude for science; his mind was not that way inclined, and an enemy went so far as to say that he was the man who could 'best write down what other people have thought.'¹ Voltaire was therefore well advised to devote himself to poetry and philosophy rather than become a second-rate savant.² He followed this advice, and at Cirey produced *Alzire*, *Zulime*, *Mahomet*, and his *Discours en vers sur l'Homme*, whilst he also wrote the *Histoire de Charles XII*, and prepared the *Siècle de Louis XIV.*, and collected the materials for his *Essai sur l'hist. générale et sur les mœurs et l'esprit des nations*. All the while he was not stationary at the château, but moved about from place to place—Amsterdam, Brussels, Berlin, etc.—always glad to return to his settled home again. Paris was free to him after 1735. His

own sovereign, Louis XV., would have none of him, and Frederick, now king of Prussia (1740), took advantage of Voltaire's fear of how his writings might cause him trouble, and tried to secure his presence by an offer of protection. A constant correspondence took place between the two, as well as a *soi-disant* diplomatic visit on Voltaire's part to the king.

Voltaire's historical writings occupied him greatly at this period of his life. He is not remembered as, properly speaking, a historian, but his historical works are all written in reference to the times in which he himself lived, and hence their interest for us to this day. They are full of intelligence and good sense, with moralizings which are to the point and are yet combined with an irony which is characteristic of the author. His *Siècle de Louis XIV.* is specially interesting, inasmuch as he was able to make use of his own private information and of memoirs hitherto unpublished, like those of Saint-Simon. He gives a very full account of the government, commerce, and industry of the time. In fact, he had in view not only to write a history of the period with which he dealt, but also to relate the history of the human mind in that wonderful epoch of history. He worked with great diligence, passing the whole day at his desk, and, despite frequent ill-health, never seemed to tire.

Madame de Pompadour was Voltaire's first friend at court, and through her he was asked to celebrate the marriage of the dauphin in a court piece called the *Princesse de Navarre*. In view of this work, which he regarded very lightly, he was made in 1745 historiographer of France—a position once jointly held by Racine and Boileau—and given thereby a certain protection as well as a salary of 2000 livres. But above all he desired to obtain admission to the Academy, and before this was possible he wrote to Latour, head of his former school, professing his devotion not only to religion but also to the Jesuits. He achieved his end in 1746. But he did not long hold a place in royal favour, for libels poured upon him, worse even than before. Crébillon was given the pre-eminence as an author by Madame de Pompadour and others, and everything was done that could be done to humiliate and discourage him.

In 1749 Madame du Châtelet, the friend of sixteen years, died. Her companionship had meant much to Voltaire, and his life with her had been on the whole useful and not without dignity. Frederick of Prussia, who had for long corresponded with Voltaire and had formerly urged his migration to Prussia, came to the throne in 1740, and renewed his blandishments. The result was that in July 1750 Voltaire arrived at Potsdam. He was received with the greatest respect by his remarkable host and endowed with a pension; but the step was one which he had every cause to regret. By his action he even gave offence in his own country and to Louis XV., his king, little appreciated as he had been by him before. He thought he would find liberty and peace in his new abode, but he found on the intellectual side obscurantism only. The Academy of Sciences, founded by Sophie-Charlotte under the direction of Leibniz, had fallen on evil days. The king was mainly concerned about drill and orthodox theology, and Berlin was far behind Paris in civilization, being in many ways but a mediæval town. The association of these two, the greatest figures in Europe, will always be a matter of the profoundest interest to mankind. But actually the combination was disastrous. Frederick was Voltairian, it is true, but his interests were centred in the establishment of the Prussian ascendancy and the transformation of the face of Europe. Voltaire's task was a no

less momentous one, for his aim and object were to change the intellectual outlook of the Continent and destroy the old spiritual ascendancy. But the two men moved in different planes—nothing could have made them agree—and during the two and a half years spent by Voltaire as Frederick's guest there were constant and undignified quarrels and stupid practical jokes of a spiteful sort. It was all unworthy, and we cannot wonder that the visit came to an untimely end. Voltaire was no easy guest, always looking out for insults, which were not hard to find. There is a famous and cruel saying which La Métrie quoted as having been applied to Voltaire by the king: 'I require him a year longer . . . one sucks the orange and casts away the skin.'¹ Voltaire was grasping, while Frederick was parsimonious; he quarrelled with Lessing and got into not too creditable financial transactions. But, despite all this, and the fact that he was asked to criticize and amend the king's verses, Voltaire made progress with the *Siècle de Louis XIV.*, and the famous *Dictionnaire philosophique*. There was doubtless a certain fellow-feeling between the two men, who were at one in their hatred of superstition and prejudice; but there was a strong disagreement too, and Maupertuis was the means of bringing this disagreement to a head. Maupertuis was an ancient rival of Voltaire, and a quarrel arose between the two. The one issued *Lettres*, the other the *Diatribes du Docteur Akakia*. The king was at first amused, but the *Diatribes* was proscribed and ordered to be burned. Voltaire had, however, according to his wont, sent copies away, which were printed, and the king was annoyed by this and placed him under arrest. After a sort of reconciliation Voltaire finally left Potsdam in 1753 and went to Leipzig, there to stay with the Duchess of Saxe-Gotha, for whom he commenced the *Annales de l'Empire*, a popular history of Germany, which he himself did not rate highly. Subsequently he journeyed to Frankfort, where he and his niece, Madame Denis, were arrested and kept for three weeks under guard. Frederick tried to put the blame on another, but the matter caused much resentment, and Voltaire told his friends that the king had 'a hundred times kissed the very hand which he had just caused to be enchained.'²

On leaving Frankfort Voltaire went to Colmar in Alsace, where he completed his *Annales* and spent nearly two years, and where he thought of settling. But France seemed impossible, as persecutions threatened; he happened on one occasion to go to Geneva to consult Tronchin, and its beauty, language, and liberty captivated him; consequently he settled in a country-house outside the town, named Les Délices. Even that resting-place did not seem perfectly secure, and, in order to have retreats from the persecution of the Catholics on the one hand and the extreme Reformed party on the other, he bought houses in the different territories and in turn inhabited Tournay, Ferney in France, and Les Délices close to Geneva. It was at the last place that he and Madame Denis, his widowed niece, made their home and set up a considerable establishment.

The year 1754 was, so to speak, a dividing time in Voltaire's life. After a stormy period of combat and fear he passed from dependence to independence and comparative freedom. He was wealthy—not from the proceeds of his works, but from speculations—and was able to set up a theatre and keep open house, whilst he could print as he wished in Geneva. He was no longer dependent on the great as formerly, but received them into his house on equal terms. It promised to be a

¹ Letter to Madame Denis, Berlin, 2nd Sept. 1755.

² Condorcet, p. 206.

peaceful life, but he meant to devote himself to political work, to obtaining a change in the constitution of European states such as would bring them more into line with that of England. He wished above all to procure economy of public money, to put an end to persecution and intolerance, and he carried on a vast correspondence with these ends in view. He was ambitious, desired to produce and to teach. He might indeed be compared to a great European instructor—one whose work was to enlighten nations which were not too favourably disposed to receive the instruction offered them. He was not an idealist perhaps, but he had the good of his fellow-countrymen at heart, and there was no better place from which to preach his gospel of the deliverance of mankind from the thralldom of the oppressor than the republics of Berne and Geneva.

His literary work went on apace. The first play to appear was *L'Orphelin de la Chine*, composed when he was in Alsace and performed in 1755. His peace was, however, disturbed by the piratical publication of *La Pucelle*, which forced him to finish and issue it himself. By its means there was plenty of reason given to the enemy to blaspheme, although it may be possible to argue that it aims at the destruction of hypocrisy and superstition. It is impossible, if so, not to wish that a better and less gross manner of bringing about that result had been adopted and that more respect had been shown for a famous woman and patriot. He also wrote at this time the poem entitled *La Loi naturelle* and the *Désastre de Lisbonne*. The first was burned by the parliament at Paris because of its attack on intolerance and the fear of where such opinion would lead. The second was in antagonism to the orthodox view of the origin of evil, and was condemned in consequence. In 1759 he published *Candide*, undoubtedly one of the best of all his works of the romantic and philosophic type. It is an ironical satire on the optimism of Leibniz, and is extremely amusing as well as full of a common-sense type of wisdom, so that it can be read in the present day with as much pleasure as when it was first published. At the end of it there is the famous injunction to himself and his readers to 'cultivate one's own garden.' Voltaire also made a free translation of Ecclesiastes and part of the Song of Solomon. In 1757 the first edition of his collected works appeared. This was published under his own supervision, and to this edition there was added the *Essai sur l'hist. générale et sur les mœurs et l'esprit des nations*, a work undertaken in order to influence Madame du Châtelet in favour of the study of history. This work involved an immense amount of research and labour that must have been irksome to a man of quick wit like Voltaire, who was neither an earnest student nor a metaphysician. But his historical writing was never dull. He grouped his facts and interpreted these in a wide way, giving them life and significance. His reflexions may not be very profound, but they are full of common sense and just. He obtained the best material available and put it to the best use in his power. On the whole he was scrupulous and critical in respect of the value of his evidence. Satire and wit were always at his command.

In 1765 Voltaire sold Les Délices and settled at Ferney, where he occupied the position of a country gentleman, and where he was visited by most of the celebrated men of the day in Europe. He corresponded voluminously and even came into touch with his former friend King Frederick. Diderot and d'Alembert launched their great project of the *Encyclopédie* while Voltaire was still at Berlin, and with their object, the free and open statement of the facts of science and philosophy,

he was in the most intense sympathy. Hence from Ferney he wrote a number of articles for the work. That work had to be printed in secrecy, and, when it once became known, it was speedily proscribed. The writers were known as the *philosophes* and *encyclopedistes*, and among them the chief was often named 'the patriarch of Ferney.' The latter was as usual ready to make reply to the ignorant attacks made on the writers who numbered among them those most distinguished in the literary world; and a series of lampoons was the result. One of these is known by the name of *L'Écossaise*, a comedy in which a calumniating journalist is introduced.

At the age of sixty-six Voltaire wrote *Tancrède*, dedicated to Madame de Pompadour. This work was admired by Gibbon¹ and translated by Goethe, and it has always been considered one of the author's best dramas. But he was not only concerned with literature, for the human side of him was ever conspicuous.

His admiration for the great Corneille was profound, and his notes on some of Corneille's works are classic. Though he might criticize where he thought criticism due, none recognized more fully the greatness of this man of whom France was so justly proud. His grand-niece was, he heard, in distress, and at once Voltaire said that it 'was the duty of a soldier to succour the niece of his general.'² Consequently he brought her to Ferney and provided for her education, and with wonderful tact and good feeling he caused her to believe that she owed her support to the proceeds of her uncle's writings.

Another case, much more remarkable, is that of Calas. This old man, a Protestant, had been broken on the wheel because his son was found dead and he was accused of poisoning him, although there was not the slightest evidence of the fact. The accusation rested on the statement, quite unwarranted, that Calas feared his son's turning Catholic and therefore brought about his death; in consequence the son was regarded as a martyr. The father died, but Voltaire took enormous trouble to have the sentence annulled and to prevent the other members of the family from being convicted as accomplices; and, in the end, after years of work, he was successful. During the three years which were taken up with this matter Voltaire stated that 'not a smile passed over my face but that I reproached myself for it as though I had committed a crime.'³ No wonder that when he came to Paris in triumph before his death he was acclaimed as the saviour of Calas.

Sirven's case was somewhat similar, but he had time to save himself and take refuge with the protector of the oppressed and persecuted, and he was consequently secure.

But it must not be assumed that it was only those of another faith than that in which he had been brought up whom Voltaire succoured. He was ready to help any one oppressed in whatever way, and whatever his professed religion. The Jesuits even, his old instructors, whose order was destroyed—'the friends of letters and enemies of reason,' as Condorcet calls them—enlisted his sympathy, and one of them, persecuted by the Jansenists, became his almoner at Ferney. Possibly he was not without his use when Voltaire's own enemies blasphemed. But free-thought was speeding apace, and persecution did little, if anything, to stem the tide. Jean Jacques Rousseau was writing, and his writings were being circulated abroad. Political feeling was strong against a privileged and effete aristocracy. And yet the most astonishing events occurred, like the case of a young soldier named La Barre, about seventeen years old, who was accused of defacing a crucifix placed on the bridge of Abbeville. The lad was executed with horrible barbarity, and this aroused a blaze of indignation in Voltaire's bosom, although he had some cause to fear for himself, seeing that the *Dictionnaire philosophique* was in a manner involved (it was burned with La Barre's body). No wonder that he exclaimed, 'I am tired of hearing that twelve men were able to establish Christianity; I should like to prove that one is capable of destroying it.' We cannot forget Voltaire's efforts on behalf of our own Admiral Byng, who retired before the French at Minorea and was

¹ *Decline and Fall*, ch. liii., note 98.

³ Condorcet, p. 240.

shot in 1757. 'In this country,' says Voltaire of England in *Candide*, 'it is well to put an admiral to death now and then to encourage the others.'¹

This side of Voltaire's character—his righteous indignation with injustice and indefatigable efforts after restitution when injustice had been inflicted—is the side which attracts us most. He, perhaps the greatest personality in Europe (for Frederick was his only rival till the star of Goethe rose), endowed with a power of sarcasm and of invective of the most incisive kind, had the power to act, and it is entirely to his honour that in those difficult times he did act without fear and without delay. His humour was the bitter humour of the man who felt that things were too desperately bad to be taken entirely seriously, but this sardonic merriment did not prevent his practical action. His correspondence, which forms in some ways the most interesting part of his voluminous writings, is full of expressions of his inmost feelings regarding the events that were occurring daily around him. The iron burned deep into his soul, and he was given the power to foresee what was wholly realized only later on and then was dealt with by the terrors of revolutionaries.

There is another side to Voltaire's character which is more difficult to fathom. When he built his new manor house, he also built a small church with the inscription on it 'Deo erexit Voltaire.' And his correspondence shows him to be apparently anxious to prove himself to be all things to all men. He was likewise always ready to shelter himself through anonymity, and even to ascribe his works to another, though the other was dead and unable to defend himself. No doubt the times were bad and men's lives had to be preserved; but, whatever the customs of the day, this action was far from heroic. Then there is the famous communion made on 1st April 1769, followed by a public protestation of respect for the Church. His impish delight in forcing the priest to administer the communion to him, though forbidden by his bishop, and his 'forgiveness' of the bishop, is not an edifying spectacle, any more than the fact that Voltaire had himself made temporal father of the order of Capuchins for the district of Gex—an act done probably to annoy the bishop of Annecy. Even his sympathizers were scandalized by these actions, and in regard to them and many others no real justification seems possible. Voltaire was a deist, but that he regarded orthodox Christianity in any other way than as a scoffer is unthinkable, and this is the rôle he played throughout. He scoffed at the ordinary optimistic point of view, whether it was that of the philosopher or that of the ordinary believer. He was always ready to criticize and show the errors incipient in any positive creed or system of philosophy, but he never reached a constructive system either of spiritual belief or of social theory. Indeed he did not appear to have constructive power any more than great originality, but his interest in theological matters is apparent from his constant references to them. His religion, though it partook of negation, was not of the wholly negative character of that of some of his contemporaries, nor did it partake of the nature of the beliefs of Rousseau. Voltaire denied what he believed to be false, and that included practically all that he had received as religious tradition from the past. But it left a sort of possibility for the future which seemed to satisfy many of his successors, bald and empty and unfruitful as it might seem to be. 'I shall always be convinced that a watch proves a watchmaker and that the universe proves a God.'² And Voltaire's attacks on religion were

not philosophic. His was a mind of extreme lucidity, which took hold of detailed facts that he held to be false and on which he poured derision as well as argument. He tried to cover the teaching of the Church on miracles, *e.g.*, with ridicule. With Rousseau Voltaire had little in common. Rousseau's sentimentalism made but little appeal to the older man's reasoning mind. Rousseau had repelled Voltaire's offers of assistance and shelter, and that was one cause of their estrangement, but their writings were antipathetic to one another, and Rousseau's effusions seemed to Voltaire false and his conduct hypocritical.

Voltaire's long life at Ferney—it lasted almost twenty years—has made a deep impression on mankind. Here he was growing into an old man on whom the eyes of Europe were constantly set either in deep dislike and fear or in admiration. He was in continual controversy, whether with the republic of Geneva or with the clerics. His hospitality to every kind of man, whether from Russia, England, or Germany, was constant and ungrudging. His niece, Madame Denis, who was unattractive and not agreeable in temper, kept house for him on a lavish scale, and he became a sort of 'hotel-keeper for Europe.' The winters were cold, but the life suited one who was glad to evade the distractions and intrigues of Paris, and doubtless for a man who was constantly subject to illness it tended to the prolongation of life. He wrote perpetually, corresponding with every civilized court and with distinguished persons of every country. Not only did the great men of the earth write to the patriarch but also every one, young or old, who wished for advice on literary or speculative questions. Many thousands of Voltaire's letters are now in existence, and they are full of wit, if not always pleasant reading.

Paris, much as he hated its atmosphere and resented its treatment of him in the past, had the same attraction for Voltaire as it has for all its children, and in 1778 he set out for the metropolis. His departure was bemoaned by his tenants and the peasantry of the Pays de Gex, a district which by his wise management he had caused to prosper exceedingly. Voltaire, as we know, managed his own monetary matters to great advantage, and he also had the business faculty which is necessary to make a countryside prosperous. At the same time he took an acute interest in politics abroad, more especially in the war between Russia and Turkey and the partitioning of Poland. By this time Louis xv. had died (1774), and Turgot was in power, greatly to Voltaire's satisfaction. He hoped everything from the advent of this great minister, who worked hard to bring about the reforms in economics that Voltaire so keenly desired; and his fall in 1776 brought him near to despair. But he had conceived a desire to see his tragedy *Irène*, now completed, produced, and above all to revisit the city from which he had been absent for thirty years. Nothing could be more flattering than his reception. Admiring crowds pressed around him, and jealousy was silent before the great old man whose personality had so impressed itself on the nation. People threw themselves at his feet and kissed his garments, for he was greeted as the true vindicator of the cause of humanity against oppression, more even than as a great and famous writer. 'They will kill me with joy,' he said, and indeed this proved but too true. *Irène* was performed amidst tears of enthusiasm; the author's bust was crowned in the theatre, and it was difficult for him to pass through the surging masses of people. 'Long live Voltaire! Long live the *Henriade*, *Mahomet*, and *La Pucelle*!' they cried. The Academy, after all its coldness to him

¹ Condorcet, p. 245.

² *Corr.*, 1744, letter to M. M. Kahle.

in early days, lavished honours upon him. Franklin was in Paris, and Voltaire insisted on speaking to him in his own tongue and blessing his grandson in the simple words 'God and liberty.' And the great man was not idle. He was revising his *Essai sur les mœurs*, and he had a scheme for a new dictionary to be issued by the Academy, and he even himself undertook the first letter in it. But all this was too much for a man of 84. Sleep went from him, he took more opium than was good for him, and finally died on 30th May 1778. The Abbé Gaultier confessed him some time before his death, and it was declared by him that he died in the Catholic religion in which he was born. 'I am about to appear before God, the Creator of the universe,' he wrote. 'If you have anything to say to me, it will be my duty and privilege to receive you.'¹ When he was in the act of death, the curé of Saint-Sulpice tried to get him to give a more detailed statement of his beliefs, and, as he was frustrated in this, made difficulties about his burial. Finally, however, Voltaire was buried at the Monastery of Scellières in Champagne, where his nephew was abbé, in time to avoid the interdict of the bishop. There was also objection made to the usual service for one of the members of the Academy; the king of Prussia, however, held a service at Berlin in his memory and himself wrote his *éloge*. In 1791 the body was removed to the Panthéon, but later it was disturbed and taken away, like so many others.

Voltaire's personal appearance is perhaps better known than that of any literary man of his time. He was extremely thin, almost like a skeleton in old age, with bright piercing eyes and a 'mocking smile,' and he wore a wig. He had a great attraction for women and a certain devotion to them, but this was for the most part of a platonic kind, and in any case he did not, like so many of his contemporaries, allow himself to be carried off his feet by it. His life was never indecent, judged by the standards of his time, whatever his expressions may seem to us to be. His powers of work were prodigious, and, though not physically strong, he often worked for eighteen or twenty hours on end. He was interested in medicine and has the credit of recommending inoculation for smallpox when it was hardly thought of. His conclusion as to health matters is given in a letter to M. Bagieu, a well-known surgeon: 'I have come to the conclusion that every man must be his own doctor . . . above all he must know how to suffer, grow old, and die.'² Sometimes he is seen bargaining and quarrelling about sums of no importance, and then inordinately munificent on another occasion. From such contradictoriness of nature he may be painted black or white, as the sympathies or prejudices of the observer dictate. To many of his own and later generations he was the most sinister figure of his age, and his writings (excepting some of his historical works) the most harmful in the 18th century. Others regard him as the deliverer of the oppressed and the champion of liberty. He wrote with the utmost ease and lucidity. He was a prince among journalists, and his output was enormous, as the 80 volumes of his writings testify. What he wrote was written as from himself and not as the views of those who had written before, though he had a wonderful power of absorbing the work of others. Goethe, after enumerating all the gifts which great writers should have, denies him only two—depth and finish ('Tiefe und Vollendung').³ He was no philosopher, but a child of the 'Illumination'; *i.e.*, he belonged to the school

of those who saw facts so clearly that there seemed no possibility of error in them. It was the time of cataloguing and arranging, the heyday of encyclopædic knowledge. Yet all Voltaire's work was impressed with his own individuality. He seemed to have the power of seeing the truth that others were groping after, and, when he came upon a false belief, he ran a tilt against it without hesitation. He could not be called a sceptic, for he had his own beliefs clearly defined and certain: his was no doubting spirit. 'My reason tells me that God exists; but it also tells me that I cannot know what He is.'¹ There were occasions on which he lied, but the lies were lies begotten of the circumstances of life which he was ready to justify. His vanity was apparent to all, but that again was the conscious vanity of the man who felt himself to be above his fellows. He was money-loving, but he loved money because it redeemed him from a position of subservience and gave him the power he required. He had another side which proved him ready to be generous and hospitable in the extreme, so that he cannot be truly called avaricious or miserly. He was by nature a politician, and, as entrance to the politics of his country was denied to him, he showed what could be done on a small scale in his own domains and passionately supported reforms, fiscal and political, in his country. He did not live to see that his teaching bore fruit in a manner none could foretell, though many must have anticipated it when they saw how vain the efforts after orderly reform had proved. Such men as Voltaire were never used, and never had a chance of being used, for the amelioration of the conditions of their country. Such as he, who had an intense love of humanity, and on whom the misery of the common people under their unjust taxation rested like a constant cloud, were set aside. His reception in Paris as a human benefactor might have enlightened the rulers of the time.

Voltaire loved the stage from his boyhood onwards, and among his works there are 50 or 60 *Théâtre* pieces of various merit. The interest in his tragedies is often said to be too purely intellectual; *i.e.*, love plays little part in them. This is characteristic of the writer on whom in manhood affection never seemed to take any passionate hold. His poetry is fluent, and the usual criticism is that its fluency is excessive. Hence the *Henriade*, great as is its theme (and the theme is one that specially appealed to Voltaire), is not the really great poem that he intended it to be. He wrote many comedies, but no one could say that real humour, such as we find in Sterne, was present in Voltaire's writings. Of wit he had an ever-ready store, and his subjects knew too well of his powers in caricature. But Voltaire had not the terrible bitterness of Swift. His romances and tales appeal to the largest section of readers, if we except his historical works. They are delightful to read to this day. *Candide* gives us an admirable specimen of his style. *Zadig* and others attack the orthodox view of Biblical events, though not the larger idea of Providence. The most numerous of his writings, however, if we except his *Correspondance*, are his historical works, of which the best known are *Charles XII.*, *Louis XIV.*, *Louis XV.*, and the *Histoire de l'Empire de Russie sous Pierre le Grand*. The first is celebrated for the attractive way in which it is written, the ease of its style, and clearness of its narrative. With his *Essai sur les mœurs* he breaks with the old forms, so unsatisfying, as he explains, to an intelligent reader like Madame du Châtelet, and he gives us a sense of proportion which was absent from the writings of those who had made sacred

history their pivot. Of course he runs to the opposite extreme, as always, and makes his work too much a polemic against the old prejudiced beliefs. As in the *Catechisme de l'honnête homme*, Church and Bible history is either parodied or misrepresented in the way that was so common long after Voltaire's day. The history of the Church was to him for the most part a history of imposture and fraud. Voltaire was not a great scholar in the historical sense, despite his vast stores of knowledge. His merit was to have a large and comprehensive view of the subject with which he dealt. This largeness of vision is indeed the quality which most impresses itself upon us when we think of this great man. The mark he left on European thought will never be effaced.

LITERATURE.—Voltaire, *Œuvres complètes*, 70 vols., Paris, 1785-89 (includes correspondence), new ed., 52 vols., do. 1877-85; Marquis de Condorcet, *Vie de Voltaire*, do. 1789 (also given in the 1877-85 ed. of the *Œuvres complètes*); R. d'Argental, *Hist. complète de la vie de Voltaire*, Neuchâtel, 1878; G. VOLUNTARIYISM.—See WILL.

VOLUNTARIYISM.—I. Introductory.—The historical illustrations of this article have been taken largely from Scottish Church history, for Scotland, in a special degree, has been the battleground of spiritual independence, and it is there that the theory of voluntariyism has been most fully developed and most clearly defined, but it is there also that it has never yet been realized.

Five different theories of the relation of Church and State may be distinguished and enumerated.

(1) *The Erastian.*—This is the view that the authority of the State is supreme in every department of the citizen's life, whether civil or spiritual. For the question of whether this view dates from and owes its origin to Erastus and whether Erastus himself was an Erastian see art. ERASTIANISM. The most notorious instance in British history of pure Erastianism, in the opinion of many, is the decisions of the Court of Session in Scotland and of the House of Lords in England that led to the Disruption of the Church of Scotland in 1843.

In the second Auchterarder case Lord President Hope said: 'What makes the Church of Scotland but the Law? They are the Church of Scotland

only so far as the Law has established this Church.'¹ In the Stewarton case the same judge said: 'The spiritual authority of an establishment cannot exist in law, except in so far as the Legislature has allowed or sanctioned that authority'—an opinion which was corroborated by Lord Wood: 'The Church, as an establishment, is the creation of statute.'²

'The decisions as to all of them (in the Auchterarder, Lethendy, Strathbogie, Culsalmond, and Stewarton cases) were uniformly founded on the one general law, laid down with cumulative deliberation and emphasis, that the Kirk derives "all its powers" and "its whole authority" from Parliament and the laws of the realm . . . and that the jurisdiction of the Church Courts is derived from and defined by the State.'³

It is only just, however, to note that the subordinate standard of the Church, the *Westminster Confession of Faith*, speaks with two voices on the relation of the Church and State. In one passage it enunciates the principle that 'God alone is lord of the conscience, and hath left it free';⁴ in another the principle of spiritual independence is not less clearly enunciated: 'the Lord Jesus, as king and head of his Church, hath therein appointed a government in the hand of church officers, distinct from the civil magistrate';⁵ but in other passages this document is as frankly Erastian as, if not more so than, the decisions of these judges and the reasons by which they are supported.

'The civil magistrate . . . hath authority, and it is his duty, to take order, that unity and peace be preserved in the Church, that the truth of God be kept pure and entire, that all blasphemies and heresies be suppressed, all corruptions and abuses in worship and discipline prevented or reformed, and all the ordinances of God duly settled, administered and observed. For the better effecting whereof he hath power to call synods, to be present at them, and to provide that whatsoever is transacted in them be according to the mind of God.'⁶

(2) *Hildebrandism.*—According to this theory, the Church's authority is final not only in things spiritual but in things civil as well. This theory takes its name from Hildebrand, the family name of Pope Gregory VII., and finds its most memorable illustration in the excommunication of Henry IV. and his pilgrimage to Canossa. For three days he stood in the courtyard of the castle, in midwinter, clothed only in the hair shirt of a penitent, till he was absolved and restored by the pope. Excommunication, by the civil law of the empire, involved deposition; no excommunicated person could sit on the throne. Indirectly, therefore, if not directly, the enthroning and the dethroning of monarchs was part of the authority to which the Vatican laid claim.

The claim of the Free Church of Scotland in 1843 has been described as Vaticanism or Hildebrandism, but the assertion is groundless. The core of the claim of the Free Church of Scotland and of those secessions by which it was preceded was the right to regulate their spiritual concerns, confession, worship, discipline, without interference from the State—a claim that differs in two essentials from that of Rome.

(a) The finality of the authority of the State in temporal matters, including Church property, was not questioned. The decisions of the Legislature and Law Courts might be unjust and oppressive, involving hardship even to persecution, but the right of the State to pass these laws and to enforce them was not disputed or resisted.

(b) The Free Church, unlike the Church of Rome, claimed no authority over the conscience of the individual.

(3) *Co-ordinate jurisdiction.*—Establishment in England and Scotland has been described by many under this conception. The Church, it is argued, existed before the State and still exists independently of it. She framed her own creed and constitution and adopted them: she organized her own courts and defined their sphere and jurisdiction. The State, recognizing that these things were in accordance with the teaching of revealed religion, or accepting them as such on the authority of the Church, inscribed the Creed in its statutes,

⁴ Ch. xx.

⁵ Ch. xxx.

⁶ Ch. cxiii.

ratified the Church's claim to jurisdiction in her own sphere, and voted support from the nation's exchequer. If moreover, it is argued, Church and State would restrict themselves respectively to their own sphere, they need never come into conflict.

Co-ordinate jurisdiction is the ideal outlined and advocated by Thomas Chalmers in his *Lectures on the Use and Abuse of Literary and Ecclesiastical Establishments* (1827) and later in his *Lectures on the Establishment and Extension of National Churches* (1838), but Chalmers had to confess that his ideal had not been realized. The cause of establishment had been vindicated in argument, in his opinion, but his grief was that the cause had suffered defeat at the hands of those who believed in it, but stultified their convictions by submitting to the jurisdiction of the State in the sphere of the Church.

(4) *Nominal establishment with real and effective endowment.*—This theory is that the function of the State is only to furnish monetary support, and it is not for the State to intervene or to judge whether the creed and constitution on which the Church had been established had been departed from or not, an ideal which seems to be the objective of the articles declarative of the constitution of the Church of Scotland and the proposals for union with the United Free Church, but, as these articles and the question they involve are still *sub judice*, they will not be further referred to in this article.

(5) *Voluntaryism.*—The voluntary takes high ground and argues from first principles. The Church is the Bride of Christ, and the phrase is more than a figure. There is so much of reality in it that, if the Church enter into a wedded relation with any earthly institution, the loyalty and obedience which she owes to her King and Head are thereby imperilled.

The Church's sphere is faith and conduct; but these are questions of conscience, and conscience must not be forced. Liberty of conscience is one of the first principles of religion. The only weapons of the Church are moral and spiritual. The weapon of the State is force. The entry of the State into the sphere of conscience is thereby *de facto* debarred.

Liberty of conscience implies universal religious toleration. Religious toleration connotes religious equality. Each of these principles, argues the voluntary, is traversed by Church establishment. Not only is loyalty to Christ imperilled by alliance with the State, but history has proved that such alliances are impossible without situations arising often in which the Church must choose between the will and command of the State and the will and command of Christ.

Conscience is forced by establishment, for State support directly or indirectly comes from all classes and creeds, and people are compelled to support what they may or may not get benefit from, and in many cases for the propagation of doctrines which they do not believe.

Toleration is traversed, for the principle of intolerance is the same whether it be expressed in the form of active persecution or in that of passive disability. Equality and justice are traversed wherever one Church or one creed is favoured, privileged, provided for more than others.

Voluntaryism is thus reached by the path of deduction. The voluntary takes his stand on great *a priori* principles of justice, liberty, equality, and, in particular, spiritual independence, of which he holds that voluntaryism is the logical and indisputable corollary. It is reached equally by the path of induction. It is supported by masses of evidence accumulated from the history of the

Church in every age. The Church was never so vital, so convincing, so fruitful as in the first three centuries before her alliance with the State. The spiritual activities of the Church in modern times in every field of service (Home Mission, Foreign Mission, Church Extension, liberality)—not to speak of the inward graces of the spirit—have been confessedly greater and more fruitful in voluntary churches than in those allied with the State.

Not less convincing are the testimonies of those who, previously to the disestablishment of the Church of which they were members, not only believed in the principle but believed also that the existence of religion in their country was bound up with the alliance of Church and State, but after their experience of disestablishment moved rapidly to the opposite pole of opinion. Lyman Beecher wrote :

'It was as dark a day as ever I saw. The injury done to the cause of Christ, as we then supposed, was irreparable. For several days I suffered what no tongue can tell. And yet it was the best thing that ever happened to the State of Connecticut. It cut the Churches from State-support: it threw them wholly on their own resources, and on God.'¹

Colonel Sanderson, formerly M.P. for North Armagh, whose every sympathy was strongly biased against disestablishment, politically as well as religiously, declared that he voted against the disestablishment of the Irish Church, but he would undo that vote if he could: 'He believed the Irish Church at the present moment was stronger and more spiritual than it ever was before.'²

2. *Voluntaryism and Scripture.*—The argument against State support is often rested upon Scripture, but the argument is not final. The passages most frequently quoted and relied upon are :

1 Co 9¹⁴: 'Even so hath the Lord ordained that they which preach the gospel should live of the gospel'; Jn 18³⁶: 'My kingdom is not of this world: if my kingdom were of this world, then would my servants fight, that I should not be delivered to the Jews'; 2 Co 10⁴: 'For the weapons of our warfare are not carnal, but [spiritual or] mighty through God to the pulling down of strong holds'; Gal 6⁹: 'Let him that is taught in the word communicate unto him that teacheth in all good things.'

Now it must be premised that the weight of the Scripture argument depends upon the interpretation and application of the passage. So convinced a voluntary as the late Principal Cairns acknowledged this frankly in a lecture delivered in the Synod Hall in 1882.³

'The voluntary principle is, in one sense, held by all Christians. They all admit the duty and privilege of giving for religious purposes, according to 2 Cor. ix. 7, "Every man according as he purposeth in his heart, so let him give; not grudgingly, or of necessity: for God loveth a cheerful giver." All Christians agree likewise that this principle in some way or other embraces the support of Christian ministers and ordinances and put their own construction on such passages as 1 Cor. ix. 11. 13. 14. . . . Even so hath the Lord ordained that they which preach the gospel should live of the gospel. The peculiarity of the Voluntary Principle (so called) lies in giving such texts an exclusive interpretation so as not to take anything beyond the free-will offerings of the Church.'⁴

Confessedly, then, the weight of the Scripture argument rests upon the interpretation of these passages. Scripture authority would be final only if one interpretation were possible. But that is not maintained.

1 Co 9¹⁴, the great proof text of voluntaryism, may be correctly rendered: 'even so did the Lord give instructions or directions that they who preach the gospel should live of the gospel.' The instructions referred to, doubtless, were those given on the occasion of the mission of the twelve and the seventy, but most of these were local and temporary in their nature: some of them assumed the power of miracle; others inculcated a voluntary poverty and dependence on Providence ('no purse, no scrip') compatible only with a temporary and unique Providential dispensation, but abrogated afterwards by our Lord when He said: 'But now, he that hath a purse, let him take it, and likewise his scrip: and he that hath no sword,

¹ *Disestablishment in Connecticut*, quote in J. Barr, *Scottish Church Question*, p. 139.

² *Glasgow Herald*, 21st June 1902, quoted in Barr, p. 14¹.

³ *Synod Hall Lectures*, Edinburgh, 1882.

⁴ The italics are the present writer's.

let him sell his garment, and buy one' (Lk 22³⁶). Many of the apostle's instructions in his epistles were local and temporary, and the fact that he still considered this instruction valid for the Church in Corinth does not prove its validity for all time. To say that such an instruction debars the Church in every age from taking any help except from its own members is surely an irrelevance.

In 18³⁶ and 2 Co 10⁴ enunciate the same principle that the Church as such will not resort to the weapons of force, but the inference that she will never in any circumstances accept help from a civil power as such is not a self-evident corollary from it. Gal 6⁶ is an exhortation to liberality on the part of the individual Christian. To say that the Church as such is thereby forbidden to accept a contribution from the State is a *non sequitur*.

Isolated passages from the OT or the NT for or against disestablishment and disendowment are so differently interpreted and applied by different writers, and these interpretations are so coloured and biased by the writer's position, that definite conclusions cannot be rested upon them.

3. Voluntaryism in history.—The first quarter of the 4th cent. was signalized by three remarkable edicts: (1) an edict of Galerius signed also by Licinius and Constantine, a *venia indulgentia*, by which the last great persecution was brought to an end; (2) the edict of Milan (A.D. 313), a declaration of universal religious toleration; (3) proclamation by Constantine 'to the Peoples of the East' (A.D. 323), in which toleration is based on the principle of justice.

The logical issue of the edicts of Constantine was voluntaryism, but the practical issue of his action and influence was State-Churchism. His personal benefactions were very large, and the gifts of an imperial autocrat can hardly be distinguished from those of the State. The whole weight and wealth of the Byzantine Empire under Constantine and his sons in the middle of the 4th cent. were put in the scales on the side of Christianity, and it was established and endowed as the religion and the worship of the empire.

Space limits us to two or three great names in the voluntary succession.

(1) *Dante Alighieri*.—

'Ah, Constantine! to how much ill gave birth,
Not thy conversion, but that plenteous dower,
Which the first wealthy Father gain'd from thee.'¹

(2) *John Milton*.—

'It concerns every man's conscience to what religion he contributes. The civil magistrate is entrusted with civil rights only, not with conscience. . . . That which each man gives to the minister, he gives either as to God or as to his own teacher. If as to God, no civil power can justly consecrate to religious uses any part either of civil revenue which is the people's and must save them from other taxes, or of any man's property, but God by special command as He did by Moses, or the owner himself by voluntary intention and the persuasion of his giving it to God. If he gives it as to his teacher, what justice or equity compels him to pay for that which religion leaves freely to his choice whether he will learn or no, whether of this teacher or another and especially to pay for what he never learned or approves not, whereby, besides the wound of his conscience, he becomes less able to recompense his true teacher. . . . most of all are they to be reviled and shamed who cry out with the distinct voice of notorious hirelings that if ye settle not our maintenance by law, farewell the Gospel, than which nothing can be uttered more false nor ignominious, and I may say more blasphemous against our Saviour who hath promised without this condition both the Holy Spirit and His presence with the Church to the world's end.'²

No clearer or weightier exposition of the principle of voluntaryism and the sense of justice to which it appeals has anywhere been given.

(3) *John Locke*.—Locke's *First Letter on Toleration* is a powerful exposition of the motto from which it begins: 'Absolute liberty, just and true liberty, equal and impartial liberty is the thing that we stand in need of'—an exposition that would have been weightier still, had it been carried to its logical issue from the magistrate to the Government by which the magistrate is appointed.

(4) *A. R. Vinet*.—

'How will it be possible to persuade the state that it has no

right to superintend services for which it pays. . . whoever pays is master: whoever accepts payment, accepts servitude.'¹

(5) *Henry Alford*.—Coming, as it does, from one of the most scholarly and most spiritually-minded men in the Church of England, the thoroughgoing voluntarism of Alford is remarkable.

'The next term is, the severance of the Church from the State. Whether years, or decades of years be taken for the accomplishment of this;—however it may be deprecated, and however opposed;—accomplished it will certainly be. . . God's arm is thrusting it on, and man's power cannot keep it back.'²

Voluntaryism as a principle was not professed by the founders of the Secession and Relief Churches in Scotland or by the Free Church of Scotland at the Disruption. In Scottish Church history it is a practical corollary rather than an *a priori* principle. The claim of spiritual independence, and the growing certainty that it could not be realized in a State Establishment; the conviction that State support for one branch of the Church was unjust and forced the conscience of those who did not belong to it or believe in it; the conviction, also, on the part of many that State alliance and support were contrary to the teaching of Scripture, led the former United Presbyterian Church almost unanimously, and a large majority of the former Free Church of Scotland, to adopt voluntarism as the polity of the Church. The leaders in that movement were the Principals of four colleges—John Cairns, Robert Rainy, Thomas M. Lindsay, and George C. Hutton of Paisley.

The Church of Ireland was disestablished in 1869, the Welsh Church in 1909, the bill becoming operative in 1911, the Church in France in 1905. No Church is established in Canada, Australia, New Zealand, or South Africa; there is none in the United States. The only English-speaking nations in which establishment still exists are England and Scotland.

4. Questions.—(1) Is voluntarism compatible with the conservation of endowment? James Barr, in his recently published *Scottish Church Question*, the most effective and comprehensive contribution to the subject yet produced, holds that it is not.

'What we on our part insist on is that none of the endowment shall go to ecclesiastical uses.'³ 'It is a needless precaution so far as the main bodies of non-Presbyterian Protestant Dissenters in Scotland are concerned, for to their honour, they would not accept State endowments.'⁴

Some, however, have claimed for themselves the designation of 'pure voluntaries' who deprecated the alienation of the endowments. Speaking in the Assembly of the Free Church of Scotland in 1882, W. Robertson Smith said:

'I will stand here as a Free Churchman, but perfectly free to say as I do now, that while I am a loyal Free Churchman, recognizing the value of the act of 1843, I also stand here as a voluntary—a pure voluntary';

but Robertson Smith made it clear that he did not take exception to accepting relief from the State.

Objection to endowment rests on three grounds: (a) it is anti-Scriptural—to which it is replied that that is a matter of interpretation and of circumstances; (b) it is contrary to sound political economy that a State should give monetary help without determining and enforcing the conditions on which it is administered—to which it is replied that, if the State is satisfied with the wisdom and conscience of those to whom the money is given in trust, its duty to itself and to its citizens has been fulfilled; (c) it is incompatible with the principle of spiritual independence; it is not possible that a Church should be State-endowed and spiritually free. A distinction, however, may be drawn, and

³ P. 58.

⁴ P. 159.

¹ *Inferno*, tr. H. F. Cary, xix. 118.

² *Considerations*, etc., 1659.

has been drawn, between an endowment and a donation.

'It is perhaps conceivable that the State should make a donation to the Church without imposing conditions, but that it should make permanent provision for the ministers of religion and impose no conditions is not for a moment to be thought of.'¹

Furthermore, when it is remembered that many believe that morally as well as legally the endowments are the property of the Church, that the State has never really owned them, but only administered them, that the alienation and secularization of these endowments would be morally unjust and religiously harmful; when further it is remembered that centuries of undisturbed possession establish a prescriptive right in law as well as in equity, it seems clear that one may claim to be a voluntary and yet hold also that the endowments of the Church should not be secularized.

(2) Voluntaryism appeals so often to conscience that one is constrained to ask, Is it possible to be a State-Churchman and yet to be sincerely conscientious? Does voluntaryism claim a monopoly of conscience? Was Ebenezer Erskine not true to his conscience when in 1735 he wrote:

'Whenever it shall appear that the established Judicatories are heartily adopting the cause of Christ, purging and planting His house according to His will and the solemn covenant lying upon the land and giving justice to His oppressed members throughout Scotland, I hope not only to return to communion but to enter the gates of our Zion with praise.'²

Thomas Chalmers was loyal to his convictions and conscience when, in his opening address to the first Free Church Assembly, he declared, 'We are not voluntaries,' and when in 1827 and 1838 he bent the weight of his massive intellect and pure heart to the vindication of Church establishment as being right and expedient. The voluntary is conscientious according to his light; so also is the State-Churchman. To say otherwise would be a 'railling accusation' on one side or the other.

But, if both are equally convinced and equally conscientious, it follows that the conscience of a sincere State-Churchman is forced and wronged by disestablishment in the same measure as the conscience of a sincere voluntary is forced and offended by an existing establishment. The argument leads to a moral dilemma. Neither side could press its conviction if the conscience of another were thereby offended.

Solvitur ambulando. The question is one for men as citizens of the State more than as members of the Church; some convinced voluntaries have held that it should not be touched by the Church *qua* Church. In a democratic Government like our own the will of the State is the will of the majority of its people. If that majority believe that the best and wisest way in which national religion can be expressed is by a national Church, their right to establish such a Church cannot be impugned. If, on the other hand, the majority believe that a national Church is a public inequity and a wrong to religion, their right to disestablish and to disendow cannot be questioned.

The voluntary ideal is a Free Church in a Free State. The trend of public opinion everywhere is towards it; its realization is inevitable. The principle has been recognized and embodied in Queen Victoria's Proclamation to the native religions when she assumed empire in India.

'Firmly relying ourselves on the truth of Christianity, and acknowledging with gratitude the solace of religion, we disclaim alike the right and the desire to impose our convictions on any of our subjects. We declare it to be our royal will and pleasure that none be in any wise favoured, none molested or disquieted by reason of their religious faith or observance but that all shall alike enjoy the equal and impartial protection of the law: and we do strictly charge and enjoin all those who may be in

authority under us that they abstain from all interference with the religious belief or worship of any of our subjects on pain of our highest displeasure.'

The justice of that Proclamation to many minds is self-evident; but what is just in India is just all the world over, and the day will come when justice shall be done.

By what path will it come? It may come by way of the State or by way of the Church. State-compelled voluntaryism sounds like a contradiction in terms. Voluntaryism for the individual is real only when it is spontaneous. Compulsory voluntaryism may force the conscience of the State-Churchman as really as State-Churchism forces the conscience of the voluntary. Let voluntaryism get its majority and power, and, on the ground of abstract justice, it is entirely justified in enforcing its convictions on the nation. The true voluntary will, however, hesitate to do it. He will rather suffer wrong than inflict it on the conscience of another.

Voluntaryism may come by way of the Church. Conviction in favour of it is growing rapidly not only in Free Churches but in those allied with States. The proposed union of the two great Presbyterian Churches in Scotland and the tentative approaches towards union on the part of the Church of England and Nonconformists are full of hope and promise. The voluntary conviction in each of these unions would leaven the whole lump, and voluntaryism would come by a great free-will surrender and sacrifice in which these Churches would denude themselves of every State-conferred privilege, prerogative, preferment, and prestige and take their place on the platform of toleration and equality with all the Churches of the land.

WILLIAM ROSS.

VONDEL.—I. Early life and writings.—Joost van den Vondel (1587–1679), the greatest of Dutch poets and one of the greatest religious poets of the Counter-Reformation, belonged by descent to the South Netherlands, his parents being natives of Antwerp, pious 'Doopsgezinde,' or Baptists, who were driven by religious persecution to settle at Cologne, where the poet was born in 1587. The lovely opening stanzas of his *Olyftack aen Gustaaf Adolf*, written when that town was threatened by the Swedish army, recall his earliest experiences. While he was still a child, his parents migrated, first to Utrecht and later to Amsterdam, where his father soon acquired a considerable business in the hosiery trade. Vondel's younger brother was thus enabled to obtain a good classical and legal education, but the poet entered his father's business and was a self-educated man. As an exile from the south, he became early a member

¹ Andrew Henderson, *Synod Hall Lectures*, Edinburgh, 1883, p. 63.

² A. R. MacEwen, *The Erskines*, p. 85 f.

of the Chamber of Rhetoric, 't Wit Lavendel (White Lavender), to which most of the Brabanters in Amsterdam belonged; and his earliest plays and poems are written in the style of the *Rederijkers* and of the Bible plays which, under the influence of the Renaissance and the Reformation, had taken the place of the mediæval moralities. The poems show also, like some of Milton's first verses, traces of an admiring study of the French Protestant poet Du Bartas. His wife took over the management of the hosiery business, and Vondel set himself to the task of repairing the defects of his literary education. He took up the study of Latin, French, Italian, and ultimately Greek. Seneca and later Sophocles became his models in tragedy. Besides metrical versions of Sophocles' *Electra* and *Edipus Rex*, he made complete translations, at one time or another, in prose or verse of Virgil's *Ecloques*, *Georgics*, and *Æneid*, of Ovid's *Metamorphoses*, and of Horace's *Odes* and *Epodes*. But classical influence in Vondel never repressed the spontaneously lyrical inspiration of his poetry or modified the passionately Christian temper of his mind. From first to last the poetry of Vondel has two great sources of inspiration—God and his native country; and, whatever form his poetry may take, its master-quality is always lyrical—ardour and sweetness, fertility and subtlety of thought, a music of verse which is at every turn the full and resonant counterpart of the changing moods of his exalted mind. He wrote few or no love poems. Only once or twice in his long life does the current of his private feelings of joy and sorrow rise to the surface in a lyric of joy or sorrow. His personal interests were merged in his passion for great causes, patriotic and religious.

The first conflict which evoked the full strength of Vondel's religious feeling and poetic genius was the critical struggle between the Remonstrant Arminians, supported by the magistrates and cultured circles, and the Calvinist Contra-Remonstrants with the common people behind them, which ended with the Synod of Dort and the execution of Oldenbarneveldt. Vondel's soul was moved to its depths, and about 1618 he attacked Prince Maurice and the preachers under the thin veil of a classical tragedy on the subject of Palamedes. He had to go into hiding and was fined for his boldness. Vondel found a more effective outlet for his feelings in a series of satires, begun about this time and continued at intervals throughout his life. The best of these, the fiery *Geuse Vesper of Sieckentroost*,

'Had hij Hollandt dan gedragen
Onder zijn harte,'

and the *Rommelpot van Hanekot*, where the mutual amenities of the Calvinist clergy are portrayed under the figure of a roost full of gobbling, scratching, fighting cocks, are popular songs handled by a poet of genius. The *Decretum Horribile* is an impassioned denunciation in Alexandrines of the doctrine which consigned infants to eternal perdition. *Roskam* and *Harpoen*, in the same verse, are more quiet and argumentative expostulations against endless theological hatred and strife. The *Uitvaart van Apollo* and *Speelstrijdt van Apollo en Pan*, written when his *Lucifer* was driven from the stage, read like folk-songs into which a great poet has blown a music as winged and sweet as the *Hymn of Pan* by Shelley. None of Vondel's poems has preserved their popularity so entirely as the satires.

It would be out of place to give here any full account of the secular poems which flowed from Vondel's pen hereafter till the end of his long life. A large number of them are political and occasional pieces, descriptive and lyrical in

character, written to celebrate the sea-power of Holland, the birth of a prince to the House of Orange, the victories of Frederick Henry by land or of van Tromp and de Ruijter by sea, the building of a new Stadthuis at Amsterdam, the visits of royal persons, the marriages and deaths of his friends. He was the laureate of Amsterdam when that city was the heart of the Netherlands, and the Netherlands almost the heart of Europe, responsive to every movement from Sweden to Spain, from England and France to Turkey, and looking out over the seas to the East and West Indies. Here we must confine ourselves to the history of his religious development and some of the chief poems in which his devout and ardent feeling found expression, dramatic, didactic, and lyrical.

2. **Attractions of Roman Catholicism.**—The steps which led Vondel into the Church of Rome have nowhere been clearly indicated by himself, but they are not difficult to trace. As a 'Doopsgezind' he had been brought up to reject the doctrine of predestination as formulated by the Calvinists.¹ That movement had its ultimate source in the desire to find in the Reformation not so much a new creed as a new life, a closer personal and spiritual communion with God; and for Vondel himself it is clear that Christianity was primarily a movement of the heart, a passionate love of God, a faith in God's love to man as revealed in Christ. To him Calvin's doctrine seemed an outrage on that faith and love. The bitter fanaticism of the Contra-Remonstrant preachers appeared equally hostile to the spirit of Christian love. Moreover, as a poet and lover of the culture of the Renaissance, he ranged himself with the poets, dramatists, and men of learning, like Grotius, the object of his warmest admiration, who found their chief friends and patrons in the magistrates and middle class who were also the supporters of the Arminian movement. In short his religious and artistic sympathies alike drew him to the side of the Remonstrants. But he had no sympathy with the somewhat Epicurean and sceptical spirit of some of the humanists, as Hooft, who took the same side. Religion was for him the first of interests. Further, within his own Baptist communion were differences that disturbed him and doctrines enunciated to which he could not subscribe. In the *Antidotum tegen het Vergift der Geestdrijvers* (1626) he ranges himself against the supporters of the doctrine that the private spirit is a source of inspiration and instruction equal or superior to the written Word. He does not go further in this poem. He does not ask whether the interpretation of Scripture may be left to the individual enlightened by the Spirit. But events showed that this was the question on which his mind was busy, that he was in search of an authority able to allay such storms of conflicting dogma as had swept over the Netherlands and brought to the scaffold one of the saviours of his country. The trend of Vondel's mind was diametrically opposed to that of Milton, who was a republican in politics, and became always more hostile to the recognition of any organized Church, any authoritative interpreter of Scripture, any mediator between the Scriptures and the individual conscience and reason.² An uncompromising adherent of authority in the State, Vondel could not rest till he found a centre of authority in religion.

It was not till the autumn of 1641 that he took the final step, but in the interval he was busy with Church history and legend. In the *Olyftaek aen Gustaaf Adolf* (1632), an appeal for the safety of Cologne, he recalls, like Milton, how

¹ See art. ANABAPTISM, II. 1 (2).

² See art. MILTON, vol. viii. p. 644a.

'The great Emathian conqueror bid spare
The house of Pindarus.'

but elaborates more fully the legend that Alexander the Great spared Jerusalem on the intercession of the high-priest. Like Milton also, Vondel was planning in these years a heroic poem, and the subject he selected was the conversion and victories of Constantine. He had reached the battle of Aquileia when his wife died, and the poem was never completed nor any part of it published. He turned to tragedy, and prepared for the new Amsterdam theatre a classical tragedy on the legendary history of Amsterdam, *Gijsbrecht van Aemstel*, supplying the details of his plot from the description of the destruction of Troy in the second and third books of the *Aeneid*. The best things in the play are the beautiful choruses on married love and on the Massacre of the Innocents; but the sympathetic treatment of Roman Catholic rites and beliefs throughout the play warned his countrymen of the coming change which was consummated in the autumn of 1641. With the *Gijsbrecht*, too, Vondel began a long series of dramas on Biblical subjects or saints' legends, but including two patriotic plays—*De Batavische Gebroeders* and the beautiful pastoral *De Leeuwendaalers*. Vondel did what Milton in the same years would probably have done had he not turned from poetry to political and religious controversy. But Vondel had ready to his hand, what Milton would not have found in England,—a theatre to perform his religious plays.

The relations of the Protestant Reformation and the drama were complex, and differed in different countries.¹ In general Protestantism was antagonistic to the stage generally, on much the same grounds as the early Church, and especially to the realistic presentation of the great mysteries of the Christian faith in the miracle- and mystery-plays. But, on the other hand, the moralities lent themselves to polemical ends, Protestant as well as Roman Catholic; and the educational interest of the time found a useful instrument in dramas composed in Latin—e.g., the *Jephthes* and *Baptistes* of Buchanan and the flourishing drama, Terentian and Senecan, on Scriptural subjects, of Germany, Switzerland, and the Low Countries. From both of these sources were descended the naive Biblical plays of the Chambers of Rhetoric, the kind of play with which Vondel had begun. But the *Eglantine*, the most famous of the Amsterdam Chambers, and its successor the Academy, founded by Coster, a minor dramatist, preferred secular plays, native farces, romantic plays of the English type, but without their poetry, and classical plays. The new Theatre which finally took the place of Coster's Academy was opened with Vondel's *Gijsbrecht*, and it was here that all his subsequent plays were presented with elaborate and gorgeous staging and scenery. These plays differ from his earliest experiments simply in their more classical form, as that was understood, their closer resemblance to the Latin plays of Grotius.

3. Vondel and Milton.—Vondel's genius was not dramatic, and his ardent piety still further limited his dramatic treatment of its themes. He was incapable of letting his artistic genius so far get the upper hand of his didactic purpose as to create a great figure like Milton's Satan. His favourite hero is the pious and submissive saint whose first virtue is unquestioning obedience to the will of God as revealed by God's priest. The result is sometimes even painful, as in *De Gebroeders*, a play on the subject of the expiatory murder of Saul's sons, in which David's piety is shown by his becoming accessory to a crime at the bidding of a

pious and politic high-priest. Vondel's temper is more attractively expressed in plays whose hero is some young saint of pure and ardent piety, like Joseph in the two plays with which he followed up his translation of Grotius's drama on the subject of Joseph's temptation, *Joseph in Dothan* and *Joseph in Egypten*, or again in the beautiful character of Jephtha's daughter in *Jephtha*. The most famous of all his plays, the *Lucifer*, will not bear comparison dramatically with the great opening books of *Paradise Lost*. Vondel gives as the motive for the rebellion of Lucifer the announcement that Christ will take on Him the nature of man and thereby raise humanity to a higher level than the angels, following the tradition that the Incarnation was independent of the Fall. With his eye upon the Rebellion in England, to which he was passionately hostile, he presented the revolt more in the form of a mutiny among the angels, in which Lucifer allows himself to be pushed to the front, concealing his deeper ambitions under a veil of zeal for the rights and privileges of his order—a Cromwell, in short, as royalist sentiment interpreted Cromwell's policy and career. For Milton also disobedience to the absolute and unconditioning will of God is Satan's crime, but there was in Milton the temper that rebels, and he was on Cromwell's side, and the apologist of regicide. His feelings and imagination got the better of his theology and gave us the great dramatic and human figure of Satan as he is presented to us in the opening books. Vondel's strength did not show itself in dramatic creation, nor, any more than Milton's, in philosophical or mystical interpretation of the inexplicable episode; but in descriptive and lyrical poetry—the opening picture of Eden, the final conflict of angels in the air, a great naval battle as between angelic van Tromps and diabolic Blakes, and the choral odes—e.g., that on God which closes the first act:

'Wie is het die zoo hoog gezeten,
Zoo diep in 't grondelooze licht.'

All Vondel's plays show the same weakness in the portrayal of heroic and dramatic characters, the same descriptive and lyrical qualities. Such a pious and complete acceptance of the Christian view of life as Vondel's leaves little room for tragedy such as that of the Greeks or Shakespeare; for it eliminates those conceptions of fate and chance and the enigma of human life of which such tragedy is an expression.

4. Teaching of the plays.—The teaching of the plays is in general simply Christian and Biblical; only latently is it specifically Roman Catholic, as in *Jephtha*, where Vondel makes Jephtha's sin his stubborn reliance on his own conscience rather than on the authority of the priest whom he consults. Vondel's more purely Roman Catholic sentiments found expression in lyric-didactic poems such as the *Brieven der Heilige Maeghden* (1642), saints' letters modelled on the *Heroides* of Ovid: the *Altaer-geheimenissen* (1645), an impassioned didactic on the sacrament of the Mass, the Scriptural and ecclesiastical authority for the Roman Catholic view of the mystery, the worship of the Host, and the rites with which that worship is invested: *De Heerlijkheit der Kercke* (1663) on the glory of the Church; and the *Bespiegeling van Godt en Godtsdienst* (1662) on the attributes of God.

More interesting than these to the reader of to-day, especially the non-Catholic reader, are those poems in which Vondel pours forth, with no didactic purpose, his personal feelings in strains which reveal what a fullness of happiness the devotional richness of the Roman Catholic Church brought to him as to the English poet Crashaw. *De Koningklycke Harp*, a brimming river of song

¹ See art. DRAMA (Introductory), § 5.

in praise of David's Psalms, the *Opdraecht aen De Heilige Maecht*, prefixed to the *Brieven* mentioned above, a white flame of adoration, are good examples; but perhaps most touching of all are the shorter, simpler lyrics evoked by the death of his wife, his little son 'Constantijntje 't zalig kintje,' his daughter, and his granddaughter. The *Uitvaert van myn Dochterken*, written in 1633, is an unrelieved cry of sorrow, simple but perfect in form. The corresponding *Uitvaert van Maria van den Vondel* (1668) is a hymn of resignation to God's will that hardly breathes regret.

'When this our earthly life hath ended
Begins an endless life above,
A life of God and angels tended,
His gift to those that earn His love.

What from that Unity is severed
Must here in weary exile roam,
On earth no resting-place discover,
In Heaven her fatherland and home.

Her dying breath went out to God
Whither all hearts must turn at last,
The goal, the rest, the perfect portion;
And in that prayer all sorrow passed.'

The resignation which such poems breathe was displayed by Vondel in the heroic close of his life when the aged poet sacrificed his whole fortune to redeem the debts of a worthless son and spent ten years of his life in the service of his native city as an official in the public pawnshop—a very Dutch pound for Pegasus. He died in 1679 at the age of ninety-two.

5. Place as a religious poet.—The personal note of the last poems cited is even historically the most important; for the significance of such poets as Crashaw and Vondel, emphasized by the supreme place which the latter holds among the poets of a country which had been in the vanguard of the Reformation, is that it reveals the importance of the Counter-Reformation, where it was that the Protestant movement had miscarried, had ended, not as its leaders anticipated, in a victory of Christ's Church over Antichrist, but in a definite rending of the seamless garment, a division leaving truth and untruth, good and evil, on either side. In its eager quest of a purer and more Scriptural creed and simpler worship, its impatient desire to root out the tares of 'human' traditions and ceremonies, Protestantism had outrun the human heart, had ignored the depth and power of the instincts of which those beliefs and rites were the expression. The idea of a united Christian Church speaking with authority; the significance of the sacraments, above all of the Eucharist—the 'This is my body,' 'This is my blood'; the devotion to the person of Christ and its overflow in the cult of the Virgin and saints—there were in Protestant countries and churches of all denominations hearts to which these things had only to be presented to make immediate and irresistible appeal. Some of the most interesting movements in Protestantism since the 17th cent. have represented the effort of individuals to recover these sources of devotion without sacrificing Protestant loyalty to Scriptural and historical truth; and there have been corresponding movements in the Roman Catholic Church to secure a higher level of Scriptural and historical truth without any sacrifice of traditional devotion. Vondel is not a poet of the calibre of Dante or Milton; there is nothing striking and original in the content of his thought; but a poetry so resonant and harmonious, uttering with perfect sincerity the passionate ardours and exultations of a great Christian soul—a Roman Catholic poet in a Protestant country—can never be without significance for the student of religious thought and feeling in Western Europe since the Reformation.

For the student of the drama too there is an interest, corresponding to that of the religious drama of Calderon, in this last survival in a Protestant country of the drama of the Middle Ages.

'The Spanish drama,' says a recent writer, 'like the Greek but unlike the English, had not cut itself adrift from its religious origins, and so remained a far more truly national institution than the English drama ever became after the Reformation.'¹

Vondel's drama is throughout religious and patriotic. If it is not completely national, it is because the religious spirit which it expresses is not that of the great body of the Dutch people and because it does not do full justice, as Shakespeare's did, to the secular interests of the nation as these had taken shape and colour under the quickening influence of the Renaissance.

LITERATURE.—The most complete bibliography, up to date, is J. H. W. Unger, *Catalogue of Writings, etc., by J. van den Vondel*, Amsterdam, 1907, *Bibliographie van Vondels Werken*, do. 1885. See also G. Kalf, *Geschiedenis der Nederlandse Letterkunde*, Groningen, 1906-12, iv. 333-336. The best ed. of Vondel's works is that of J. van Lennep, in 25 vols., Leyden, 1888-94; Geeraardt Brandt, *Leven van Vondel*, Amsterdam, 1682, ed. Felco Verwijs, 1866, is the classical biography. A complete list of Vondel's dramas, not including translations, in order of production is: *Het Pascha* (1612), *Palamedes* (1625), *Hierusalem verwoest* (1629), *Gijsbrecht van Aemstel* (1637), *Maegden* (1639), *De Gebroeders* (1639), *Joseph in Dothan* (1640), *Joseph in Egypten* (1640), *Pieter en Pauwels* (1641), *Maria Stuart* (1646), *De Leeuwendaalers* (1647), *Lucifer* (1654), *Salomoneus* (1657), *Jephtha* (1659), *Koning David in ballingschap* (1660), *Koning David Herstelt* (1660), *Sanson* (1660), *Adonias* (1661), *De Batavische Gebroeders* (1663), *Patron* (1663), *Adaan in ballingschap* (1664), *Zunchin* (1667), *Noah* (1667), *Joannes de Boetgezant* (1662) is a short didactic epic suggested in part by G. B. Marino's *La Strage degli Innocenti*. For the religious drama of the Reformation see art. DRAMA (Introductory), § 5; C. H. Herford, *Literary Relations of England and Germany in the 16th Century*, Cambridge, 1886; and W. Creizenach *Gesch. des neueren Dramas*, Halle, 1893-1909, vol. ii. bk. i. and elsewhere. Note also G. Edmundson, *Milton and Vondel*, London, 1885; H. J. C. Van Noppen, New York, 1898.

H. J. C. GRIERSON.

VOODOO.—Voodoo is devil-worship and fetishism brought from the Gold Coast of Africa by negro captives to the United States and West Indies. Its chief sacrifice is a girl child, referred to by the initiates as 'the goat without horns.' When a child is not available, a white kid takes its place. Excepting at the great semi-annual festival when the 'goat' is drugged, killed, and eaten, black dogs, cocks, and hens are cruelly sacrificed by being slashed so that their bowels fall out. There is a regular priesthood to intimidate and rob the devotees. These sometimes have the name *papaloi* and *mamaloi*, more frequently *pappy* and *mammy*, used as a prefix to their given names. The head of the circle or association of priests and priestesses has the title of 'king'; e.g., King Alexander was long the head of the cult in the south-western states. The entrance into the priesthood is won by many and difficult tests. The aspirant (man or woman) must endure hunger, thirst, extreme heat and cold; must go sleepless, unless commanded to have the dream-tormented sleep induced by drugs; must eat ofal and drink the ooze of garbage. While enduring this, he must keep a calm mind and strong will, and memorize the power of various poisons, from rattle-snake venom, stramonium, and water-hemlock to putrid liver and earth from under carrion. Also he must acquaint himself with the properties of healing herbs, such as red clover for cancer, dock for liver trouble, boneset for fever, etc. He must learn to make luck-balls, tricken-bags, hands-of-love, fingers-of-death, and other fetishes, and lay up in his memory the incantations which he must mumble as he works and the number of times he must repeat them, for numbers are very important

¹ John Eglinton, *Anglo-Irish Essays*, 1917, p. 59.

in his magic.¹ He must, above all else, concentrate his will, so that, by the time he is considered a finished product of his school, he is a hypnotist of power. When he has satisfied his teachers as to his acquirements, he is set to lead a season's dances, these being fire-, snake-, and moon-dances. The fire-dance is the most important, and is called 'the dance of the Old Master' (meaning the devil). It is given at mid-summer and mid-winter in a lonely field or ravine, around a great fire of wood and tar. At a little distance is a sort of altar at which the 'goat without horns' is sacrificed. It has already been stupefied with some sort of narcotic. Each dancer gets a quivering fragment, and then hops and whirls and howls more frantically than ever. It is only justice to say that the priests swear that no child has been killed for a dance for fifty years. The moon-dances are the same unregulated caperings, indulged in when the moon is full. The performers start in a circle, clasping hands. At a signal from the leader, all start running round a big stone which is set in their midst, and, soon breaking away from one another, begin to caper and howl and yelp compliments to the moon, such as 'Pretty moon! Old Master's moon! Ho-ho! I love you, pretty moon.' The snake-dances are given by the owners of snakes at any time. The reptiles are brought out in their baskets and set down uncovered in the midst of a dancing circle. They are expected to be torpid, but occasionally one tries to escape and, being trodden on, bites a naked foot, but no serious consequences follow if the dancer is not too maddened to apply an embrocation of snakeweed (*liatris scariosa*), which is kept in readiness.

It is not really necessary for a voodoo to have great knowledge of poisons, for such is the power of suggestion on the ignorant and superstitious that, if a negro imagines that he has been 'hoodooed,' 'witched,' or 'cunjered,' he pines away and dies, unless some one can be found whom he considers a voodoo of greater powers, to minister to his mind diseased and root out death-compelling terrors by the tricks and bables of his nefarious profession. Few white people realize the menace of voodoo due to its absolute power over a certain class of minds.

MARY A. OWEN.

VOTIVE OFFERINGS (Greek).—I. Definition and terms.—The votive offering may be defined as a permanent memorial dedicated of free will to a supernatural being. It thus differs from the sacrifice (*q.v.*), which is not permanent, and from the tax, which is not given of free will. Tithes and firstfruits are properly not included, since they are neither; yet they must be considered, since a votive offering may be given in consequence of them.

The custom may safely be assumed for the whole history of worship on Greek soil. In the most ancient sanctuaries, such as those of Crete, Argos, Olympia, Sparta, Ephesus, these offerings are found in every stratum down to the earliest. At least small vessels that once held some kind of perishable offering are found in large numbers everywhere, and these also in the beehive tombs extend the practice to ancestor-worship. Such vessels, however, may be there by accident, simply because the sacrifice could not be presented without them; and the argument must be based on more significant things—human-like figures or animals which meet us in the sanctuaries just named. These are of course not the only offerings that may be assumed for the early age; other kinds that are found later may well have been found there, but, when the

material was less lasting or more precious than clay, they had less chance of escaping destruction or theft. The custom seems, however, to have been extended and systematized in the time between Homer and Hesiod. In Homer the formula varies: we have no special word for act or thing (*ἀγαλμα*, *ἀνάγαι*, *κρεμάσαι*, and *θεῖναι*, *δῶρα* and *διδόναι* being used of other things as well); but in Hesiod we first meet with the technical *ἀναθεῖναι*, and inscriptions of about the same age have *ἔθηκεν*, *ἀνέθηκεν*, *ἔστησεν*, and *ἴσατο*. Shortly after this the terms used for the votive offering become generally fixed: *ἀνατίθῃμι* and, as its passive, *ἀνάκειμαι*, with the noun *ἀνάθημα* (*ἀνάθημα*, *ἀνθεμα*, *ἄφθημα*), being used to distinguish such things from gifts to human beings (*δῶρον*, *διδόναι*). These terms remained until in the 4th cent. and later they lose their force. These changes probably correspond to psychological changes,¹ the offering being considered at first as a gift to the god, then as a gift from the giver, and finally the religious feeling being swallowed up in self-glorification. The shifting centre of gravity changes the character of the gift, and at last robs it of its value.

2. Occasion.—The offerings might be given on any occasion, customary or special, public and private; but, whether state or person was the giver, the principle remained the same. Our classification therefore is only made for convenience.

(a) *Customary.*—There are many records of customary offerings at the recurrent feasts. Such are the dedication of a *πέπλος* to Athene every four years at the Great Panathenæa, and a *πέπλος* to Hera at Olympia every four years, and a *χιτών* to Apollo at Amyclæ;² Alcman's *Partheneion* seems to describe a similar gift to Artemis Orthia at Sparta.³ We know that many other ancient images were clothed,⁴ and it is not unreasonable to suppose that these customs did not stand alone. The periodical washing and dressing of images is common in the East, and its ancient character is obvious. Hecuba indeed gives a fine robe to Athene,⁵ but the records of the public and customary dedications do not go beyond the 6th century. A *θεωρία* sent to an oracle carried with it votive offerings as well as sacrifice. Hyperides describes how one of them dressed and decorated the statue of Dione at Dodona,⁶ and an oracle from the same place demanded sacrifice with the gift of a bronze table for the gift that the Athenian people had sent.⁷ Other records show a silver *φιάλη* as the customary gift of a *θεωρία*; we find them year after year at Branchidae, where fourteen cities dedicate in one year,⁸ and at Delos.⁹ So the Athenian colonies sometimes sent gifts to the great feasts of Athens.¹⁰ It is reasonable to assume that the practice was customary at public feasts.

The private worshiper who took part in a festival was certainly expected to offer something. There are occasional allusions to this;¹¹ but it may be safely inferred from the preservation of thousands of little saucers of the same shape and make, and of anthropomorphic figures of certain types. These are found in most ancient shrines in regular series from the earliest strata; and, whatever they meant, we may assume them to have been sold by the priest to visitors for the purpose of dedication. The worshipper may very likely have taken the

opportunity then to present some special petition ; so that it is impossible to be certain of the occasion for any one.

But there are a large number of objects, common in the Archaic period and later, that can best be explained as memorials of the act of worship. Such are the well-known statue of Rhombus at Athens, bearing a calf over his shoulders, just as the modern Greek does still on Good Friday.¹ There are several similar figures known ; and large numbers of little clay figures carry some offering, often representing a lamb or pig, cock, dove, or other bird, fruit, flower, or garland, which have been found in Athens, Calauria, Corcyra, Crete, Cyprus, Dodona, Ephesus, Naucratis, Sparta, Tegea, Thebes. Others, again, are grouped in a ring-dance, and there are single figures who bear pipes or harp or play upon some musical instrument, who carry in the hand a bowl or jug or lustral spray or a jar of water on the head, who clap the hands or uplift them in the attitude of worship. A peculiar variety are the figures of Artemis found in Corcyra ; the goddess stands facing, and a votary is seen in the act of dancing before her.² Others are depicted in ritual costume, and may be priests or priestesses. The most remarkable of these are those discovered in Crete and Ephesus. In a shrine at Cnossos were found figures elaborately painted, representing a female in ceremonial dress, holding and girt with snakes ; similar figures, less elaborate, at Palaikastro and Gournies ;³ at Ephesus, perhaps priestesses, and probably the eunuch priest.⁴ Relief-carving reached its perfection in the 5th cent. ; and then and later the sacrifice, the libation, and the feast are commemorated in reliefs. The worshipper may dedicate the clothes actually worn in doing the rite ; even models of them have been found made in porcelain.⁵

(b) *Occasional*.—Here fall the great majority. State or person may return thanks thus for victory in war or deliverance from peril ; and the person often marks by an offering the date of some event such as marriage and retirement from active life. Any supposed wrath of a deity may be met with a propitiatory offering, and the sin of the human being thus expiated.

3. *Motive*.—The motive may be thanksgiving, prayer, or propitiation, chiefly the two former. Help or deliverance from peril and success in some undertaking are the commonest occasions of the act. With a prayer the votive offering was sometimes given in anticipation, to keep the god in mind of the prayer ; if we may draw a deduction from the customs of modern Greece, this would be common in cases of sickness. The crew of Odysseus, intending to steal the oxen of the sun, vow to build him a temple if they return to Ithaca ;⁶ and Crœsus appeased with rich gifts the oracles of Apollo and Amphiaraus, which had guessed his riddle and were angry with him for his unbelief.⁷ For unbelief a worshipper at Epidaurus was ordered to offer a silver pig,⁸ and other indications exist that small offerings were made for a breach of etiquette.⁹ Fixed fines or confiscations differ from these in being compulsory. For bloodguilt propitiation was not uncommon. Temples are recorded as being built for this cause ;¹⁰ and after the murder of Pausanias the Delphic oracle commanded that

his statue be dedicated in the Brazen House, whence he was dragged forth to die.¹ The nine archons at Athens swore to dedicate a golden statue (*ἀνδριάς*) if they should break the laws.² One inscription mentions as the motive of dedication 'fear of the wrath of the twin Tindarids.'³

4. *Classification*.—A certain number of the worshipper's gifts are of direct use in the god's service. Such are temples or shrines and the articles used in them. Temples dedicated on a special occasion are recorded in legend and in history. Danaus erects a temple to Apollo in Argos, in memory of an omen which encouraged him in seizing the kingdom ;⁴ Heracles and Theseus do the like. The temple of Apollo at Bassæ commemorates the deliverance of a city from pestilence, and that of Hera in Sparta deliverance from flood.⁵ The murder of a tyrant was expiated by the temple of Artemis at Tegea.⁶ A colonnade is built in some religious precinct with the spoils of war, as that of the Athenians at Delphi ;⁷ so with certain of the Treasuries at Delphi.⁸ Parts of a temple might be specified, as the pillars of that in Ephesus dedicated by Crœsus ;⁹ this becomes very common in late times, when it often means no more than that some official paid for repairs or even arranged for them. Altars are a common dedication, especially late, some being apparently memorials of a ritual act.¹⁰ Garments for the idol have already been mentioned. Many articles of intrinsic value, such as ornaments or coins, may have been given as valuables ; but these are generally appropriate to the occasion, as we shall see.

Another class consists of what may properly be called *ἀγάλματα*, *οἷς ἀγάλλεται ὁ θεός*. The *ἀκροθίνια*, or choice pieces, are given from spoils of war—as the throne of Xerxes, the manger of Mardonios,¹¹ statues from the temples of a conquered foe.¹² So also any rarity—the stone swallowed by Cronus, the sceptre of Hephaistos, Dædalus's wings, mammoth bones.¹³

But in the great majority of things dedicated, even if they have material value, the ideal value predominates : they are in fact appropriate to the occasion. We may classify these : (a) image of the deity, (b) the act or process blessed by the deity, (c) the winnings, (d) the tool or means.

(a) *Image of the deity*.—In all the great shrines large numbers of clay figures are found that must represent the deity. These are sometimes not differentiated : the same seated type does duty for Athene in Athens or Demeter in Tegea. Others have attributes, as Artemis with a fawn or other animal, Athene armed cap-à-pie, Zeus with the thunderbolt. Probably the small figures reproduced the general aspect of the cult-image ; anyhow it is impossible to say that the attributes suited the occasion. The naked male figures found in Bœotia, in the shrine of Apollo Ptoan, and many other places, were probably meant for the god ;¹⁴ and so also the *κόραι* of Athens and Delos were probably meant for the goddess.¹⁵ Some in each class are dedicated as a tithe or firstfruit ;¹⁶ and the armed bronze Athene dedicated by a baker-woman¹⁷ shows that there need be no connexion of the type and the occasion.

Perhaps the figure of the nursing mother may be a goddess in her beneficent aspect; but these seem more likely to represent the devotee. Later, the god's benevolent activity is represented in a series of reliefs, which show Asklepios and his attendants curing the sick.¹ With less confidence, the same may be held for a few other classes of reliefs. These begin late in the 5th century.

(b) *Act or process blessed by the god.*—The earlier examples are simpler in conception. We would include here the warrior armed, a type that goes back to the 7th cent. at least, sailors rowing their galley, the victor in his car with Victory driving, the jockey on his courser, the athlete² with his proper attributes or in proper pose, the hunter with his game, the dairy-farmer milking his cow, perhaps the peasant in hat and cloak.³ Here also we would place the common statuettes of the nursing mother and the various scenes of childbirth, which are becoming more common with the progress of excavation.⁴ These must sometimes represent the devotee, and it is reasonable to assume that they always do, in the absence of direct proof that they represent the deity. A more summary representation is a bronze stonemason from the Athenian acropolis, inscribed so as to leave no doubt as to its meaning: τὴν ὄκλειαν (= ὄχλειαν) με τὰθεναίαι ἀνέθηκεν.⁵ This may give the key to interpret other figures of rams, bulls, and horses, which are found everywhere.⁶ A complete scene of animal life is not uncommon: brood-mare suckling a foal, stag attacked by hounds, or the hound alone, hawk gripping hare.⁷ There are vast numbers of other animals, which more probably belong to the next class. In many cases the figure may be a simple reminder of a tale to which the key is lost, like the figure of an ass that prevented a surprise by his bray,⁸ or that of a frog which directed a traveller to a spring.⁹ An early series of painted tablets found at Corinth depicts every stage of the staple industry of the place, pottery-making, together with hunting and farming and vine-dressing; later, athletic contests were often commemorated by a relief.¹⁰

We may perhaps add the rather rare instance of a workman dedicating his first or chief piece of work, or a model of it. The most definite instance of the 'masterpiece' is Lycinus's pot, inscribed, Λυκίνος ἀνέθηκεν τῇ Ἀθηναίᾳ τὸ πρῶτον ἡργάστον. Mandrocles, who could not place his bridge over the Hellespont in the temple of Hera, placed a picture of it instead.¹¹ A summary memorial of healing was often a model of the part affected. These have now been discovered in very ancient deposits of Crete and Ephesus; hitherto they have been very common from the 4th cent. B.C. to our own day, and hardly known before.¹² In

¹ Rouse, p. 217 ff.

² The athletes at Olympia appear to differ somewhat, as the right to erect a statue was an honour.

Ephesus was also a real human tooth, bound with gold wire (for hanging?).¹ Things outworn may be regarded as similar memorials of the act blessed. There is little record of this in early days: the earliest is an epigram of Simonides,² but there is enough to show that the thing might be. Later, its sentiment won favour for it, and it became common. So the lame man dedicates his crutch or the sick man his bandage; children dedicate their toys at puberty; and clothes worn in time of peril are dedicated by the survivors.

(c) *The winnings.*—The oldest and most important group of these are the spoils of war, which are found everywhere, dedicated to practically all gods, from the earliest times to far into the Christian era. The trophy itself is a war-dedication; and the warrior made his gift to the god whom he believed to have helped him, *i.e.* usually to the patron of his own city or tribe. It is rather mean to dedicate a small model of spoils, but it seems to have been done. In Olympia, Delos, Lusi, and Crete have been found useless or miniature models of shields, helmets, loinguards, cuirasses, and knives, besides others, such as axes, which may be memorials of war.³ So with the athletic prize: from Hesiod's tripod in the 8th cent.⁴ to the prize tripods at Athens and the Triopia, *stilengis*, vase, or crown here or there, and the iron sickle at Sparta,⁵ there is plenty of evidence of the custom. Models in gold of corn-sheaves, silphium, olives, or vine doubtless display thanks for a good harvest; and perhaps some of the numerous animal models, which include every domestic kind and most game, are due to the hunter's gratitude.⁶

(d) *The tool or means.*—Sometimes the soldier dedicated the arms or weapons used in battle; sometimes the athlete dedicated his chariot or his quoit or leaping-weight. Later, we have models of sickles, wine-presses, and the like recorded in literature. There is not much evidence of this, but there is enough to show that the thing was done.⁷

It should be noted that, wherever the worshipper's figure appears, he is depicted as engaged in some significant act. His portrait, as such, is never dedicated by himself. The human being never appears except when something of the ideal is implied. There are some apparent exceptions; but in Greece they are only apparent, and, if not apparent, they are not Greek. Later, beginning in the 4th cent., all this changed; and the honorific statue came in just when the votive offering became a means of self-glorification. The old spirit hardly survived except in cases of dedications for relief from sickness and peril.

VOWS (Buddhist).—I. Vows at ordination.—The primitive and most fundamental form of taking vows in Buddhism consisted in expressing one's confession of faith on the occasion of ordination (*upasampadā*). The words uttered at ordination before the master of the ceremony were the regular formula (*kamma-vācā*) of taking refuge in the Buddha, in the Dharma, and in the Sangha, repeated three times as a rule.¹ This profession of faith was associated with other professions—of personal purity, of the determination to practise all the precepts and rules of conduct ordained by the Buddha—for the newly ordained was, after the regular profession, instructed in the rules of discipline, and therein was implied the vow to observe the rules. The procedure and methods of the ceremony differed among the schools of Buddhism, and various doctrines developed as to the efficacy of the ceremony, its influence upon the life of the ordained, its relationship with the other branches of Buddhist training, etc.² The more important aspect in the development of the practice and doctrine was the Mahāyāna conception of vow-taking, *i.e.* its significance in the ethics of the *bodhisattva*.

2. The vow of a bodhisattva.—As is seen in the art. PRAYER (Buddhist), prayer in Buddhism amounted to taking the vow to perfect oneself on the way to *bodhi* and thereby to save others. It takes, as a rule, the form of vows (*prañidhāna* or *prañidhi*) taken by a *bodhisattva* (or any other Buddhist) before a master Buddha, who gives assurance (*vyākaraṇa*) that the vow-taker shall finally attain full Buddhahood; the task of the vow-taker is then to dedicate all his good qualities and meritorious deeds for the realization of his high purpose. The specific methods and points in the acts of dedication (*pariṇāmanā*) are copied from the special vows attributed to the Buddhas and *bodhisattvas* of the past, recorded in various texts. As a specimen we cite here a passage from the 'Lotus' (*Saddharma-puṇḍarīka*) where Buddha Śākyamuni tells his all-saving power:

'There shall never be any being,
 Who, having heard the truth of Buddha, shall not attain Buddhahood;
 For the vow taken by all the Buddhas is this:—
 "Let me lead them to Bodhi, by accomplishing (my works)."
 Throughout future days Buddhas will expound
 Many billions of the threads of truth;
 They shall reveal this unique road (*eka-yāna*)
 And preach thereby the truth for the Tathāgata-ship.'³

The 'unique road' is explained as working out in life the stability of truth, the continuity of existence. Being is one throughout all existences, and therefore the ardent intention expressed in a *bodhisattva's* vow and his work of salvation can induce other beings to the same zeal and life, while the assurance given by his predecessor not only encourages him in the work of salvation but has a mysterious, or metaphysical, efficacy to help him in the progress of *bodhi*.⁴

3. The communion of the vow-takers.—The vows are destined to be fulfilled not only by means of earnest intention and ardent work on the part

of the vow-taker but also in virtue of the assuring help rendered him by the master Buddha and of the mutual reaction between all the vow-takers. This is due to the metaphysical continuity of existences and to the consequent reciprocation among the vow-takers, *i.e.* *bodhisattvas*, of the works of dedication done in fulfilment of their vows. The realm of existence is likened, in a metaphor often used, to a net in which every knot is studded with a brilliant diamond and all those diamonds mutually reflect their lustre and figures. Every one in the realm does perpetually affect, more or less, all others by his or her ideas and deeds, good or bad, noble or mean. The intention and resolution (*chittotpāda*) are the preliminary to the vow, and the consequence is the dedicatory work; but these three phases are one in their essential nature, not only on the part of an individual vow-taker but in the communion of all the vow-takers, of the past, present, and future, because these phases and the individuals are but manifestations of the *bodhi-chitta*,¹ one and the same throughout all the realms of existence.²

Seen from this point of view, all the branches of Buddhist training are but accessories to, or methods of carrying out, the vows solemnly pledged. This is why in various texts a special emphasis is put on the practice of taking vows.

The Penitence of Mañjuśrī, e.g., enumerates the six methods of practising faith, which are: (1) penitence, (2) invocation (of all the Buddhas), (3) entreatment (to reveal truths), (4) adoration, (5) dedication, and (6) taking vow.³ Similarly the *bodhisattva* Samantabhadra vows to accomplish the following work: (1) reverence towards all the Buddhas, (2) adoration of the Buddhas, (3) the practice of offering and giving, (4) confession, penitence, and absolution, (5) emulation of meritorious deeds, (6) entreating the Buddhas to turn the wheel of truth, (7) entreating them to live among human beings for ever, (8) perpetually observing Buddhist discipline, (9) constantly adapting oneself to fellow-beings, and (10) the practice of universal dedication.⁴

4. Further examples.—The Buddhist ideal was to emulate the *bodhisattvas* of the past, and we have many records of vows taken by historical or imaginary personages. These were an expression of emulation as well as a source of inspiration, because in Mahāyāna Buddhism every one is a potential *bodhisattva*, and it is within the reach of a common mortal to emulate a *bodhisattva* and to pledge himself to similar tasks. We may cite here the vows taken, in the presence of the Buddha Śākyamuni and his great disciples, by Queen Śrīmālā, of Benares, the alleged daughter of King Prasenajit, of Kośāla. The vows consist of ten preliminaries and three great vows, wherein she says:

'I shall never cherish any thought of breaking the precepts which I have now accepted. From to-day up to the attainment of Buddhahood I shall never cherish any idea of pride toward the elders . . . I shall never arouse any angry thought toward any fellow-being . . . I shall never envy any others in their bodily excellence or beauty . . . I shall never arouse arrogant thought concerning all things, whether subjective or objective . . . I shall never accumulate wealth for my own sake but give out all that I shall receive for helping poor and suffering people

⁴ See D. T. Suzuki, *Outlines of Mahāyāna Buddhism*, p. 398, for a typical *bodhisattva* vow taken from a Chinese version of the *Sūvarṇa-prabhā*.

... I shall practise the four embracing methods (*sangraha*) not only for myself but for the sake of all beings, and thus, being free from attachment, never being weary (of my work), and being without any entanglement in the mind, shall embrace all fellow-beings into the same communion . . . Whenever I shall meet any unfortunate people, orphans, deserted, imprisoned, or suffering from various mishaps and tribulations, I shall never leave them unhelped nor stop until they will be saved and freed from sufferings, through righteous means . . . Whenever I shall see any people offending rules of decency or committing crimes, I shall never pass by them without trying to correct them but try to persuade or coerce them, according to the degree and nature of the offences. For persuasion and coercion are the methods of perpetuating righteousness; and when righteousness is perpetuated, the beings in the heavenly resorts grow in their number while those in the woeful resorts diminish, and thus the wheel of truth will perpetually be turned, to the benefit of all beings. . . . I shall never cease to embrace the perfect truths, since thus, and thus alone, we can remain mindful of the Buddha, the Communion and the *Pāramitās*.

Now, let me take the vow to save innumerable fellow-beings and to attain the perfectly right view of truth throughout all my coming lives. Let me take the vow to preach the truth to all without ceasing, on my having realized the perfect truth. Let me take the vow, for the sake of embracing the perfect truth, to dedicate my body, my life and my wealth for guarding the truth.'

Here ends the vow of the queen, and the book adds a comment :

'When Bhagavā listened to and accepted these vows taken by the Queen, all the innumerable vows taken by the *bodhisattvas* were caused by him to be embraced into and consummated in the three, just as all material existences are embraced in space.'¹

We have here an instance of the vow intended for normal training in Buddhist morality.

In contrast to the peaceful intention of the queen's vow, we have another type of the vow to persevere in persecution and missionary activities. We are told in the 'Lotus' how the Buddha Śākyamuni, before entering the Great Decease, prepared his disciples, both human and superhuman, for the hard tasks to be achieved and the difficulties to be encountered by them after the Master's death. Then the *bodhisattvas* pledge themselves in the presence of the Buddha to remain faithful to his admonition and warning, even after he passes away, and to fight opponents and persecutors, even in remote countries. The ardent zeal and passionate tone of this vow sometimes aroused the fighting spirit in combative Buddhists and gave them a consoling assurance of the righteousness of their cause.² Apart from the question of the period and circumstances of the composition of the book, we have here a counterpart to the missionary charge and an extension of the story of Punna, the first missionary to the barbarous *Sunās*.³

5. The 'prime vow' of a Buddha as a redeeming power.—Just as the vow taken by a *bodhisattva* served as an inspiration and incentive to Buddhist morality, the vow accomplished by a Buddha furnished the occasion for adoration and devotion to the achiever of the wonderful vow. A *bodhisattva* is a being on the way to *bodhi*, while a Buddha is one who has reached the end of the way, where he has established a paradise to receive those who believe in his power. His vow is fulfilled, as shown in the glories of his paradise, and is called the 'prime' vow (*pūrva-praṇidhāna*), while its actual efficacy manifests itself in the saving power, more or less vicarious, of the Buddha. We see here a special stream of Buddhist faith developed out of the metaphysical conception of the power of vow-taking—a stream which was further divided into various branches according to the respective nature of the vows taken by several Buddhas.

Of the vows attributed to Buddhas who on that

¹ In the *Śrīmālā-devī-siṃhanāda* (Nanjio, no. 59).

² For the stanzas of the vow, called the 'Stanzas of Perseverance,' see *SBE* xx. [1885] 259-261; for a man who believed himself to have carried out the vows in his life see M. Anesaki, *Niehren, the Buddhist Prophet*, Cambridge, Mass., 1916, esp. pp. 39-42.

³ See *Saṃyutta-nikāya*, iv. 60-63.

account became objects of specific worship we take two most important cases—that of the Buddha Bhaiṣajya-guru (the Medicine-Master), the lord of the eastern paradise Viśuddhi-vaidyūya, and that of the Buddha Amitābha (the Infinite Light), the lord of the western paradise Sukhāvati, the Land of Bliss. Apart from the questions pertaining to the mythical origin of these Buddhas and their paradises, we note here an interesting contrast between their respective vows and between the streams of religious faith based on their worship. The lord of the eastern paradise pledges himself, among other things, to save the sick and other sufferers and to give them immediate comfort, while the lord of the Land of Bliss promises to take to his paradise all those who cherish a pious faith in his saving power. Thus the Medicine-Master was a supernatural medicine-man, and his worship became a religion of healing, while the Buddha of Infinite Light was almost a vicarious saviour, and the faith in his redemptive power developed into a pietism, a Christianity within Buddhism, so to speak.

Let us now see the vows taken by Bhaiṣajya-guru. The story is that, while he was still a *bodhisattva*, he pledged himself to the following twelve vows :

'(1) Let me, on attaining Buddhahood, realize all the supernatural glories of a Buddha's body which illumines all the realms of existence, and induce all beings to the same glories.

(2) Let me realize all the luminous splendours and thus illumine all those who are shrouded in darkness.'

[(3)-(5) amount to vowing that all beings be induced to Buddhist perfection.]

'(6) Let me release all the crippled, mutilated, blind, deaf, lepers, sick of every description, from their sufferings and have them furnished with wholesome limbs or body.'

[(7) Saving of helpless and unfortunate.]

'(8) Let me save women suffering from the diseases peculiar to their sex and let them be transformed to men.'

[(9) Saving of those entangled in illusions.]

'(10) Let me release all those who would be imprisoned, punished, tortured or sentenced to death, if they should implore in my name.

(11) Let me release all those who, being starved, commit offences for getting food, by giving them, first, delicate food and then giving them a saturation in the taste of truths.

(12) Let me save all those who, being destitute of clothings, would be attacked by cold or heat, insects and worms, by giving them all kinds of fine clothings, decorations, perfumes.'¹

Here we see a Buddhist counterpart of the Vedic *Sūrya* or *Asvins*, and it is no wonder that Bhaiṣajya-guru was worshipped for the sake of immediate helpfulness.

In the myth of the western paradise the Buddha Amitābha was once a monk Dharmākara, who vowed to furnish a paradise for the pious souls and accomplished the task by a long and severe self-training and by supplying to his believers his name as the sole means of calling forth his saving power. The vow is taken before the Buddha *Lokesvararāja* as the testimony, and consists of three parts. The first part is chiefly in praise of the Master Buddha and is an expression of the vow-taker's determination to imitate and emulate him.² The second part consists of the forty-six³ specific terms of Dharmākara's intention and purpose in furnishing a paradise in the west and inducing all beings, without distinction of good and bad, of wise and fool, to share the glorious and blissful life in the paradise.⁴ The last part is the consummation of the second and takes the form of a passionate committal to carry out the plan, and even of a compelling call to the universe to respond to his ardent intentions and to give an assurance of the final attainment.

Here we see the Buddhist conception and practice of taking a solemn vow developed to a faith in the saving and redeeming power of the vow.

Finally let us add a remark on a modification, or degeneration, of the vow to curse or magic formula—the case with the Tantric form of Buddhism. Here we see a circuit of the idea of *praṇidhāna*, starting from entreatment and petition and resulting in the use of the vow and prayer

VOWS (Chinese).—1. Vows in ancient China.—The earliest historical records of China, as of other countries, are mainly concerned with the activities of rulers and with internal and external warfare. It is not surprising, therefore, that the first vows or oaths mentioned in Chinese annals¹ were taken by the princes and great officers of the various feudal states of the empire, and that the occasion of such vows or oaths was usually the conclusion of a treaty of peace or alliance, or a similar event of public importance.

The customary term for the ceremonial taking of a vow or entering into a covenant was *mêng-shih*. The two characters comprising this ancient term are still in common use, though usually found in different combinations. They are explained thus. *Shih* is equivalent to *yüeh-hsin* and *mêng* to *li-shêng*. *Yüeh* signifies a bond or covenant, and is still used to denote an international treaty. *Hsin* means 'good faith' or 'sincerity.' The signification of *li-shêng* is less transparent. There is no difficulty about *shêng*, which means 'a sacrificial animal.' The character *li* is an unusual substitute for *lin*, which means 'to approach,' 'to draw near to,' and is a euphemism for 'to slaughter.' Hence the combination *li-shêng* signifies 'to slaughter a sacrificial animal.' Thus the term *mêng-shih* is a concise expression meaning 'a covenant entered into with sincere heart and confirmed by the slaughter of a sacrificial animal.'

The sacrificial animals chiefly used in ancient China on the occasions of a solemn oath-taking were oxen and pigs (by princes and great fiefs), dogs (by ministers and officials), and fowls (by the common people). The method of procedure was as follows.

A pit was prepared in the ground (called *kan*), at the edge of which the animal was slaughtered. The victim's left ear was held by the master of ceremonies or by the person undertaking the vow; and immediately after the slaughter the ear was cut off and deposited in a dish called *chü-p'an*. Then blood was taken from the victim and poured into a goblet called *yü-tui*.² When this part of the ceremony had been carried out, the vow or oath was written in the blood collected in the *yü-tui*, and the oath-taker also used the blood to smear his own mouth.³ The tablet on which the words were inscribed (called *tsai shu*) was placed on the carcass of the victim, which was then buried in the prepared pit.⁴ The covering of the victim with soil was an essential part of the ceremony, as it was equivalent to calling upon the earth to be witness of the vow.

There was an officer known as *Ssü-mêng* ('Director of Covenants') whose special duty it was to superintend ceremonies of this kind. His functions were to some extent of a priestly character. He also made copies of the inscribed tablets, and either deposited them among the official archives or (in the case of covenants between private persons) became himself their custodian.⁵ It was also this officer who administered the oath to persons who had revolted against the Government and had subsequently returned to their allegiance. Other officers who had certain duties to perform in connexion with these ceremonies were the Grand Minister of Justice (*Ta-Ssü-K'ou*) and the Guardian of the Imperial Ancestral Temple and Treasury (*T'ien-fu*), who were responsible for the safe-custody of certified copies of covenants made between the emperor and the great vassal princes.⁶

¹ See art. *ORDAL (Chinese)*.

² See *Le Tcheou-Li*, tr. E. Biot, Paris, 1851, ii. 247. *P'an* and *tui* are terms used for two kinds of sacrificial vessel. That they were supposed to be, and perhaps were, decorated or inlaid with pearl and jade respectively is indicated by the words *chu* and *yü*—the Chinese names for those substances.

³ The technical term for smearing the mouth was *sha*. See *The Chinese Classics*, tr. J. Legge, Hongkong, 1861-72, ii. 2 437.

⁴ See Biot, ii. 359.

⁵ *Ib.* ii. 359-361.

⁶ *Ib.* ii. 314.

Numerous instances of vows and oaths taken by the princes of the Chinese states in the early historical period may be found in the famous narrative of Tso (*Tso Chuan*).¹ A good example of these early covenants is the following, which belongs to the eleventh year of Duke Hsiang (562 B.C.).

'All we who covenant together agree not to hoard up the produce of good years, not to shut one another out from advantages that we possess, not to protect traitors, not to shelter criminals. We agree to aid one another in disasters and calamities, to have compassion on one another in seasons of misfortune and disorder, to cherish the same likings and dislikes, to support and encourage the royal House. Should any prince break these engagements, may He who watches over men's sincerity and He who watches over covenants, [the Spirits of] the famous hills and [of] the famous streams, the kings and dukes our predecessors, the whole host of Spirits, and all who are sacrificed to, the ancestors of our 12 (13?) States with their 7 surnames:—may all these intelligent Spirits destroy him, so that he shall lose his people, his appointment pass from him, his family perish, and his State be utterly overthrown!'²

Some of the old commentators and moralists began at a very early period to complain that the frequency of sworn covenants and formal vows was detrimental to sound morals, because, when solemn engagements were lightly made, they were apt to be lightly violated. Cases were known, in Chou-dynasty China, of covenants that were broken 'before the blood smeared on the mouth was dry.' It was held that in the golden age of the 'holy kings' vows and covenants were unknown (*ku ché pu mêng yeh*), and that the simple spoken word required no vow or oath to make it binding. It was pointed out that the making of many solemn protestations fostered distrust between state and state and also between rulers and ruled. In the 'Classic of Poetry' (*Shih Ching*) we read of a king who added to the disorders of his kingdom by entering into frequent covenants with the vassal princes; for he showed thereby that he had no confidence in them and lived in fear of rebellion.³ Commentators also observe that no formal covenants were known before the Yin dynasty (1766-1122 B.C.) and that this was precisely the time when the State began to be disturbed by rebellious movements. Oaths and vows were introduced only 'when loyalty and sincerity had worn thin and men's hearts were perplexed with doubts.'

It will have been noticed that these State covenants were really the ancient Chinese equivalents of modern treaties; and the vows or oaths that accompanied such engagements practically corresponded to the modern seals and signatures of plenipotentiaries. The violation of a covenant was therefore nothing more or less than what we should call the wilful breaking of a treaty.

2. Vows of friendship.—Chinese social life has for ages been characterized by five 'relationships,' each of which implies certain rights, privileges, and duties. These are the relationships between 'sovereign and minister' (this will probably be reinterpreted to mean 'citizen and State' if the Republican form of government proves permanent), 'husband and wife,' 'father and son,' 'elder brother and younger brother,' 'friend and friend.' Friendship thus often assumes the importance of a recognized social institution, with its appropriate rules, customs, and traditions. When two or more Chinese decide to become 'friends' in what may be called the institutional sense of the term, they become bound to one another by solemn vows which are sometimes accompanied by a ceremonial mingling of blood. This is supposed to create a bond identical for all practical purposes with that of blood-kinship. The following example of a vow

¹ Tr. J. Legge, *The Chinese Classics*, v.

² *Ib.* p. 453. It may be noted that there were instances of treaties with smearing of lips as late as the wars between the Chinese and the Tatars (c. 1131).

³ See Legge, iv. 340 f.

of friendship is taken from the official annals of the Sung dynasty.

'We . . . will cling together like serpents and dragons inextricably coiled. When one of us attains riches and honour he will share his prosperity with the others. May he who breaks this vow receive divine chastisement.'

After uttering these words, the parties would prick their arms and let the blood flow into a goblet. Of the mingled blood each took a sip, thus becoming the 'blood-brother' of the other.¹ If 'sworn brothers' wish to terminate the relationship, they must do so in a formal manner. This is sometimes known as 'withdrawing the incense-stick' (*pa hsiang-t'ou-tz'ü*).²

A few foreigners have become the 'brothers' of Chinese officials and others, though probably in these cases the ceremony is abbreviated and simplified. H. A. Giles describes how, in 1868, he became the 'younger brother' of the influential court eunuch, An Tê-hai.³ A similar relationship has also been entered into between various Chinese emperors and some of their chosen subjects; e.g., Shêng Tsu (10th cent. A.D.) and Ihsing Tsung (11th cent. A.D.) of the Liao dynasty both became 'bound brothers' (*chieh wei hsiung-ti*) of certain trusted friends. In modern times the Chinese Government (especially under the Manchu dynasty) has shown itself extremely hostile to this custom, and indeed made it a punishable offence.

Soon after the accession of the Manchus it was decreed that for persons of different surnames to salute each other as brothers (*chieh pai hsiung-ti*) was an offence punishable by a hundred blows. In 1661 the death-penalty was decreed against 'sworn brothers' who took part in the ceremonies of blood-smearing and the ritual burning of paper slips on which vows were written. A slightly less rigorous law was enacted in the seventeenth year of K'ang-hsi (1668), but membership of sworn brotherhoods was still an offence punishable by flogging and, in aggravated cases, by death. The death-penalty was reduced to 'a hundred blows' if there was no blood-drinking or smearing and no burning of vows. In 1671 a further law enacted that persons guilty of joining sworn brotherhoods were liable to three years' banishment to the frontiers; but in 1673 a new law made a clear distinction between harmless brotherhoods and those which were regarded as criminal. The blood-smearing and drinking, and the formal consignment of the written vows to the keeping of the gods by means of fire, constituted the decisive evidence of guilt in its most serious form.

Formal vows of friendship between women are not unknown. They salute each other as 'dry sisters' (*kan chieh*). One method of entering into this relationship is for each of the two women to hold the end of a straw over the village well and to call upon a divinity known as 'the Peach-Flower Maiden' to witness the compact.

3. Vows of secret brotherhoods and societies.—The reasons for the severity with which 'sworn brotherhoods' have been treated by the Chinese Government are not far to seek. Secret fraternities, all the members of which are bound by inviolable vows to be loyal to one another as against the whole world, are very apt to become a danger to almost any form of government, especially if that government is controlled by an alien dynasty that has supplanted a native one. In ancient times, nevertheless, it was considered a right and proper thing that men should take vows of co-operation and mutual aid. The *Chou Li* declares that 'by entering into mutual engagements accompanied by vows the people are taught to extend brotherly love to one another and to put away apathy.'⁴ A commentator on this rather enigmatic statement is worth quoting.⁵

'There are different ways,' he says, 'in which people show their apathy and laziness. They do not hurry to give help to those who are in danger or suffering hardship, thus they are lacking in charity and sympathy. It is therefore a good thing

that people should be stimulated by means of solemn vows to aid one another in distress, to support one another in sickness, to extend a friendly hand to those who need it, to help one another in times of anxiety or peril, and to be faithful to one's word as long as life lasts, setting aside all petty personal considerations that might cause delay or give an excuse for laziness.'

This remarkable description of the social value of vows seems strangely modern; it might almost serve as a statement of the ethical basis of the Boy Scout movement. Chinese history affords innumerable instances of vows of this kind entered into and most faithfully carried out by bands of associates or members of social groups. Where the ethical ideal falls short is in the fact that the obligation to succour the distressed is not usually regarded as of general application, but concerns only fellow-members of the oath-bound fraternity. Yet this depends, of course, on the specific purposes for which the fraternity has been constituted; and sometimes they far transcend the individual or collective interests of the members, even if they do not go so far as to include all mankind within their purview.

The most famous and memorable Chinese example of a vow entered into for purposes that went far beyond the private interests of those concerned was 'the Vow of the Peach-garden,' whereby the three heroes Liu Lei, Kuan Yü, and Chang Fei (2nd and 3rd centuries A.D.) bound themselves to fight for the preservation of the reigning dynasty against the attacks of the Yellow-Turban rebels.² We are told that the ceremony (which took place in Chang Fei's peach-garden) consisted in the sacrifice of a black ox and a white horse and in the taking of a vow to the following effect:

'We swear to regard one another henceforth as brothers, to unite our abilities and our hearts, to bring succour to the miserable, to raise up the fallen. We will serve our country and give peace to the people. Though we were born on different dates we wish to die together on the same day. Our hearts are open to the inspection of the divine powers of Heaven and Earth. If any one of us proves false to his duty and forgetful of his obligations, may God and man unite to destroy him.'

This celebrated 'Vow of the Peach-garden' has been imitated countless times, especially by members of societies formed for purposes of mutual protection. Such societies, indeed, are still formed from time to time; several new ones sprang into existence among the tens of thousands of Chinese labourers who worked behind the fighting lines in France during the Great War.³

It is interesting to note that the Peach-garden Vow was 'often referred to by the Triad Society,' and that its members were 'exhorted to emulate the faithfulness to each other and loyalty to their cause of the heroes who took it.'⁴ The vows of the Triad Society were thirty-six in number.⁵ It is characteristic of China that the first of them is a vow of filial piety. After repeating the vows, each candidate is required to take a lighted incense-stick and dip it in a bowl of water. As the light is extinguished, he says, 'If I prove false to my vows, may my life go out like the fire of this stick of incense.' The master of ceremonies ('incense-master') then takes up a porcelain basin and dashes it on the ground, saying, 'May such be the fate of all traitors.' He proceeds to take up the paper on which the vows are written, and sets fire to it. By this means it is supposed that the vows pass from the material into the spiritual world and are received by the divine powers, who will register them in the archives of heaven and inflict punishment on traitors. The next part of the ceremony consists in cutting off the head of a cock, as an indication of the grim fate that will befall any one who betrays the cause. The incense-master then drops some of the dead cock's blood into the water in which the incense-sticks were extinguished; and each of the candidates pricks one of his fingers and lets the blood drop into the same vessel or (sometimes) into another bowl containing wine. The ashes of the burnt papers on which the vows were written are put into the bowl containing the mingled blood of

the candidates, and the bowl is then handed round and sipped by each in turn. This concludes the ceremonies of initiation, after which the new members of the society are hailed by the old ones as 'brothers.'¹

Sisterhoods are less common than brotherhoods, but by no means unknown. Detailed information regarding them is lacking, but mention must be made of the Golden Orchid Society (*Chin-Lan Hui*), which is described by H. A. Giles as 'a secret association of unmarried girls who bind themselves not to cohabit with their husbands after marriage (which they are unable to avoid) but to leave them and return to their old homes or go elsewhere.'² It has been said that members of this society would commit suicide rather than break their vow.³

4. **Religious vows.**—(a) *Buddhism.*—In China as in other Buddhist lands there are vows for both monks and laymen, those of the former being naturally much stricter and more comprehensive than those to which laymen subscribe. Sometimes, however, lay Buddhists of both sexes voluntarily bind themselves by one or more of the obligations which are ordinarily binding only on the monkhood. There is a society of lay vegetarians which is said to have been founded in the T'ang dynasty by the fifth and sixth 'patriarchs' of the Ch'an school of Buddhism. Members of this society are known as *chai kung* ('fasters'), a term which is also applied to those who take vows of temporary vegetarianism during their pilgrimage to a sacred mountain.

The fact that practically the whole of Chinese Buddhism⁴ belongs to the Great Vehicle (Mahāyāna) explains the existence of religious vows of which little or no trace can be found in primitive Buddhism. The great models of all such vows are those which are supposed to have been taken by the *bodhisattvas*. These vows are numerous—in the *Wu-liang-shou-sūtra* they are forty-eight in number⁵—but they are practically all summed up in the formula, 'So long as there remains a single being who has not attained Buddhahood, I vow that I will not become Buddha.' The 'vows' of the *bodhisattvas* (*prañidhāna*) may be described as expressions of will which, through the intensity of the selfless emotion that inspires them, are instrumental in bringing about a realization of the desired conditions.⁶ The Mahāyāna, as J. J. M. de Groot has shown, 'admits the creative power of thought,'⁷ and indeed this is insisted upon so frequently that it may be regarded as one of the fundamental principles of Buddhist psychology. This fact is apt to be ignored by those who dwell upon the 'vain repetitions' said to be characteristic of Buddhism in practice, and who do not understand that the repetitions are believed to reinforce the creative power of thought to which the spoken words give expression.

We have already seen that forty-eight *bodhisattva*-vows are preserved in a famous *sūtra*; but according to another classification only four are essential. These 'four great vows' (*ssü hung shih-yüan*) are as follows: (1) the vow to save the world, *i.e.* not to rest until all beings in the universe have been brought to salvation; (2) the vow to destroy in oneself all evil and the passions

that produce evil; (3) the vow to study and practise the *dharma*, *i.e.* the law of Buddha, with a view to the attainment of wisdom and virtue; (4) the vow to attain the perfection of Buddhahood. These vows are related to the *San Kwei*—the 'Three Refuges' (the Buddha, the Law, and the Church)—common to both Vehicles. The second and third (the destruction of evil and the cultivation of virtue) have reference to the Buddha and the Law, and to self-development (*tzü li*); the first (the helping of others and bringing them to salvation) has reference to the Church or community, which, in the Mahāyāna, includes all beings in the universe (*lit'a*).¹ The full accomplishment of the three first vows will lead automatically to the accomplishment of the fourth—the attainment of universal Buddhahood.

There are several other classifications of *bodhisattva*-vows, but we need not give a detailed analysis. It will be sufficient to refer to the ten vows set forth in the *sūtra* known as the *Ta-Pei-Hsin T'o-lo-ni Ching* (the Dharani 'Sūtra of the all-Pitiful Heart').² In this *sūtra* Kwan-yin (Avalokiteśvara) is represented as being the inventor or teacher of these vows; hence the recital of each is followed by an invocation of the name of this *bodhisattva*. The vows are (1) to become acquainted with the true faith; (2) to attain spiritual vision; (3) to lead others to salvation; (4) to be charitable; (5) to embark on the ship of *prajña*, 'wisdom'; (6) to cross the ocean of bitterness (life and death); (7) to be steadfast; (8) to attain *nirvāna*; (9) to join the company of the saints; (10) to become one with the Dharmakaya (the mystical body of the eternal and universal Buddha).

The vows taken by Buddhist monks on their reception into the order, or on subsequent occasions, may be conveniently studied in the *Brahmajāla-sūtra*, called in Chinese the *Fan-wang-ching*.³ The 35th and 36th sections of this popular *sūtra* deal with the vows which should be taken and constantly retaken by 'every son of Buddha' (*ko Fo tzü*). They bind him to regard his parents and religious teachers with respect and devotion, to associate only with virtuous companions, to study the scriptures and perform good works, and to obey the commandments of Buddha in all things. He must be ready to sacrifice life itself rather than allow himself to act or think in such a way as to hinder the realization of these ideals.⁴ Similar vows should be taken by those who seek to attain mystical illumination by practising the rules of *dhyāna*.

In the *Tso-Ch'an-I*, written by the monk Tsé-Ch'an for the guidance of such aspirants, it is stated that the novice should begin by cultivating an attitude of love towards all beings, and should then make a 'great vow' (*ja hung shih-yüan*) to devote himself earnestly to the spiritual welfare of others and not to seek salvation or enlightenment for himself alone (*pu wei chi shén tu ch'iu chieh-t'o*).⁵

It will be seen from the foregoing that the Buddhist vow is practically a self-dedication to an ideal of conduct of which the central feature (in the Mahāyāna) is the service of others. But, apart from what may be described as the 'official'

¹ The terms *tzü-li* and *lit'a* constitute a concise statement, from the Mahāyānist standpoint, of the essential difference between the Small and the Great Vehicles. *Tzü-li* (to benefit oneself) is regarded as the ideal of the Small Vehicle, and *lit'a* (the helping of others) is regarded as the characteristic ideal of the Great Vehicle. The combination of the two (*erh li yüan man*) is aimed at by Mahāyānists.

vows, there are others which have sole reference to the spiritual needs or personal aspirations of the individual who utters them.

One of the most remarkable and comprehensive is the vow which is said to have been taken by a monk of the Sung dynasty named Jui Chien, who dwelt as a hermit on the sacred mountain of Wu-t'ai. It was to the following effect: (1) that he would never allow his eyes to look upon forbidden sights; (2) that he would never allow his ears to listen to forbidden sounds; (3) that he would never allow his mouth to utter forbidden words; (4) that he would never allow his mind to be occupied by forbidden thoughts.

Of the numerous vows made for particular objects or in view of particular circumstances it is unnecessary to give a detailed account. Sometimes a Buddhist will make a vow to recite a certain number of *sūtras* or portions of *sūtras*, in which case beads are often used to count off each completed recital.¹ Sometimes he will register a vow to go on a pilgrimage, or to supply oil for keeping a lamp burning in some shrine for a term of years, or to burn a certain number of sticks of incense before the image of a *bodhisattva*.² Some, again, will undertake to print and circulate copies of a favourite *sūtra*.

One such person, e.g., vowed that he would cause 1000 copies of the Diamond *Sūtra* to be printed and given away if his mother were cured of sickness. The emperor Yung-chêng (1723-35) vowed that he would feed a stated number of monks in return for reasonable weather.

Sometimes the vow is accompanied by some act of austerity or even self-mutilation, though the latter is contrary to Buddhist law.

A monk of the 12th cent. named Tsun-Shih, who belonged to the famous monastery of Kuo-ch'ing at the foot of the T'ien-t'ai mountain in Cheh-kiang, made a vow to devote himself to the propagation of the teachings of the T'ien-t'ai school, and in proof of his sincerity burned off one of his own fingers before an image of the *bodhisattva* P'u-hsien. A similar act, showing regrettable fanaticism but great fortitude and powers of endurance, was performed by a monk who died less than ten years ago. Having made a vow of self-dedication to religion, he burned off two of his fingers. Throughout the rest of his life he was known as Pa-chih-t'ou-t'o, 'the eight-fingered ascetic.' He rose to be abbot of one of the most prosperous monasteries now existing in China (the T'ien-t'ung Ssu, near Ningpo) and to be head of the newly-founded Association of Chinese Buddhists.

Various opprobrious epithets are bestowed on members of the monkhood who have broken their vows (especially the vows of chastity and vegetarianism) or have been expelled from their monasteries for misbehaviour. Among these are such terms as 'slanderer of the Three Holy Ones,' 'shameless one,' 'obstruction on the holy pathway,' 'bald-headed huntsman,' 'cassock-wearing robber.'

All the Buddhist or quasi-Buddhist sects which have played so prominent a part in the political as well as the religious life of China in the past have their characteristic rituals and vow-formulas.³ But in many cases these societies have very little to do with religion and merely make use of religious formulas in order to inspire their members with a due sense of the binding nature of their vows. This is so in the case of the Tsai-Li Society, one of the most flourishing organizations of the kind in N. China. It professes to be associated with the cult of the *bodhisattva* Kwan-yin, but its activities are of a social and ethical rather than a religious nature, and in any case its slight religious basis is almost as much Taoist as Buddhist. It is said to have sprung from the dreaded White Lotus Society, and, though it has apparently long ceased to meddle in politics, it was dreaded by the authorities up to the time of the Boxer movement, if not later.⁴ It flourishes in the leased territory of Wei-hai-wei, but has never given any trouble to the British authorities there. Its members take vows to abstain from strong drink, opium, and tobacco. When a member is known to have broken his vows, he is expelled from the society and is said to be *pu tsai*, a phrase meaning 'not present'—a common Chinese euphemism for 'dead.' The phrase implies that the disgraced member is 'dead' to the society. There is a play on the word *tsai*, which also forms part of the society's name.

¹ See De Groot, *Sectarianism and Religious Persecution in China*, Amsterdam, 1903, i. 225 L.

² For a short account of some of these vows see H. Doré, *Recherches sur les superstitions en Chine*, pt. i. vol. ii. no. 4, p. 342 L.

³ Much useful information is contained in De Groot's *Sectarianism and Religious Persecution in China*, already cited; but allowance must be made for the author's strong prejudices, and especially for his antipathy to Confucianism.

⁴ See Stanton, p. 6.

(b) *Taoism*.—(1) The vows of Taoists are similar to those of Buddhists. In this, as in many other respects, modern debased Taoism has merely adapted the usages of Buddhism. The *bodhisattvas* who are supposed to hear and register the vows made by pious Buddhists are of course replaced by Taoist divinities. The three goddesses (*Niang-niang*) whose worship flourishes on the sacred mountain of T'ai-shan in Shantung, on Miaofêng-shan near Peking, and many other places, are among the divinities most often resorted to for the purpose. Several of the mountains consecrated to Taoist worship (such as T'ai-shan and Hua-shan) have been the scenes of pitiful tragedies enacted by those who have vowed to sacrifice their lives in return for favourable responses to prayers made on behalf of parents or others. These and other mountains possess 'suicide cliffs' (*shê-shên yai*), over which religious fanatics have hurled themselves to death in fulfilment of rashly-made vows; and, though this practice has always been discountenanced and even forbidden by the officials, it is not even yet quite extinct.¹ From such acts of fanaticism it may be gathered that a Chinese rarely fails to keep a vow that he has once made, provided that it is physically possible for him to fulfil it. The Chinese are, and always have been, too fond of making vows. They certainly do not act in accordance with the good advice of Ecclesiastes, 'Be not rash with thy mouth'; but it must be admitted that they would readily endorse the other principle laid down by the same Hebrew writer—'When thou vowest a vow unto God, defer not to pay it. . . . Better is it that thou shouldst not vow, than that thou shouldst vow and not pay.'²

LITERATURE.—This has been indicated in the footnotes.

R. F. JOHNSTON.

VOWS (Christian).—I. New Testament.—(a) *The word*.—The discussion starts naturally with a consideration of the data afforded by the earliest Christian books, the writings of NT, but these are scanty and to some extent irrelevant. The word 'vow' (*εὐχά*) occurs twice (Ac 18¹⁸ 21²³), but in both cases the atmosphere is Jewish rather than Christian. In the first instance Paul (or Aquila) has his hair cut at Cenchræ, 'for he had a vow.' Whether the making or the redemption of the vow is meant is not clear; if the latter, it was probably in connexion with some escape from danger. The second passage is similarly connected with the hair-offering. To avert the reproach of anti-Judaism, Paul, at the request of the Jerusalem elders, associates himself with four men about to be 'purified' on the termination of a vow, and bears the expense of their hair-cutting and probably of their sacrifices—a custom not uncommon among rich Jews on behalf of their poorer brethren. On the Nazirite vow (Nu 6), of which these incidents, and the account given by Hegesippus³ of James the Just, are illustrative, and the significance of the hair as the seat of the devotee's life, see art. NAZIRITES, VOWS (Hebrew), and W. R. Smith, *The Religion of the Semites*², London, 1894, p. 483.

Two other NT passages may be glanced at. One is the vow made by forty Jews to fast until they had killed Paul (Ac 23¹²), but this is at least as much an oath as a vow. The other is the 'Korban' passage (Mk 7⁹⁻¹³ = Mt 15³⁻⁶) in the teaching of Jesus, a reference to cases in which the keeping of a vow conflicted with duty to parents. The case of Ananias (Ac 5) has no pertinence, though Roman theologians find a precedent for vows in the community of goods supposed to have existed in the early Jerusalem Church.

¹ See art. SUICIDE (Chinese).

² Ec 52. 4, 5.

³ Eus. HE ii. 23.

(b) *The thing*.—When, however, we consider the basal ideas of vows as solemn promises and engagements offered to a personal God, the NT has something vital to say. The service and gift here are nothing less than the whole personality and its powers (e.g., Ro 6¹¹⁻¹³ 12¹, Gal 2²⁰, 2 Co 5¹⁶), dating from the hour of baptism and the entry on a consciously Christian life. The undertakings therein involved may be called a vow, though nothing is promised which is not obligatory. It is the natural response of the soul to the appeal of redemption, the expressed impulse of the new life. This impulse is partly a desire to show gratitude and devotion, partly a desire for increasing perfection by growing intimacy with the Saviour, and further involves a claim to continued and new blessings. Thus the vow has its approach to a covenant.

In the narrower sense a vow is the promise of something not generally regarded as already obligatory, not strictly owed to God. The starting-point here is to be found in passages of NT where, though the word is not used, the idea (of asceticism) is present — e.g., in the references to fasting, poverty, and virginity. The most probable interpretation of the curious counsels given by Paul in 1 Co 7 is that he is dealing with cases of spiritual marriage in which man and woman united in taking a vow of continence. Parallel to this is the reference in Ignatius:

‘If any one is able to abide in chastity to the honour of the flesh of the Lord, let him so abide without boasting. If he boast, he is lost, and if it be known beyond the bishop, he is polluted.’¹

What one notices in this reference to a vow of celibacy or of continence is its privacy as opposed to the publicity which was of the essence of the Jewish vow. The Christian is not to parade his vow, but to realize that his chief danger is pride and vainglory.

2. **The early Church and vows of virginity.**—On early Christian asceticism, especially as regards celibacy, see artt. ASCETICISM (Christian) and CELIBACY (Christian). There are abundant evidences within NT that by the end of the 1st cent. virginity was often looked upon as superior to marriage and indicative of a higher spiritual life, and this opinion gained ground extensively and rapidly in the sub-apostolic and ancient Catholic ages, especially as regards the clergy. The latter half of the 3rd cent. was a period of increasing stringency, for, while Cyprian² had advised that young women who felt they could not maintain their virginal vows should marry, the 19th canon of Ancyra (A.D. 314) says that such vows are perpetually binding and that to break them is as bad as committing bigamy. By the 4th cent. the unmarried state had come to occupy the place that martyrdom had held during the persecutions, and is a favourite theme with such Fathers as Athanasius and the Cappadocians. Chrysostom rhapsodizes over the lustrous sanctity of virginity, though he has to bewail the reverse side of the picture, ‘the broken vow, the frequent fall.’ Fulgentius († 533) in his *de Fide* lays it down that vows of chastity are perpetually binding on both men and women. Those who vowed themselves to virginity had their names formally recorded, and the vow was made an impressive ceremony.³ The 15th canon of the 2nd Council of Toledo (A.D. 567) is evidence that the secular arm was invoked to aid the ecclesiastical, by imposing divorce on a monk who had married; but in general the episcopal court was able to deal with such matters itself, and the bishop could modify the penalty according to circumstances.⁴ For a statement of

what was expected from virgins we may refer to Jerome’s treatise on the subject and his letters to Eustochium (xxii.) and Demetrias (cxxx.). The thirty years’ interval between these epistles may account for the milder and less fanatical tone of the second.

The subsequent history of vows of celibacy belongs mainly to the story of monasticism (*q.v.*). Poverty, chastity, and obedience are the triple cord of the monastic life. They had been required from its early days, and the great Benedict of Nursia, while making obedience still more absolute, added what was known as the ‘vow of steadfastness.’

‘Henceforth the door of the monastery opened only inwards. Formerly, if the monk forsook his cell and married he was liable to penance, but his marriage was not annulled. Now such marriages were declared, *ipso facto*, void, and the offender was compelled to return. The vow, written out, was laid upon the altar, those who could not write signing it with their mark.’¹

The Trappist (Reformed Cistercian) ‘vow’ of silence seems rather an injunction and comes under the vow of obedience.

3. **Patristic evidence.**—A few examples of general references to vows in the Fathers may be given. Eusebius² says that it was customary for vows to be taken at the tombs of martyrs, and Hilary³ says that they are effective and helped by the Holy Spirit only when taken in a church with due ceremonial. In his day the usual personal vows were those of abstinence, chastity, and fasting.

The opinion of Augustine is interesting:

‘If in Scripture a vow is usually termed εὐχὴ, being called a prayer, we must understand particularly that kind of prayer which we offer when making a vow, i.e. πρὸς εὐχὴν. But everything we offer to God is vowed, and above all the offering of the holy altar, in which is implied the greatest of all our vows that by which we vow to be in Christ, as members of His body.’⁴

Commenting on Ps 76, he encourages the taking of vows as an inspiration to otherwise unaided strength. Among the customary vows in his time were those between man and wife either to be faithful to each other or to abstain from intercourse with each other, and those on the part of the rich either to show hospitality to all ‘religious’ persons or to give their goods to the poor and embrace the ‘religious’ life.

Ambrose contributes something. In *de Off. Minist.* III. xii. he lays down the general proposition that we must make no promise that is wrong, and, if we have made an unjust oath, we may not keep it. He illustrates his contention from the familiar cases of Herod and Jephthah. In his funeral oration over his brother Satyrus he says:

‘We now recognize that thy departure hence was obtained by thy vows to the holy martyr Lawrence.’⁵

There are other references to vows to martyrs,⁶ but they seem to be of the nature of prayers for martyrly intercession. In the Satyrus oration, § 35, he says:

‘Not that I was ignorant of his condition, but a certain kind of prayers and vows had so clouded the sense of common frailty, that I knew not how to think anything concerning him except entire prosperity.’

Ambrose is also responsible for the clear distinction between *precepta* and *consilia*, on which see below.

4. **The mediæval doctrine; consilia evangelica.**—In the theology of the mediæval and modern Roman Church the subject of vows occupies a large place. It is bound up with the concept of works of supererogation.⁷ The doctrine of good works

³ *Chrys. de Sacerd.* iii. 16 f.

⁴ *Canons of Chalcedon*, 16.

rests in the first place on the Augustinian doctrine of grace together with the idea of the universal working of God. Strictly speaking, a meritorious work is inconceivable, but, on the other hand, free man is bound to acquire merit before God and through it to make satisfaction for his sin—a notion compounded of Jewish legalism and Stoic moralism and found as early as Tertullian. The Stoics also supplied a distinction between *medium* and *perfectum*, and the Jews emphasized special and unusual virtues—*e.g.*, To 12³. Certain NT passages (Mt 19¹⁶⁻²², 1 Co 7²⁵⁻⁴⁰) were regarded as similarly indicating a graded valuation of works. In time the doctrine of *consilia evangelica* ('evangelical counsels') was developed. The term is used in contrast with *præcepta* ('commands'), and the distinction, though traceable in Hermas,¹ Tertullian,² and Cyprian,³ is first expressly formulated by Ambrose.⁴ We find it in Augustine, though two tendencies are visible. For, while the external and literal observance of the counsels (*e.g.*, poverty, virginity) is commended as a higher standard of morality procuring greater merit, he sees the danger of measuring the ultra-moral by this standard, since all conduct is judged in the light of inward moral intention.

For many centuries, in the heyday of monasticism, the first consideration outweighed the second, but in Thomas Aquinas⁵ the other tendency again appears. Commandments are given 'about those things which are necessary to attain the end of eternal felicity,' but the counsels 'about those things by which one may obtain this end better and sooner.' In general the counsels deal with poverty, chastity, and obedience, but there was an enumeration of twelve culled from the Sermon on the Mount, including, *e.g.*, the injunctions 'Love your enemies' and 'Resist not evil.' Aquinas⁶ puts it that perfection consists *essentialiter* in the command of love, but *instrumentaliter* depends on the counsels. Generally speaking, the disregard or non-observance of the counsels is not sinful, though their observance entails greater perfection and greater reward. They are 'auxiliary norms toward the discernment of those obligatory commands which govern a Christian in his particular circumstances.'

5. Roman Catholic doctrine.—Roman theology classifies vows as personal (applying mainly to oneself) and real (applying to external objects and circumstances); also as perpetual or for a definite time; also as solemn (publicly pronounced before the Church like the monastic vows or the subdiaconate implicit vow of celibacy) or simple. The doctrine of works of supererogation drew vows of all kinds, even simple and private vows, within ecclesiastical jurisdiction. Dispensations can usually be granted by the bishop, but in five cases by the pope alone. Vows that prejudice the rights of a third person and vows made by minors without parental consent are inadmissible.

6. Protestant and evangelical views.—Half a century before Luther, Johann Pupper von Goch in the *de Libertate Christiana* and *Dialogus* maintained that God has given but one law and set before all Christian people one kind of perfection. Luther declared for the all-embracing nature of the baptismal vow and combated Aquinas's idea that the higher degrees of love are not commanded. He condemned all breaches of the law alike and would not allow 'inferior' perfection, though this sin God forgives on condition of faith with daily repentance. Monastic vows he declared not only invalid but sinful and idolatrous, and the *Augsburg*

Confession and *Apology* and the *Schmalkald Articles* follow his lead. They also oppose the Roman doctrine of evangelical counsels as setting up works of supererogation, admitting private revenge, and casting doubt on the civil commonwealth.

With regard to special vows (promises made to God from motives of gratitude or devotion or as a means of deepening the spiritual life) he was tolerant, though not putting any stress on them. Calvin, however, while giving pride of place to the baptismal vow and championing Christian freedom against the Roman doctrine, was more convinced of the utility of particular vows by which a Christian might in some signal way express his gratitude, or strengthen his will-power. In this connexion it is worth recording the testimony of the *Westminster Confession of Faith*, ch. xxi. 5, where it is said that religious oaths and vows, solemn fastings, and thanksgivings upon special occasions are an addendum to the 'ordinary religious worship of God.' Ch. xxii. 'Of Lawful Oaths and Vows,' includes the following paragraphs:

'v. A vow is of the like nature with a promissory oath, and ought to be made with the like religious care, and to be performed with the like faithfulness.

vi. It is not to be made to any creature, but to God alone; and that it may be accepted, it is to be made voluntarily, out of faith, and conscience of duty, in way of thankfulness for mercy received, or for the obtaining of what we want; whereby we more strictly bind ourselves to necessary duties, or to other things, so far and so long as they may fitly conduce thereunto.

vii. No man may vow to do any thing forbidden in the word of God, or what would hinder any duty therein commanded, or which is not in his power, and for the performance whereof he hath no promise of ability from God. In which respects, popish monastical vows of perpetual single life, professed poverty, and regular obedience, are so far from being degrees of higher perfection, that they are superstitious and sinful snares, in which no Christian may entangle himself.'

The 'proof texts' adduced are as follows: (v.) Is 19²¹, Ec 5⁴⁻⁶, Ps 61⁸ 66^{13c}; (vi.) Ps 76¹¹, Jer 44^{25f}, Dt 23²¹⁻²³, Ps 50¹⁴, Gn 28²⁰⁻²², 1 S 1¹¹, Ps 66^{13f}, Ps 132²⁻⁵; (vii.) Ac 23¹²⁻¹⁴, Mk 6²⁶, Nu 30^{5. 8. 12f}, Mt 19^{11f}, 1 Co 7^{2. 9}, Eph 4²³, 1 P 4², 1 Co 7²³.

Modern Biblical criticism had not yet been born. Similarly in the *Larger Catechism* vowing unto God is included among the 'duties required in the Second Commandment,'¹ and sinful vows among the 'sins forbidden in the Third Commandment.'²

7. Conclusion.—There are certain ethical duties which the community, whether ecclesiastical, civil, or social, imposes upon the individual and which he accepts (marriage vows at least in part may be reckoned in here), and there are others of a more particular kind which the individual imposes on himself either to develop his spiritual life or to express his gratitude to God for some special mercy. It is quite legitimate to argue that these are implicit in the general vow taken at baptism or on conscious entrance into the Christian circle. It is also evident that all action is conditioned by circumstance, and circumstance may vary so that what seems to-day a clear and positive duty may to-morrow occupy quite a subordinate place. It is possible for a formally expressed vow to become a burden on the conscience, and it then exposes the soul to extra peril. In any case special and formal vows are best left to extraordinary circumstances, and normally it is well simply to lay one's impulses earnestly before God with a prayer for the grace of perseverance and constancy. A closing word may be said about the 'counsels.' Alongside the 'commandments,' whether 'of God' or 'of the Lord,' there are not only the 'commandments' of Paul, which hardly concern us here (1 Co 16¹ 7¹⁷), but also his 'judgments' (1 Co 7²⁻⁶, 2 Co 8^{10. 8}), counsels whose acceptance presupposes a divine *charisma* (1 Co 7). Making all allowance for time and place, the apostle's counsels still have pertinence, and 1 Co 7, like Mt 19^{11f}, furnishes a basis for distinguishing between an 'advisory

norm' and the absolute force of a command. This, however, is not to admit the whole Roman doctrine of *consilia evangelica*.

VOWS (Greek and Roman).—I. Greek.—We understand by a vow a conditional promise made by the worshipper to the divine power. The condition is the rendering of aid; and the vow, thus strictly regarded, is the proposal of a bargain that the recipient of the favour required shall make suitable recompense. Viewed in relation to prayer (*q.v.*),¹ the vow is intended to add cogency to the request and to help towards its fulfilment. The fulfilment of a contingent vow is often pledged by the security of an oath, as when the nine archons at Athens on entering office swore at the altar in the market-place that they would dedicate a golden statue, if they transgressed the laws during their term.² But, of course, a promise may be ratified by an oath which lacks the essential conditions of a vow, as when Odysseus undertook to bring Philoctetes to Troy, offering in the event of failure to yield his life to any one who might choose to take it.³ Further, to the Greek conception a vow could not be merely negative; a definite offering must be promised as a return for the favour to be granted.⁴ If therefore the Nazirite vow taken by St. Paul (Ac 18¹⁸) involved merely an act of abstinence or consecration promised by way of thanksgiving for escape from danger,⁵ it would not be a vow in the full sense of the term as explained above. It frequently happens that, although we have reason to suppose that a vow has been made, evidence is lacking of the conditions imposed. Thus in the version of Iphigenia's sacrifice referred to by Euripides⁶ and Cicero⁷ we are simply told that Agamemnon vowed to Artemis the fairest thing born in his kingdom within a particular year. Among the very numerous examples of 'votive' offerings recorded in literature and inscriptions there are comparatively few where it can be determined with certainty whether the consecration was made by way of thanksgiving or in fulfilment of a vow.⁸ The illustrations which we propose to give have been taken from sources where the evidence is unambiguous. It should be added that several inscriptions which have been preserved and were attached to votive offerings bear as a label the statement that the dedication is in consequence of a vow.⁹

(a) *Public vows.*—It may be stated generally that vows were made in times of fear and danger. Women especially, Plato¹⁰ tells us, and men too when they are sick or in trouble, if alarmed by dreams or apparitions, are apt to consecrate the occasion by vowing sacrifices and promising the building of temples. Times of war, especially when the existence of the State was imperilled by hostile attack, often gave occasion for vows to be made in public on behalf of all.

Hector bade his mother Hecuba promise the sacrifice to Athene of twelve heifers, if she would have pity upon the city of Troy and its inhabitants.¹¹ In historical times the most

famous of such public acts of intercession was the vow of the Athenians made before the battle of Marathon offering to sacrifice to Artemis a number of she-goats equal to that of the enemy who might be killed in the impending fight. But so many corpses of the enemy were found that it was impossible to procure the victims; and consequently it was resolved to compromise the liability and to sacrifice 500 every year. The custom was still maintained in the life-time of Xenophon.¹ This famous vow is parodied in Aristophanes,² where the sacrifice of 1000 goats is offered to Artemis so soon as the price of anchovies is down. Before Salamis a vow was taken by the Greeks to destroy the Medizing states and to consecrate their goods.³ The oath said to have been taken before Plataea to found in that town a festival *Eleutheria* to be celebrated perpetually⁴ is considered to be apocryphal. Herodotus, discussing the motive which impelled Cyrus to place Croesus and fourteen Lydian youths on a pyre for sacrifice, recognizes the prevalence of human sacrifice among Oriental nations by suggesting that Cyrus may have so acted in fulfilment of a vow.⁵ Heracles, before the capture of Oechalia, vowed the dedication to Zeus of altars and tributaries of fruit-lands.⁶

Before entering upon a campaign, it was customary to offer to the gods a share in the spoils as a reward for their assistance.⁷ Similar obligations were undertaken in the crises of civil war or when national interests were seriously endangered.

Cypselus offered, if he succeeded in his attempt to become master of Corinth, to dedicate all the property of the citizens to Zeus, and evaded the extremity of the hardship imposed upon them by exacting a tithe of their goods for ten successive years.⁸ On the other hand, Moxus the Lydian, after he had freed his countrymen from the tyranny of Meles, ordered them to fulfil his vow by handing over a tithe of their possessions to the gods.⁹ In the hope of freeing themselves from the horrible tribute of human lives exacted by Minos the Cretan king, the Athenians are said to have promised Apollo that they would every year dispatch a sacred embassy to Delos.¹⁰

(b) *Private vows.*—We may now pass to vows made by individuals in order to save lives dear to them on occasions of peril.

Peleus vowed that, if Achilles came back safe from Troy, he would dedicate a lock of his son's hair, together with rich sacrifices, to the river-god Spercheios.¹¹ Similarly Berenice vowed a lock of her hair to the gods on the occasion of her husband, Ptolemy Euergetes, starting on an expedition to ravage the Assyrian borders.¹² So long as the owner is exposed to a special peril, the hair remains uncut, but, when he has safely passed through the crisis or has reached a certain age unharmed,¹³ a lock is rendered in thanksgiving to the protecting power. Hector, about to meet Ajax in single combat, promises that in the event of his success he will dedicate the spoils in the temple of Apollo.¹⁴ Telemachus urges his mother Penelope to vow the sacrifice of hecatombs to the gods, if Zeus should grant retribution for the wrongs they have suffered.¹⁵

The successful completion of a sea-voyage was frequently celebrated by offerings to the gods.¹⁶

Eurylochus, on behalf of the companions of Odysseus, when they prepared to kill the oxen of the sun-god, offered to build a splendid temple in his honour, if he would grant them a safe return to Ithaca.¹⁷ Diogenes, in peril on the Carpathian sea, vows to dedicate his cloak to the Bœotian Cabirus, if he escapes safe to land.¹⁸ An epigram of Callimachus parodied these vows by describing the dedication to the Samothracian Cabiri of a salt-cellar which by providing its owner with frugal meals had enabled him to escape from the storms of debts.¹⁹

In the same way the traveller by land who has safely completed his journey dedicates his felt hat to Artemis in the due accomplishment of his vows.²⁰ We have a copious record of dedications by those who successfully competed in the ordeal of the great Games.²¹ Many of these must have been made in consequence of previous vows such as that of Xenophon of Corinth, who, as a competitor for the Olympic crown in 464 B.C., vowed that, if successful, he would consecrate 100 *ιερόδουλοι* for the service of the temple of Aphrodite in that city.²²

Many examples of vows are connected with the ordinary incidents of family life. A mother makes and pays vows for the safety of her child.²³ The

dedication consequent upon the parent's vow is frequently in the form of a portrait-statue of the child,¹ which is offered to Æsculapius or Apollo on condition of the cure of sickness.² Or it may be the patient himself who makes the vow, as is indicated in parody by the tricky vow of a devotee of Bacchus to abstain from strong drink for 'a hundred suns' in the event of recovery from fever.³ The Greek Anthology furnishes several examples of vows made to Ilithyia or Æsculapius if they will grant a safe release from the pains and dangers of child-birth.⁴ The appropriate offerings in such cases were articles of dress or jewelry.⁵ Sometimes the condition of the vow is the granting of a good harvest;⁶ more often it is relief from the stress of poverty.⁷ There is even on record the promise of a sacrifice, if the god will make a curse effective upon an enemy.⁸

(c) *Penalty for infraction.*—The infraction of a vow was visited with a suitable penalty;⁹ and this might be directed against the community of which the transgressor was a member, as we have seen that, according to one form of the story, the Greeks were punished with adverse winds at Aulis for the default of their leader Agamemnon. It rarely happened that the favour of the gods was so confidently anticipated that offerings were made to them in advance; Polynices, who dedicated statues to Aphrodite and Ares before starting from Argos on his expedition against Thebes,¹⁰ was not an encouraging example. But no doubt confidence was more frequent in the daily requirements of domestic need.¹¹

2. Roman. — Whereas with the Greeks vows tended more and more to become a matter of individual concern, as being employed chiefly in the critical moments of domestic life, and the records of vows offered publicly on behalf of the whole community are comparatively scanty, at Rome the conditions were entirely different. It is true that we have sufficient evidence that here also individuals menaced with danger applied for the assistance of the gods with promises of offerings or sacrifice. The illustrations to be found in Vergil should not be set down to the influence of his Greek models.

Æneas, shipwrecked on a foreign coast, promises sacrificial victims as a reward to the disguised Venus, whom he recognizes as a goddess.¹² Ascanius calls upon Jupiter to direct his arrow, vowing gifts and the sacrifice of a bullock in the event of success.¹³ Cloanthus promises a sacrifice to the sea-gods on condition of victory in the boat-race.¹⁴

Copious evidence will be found in inscriptions of the frequent occurrence of vows in the private life of the Romans. As an example we may mention the inscription from Sora¹⁵ in which the two brothers Vertulei dedicate a tithe to Hercules in payment of their father's vows. From the time of Augustus onwards the formula *VSLM* ('*votum solvit lubens merito*') is regularly employed.¹⁶ A collection of these private votive inscriptions has been made by A. de Marchi, *Il culto privato dei Romani*, i. 271 ff.

Nevertheless, the characteristic formalism of the Roman religion is chiefly apparent in the administration of the public vows. A regular contract is drawn up between the State and the deity concerned, and its conditions are publicly announced (*nuncupatio*); the form of words necessary in accordance with sacred law is prescribed by the priest (*concipere vota*); a solemn engagement (*suscipere vota*) is entered into by the official who

represents the State; in his public capacity he becomes liable to carry out the vow (*votum solvere, reddere*); and, if he fails, the breach in the sacred compact must be duly punished. The State representative is thus, during the period between the undertaking of the vow and its fulfilment, in the position of an accused person awaiting his trial (*voti reus*);¹ and, so soon as the condition was fulfilled, he was cast in the terms of his bond (*voti damnatus*).² Sometimes an estimate was made of the cost involved, and the sum required was entered in the public records. The cost of the celebration of *ludi magni* on a solemn occasion during the Second Punic War was assessed at the figure of 333333½ sesterces—a number evidently chosen for its magical potency.³

One of the usual occasions for the making of vows was at the opening of a war.

Thus Aclius Glabrio, at the commencement of the war against Antiochus, vowed a celebration of *ludi magni* for ten days with gifts laid on all the *pulvinaria*, if the war should be satisfactorily brought to an end.⁴ Augustus, at the beginning of the campaign which was closed by the battle of Philippi, vowed a temple to Mars Ultor, which he dedicated forty years later.⁵ App. Claudius, in the thick of a battle with the Samnites, exclaimed: 'Bellona, if thou givest victory to-day, I vow thee a temple.'⁶ Marius before the battle of Vercellæ was said to have vowed a hecatomb as the price of victory.⁷ Marcellus, having vowed a temple to Honos and Virtus, was met, when he proceeded to its execution, with a technical objection by the pontiffs that a single *cella* could not be dedicated to two deities.⁸

An outbreak of pestilence was another occasion on which extraordinary vows were usually made. On the occurrence of such a visitation, among the vows to be fulfilled on the cessation of the plague we find the dedication of a temple to Apollo,⁹ the oblation of gifts and sacrifices to Apollo, Æsculapius, and Salus,¹⁰ and the institution of public holidays (*feriæ*) and ceremonial processions (*supplicationes*).¹¹ These and similar rewards suitable to the particular occasion or to the functions of the god whose favour is to be enlisted meet us continually in the pages of Livy.

Thus the Pythian Apollo was offered a tithe of the booty for assistance rendered in the capture of Veii.¹² The most remarkable example of votive dedications was the consecration of a *ver sacrum*, i.e. the sacrifice of all living animals to be born within the limits of a particular spring. There is only one instance on record in historical times, that is to say, at the beginning of the Second Punic War in 217 B.C.¹³ The vow was actually performed twenty-one years later.¹⁴

Sometimes the condition imposed upon the divine agent was the continuance of the commonwealth in its then present condition for a period of five¹⁵ or ten years.¹⁶ The specification of a definite time-limit forms a link between the extraordinary vows and those which were repeated regularly after the lapse of a certain period. Thus, every year on 1st January the consuls, suitably attended, climbed the Capitoline hill, made a solemn sacrifice of white oxen in fulfilment of the vow made the previous year, and entered into a new obligation for the year to come in order to secure the safety of the State.¹⁷ From the year 30 B.C. onwards a special vow was made for the safety of the *princeps* and his house;¹⁸ and at a later date the rite was fixed to be performed annually on 3rd January.¹⁹ Similarly, when sacrifice was made at the opening of a new *lustrum*, a vow was made of a new offering to become due after the expiration of the quinquennial period.²⁰ In imperial times a custom grew up of making vows for periods of five, ten, fifteen, or twenty years.²¹ This may have been

partly due to their substitution for the old *lustra*, and partly to the periods of five and ten years for which Augustus assumed the imperial power, starting from the year 27 B.C.¹ The establishment of the empire not unnaturally gave rise to a multiplication of the vows offered on extraordinary occasions by courtiers anxious to testify their devotion to the reigning Cæsar and his household. Tacitus records vows made for the safe return of Tiberius from a campaign,² for the safety of the dying Claudius,³ and for the safe delivery of Poppæa.⁴

We have seen that the choice of the god whose aid is invoked—e.g., Æsculapius or Bellona—is determined by the occasion of the desired intervention. In the fierce struggle of a decisive battle, as a final effort to leave no possible means of victory untried, it was sometimes determined to appeal to the enemies' gods and to offer them an inducement to transfer their protection. The classical instance is the offer of the dictator A. Postumius at the battle of Lake Regillus to dedicate a temple to Castor, the patron deity of Tusculum.⁵ A special application of this practice was the solemn rite of *evocatio*,⁶ according to which, before the final assault was delivered against a beleaguered city, its gods were summoned to abandon it and to accept a new resting-place at Rome. In this way Juno was invited to leave her home at Veii and follow the fortunes of the conquerors.⁷ An interesting account of the whole matter is given by Macrobius,⁸ who remarks that the Romans endeavoured carefully to conceal the name of their protecting god, in order that others might not employ against them the device which they used against Corinth and Carthage as well as against Veii and other Italian towns. He records the *formulae* which were employed at the siege of Carthage and points out that the *evocatio* of the gods must be carefully distinguished from the simultaneous *devotio* of the hostile garrison and citizens who were handed over to the dominion of the deities of the under world Dispatet, Veiovis, Manes, and Tellus. To these powers a sacrifice of three black sheep was offered at the same time. The *devotio* of the enemy appears here as the consequence of the *evocatio*;⁹ but the term was specifically employed when during the progress of a battle the Roman commander made a vow to the infernal powers that he was prepared to sacrifice either his own life or that of a Roman citizen serving under him on condition that in return for this surrender the annihilation of the enemy's forces was assured.¹⁰ The peculiarity which distinguished the *devotio* from the offering of vows in general was that the forfeit was rendered in advance to the divine promiser in the assurance that the required service would be forthcoming. Our knowledge of the custom rests almost entirely upon Livy's account of the self-sacrifice of P. Decius Mus in the battle with the Latins in the neighbourhood of Vesuvius in 340 B.C.,¹¹ and of his son at Sentinum in 295 B.C. during the course of the war against the Etruscans and their allies.¹² Even if these events are not to be regarded as historically true,¹³ the particulars of the ritual and formularies adopted are sufficient to prove the antiquity of the

custom. If the person whose life was pledged fell in battle forthwith, the sacrifice was considered acceptable and the result assured.¹ If the Roman general who made the vow did not meet with his death, he became *impius*, and was excluded from participation in public and private *sacra*;² but, if the vow was made for the self-immolation of a legionary soldier, and the sacrifice of his life was omitted or rejected, he could obtain expiation by the burying in the ground of a *signum* at least seven feet high and the offering of a piacular sacrifice, and the place where expiation was made became *locus religiosus*.³ The development of *devotio* in later times as an act of self-sacrifice for the emperor⁴ does not concern the present subject.

VOWS (Hebrew).—By a vow a person brings himself under a sacred obligation to God (or to some particular god) to do something or to refrain from something. The thing he vows to do is something which goes beyond the normal demands of his religion, and the thing he vows to refrain from is something permissible in normal circumstances—e.g., the enjoyment of food, the fruit of the grape, sexual intercourse. The motive of the vow is usually desire to secure divine help, and its form is usually expressed conditionally: if God does something for the man, the man will do something for God, something with which He is believed to be well pleased.

In the OT a vow is unconditionally valid only when it is made by a person whose will is not subject to the challenge of another—i.e. by the head of a house (the father or husband), a widow, or a divorced woman (Nu 30). A wife (Nu 30⁶⁻⁸) or an unmarried daughter (30³⁻⁵) could of course make a vow; but the husband in the one case, and the father in the other, had the right of veto. If, however, this right of the husband was not immediately exercised, the vow of the wife was held to be valid: it could not properly be cancelled by a subsequent disavowal on the man's part; if he did so cancel it, the guilt of non-fulfilment attached to him, not to the woman. The 'strange' woman of Pr 7, who is married, is represented as making vows and inviting a paramour to the sacrificial feast (7¹⁴) which is a frequent accompaniment of the vow (cf. 1 S 12¹, Ps 66¹³⁻¹⁵). There are no extant regulations in the OT governing the vows of an unmarried son.

Vows must have been practised from immemorial antiquity; they are as old as the feeling for God and the experience of distress. They are attested for every period from the patriarchal to NT times (Ac 21^{23ff.} 23^{12. 21}), and they seem to have played a more prominent part in religious practice as time wore on. Early historians record vows, but there is no early legislation on the subject. This first appears in a simple form in Deut. (7th cent. B.C.); but in the later (post-Exilic) literature vows are the subject of minute legislation—a fact which indicates extensive indulgence in the practice. This is confirmed by numerous references in later books—Prophets and Psalms (Is 19²¹, Jon 1¹⁶ 2⁹, Job 22²⁷, Ps 22²⁵ 50¹⁴ 56¹² 65¹ 76¹¹).

Illustrations of vows from the period of the judges and the early monarchy are as follows: (i.) Jephthah vows that, if Jahweh give him victory over the Ammonites, he will sacrifice to Him the first human being (this is the implication) that comes out of his house to meet him (Jg 11^{30ff.}); (ii.) Hannah

¹ *Liv.* x. 28. 13. ² *Ib.* viii. 10. 13. ³ *Ib.* viii. 10. 12.

⁴ τὸν τῶν Ἰβήρων τρόπον (Dio Cass. liii. 20).

vows that, if Jahweh give her a son, she will dedicate him to the life-long service of Jahweh, and no razor shall come upon his head (1 S 11); (iii.) Absalom, while in exile in Aram, vowed that, if Jahweh brought him back in safety to Jerusalem, he would serve Him (*i.e.* worship Him—with sacrifice) at Hebron (2 S 15⁸). To these may be added—though not in the same sense historical—Jacob's vow to make the pillar at Bethel a sanctuary and to pay God tithes, if He furnished him with food and clothing and brought him safely back to the land he was leaving (Gn 28²⁰⁻²²). As an illustration of vows of abstinence may be taken the curse which Saul invoked, in the course of a battle with the Philistines, upon any one (and, by implication, upon himself) who would eat any food before the evening (1 S 14^{24ff.}), and the vow attributed to David—whether historical or not—that he would not enter his house, ascend his bed, or give sleep to his eyes, till he had found a place for Jahweh (Ps 132²⁻⁵). The nazirites, according to the later law, abstained, while the vow was upon them, from wine, from contact with the dead, and from cutting the hair (Nu 6¹⁻⁸); the Rechabites not only abstained from wine, but refused to practise agriculture or to live in houses (Jer 35^{6ff.}). The abstinence, however, which accompanies such vows is to be interpreted not as arbitrary privation, but as a *tabu* 'incident to the state of consecration, the same taboos, in fact, which are imposed, without a vow, on everyone who is engaged in worship or priestly service in the sanctuary, or even everyone who is present in the holy place.'¹ Uriah's refusal to enter his house or deal with his wife (2 S 11¹) is explained by his being a warrior on campaign, and war is a sacred activity.

Most of the vows from the early period reveal the prominence with which at that time national interests bulked in the mind of the individual, whose chief duty and privilege was to promote the religious, military, or political welfare of his people, and thus to promote the interests of the national God, which were bound up with those of His people. Jephthah and Saul, *e.g.*, desire victory over the enemy of their nation and the nation's God; David is represented as passionately concerned with the suitable worship of that God. Even in that early period, however, the individual had a life and interests of his own: Jacob and Absalom long for a safe return, and Hannah for a son. As, through the collapse of the State, the individual came into ever-increasing prominence as a religious unit, vows affecting purely individual interests became increasingly common, and even the vicissitudes of ordinary life must have offered many occasions for them. The Psalms preserve some of the songs sung by grateful worshippers at the payment of their vows, *i.e.* when they brought their 'sacrifices of thanksgiving' (*e.g.*, Ps 22²²⁻³¹ 66¹²⁻²⁰ 116). In particular, the various stanzas of Ps 107, with its repeated appeal to the worshippers to give thanks to Jahweh (vv. 1. 8. 15. 21. 31), give us a glimpse of the sort of occasions on which anxious hearts made vows and grateful hearts paid them: in each stanza deliverance from some distress is contemplated—from the perils of a journey across the wilderness or on the sea, from sickness, prison, etc. Ps 116¹³ preserves for us the interesting custom (cf. Mt 26²⁷) of raising in the hand the 'cup of salvation' when invoking the divine name in connexion with the payment of vows. The Psalms abound in expressions of overflowing gratitude which are manifestly the sincere utterance of much happy experience of divine deliverance, and profound joy in the privilege of performing the vows (which would frequently take the form of sacrifice) made in the hour of distress.

The readiness to vow, however, had its dangers. Instinct and legislation alike (Lv 22¹⁷⁻²³) prescribed that nothing short of the best was good enough for Jahweh—a male without blemish, if the offering was an animal; but vows made in haste were often repented at leisure, and offerings of inferior worth (*e.g.*, a blind, lame, or sick animal) were made—a practice which evokes the fierce indignation of Malachi (1. 14). There is no obligation to make a vow (Dt 23²²); but, once made, there is a solemn obligation to keep it in the form in which it was made (Dt 23²¹⁻²³, Nu 30²). It must cost the offerer something, whether in money, effort, or

privation; and deliberately to evade or reduce the cost to which one has voluntarily and without compulsion committed oneself is to be guilty of a breach of faith which invites the divine vengeance. But many were willing to run the risk, as we may infer from Pr 20²⁵, Ec 5⁴⁻⁶: the latter passage (v. 6) shows that men sought to evade their obligation with the plea that their vow was the result of an inadvertence. The inconsiderate levity with which vows were made and the specious religious pretences on the basis of which men withdrew from moral obligations (cf. Mk 7¹¹) go to show the danger to which in certain circles religion was exposed of losing its ethical content. The excuse of inadvertence stigmatized in Ec 5⁶ is not contemplated by the Law, which peremptorily demands that a vow must be kept; probably therefore such cases were subsumed—at least in the mind of the worshipper—under the general provision for cases where an oath was subsequently found to involve consequences which the speaker had not contemplated when he made it; relief from a rash oath could be secured after confession and the presentation of a trespass-offering (Lv 5⁴⁻⁶). The OT characteristically considers the vow rather as an external act than in its inner quality and implications: it does not, *e.g.*, discuss cases in which the fulfilment of a vow might be found to collide with some higher (*e.g.*, ethical) obligation. That was the problem by which Jephthah was confronted, but to him it was hardly a problem at all; his belief, on the one hand, in the sacredness and irrevocableness of the vow and, on the other, in the rightness—at least on unique occasions—of human sacrifice contributed to make his decision inevitable, with however sore a heart he reached it.

The thing vowed was very frequently an animal, but it might also be money, a house, land, or a person. When an animal was offered, the sacrifice was accompanied by an oblation, as in the case of the other sacrifices (Nu 15^{9ff.}). Money given to sacred prostitutes could not be accepted at the sanctuary in payment of a vow (Dt 23¹⁸)—it was 'tainted' money. As the thing vowed must be something extra to normal demands, nothing could be vowed—such as firstlings—on which Jahweh already had a claim (Lv 27²⁶). If an animal technically unclean and therefore unfit for sacrifice had been vowed, it was sold at a price put upon it by the priest, and the money was given to the sanctuary. If the man who vowed the animal wished to retain it, he could do so by paying the estimated price with an addition of 20 per cent (Lv 27¹¹⁻¹³). The same procedure was followed in the case of a house that had been vowed (27^{14c}), and, with certain modifications, in the case of land (27¹⁶⁻²⁵). The value of the land was determined by the distance of the next year of jubilee: for the complete period the basis of valuation was 50 shekels for an acreage seeded with a *homer* of barley, the value being reduced (apparently at the rate of a shekel a year) as the year of jubilee approached. If the land belonged by inheritance to the man who vowed it, he could secure the reversion of it in that year to himself by paying 20 per cent in addition to the price as ascertained on the above basis; if he failed to do this, it went to the priests. If, however, the land had not been originally his own but purchased, it reverted in the year of jubilee to the original owner.

In the older period human beings could be dedicated to the god by a vow in one of several ways—by actual sacrifice (Jg 11^{30ff.}), by service at a sanctuary (1 S 11), or by the nazirite life (Jg 13⁵). Since, however, in the post-Exilic period human sacrifice had passed away and the service of the sanctuary was exclusively in the hands of the Levites (Nu 3^{5ff.}), only the nazirite vow—and

¹ W. R. Smith, *Rel. Sem.* p. 482.

that in a modified form (temporary, not now life-long)—remained (6th). But, though the custom of vowing human beings was no longer possible, the shadow of it remained in the practice of substituting for the person a sum of money determined by the age and sex of the person, 50 shekels being payable for a man and 30 for a woman between the ages of twenty and sixty, when the powers were presumably at their highest, and smaller sums for those under twenty and over sixty (Lv 27¹⁻⁷). These estimates doubtless often represented a substantial demand on the financial resources of the worshipper; the priests would have many motives of both a higher and a lower kind for insisting that he must not escape with an offering which had cost him little or nothing (cf. the noble words of David in 2 S 24²⁴). They stood to gain heavily by the practice of vows, as what was vowed to God was as good as made over to them (Lv 27²). But the OT shows here its customary regard for the poor by providing that in their case these demands should be relaxed: they are only to pay according to their ability, as estimated by the priest (Lv 27⁸).

Persons devoted by the ban could not be redeemed; they must be put to death (Lv 27⁹). This law had doubtless chiefly in view the destruction of Canaanite idolaters: it could have been enforced, or applicable, only in early times (Jos 6²¹: cf. 1 S 15³); for the later age it would suggest little more than the obligation of uncompromising hostility to idolatry.

An examination of the vows recorded and of the laws regulating vows throws some light on the character both of the worshipper and of his God. The vow was born in a sense of need or an experience of distress (Ps 66¹⁴). The things that men desired were deliverance, prosperity, health, children, victory; and the God to whom the vows were offered was believed to be pleased with sacrifice (even—in the early period—with human sacrifice). The circle of ideas with which vows were associated is priestly rather than prophetic, and there is an externalism and a quasi-commercial conception of the relation between God and man which is alien to the higher prophetic spirit. But, though vows in the later period were sometimes lightly made and dexterously evaded, the manifest emotion with which many a singer in the Psalter records his gratitude to God as he pays his vows shows that they must often have represented a warm and genuine religious experience. They are an implicit confession of the speaker's recognized insufficiency, and their fulfilment is the expression of his gratitude for the experienced help of Jahweh (cf. Jer 33¹¹). It is no accident, however, that vows play practically no rôle at all in the NT, where the demand is for a consecration not occasional but continuous, and for a consecration not of gifts but of the entire personality.

VOWS (Hindu).—Vows are a highly important element in the Hindu religion. Thus, according to a Sanskrit lawbook, a Brāhman ascetic must keep the five vows (*vrata*) of abstention from injuring living beings, of truthfulness, of abstention from theft, of continence, and of liberality, besides five minor vows, such as abstention from anger, purity, etc. (Baudhāyana, ii. 18. 1, 3). Brāhmanical students were subject to restrictive rules of the same kind during their residence with a teacher, and they had to undertake, moreover, special vows when learning particular portions of the Veda, such as the *Sāvitrīvrata*, in connexion with the study of the sacred prayer called *Sāvitrī*. The five great *vratas* of the Jainas, 'I renounce all killing of living beings, lying, stealing, sexual pleasures, all

attachments whether great or small,' are evidently formed upon the Brāhmanical model. Nor are the five commandments (*pañcaśīla*) of the Buddhist canonical books essentially different from the five Brāhman vows, especially as they are supplemented like the latter by five other vows which are binding on the Buddhist monk only. On his entrance into the Order, the would-be Buddhist had to raise his joined hands and to declare: 'I take refuge in the Buddha, in the Law, in the Congregation.' Many different Brāhmanical *vratas*, in the sense of self-imposed devout or ceremonial observances of any sort, are described in the Purānas, and have passed from them into the mediæval and modern Sanskrit Digests of Religious Usages, such as Hemādri's *Caturvargacintāmani* (written c. 1300 A.D., printed in the *Bibliotheca Indica*), which devotes more than 2300 pages to the subject of *vratas*, most of them to be performed and repeated on certain stated days of the year. Thus the *puspadvītyāvrata* (i. 382), to be performed on the second (*dvītyā*) of the bright half of every month for a whole year, beginning with the month of Kārtika, consists of eating nothing but flowers or blossoms (*puspa*) during all those days, and presenting the Brāhman at the close of the *vrata* with flowers made of gold and with a cow. As a recompense for performing this *vrata* a man obtains heavenly enjoyments and a metallic car. For seven consecutive re-births he will be imbued with a knowledge of the Vedas and of the Vedāngas, and will live in happiness for a long time, surrounded by his sons and grandsons. In the case of the 'bull-vow' (*vr̥ṣabhavratam*), which is undertaken on the eighth of the bright half, one bestows a bull clad in a white robe and decked with ornaments, the spiritual reward consisting in a long residence in the heaven of Śiva, followed by re-birth in the station of a king. One performing the 'river-vow' (*nadīvrata*) should, within certain intervals, worship seven different sacred streams, each for one day, offering milk in water, giving water-pots filled with milk to the Brāhman, subsisting on nothing but milk himself, bathing far from the village, and taking food at night only. At the end of the year he should give a *pala* of silver to the Brāhman. By so doing he will enjoy a long and prosperous life, and will in a future birth be free from disease, eminent, virtuous, and rich, enjoying the position of a king, or of a distinguished Brāhman (ii. 462). By the side of these comparatively simple rites, we find others with a more complicated ceremonial; but the ingredients of fasting, gifts to Brāhman, offerings to deities, etc., recur in nearly all these endless *vratas*, which give a nice round of religious observances, entailing spiritual blessings and natural comforts for the whole of the Hindu year. The *Vratarāja*, which is considered the leading Sanskrit treatise on *vratas* in W. India at the present day, contains a description of no fewer than 205 *vratas*. The performance of *vratas* is nowadays specially common among women, and this may be an ancient custom, considering that in Kālidāsa's drama *Urvaśī*, the queen, when desirous of effecting a reconciliation with her husband, sends for the king, inviting him to undertake a certain *vrata* in common with her; and that the Sanskrit lawbooks exhort wives to perform their *vratas* together with their husbands. Speaking of modern *vratas*, R. C. Bose observes: 'When the boy is sent to the *Pātsālā* (school), the girl at the age of five has to begin her course of *vratas*.' The first *vrata* is the river Pājā, instituted after the example of the goddess Durgā, who performed this ceremonial that she might obtain a good husband, Śiva being considered a model husband. On the last day of

the Bengali year, two little earthen images of the goddess Durgā are made by the girl and worshipped by her. The next two *vratas* are those of Hari or Kṛṣṇa, and of the ten images. Then comes the *Sajātri vrata*, in performing which the girl repeats a volley of abuses against her *satin*, or rival wife in the possible future, in order to avert the dreaded evils of polygamy. Of *vratas* to be practised by a married woman, the *Sāvitrīvrata* is made specially prominent by Bose. This *vrata* derives its name from the ancient legend of the faithful Sāvitrī, who through her devotion revived her deceased husband. It is annually celebrated in the Bengali month of Jyāiṣṭha both by women whose husbands are alive and by widows who are desirous of averting the evils of widowhood in a future birth. In the former case the husband is worshipped by his wife with sandal and flowers, and she cooks a good dinner for him. The prayers are read by the priest, who gets his usual fee and all the offerings. This *vrata* should be performed regularly for fourteen years, at the end of which the expense is tenfold more, in clothes, bedding, brass utensils, and an entertainment to Brāhmins and friends, than in the previous years. The *Sāvitrīvrata* has also been described by Ward, who mentions, besides, the *Adirasinhāsānavrata*, at which 30 different wives of Brāhmins are entertained, one on each day, during the month of Vaiśākha; and the *Pañcamīvrata*, a *vrata* on a large scale extending over a period of six years, and including many partial or total fasts, and various gifts to Brāhmins on the part of the woman who is to perform this *vrata*, and various acts of worship on the part of the officiating Brāhmins, the whole ceremony closing with a grand dinner to Brāhmins and others. Ward calls the *vratas* a very lucrative source of profit to the Brāhmins. He defines them as unconditioned vows to perform religious ceremonies, distinguishing them from conditional vows consisting of a promise to present offerings on condition that the god bestow such or such a benefit. Vows of this kind are, e.g., when a man promises to sacrifice a goat, or to present two loads of sweetmeats, or cloth, ornaments, money, a house, etc., if the god grant his request to have sickness removed, or to become the servant of some European, or for riches, a house, a wife, and son. Bose observes that vows made in times of sickness are fulfilled.

J. JOLLY.

VOWS (Jewish).—As the OT amply indicates, vows were a familiar feature in the religious life of Israel in former days (see art. VOWS [Hebrew]).

In the Apocrypha the references to the subject are few.

'Let nothing hinder thee,' says Ben Sira, 'to pay thy vow in due time; and wait not until death to be justified [i.e. 'to pay thy debt']. Before thou makest a vow, prepare thyself, and be not as a man that tempteth the Lord.'¹

Philo² has some interesting observations on vows.

The word of the good man, he says, should be his oath, firm and unchangeable, founded steadfastly on truth. Therefore vows and oaths should be superfluous.³ If a man swear at all, he should swear not by the Divine Name, but by the sacred name of his parents or by some of the great objects of nature, which are ancient and, in accordance with the will of their Creator, never grow old.⁴ Once made, a vow should be sacred, particularly if it were made 'with sober reason and deliberate purpose.' (Philo would thus seem to open the door

to an annulment of vows made rashly and without due consideration of what they involved.) Some men, Philo continues, make vows 'out of wicked hatred of their species, swearing, for example, that they will not admit this or that man to sit at the same table with them, or to come under the same roof.'¹ And he adds impressively: 'Sometimes, even after the death of their enemy, they keep up their enmity. I would recommend such men to seek to propitiate the mercy of God that so they may find some cure for the diseases of their souls.' He then proceeds to explain the Mosaic laws concerning vows in his characteristic allegorical fashion.

All the invective of the religious teachers failed to kill the practice of vow-making. The Talmudic Rabbis were forced, accordingly, to legislate for the popular inclination to it in their turn, and, since that inclination survived long after the Talmudic age, the codifiers had to adapt the Talmudic enactments to the needs of their day, and even to amplify them. Two whole tractates of the Talmud—*Nedarim* ('The Laws on Vows') and *Nazir* ('The Laws on the Nazirite')—are devoted to this subject. The laws on vows are embodied in Joseph Caro's *Shūlḥān 'Aruḥ* (16th cent.), the latest of the great codes, and a separate section, consisting of 33 chapters, each containing many paragraphs, is devoted to them. To give even a summary of this extensive and intricate legislation is obviously impossible here. Its magnitude and complexity are themselves an indication of the large place which vows occupied in Jewish life in former times, and of the importance attached to the subject by the Rabbinical mind. The contents of the first chapter of the treatise on vows in the *Shūlḥān 'Aruḥ* are, however, interesting as an illustration of the spirit in which the Talmudic and the later teachers approached the subject. The title of the chapter is: 'Which Vows are Praiseworthy and which Improper?' For, besides a desire to preserve the inviolability of the vow, the great anxiety of the Talmudic doctors and of their successors was the prevention of useless vows which failed to minister either to religion or to morality. Among such vows were those made hurriedly or frivolously. There were also vows imposing upon the persons taking them a needless austerity and self-mortification.

Thus, when a beautiful youth under a vow of Naziriteship presents himself to Simon the Just (3rd cent. B.C.), the sage asks him reprovingly, 'How couldst thou have consented to destroy thy fair locks?'²

The chapter in Caro's work to which reference has just been made³ opens with the following monition, borrowed, like most of the prescriptions of the codes, from the Talmud:

'Be not habituated to make vows;⁴ he that makes a vow is called wicked.⁵ This of ordinary vows; but, as to vows made for holy ends, it is a positive duty to fulfil them. Even vows for charitable purposes are not desirable; if one have the money, let him give it straightway without a vow, and if not, let him defer his vow until he have it [which obviously means that, in either case, a vow is undesirable]. It is "permissible" to make a vow in time of trouble. He that saith "I will study this or that chapter of the Torah, and, fearing lest he may be slothful, binds himself to study it by a vow, his vow is permissible, as is that of one who, fearing for his strength of purpose, fortifies by a vow his determination to fulfil a certain precept of the Law."⁶ He that takes a vow in order to strengthen his good resolves, and to improve his way of life, is a man of energy, and worthy of praise. For example, if he be a glutton, and abstains by vow from meat for one year or two, or if he be a drunkard and denies himself wine for a time or for life, or if, proud of his comeliness, he becomes a Nazirite [as a penance]—all such acts are a service of God, and to them the Talmudic Sages refer when they say that "Vows are a protecting hedge to renunciation."⁷ And the concluding utterance is instructive: 'But, in spite of their being a service of God, it is well that a man should not make many vows of self-denial; rather let him abstain without a vow.'

The saying is typical of the Jewish spirit, which looks askance at vows, often made to be broken, and at asceticism, which makes for inefficiency in the great work of life. For, according to the

³ The Essenes gave practical effect to this opinion. See Jos. *BJ* ii. viii. 6.

⁴ Cf. Mt 5³⁴ff.

Jewish idea, the true servant of God, nay, the true man, is he who takes his full share of the activities of the world and harbours no scorn for its legitimate pleasures. Voluntary renunciation springing from an ennobling sense of freedom, not servitude to a despotic asceticism, is the Jewish ideal. The one is the mark of the strong; the other is the self-condemnation of the weak. For the rest, the following enactments may be cited:

All vows, to be valid, must be uttered aloud.¹ Boys of twelve and girls of eleven, provided they understand the meaning of their act, are capable of making vows;² on the other hand, in accordance with the Pentateuchal precept, a father may annul the vows of his daughter, and a husband those of his wife, if they involve hardship to the daughter or the wife.³ A man, moreover, may impose some restriction upon himself by vow; he cannot so restrict others.⁴ Moreover, vows the fulfilment of which is made impossible by *force majeure* are, *ipso facto*, null.⁵ The formal annulment of vows can be effected only by an expert Rabbi or by three laymen specially indicated for the duty by repute and experience.⁶

It will have been seen that, like the Biblical teachers, the Rabbis were opposed to vows on principle. Simon the Just only once approved of the taking of a vow—when the youth, in the story above cited, explained that he had become a Nazirite as a penance for having fallen in love with his own beauty. 'Would that there were many such Nazirites in Israel!' he exclaimed. But his objection, generally speaking, held, and it was shared by later eminent teachers like Hillel and the first Gamaliel.⁷ He that made a vow built an idolatrous altar, and he that fulfilled a vow offered sacrifice on it.⁸ Jephthah is cited as the type of such transgressors; his vow was a worship of Baal.⁹ The Nazirite is commanded in the Pentateuch (Nu 6¹¹) to bring a sin-offering. 'In what has he sinned?' the Talmud asks. 'In having abstained from wine,' is the answer.¹⁰ On the other hand, a vow, duly made, must be scrupulously fulfilled; Heaven itself testifies against the man who breaks his word.¹¹ Further, the Supreme is pictured as thus exhorting Israel, 'Take heed that ye break not your vows, for he that does so will come to break his oaths, and that would be to deny Me, and so to commit mortal sin.'¹² 'He shall not break his word' (Nu 30²)—the Scriptural utterance is the basis and starting-point of much of the Talmudic legislation concerning vows, and so sensitive was the Rabbinical mind to the sacredness of the vow, and to the danger of its being infringed by the common folk, that one Rabbi—Jehudah Gaon, of Sura (c. 750)—forbade even the study of tractate *Nedarim*.

Despite these facts the Rabbis have been accused of too readily 'opening the door,' to use their own phrase, to evasions or, more correctly, to annulment of vows. The prescriptions in *Mishnāh Nedarim*, ix., have been specially cited in support of this charge. But it is only necessary to read these enactments intelligently and fairly in order to vindicate their underlying motive. Far from being animated by a loose regard for morality, they have an ethical intent, that of saving persons who have made virtually impracticable vows from the guilt of breaking them, and of preventing the hardship and injustice which their fulfilment will entail upon others. Men would make vows in a fit of ill-humour, or in a morose and anti-social temper, from which it was only kind to them, and just to the members of their family or to their neighbours, to release them.¹³ But even such under-

takings were not lightly cancelled. They had to be annulled formally by recognized and competent authority. On the other hand, a vow made by order of the court could, under no circumstances, be set aside by any authority whatsoever.¹ A further charge of a different character has been brought, doubtless with reason, against ancient Jewish practice in regard to vows. In the Gospels the Pharisees are condemned for making vows under circumstances which involved a positive violation of the express commands of the Mosaic Law (Mt 15⁴, Mk 7¹⁰). That, in the Middle Ages, divergent practices, varying with the authorities immediately concerned, prevailed with regard to granting absolution from vows is unquestionable. Some Rabbis were more lenient in the matter than others. But this difference of practice was due to the varying importance attached to the two opposing considerations which have already been mentioned. One Rabbi would lay the greater stress upon the desirability of preventing the violation of vows, and so be inclined to grant dispensation from them; another would think more especially of the sanctity of the vow itself, however lightly made, and however trivial its character, and so refuse dispensation. A familiar instance is that of a man who vowed to give up gambling. The temptation to break such a vow was particularly strong. Should this consideration justify its annulment? Or should the man be held to his vow notwithstanding? So great was the dread of breaking the plighted word that we find a Jew of the 16th cent. swearing that he would never swear!²

Here reference may appropriately be made to the formula for the annulment of vows which ushers in the service in orthodox synagogues on the Eve of the Day of Atonement. Deriving its name *Kol Nidrē* ('All Vows') from its initial words, it runs as follows:³

'All vows, bonds, oaths, etc., wherewith we have vowed . . . and bound ourselves, from this Day of Atonement unto the next . . . lo, we repent us in them. They shall be annulled, made void and of none effect. . . . Our vows shall not be vows; or our bonds shall not be bonds; and our oaths shall not be oaths.'

And, since the congregation may have sinned by violating its vows in the past, the declaration is immediately followed by the verse (Nu 15²⁶):

'And all the congregation of the children of Israel shall be forgiven, . . . for in respect of all the people it was done unwittingly.'

This declaration has provided anti-Jewish writers with much welcome ammunition. Here, they have contended, is a proof that the word of a Jew cannot be trusted, seeing that he absolves himself from his vows and promises beforehand, in his very synagogue, and on the most solemn day in the year. The accusation is the fruit either of ignorance or malevolence or of both combined. The best answer to it is supplied by the unequivocal doctrine of the Rabbinical teachers in all ages, who warned their people that their very 'Yea' and 'Nay' must be truthful,⁴ and that it is even more sinful to deceive a Gentile than a Jew.⁵ The history of the declaration completes the defence. Owing its origin, at some unknown period not later than the early Gaonic age, to the dread of violating vows, it was nevertheless viewed with stern disapproval by the greatest authorities.

¹ For further information on this subject see S. Schechter, in C. G. Montefiore's *Hibbert Lectures* for 1892, p. 557 ff.

¹³ See *Mishnāh Nedarim*, ii. 1, and cf. the passage from Philo, above.

'I hear,' said one of them (R. Natronai [8th cent.]), 'that a formula called *Kol Nidre* is used in certain congregations, but we have never received it from our fathers.'

'A stupid custom'—so others styled it, and the majority of their fellow-Gaonim shared their opposition.¹ Their condemnation would probably have been sterner still if they had known the declaration in its later form. In their time it had a retrospective effect only, and was, therefore, comparatively harmless. Nor, according to one weighty opinion, was it intended to apply to personal and private vows, but only to those made by the leaders of a congregation, in their official capacity, for congregational purposes, either without due forethought or under duress.² It certainly applied, at most, to such personal vows as affected only the individual making them; it could not possibly cover vows involving the rights of others, for absolution from them under such conditions was impossible under the Talmudic law.³ But unfortunately a Rabbi (Meir ben Samuel [11th cent.]) took it into his head to change the wording of the declaration so as to give it a prospective meaning. The original phrase 'from the past Day of Atonement to this Day of Atonement' was altered into 'from this Day of Atonement to the next,' which is the existing version in some Prayer Books; and thus a weapon was placed in the hands of the enemy, which he was not slow to use. It need hardly be said that the Rabbi who made this ill-conceived alteration was actuated by innocent motives. Dispensation from vows already taken was, he held, impossible save at the hands of competent authority, which might not be available; better, then, he argued, to annul vows in advance. Thus, in both of its forms, the declaration owes its place in the Day of Atonement Prayer Book to that fear of the violation of vows to which repeated reference has been made, and to a natural desire to safeguard those who made them from the penalty for such violation. Certainly, ignorant persons may have been misled by the formula into making vows thoughtlessly; but they did so in spite of its real object, not in virtue of it, and their mistake was severely castigated by authority. Such persons were declared to be incapable of giving evidence in a court of justice.⁴ But the ignorant malpractices and the unhappy misunderstandings that have resulted from the introduction of the formula sufficiently condemn it; and there are ancient congregations in which, owing possibly to these considerations, it has never been adopted. If it survives anywhere to-day, despite its crude and misleading phraseology, it is partly because of the force of old associations, especially powerful on an occasion so solemn as the Day of Atonement, and partly because of the moving and cherished melody to which it is sung. In modern Reform congregations it was expunged from the Prayer Book nearly a century ago. All that was of value in it—the tune—was retained; the declaration itself went the way of all unmeaning survivals.

Finally it may be pointed out that vows of a monastic character were almost unknown among the Jews, for the good and sufficient reason that the monastic idea made little or no way among them. The Essenes furnish the outstanding exception. After novitiate those desirous of being admitted into that order took a solemn vow—Josephus styles it 'tremendous oaths'—binding them to piety towards God, justice and forbear-

¹ Weiss, *Dor Dor*, 4, 17, 16; see art. 'Kol Nidre' in *JE* and Hamburger. It must, however, be pointed out that, influenced by the Talmudic permission (cf. *Nedarim*, 23b), it was the custom of some pious Jews privately to annul their vows at the advent of every New Year festival.

² Weiss, *op. cit.*

⁴ See the references in *JE* vii, 541.

ance towards men, obedience to authority, fidelity to truth, and secrecy as to the doctrines of the society. They seem also to have imposed chastity upon themselves; but since, as K. Köhler has pointed out, they joined the order, as a rule, after the prime of life, they must not be deemed, because of their submission to this restriction, to have necessarily set at naught the characteristic Jewish duty of procreation. They lived the ascetic life of the Nazirite; but whether they took the Nazirite vow is uncertain.¹ The Essenes, however, stand practically alone in Jewish history. From time to time religious associations came into existence, the rules of which bound the members (*haberim*) to holy living—to devotional exercises, to scrupulous rectitude in the daily life, and to works of benevolence. But these societies were, at the very most, brotherhoods rather than orders. In some cases the offspring of the mystical temper, and intended to minister to the mystical life, they were, however, far from monastic. There was nothing of the cloister in them. The associates lived in their own homes and, in a greater or less degree, busied themselves in worldly affairs. The bond that united them was purely voluntary, and any member could free himself from it at will. In such cases a vow of initiation was out of the question.

MORRIS JOSEPH.

VOWS (Teutonic).—Vows were solemn promises which were made before some deity or superior power, and by which the person making the vow undertook within a given time or in the future to perform a particular act, to obtain a purpose, to bestow a gift, or to devote himself to some person or thing—as, e.g., in a sworn brotherhood. Such vows were rather common among the Teutons both in the North and in Germany, and they were considered absolutely sacred and inviolable. A person not redeeming his vow or his promise was considered an out-caste, and no regard was paid to him. Among the ancient Teutons all offerings and sacrifices were carried out with great attention and seriousness. They were generally closed with much hilarity and drinking, and then all kinds of promises were made for the future while the goblets were drunk, each of them devoted to some special divinity or to the memory of some great name. The Braga-goblet was the most imposing of all. Of such an occasion we have a description in the *Heimskringla*:

'First Odin's goblet was emptied for victory and power to his king; thereafter, Njord's and Freya's goblets for peace and a good season. Then it was the custom of many to empty the Braga-goblet; and then the guests emptied a goblet to the memory of departed friends, called the remembrance-goblet.'²

This goblet was not drunk to Bragi himself, but was emptied before him to the honour of some great person or name, or before some great undertaking. At the larger festivals, such as the Jol (or Midwinter) festival, the vow was made while touching the golden-bristled boar of Frey, which was prepared for the common meal, so that the vow should be made sacred by all that is honourable and great.

Vows were made at funerals of earls, kings, and other great persons, as may be seen from the

¹ See art. *ESSENES*; *JOS.* *BJ* ii. viii. 2 ff.; Philo, ed. Bohn, iii. 523 ff., iv. 2 ff.; art. 'Essenes,' in *JE*, p. 228.

² *Heimskringla*, i. 77 (*Saga of Hakon the Good*, ch. 16).

Ynglinga Saga, ch. 36, where we read that King Ingjald at the funeral festival of his father rose when the Braga-goblet was filled in order to offer his vow, promising that he would extend his kingdom one half in each quarter of the world or die.¹ At funeral occasions all sorts of promises were made which could in any manner be connected with the wish of the deceased.

A typical funeral vow or a series of such vows may be quoted from *King Olaf Trygvason's Saga*: 'King Svein made a magnificent feast, to which he invited all the chiefs in his dominions; for he would give the succession-feast, or the heirship-ale, after his father Harald. A short time before, Strut-Harald in Scania, and Vesete in Bornholm, father to Bue the Thick and to Sigurd, had died and King Svein sent word to the Jomsborg vikings that Earl Sigvalde and Bue, and their brothers, should come to him, and drink the funeral-ale for their fathers in the same feast which the king was giving. The Jomsborg vikings came to the festival with their bravest men, forty ships of them from Vendland, and twenty ships from Scania. Great was the multitude of people assembled. The first day of the feast, before King Svein went up into his father's high seat, he drank the bowl to his father's memory, and made the solemn vow, that before three winters were past he would go over with his army to England, and either kill King Adalred (Ethelred), or chase him out of the country. This heirship-bowl all who were at the feast drank. Thereafter for the chiefs of the Jomsborg vikings was filled and drunk the largest horn to be found, and of the strongest drink. When that bowl was emptied, all men drank Christ's health; and again the fullest measure and the strongest drink were handed to the Jomsborg vikings. The third bowl was to the memory of Saint Michael, which was drunk by all. Thereafter Earl Sigvalde emptied a remembrance-bowl to his father's honour, and made the solemn vow that before three winters came to an end, he would go to Norway, and either kill Earl Hakon, or chase him out of the country. Thereupon Thorkel the Tall, his brother, made a solemn vow to follow his brother Sigvalde to Norway, and not flinch from the battle so long as Sigvalde would fight there. Then Bue the Thick vowed to follow them to Norway, and not flinch so long as the Jomsborg vikings fought. At last Vagn Aakeson vowed that he would go with them to Norway, and not return until he had slain Thorkel Leire, and gone to bed to his daughter Ingebord without her friends' consent. Many other chiefs made solemn vows about different things. Thus was the heirship-ale drunk that day, but the next morning, when the Jomsborg vikings had slept off their drink, they thought they had spoken more than enough. They held a meeting to consult how they should proceed with their undertaking, and they determined to fit out as speedily as possible for the expedition; and without delay ships and men-at-arms were prepared, and the news spread quickly.'²

Any vow or promise was made sacred by placing one's foot upon a stump or a stone and saying, 'Here I stand and promise that I shall accomplish this matter,' which was then mentioned and the con-

ditions of the vow given.¹ Those promises were, no doubt, offered to make certain undertakings more sure—e.g., to win such-and-such a woman, whom the maker of the vow wanted to secure for himself or for somebody else, to avenge a crime or an injury, to obtain an honour or any such thing which required honest personal effort—and they were often made in the interest of higher duties so as to render the act itself morally binding.

Sworn brotherhoods were mostly entered into by young men who had been brought up together or who had formed close friendships because of peculiar experiences. The ceremony was as follows.

The sod of a selected piece of ground was loosened and cut in three oblong slices, which were raised and held up by the spears of the covenanters, so as to form an arch under which they let drops of their blood from self-inflicted wounds freely flow in the fresh and open soil, vowing to be faithful to one another in life and death. Such men would afterwards be inseparable and never failed one another. The one would always avenge the injury done to the other, which meant in case of death that he had to take the life of the slayer, even though that one be a relative or a highly exalted person. In later times of ancient Teuton history sworn brotherhoods were the most sacred of all covenants, no one ever thinking of breaking a vow thus made or even considering such a thing possible.²

It is apparent that vows as sacred obligations entered into public life in various manners, and also that mutual behaviour thereby became more pregnant and dependable. Even to this day it is very common in countries of the North to demand, or at least to request, that certain promises be made sure by the oath, neither before the court nor in the way prescribed for judicial proceedings, but as a vow made to a friend or to the second party of the contract; for, where such a vow has been taken, one feels assured that the promise will hold.

WAGES.—See ECONOMICS, EMPLOYMENT.

WAHHĀBĪS.—Named after 'Abd al-Wahhāb, this Muhammadan community has its headquarters in the part of Arabia called Nejd, but is also represented in Mesopotamia, India, and Africa.

I. Tenets.—The aim of the founders of the community appears to have been ostensibly to restore Islām to its original purity, as taught by Muhammad and practised by his converts. Hence, when their system was examined by Sunni experts in Cairo, it was found not to differ from the ordinary orthodoxy. Their pretext for branding all other Muslims as idolaters lay in the practice of visiting the tombs of saints and appealing to them in emergencies, which the Wahhābis identified with the practice of the pre-Islāmic pagans that is repeatedly condemned in the Qur'an. Hence they destroyed such tombs, when they got the opportunity, not even sparing that of Muhammad in Medinah. One of their enemies summarizes

the points wherein they differ from the orthodox under ten heads.

- (1) They regard the Deity as having bodily form, with face, hands, etc.
- (2) Reasoning has no place in religious questions, which must be settled solely by tradition.
- (3) The source of law called 'Consensus' is rejected.
- (4) The source called 'Analogy' is rejected.
- (5) The opinions of the compilers of codes have no authority, and those who follow them are unbelievers.
- (6) All Muslims who do not join their community are unbelievers.
- (7) Neither the Prophet nor any saint may be employed as intercessor with the Deity.
- (8) Visits to the tombs of saints, etc., are forbidden.
- (9) Oaths by any one but God are forbidden.
- (10) Vows to any one but God are forbidden, as is also the practice of sacrificing at the tombs of saints and prophets.

It is doubtful whether no. (5) is correct, as the Wahhābis are said to be followers of the system of Ahmad Ibn Hanbal († A.H. 241), the adherents of which were notorious in 'Abbasid days for their interference with pilgrimages to the tombs of

saints; in A.H. 323 the khalifah Raḍi issued a rescript against them.¹ European travellers lay stress on their tabu of tobacco and all drugs that benumb or stupefy, and their objection to the use of silk in any part of the attire, and of ornaments of gold, silver, or gems. Practices of which their history gives evidence are the massacre of the women and children as well as the men of their Muslim enemies, and the mild treatment of the tolerated communities; these were characteristic of the early Khārijis, whose revolts were brought about by deviations from the rigidity of Islām. If it be true, as has been asserted, that they suppose the Qur'an to have been mutilated by the third khalifah, they retain therein the notion which brought about the earliest Khārijī movements. Their iconoclasm bears some resemblance to the practice of the Khārijis called Qarḥāṭians, with whom they are not otherwise connected.²

2. **History.**—The history of the Wahhābis appears to have been written exclusively by European travellers; there is therefore some uncertainty about the origins of the system. As early as 1764 it attracted the notice of Carsten Niebuhr, who brought the first mention of it to Europe. There are contradictory statements about both the birth-place and the tribe of that Muḥammad Ibn 'Abd al-Wahhāb from whose patronymic the sect derives its name. Born in Central Arabia about 1730, he is said to have travelled as a student and merchant, and to have attached himself to one Muḥammad b. Sa'ud, chief of Ḍira'iyyah (about 46°20' E. long. 25° N. lat.), who married his daughter and became his first disciple. To what extent these persons contemplated from the first the establishment of an independent state cannot now be ascertained; Palgrave,³ whose account of this matter is more than ordinarily romantic, makes Ibn 'Abd al-Wahhāb allure Ibn Sa'ud with a definite promise of the sort. It is clear that the two made their resolve to restore Islām to its original purity a ground for attacking their neighbours, at first, it is said, with a force of seven men mounted on camels; but a little initial success carries such adventurers a long way where, as in Central Arabia at the time, there is no organized government. Muḥammad b. Sa'ud had before his death extended his authority over 'Ariḍ, Qasim, Ḥaṣa, Dowāsir, and Sulayyil, and become master of all the provinces situated between the Ḥijāz and the Persian Gulf, with the exception of Qaṭif.

Under the successor of Muḥammad b. Sa'ud, his son 'Abd al-'Aziz, the Wahhābis came into collision with the outposts of the Ottoman Government, and attacked and plundered Imam Ḥusain, where they massacred the inhabitants. This was in 1801, and in the following year the Wahhābī chief, who had for some time been struggling with the then sharif of Meccah, Ghalib, was able to wrest from him the important town of Ṭā'if. Owing to the supineness of the Ottoman Government and the incompetence of the pashas who attempted to oppose the Wahhābis, the latter progressed with great rapidity; in 1803 Sa'ud, son of 'Abd al-'Aziz, took Meccah, where, however, Ghalib, having adopted Wahhābī tenets, was allowed to resume his government; and in 1804 Medinah was also taken after its port, Yanbo, had fallen. The tomb of Muḥammad was robbed of all its ornaments and treasures. By this time Sa'ud was chief of the community, his father 'Abd al-'Aziz having been assassinated in 1803. Raids were made by Wahhābī officers in the direction of the Yemen, which, however, was not permanently occupied.

³ *Personal Narrative of a Year's Journey through Central and Eastern Arabia*, i. 376.

Though the new rulers of the Ḥijāz did not actually abolish the pilgrimage, fear of them kept away the pilgrim caravans from Persia, Syria, and Egypt.

Muḥammad Ali, on whom the government of Egypt had been conferred by the Porte in 1804, with an express injunction to reconquer the sanctuaries, took no serious step in that direction till 1809, not even prohibiting the export of food from Egypt to Arabia, though that measure would have rendered the position of the Wahhābis in those cities difficult. After two years of preparation the pasha of Egypt sent his son Tuzun, a man famous for his personal courage, at the head of an expedition, which seized Yanbo in Oct. 1811. In the following year he succeeded in reconquering Medinah; and in Jan. 1813 Meccah and Ṭā'if also were recovered. In this year Muḥammad Ali himself took the command in Arabia, and fought with varying results against Sa'ud till the death of the latter in the following year; he was succeeded by his son 'Abdallah, with whom peace was made by Muḥammad Ali in 1815, after each party had won some considerable victories. Muḥammad Ali returned to Egypt; but the terms of peace could not be carried out, and in the following year the pasha's son (or stepson), Ibrahim Pasha, was sent out to reduce what remained of Wahhābī power; in 1818 he took Ḍira'iyyah, the Wahhābī capital, and obtained possession of 'Abdallah's person; the latter was taken to Cairo and sent thence to Constantinople, where he was executed.

A Turkish governor was left in the Nejd by Ibrahim Pasha when he returned to Egypt; a son of 'Abdallah, named Turki, who had escaped when the capital was taken, succeeded in re-assembling the Wahhābī forces and expelling the governor. A new capital, Riyad, was chosen by Turki for the renovated state; and under this chief, who reigned till 1830, several of the provinces which the Wahhābis had formerly held were recovered. He was assassinated in that year by a cousin, but was succeeded by his son Faiṣal, who was greatly helped in securing his accession by one 'Abdallah Ibn Rashid, whom he rewarded with the hereditary possession of the province Shamr. Faiṣal, however, was attacked by an officer sent against him by Muḥammad Ali, captured and sent off to Egypt, where he remained a prisoner till he was released by 'Abbas, son of Muḥammad Ali. Returning to Arabia, he easily obtained recognition in Nejd, and his dynasty is still established in Riyad, the dynastic name being Ibn Sa'ud. The province of Shamr became detached during Faiṣal's reign, and the dynastic name of the ruler is Ibn Rashid. His capital, Ḥaiel, has been visited by several European travellers, who have maintained a continuous history of these states.

From 1842 to 1872 the Wahhābī empire in Arabia was split up into the following communities: (1) dynasty of Ibn Sa'ud holding Riyad and Ḥasa, (2) the emirate of Ḥaiel, (3) the city 'Unaizah with the tribe of the name and dependencies, (4) the city Buraidah, (5) the town Shakra, (6) the state and city Ḥariq-Hutah, (7) the tribe Ḥarb, (8) the tribe 'Uṭaiyah, (9) the Mutair. From 1843 to 1870 the second of these was governed by two capable rulers, Ṭilal and Ma'ab; in 1872 the emirate was seized by one Muḥammad, who, after putting to death possible rivals in his own family, endeavoured to bring the remaining communities under his rule. Ultimately in the spring of 1891 most of the above-named communities formed a league against the emir of Ḥaiel, under the leadership of Zamil, ruler of 'Unaizah. On the side of Ibn Rashid there were, in addition to his own forces, the Ḥarb and the Mesopotamian Shamr. Ibn Rashid succeeded in inflicting on the league a crushing defeat, and became master of all their towns, including Riyad,

where he installed one of the Ibn Sa'nd family as ruler, remembering that the founder of his own dynasty had been a creature of Ibn Sa'ud. Since this date the ruler of Riyad has emancipated himself from Ibn Rashid's control, and in the intrigues which preceded the Great War of 1914-18 the latter favoured Germany, whereas the former favoured Britain.

3. **Wahhābism in India.**—Wahhābism was introduced into India by one Sayyid Ahmad, who was born in 1786-87 in Rai Bareli, and started a revivalist movement among the Muslims of India, with headquarters at Patna, before he made the pilgrimage to Meccah which was the occasion of his conversion to the Wahhābī system. Returning to India in 1824, he gained a following in Peshawar, and in 1826 started military operations against the Sikhs, in which he had considerable success; national dissensions, however, broke out among his followers, and in 1831 he met his death at the hands of the Sikhs. The movement was continued by some of his disciples, who obtained dominion over a large extent of territory along the left bank of the Indus, which, however, they lost in 1847, when the Wahhābī troops surrendered to a British force. Patna continued to harbour a number of Wahhābīs, who are said to have taken part in the Indian Mutiny. For about twenty years after the mutiny had been quelled attempts were made by Wahhābī preachers to stir up risings against the British in different parts of the Peninsula and to found Wahhābī states.

The Indian Wahhābism is said to differ from that of Arabia in its identification of one or other of the founders of the system with the Mahdi of the Sunnis, whereas in Arabia this term was not used.

4. **Literature.**—It does not appear that the founders of the system in Arabia did more than issue letters and manifestos; and at this day there is no printing-press in Riyad or (probably) in Haiel. Such literature as the system has produced is mainly Indian, and in Persian or Urdu; but there is some anti-Wahhābī literature in Arabic, emanating from Mesopotamia—e.g., *al-Fajr al-Sadiq fi'l-radd 'ala munkiri' tuwassul wal-karamat wal-khawariq* by Jamil Efendi Sidqi Zabawi (Cairo, A.H. 1323).

5. **Life and conduct.**—The Wahhābīs appear from the commencement of the system till our time to have maintained the institutions of orthodox Islām with far greater rigidity than other Muslim communities. Like the early Muslim leaders, the first generations of Wahhābīs propagated their views mainly with the sword; with the introduction of Arabia into the Pax Britannica more peaceful methods are coming into vogue, and the following description by a recent visitor to Riyad gives an idea of both the practices and the aims of the Arabian Wahhābīs at the present day:

'In this city men live for the next world. Hundreds are studying in the Mosques to go out as teachers among the Bedouin tribes. It is the center of a system of religious education that takes in every village of Central Arabia, and imparts the rudiments of an education to much the larger part of the male population of the various towns. Great efforts are being made now to educate the Bedouins. Men pray five times a day in Riyadh. In the winter the roll is called at early morning prayers, and also at the service in the late evening. Absentees are beaten with twenty strokes on the following day. In the summer duties in the date gardens and elsewhere are considered a valid excuse for praying at home. Only a few years ago a man absented himself some days from all prayers and was publicly executed for so doing. It is safe to say that there is one city on earth where men are more interested in the next world than they are in this one. Late dinners are unknown. The evening meal is eaten an hour before sundown so that there may be time for religious readings and exhortations before going to bed. That is the regular program in the house of the great chief himself.'

D. S. MARGOLIOUTH.

WAKANDA.—See MANITU, ORENDA, MANA, PLAINS INDIANS.

WAKASHAN.—The Wakashan linguistic family consists of two main branches: the Kwakiutl, extending from the Tsimshian country southward to the northern end of Vancouver Island, and the Nutka of the west coast of Vancouver Island and the extreme north-western corner of the State of Washington. The northernmost Kwakiutl, usually known as Heiltsuk, were divided into clans governed by mother-right, but the Kwakiutl divisions, while not true gentes, inclined to be patriarchal, although crests descended to a man's daughter's son rather than to his own son, thus showing a confused or mixed system of descent. The Nutka tribes were divided into a number of septs of varying rank, which were not, however, exogamic. If a man married outside of his sept, his children belonged to that which stood higher socially, but, if he married inside, the descent was patrilineal.

1. **KWAKIUTL.**—I. **Supernatural beings.**—The principal Kwakiutl deity was the sun, called Atā ('the one above'), Kanskiyi ('our brother'), Kansnōla ('our elder brother'), Amiaeket ('the one to whom we must be grateful'), Gyikamae ('chief'), and Kautsōump ('our father'). The last of these names is said not to have been used until after the advent of Europeans, but this is not quite certain. He was frequently addressed in prayer in such words as 'O chief, take pity upon us'; and in bad weather the steersman of a canoe would say to him 'Take care of us, chief.' His son Kanikilak ('with outspread wings') largely takes the place of the northern transformer, Raven. He descended from heaven and wandered over the face of the whole earth, giving man his arts, customs, and institutions. He also was addressed in prayer. Raven, however, appears as well, and the stories told of him resemble those related by the Haida, Tlingit, and Tsimshian (*qq.v.*). Besides being partially displaced by the sun's son, he shared his functions of trickster with Mink, who was often even more prominent.

A host of lesser spirits were believed in, but they were not especially different from those found elsewhere in America, except the spirits concerned with the great winter ceremonials. Twins were believed to be transformed salmon and were supposed to have power over the winds and weather. When a salmon was killed, its soul was believed to return to the salmon country.

2. **The dead.**—After death a man's soul, which was thought to have its seat in the head, became a ghost, or *lālenok*, the sight of which was deadly. These *lālenok* either lived in a place under ground called *Bebēnakaua* ('the greatest depth') or roamed through the woods. They might not enter a house, but hovered round the villages, causing bad weather. The name *Bebēnakaua* is said not to have been used before the advent of the Whites, but the idea for which it stands was certainly aboriginal. Ultimately the *lālenok* was reborn in the first child of a relative. Probably *Bebēnakaua* was not the only region of the dead, for one story speaks of a man whose soul went to live with the sun before it was reborn.

3. **Shamanism.**—The common name for a shaman among the Kwakiutl was *naualak*, but, when

1 P. W. Harrison, in *The Moslem World*, Oct. 1918, p. 418.

curing diseases, he was called *heilikya* or *pakala*. Disease was supposed to be caused either by some foreign object in the affected part, such as a stick, piece of skin, bone, or quartz, or by the absence of the soul from the body. In the former case the shaman moistened the place where the disease had its seat from a small dish of water, went through the usual incantations to the accompaniment of his rattle, and finally sucked out the disease and showed it to the bystanders. Sometimes he used whistles and blew the disease from the hollow of his hand into the air. When the soul had left the patient's body—a fact which the shaman discovered by feeling the patient's head and the root of his nose—the shaman caught it and replaced it in the head, its proper seat. Sometimes it was seen in his hand in the shape of a bird or mannikin. The shaman was also able to cause disease by throwing something into his victim's body. The secrets of the shaman proper or medicine-man were derived from *Haialikyawe*, the ancestor of the gens of that name. One of the secret societies, however, the *Mamaka*, conferred power to catch the invisible disease-spirit—which was supposed to be constantly flying through the air in the form of a worm—and throw it back upon one's enemies.

4. **Witchcraft.**—True witchcraft was of two kinds. In one the person was made sick by having a portion of his clothing buried with a corpse. The second, called *eka*, was more complicated:

A portion of a person's body, or clothing that had received perspiration from him, was obtained and roasted before the fire along with fragments of a corpse; then they were ground up together, sealed in a piece of skin or cloth, and placed in the hollow of a human bone. This in turn was placed inside a human skull and the whole deposited in a small box, which was afterwards buried in the ground so as to be barely covered with earth. Almost on the top of this a fire was built so as to warm the whole, and, while it burned, the wizard beat his head against a tree, naming and denouncing his enemy. This was done secretly and at night or in the early morning, and was repeated at frequent intervals until the enemy died. Such a spell might be removed, however, by finding and unearthing the box—carefully, lest a sudden jar prove fatal to the sick man—and then unwrapping the contents, covering them with feathers, and throwing them into the sea. It might also be removed by some one going over the bewitching ceremonies again, the second ceremony serving to undo the first.

5. **Eclipses.**—When an eclipse of the sun or moon took place, it was supposed that those bodies were being swallowed, and to liberate them the *Kwakiutl* burned blankets, boxes, and food. They also made noises to frighten away the enemy and sang '*Hankuä!*' ('Throw it up!').

II. **NUTKA.**—The *Nutka* are treated in art. VANCOUVER ISLAND INDIANS.

III. **MAKAH.**—The *Makah* Indians around Cape Flattery in the State of Washington are merely a colony of *Nutka* from Vancouver Island, but their beliefs show certain points of divergence.

1. **Supernatural beings and cosmology.**—Like the other *Nutka*, they worshipped a supreme being, whose name was spoken only to those who had been initiated into the sacred rites and ceremonies. One name for this being was *Chabatta Hatartstl*, or *Hatartstl Chabatta* ('the great chief who resides above'). He was said to be called upon by individuals only when they were alone, and probably received very little actual attention, the worship of the people being paid as usual to a multitude of inferior deities residing in animals, plants, and other natural objects. Swan¹ cites only one case where to his personal knowledge the supreme deity was directly addressed, but he was told that a person who wished to talk to him retired into the mountains when the moon was full, washed in a pond, and rubbed his limbs with cedar boughs, which are liked by the deity on account of their fragrance. In the same way a man acquired his individual guardian-spirit. The

¹ 'The Indians of Cape Flattery,' in *Smithsonian Contributions to Knowledge*, xvi. 61f.

sun (*Kléseakarktl*) was considered the representative of the supreme being, and it was the object to which the young were told to direct their prayers when they were awakened and made to bathe before daylight. They then called upon him to let them live. The north, south, south-east, east, west, and north-west winds were each supposed to be produced by the blowing of a certain spirit. Stars were believed to be the souls of individuals or of animals formerly existing on earth, and lunar eclipses were ascribed to a *tooshkow*, or 'cultus' cod, endeavouring to eat up the moon, which was believed to be composed of a jelly-like substance. The *aurora borealis* was caused by a small race of Indians in the far north who lived on ice-floes and were cooking seal and walrus meat. Comets and meteors were supposed to be spirits of departed chiefs, and the rainbow a malignant spirit connected with the thunder-bird and having powerful claws with which it seized any one coming near.

2. **Shamanism.**—Male shamans formerly went through a certain ceremony called *kakaip* in order to acquire supernatural powers. Sickness was believed to be occasioned by a demon, which entered the victim's mouth when drinking at a brook or pierced his skin when bathing in seawater. It assumed the form of a little white worm, which the shaman knew how to extract. During the operation he washed his hands frequently and warmed them at the fire; finally he caught the demon, squeezed it, blew through his hands towards the roof of the house, and assured the patient that it was gone. An injured bone was renewed by binding over it the bone of a dead person. There were also female shamans or, rather, doctors, who knew the uses of herbs and acted as midwives. Still other individuals were supposed to have power over the winds and weather.

3. **The dead.**—After death the souls were supposed to reside in the earth, where they existed, deprived of their bones, and received flesh and skin only as fast as it decayed from their material bodies. The usual tales are told of persons who had been to this region and had returned. Little opportunity for such a return was given, however, since to look upon the face of a corpse was considered unlucky, and the *Makah* consequently bound the body at once tightly in a blanket and laid it away in the grave-box.

LITERATURE.—The *Kwakiutl* are treated in F. Boas, report v. 'On the North-Western Tribes of Canada,' in *Report of the British Association for the Advancement of Science*, 1889, p. 801 ff., report vi. *ib.* 1890, p. 562 ff., and their secret societies in Boas, 'The Social Organization and the Secret Societies of the *Kwakiutl* Indians,' in *Report of the United States National Museum for 1895*, Washington, 1897 (this also touches upon secret societies among other tribes in the same region). The *Nutka* are treated in report vi. 'On the N.W. Tribes of Canada,' and their Washington colony, the *Makah*, by J. G. Swan, 'The Indians of Cape Flattery,' in *Smithsonian Contributions to Knowledge*, xvi. (Washington, 1870). Much valuable material may be had from J. R. Jewitt, *A Narr. of the Adventures and Sufferings of John R. Jewitt*, Middletown, Conn., 1815, and from G. M. Sproat, *Scenes and Studies of Savage Life*, London, 1863. JOHN R. SWANTON.

WAKE.—See DEATH AND DISPOSAL OF THE DEAD.

WALDENSES.—The *Waldenses* are a Protestant Church, bearing among its own people the name of *Vaudois*, derived from the geographical situation of its origin and headquarters among the southern valleys of the Cottian Alps, through which run the tributaries of the Pellice and the Po, and which are approached from Turin across the plain of Piedmont. Thus situated as a community of hardy mountaineers far away from the town life of Italy, and with interior valleys still more remote into which to retreat in times of

danger, this Church was able to develop and maintain its own individuality and to withstand the attacks of opponents in a way that has almost suggested the miraculous. We need to realize the physical geography of the area in which it grew up in order to understand its rare characteristics and account for its sturdy independence and heroic achievements. Legend has been busy weaving fanciful impossibilities into the fabric of its story. But a sufficient substratum of solid fact remains to account for the importance that has been attached to so small a group of people who have produced no thinkers, writers, or scholars sufficiently eminent to give them world-wide fame. It is the romance of their story that first calls attention to them. Then the frightful persecutions from which they suffered, appealing to the sympathy of the great Protestant Powers, connected them with the larger politics of Europe, especially when Cromwell interposed to champion their cause and Milton immortalized their sufferings in a great sonnet. Over and above these facts critical questions concerning their origin have attracted the attention of scholars and aroused the energies of controversialists, with the consequence that a literature has grown up round the Waldensian name quite out of proportion to the small number of simple folk to whom it has been attached.

I. *ORIGIN*.—The question of the origin of the Waldenses has been complicated by controversial considerations. While Roman Catholic writers have settled the matter by regarding these people as simply the followers of Peter Waldo of Lyons, they themselves repudiate this view and push back their beginnings to the age of primitive Christianity. Thus they deny that they first appeared as a sect of heretics breaking off from the historic Church, and claim to have preserved the purity of the faith through the ages, while all the rest of the Church was degenerating and accumulating the corruptions against which they protested from the first.

1. *Claim to apostolic origin*.—This claim is first met with in a Dominican monk at Passau in the year 1316,¹ who states that the Waldenses declare that they are the most ancient of all the sects, some even saying that this sect 'duravit a tempore patrum.' It was but a step from this position to add that the Waldensian Church was founded by St. Paul when on his way to Spain. A little later a woman under examination for heresy is said to have made a similar statement. It is not met with again earlier than a letter of Barbe² Morel written in 1530 and addressed to *Œcolampadius*.³ But it was adopted by Robert Olivétan and published in the preface to his translation of the Bible in 1535, and from that time onwards it was universally adopted by the Protestants, who thus came to honour the Waldenses as the one Christian Church that had preserved the primitive faith of NT times. Its adoption by Beza, its appearance in the Confession of 1541, the assertion of it by Leger in the preface of his history, the encouragement it obtained from Samuel Morland, the British envoy in Savoy, all helped to confirm its popular acceptance. It even came to be regarded as the primary source of Calvinism, an ingenious way of accounting for its otherwise suspicious resemblance to that type of Reformation theology. But now it has been pointed out that no trace of this notion can be found in any of the early Waldensian writings. The inquisitor Moneta of Cremona, dis-

¹ *Contra Valdenses*, in *Maxima Bibliotheca veterum Patrum*, Lyons, 1677-1707, xxv. 202 ff.

² The title 'barbe' (Romance for 'uncle') was employed by the Waldenses for their clergy, perhaps as distinguished from the Roman Catholic title 'father' for a priest, and at the same time as suggestive of an affectionate relationship; also as a cryptic term, a 'commonplace' in times of persecution.

³ See A. Scultetus, *Annalium Evangelii . . . decades duo*, Geneva, 1613, pp. 295, 306.

cussing the source of Waldo's heresy, makes no mention of the theory of apostolic origin. Nor is there any evidence of the existence of the Waldensian Church as a separate community maintaining primitive NT ideas for more than a thousand years from apostolic days till it emerged in the times of mediæval persecution. Its total seclusion as well as the maintenance of its purity uncorrupted throughout all these centuries would demand a double miracle, for which no evidence is forthcoming. Then this very purity of doctrine in conformity with the NT is exactly what the Protestants claimed to have recovered at the time of the Reformation. In so far as that claim cannot be entirely justified, since Protestantism is not merely a return to the apostolic type of Christianity, but, with all its effort to conform to the NT standard, still a historical development true to the spirit of its age, the same must be said of the Waldensian type of Christianity. Therefore, if we admitted the theory of apostolic origin, we should have the further marvel of a line of development in the solitude of the Alpine valleys leading to much the same results as were obtained by the Reformation theologians in their fresh studies of the NT, unless we were to conclude that Protestantism as a whole was an outgrowth of Waldensian teaching; and we are sufficiently well acquainted with its genesis in the minds of the German and Swiss reformers to know that this was not the case.

2. *The time of Sylvester*.—A second theory of the ancient origin of the Waldensian Church is that it arose at Rome in the time of the episcopate of Sylvester, when that bishop, after baptizing Constantine, put the Church under the power of the emperor; whereupon a colleague of the bishop protested, broke off communion with Rome, and retreated into the Vaudois valleys. Thus the Waldensian movement is represented as being a reaction against the corruption of the Church in the 4th century. This theory has been combined with the claims to apostolic origin, with the suggestion that the secluded Church, already some centuries old, now received an accession of refugees who found a welcome home in its primitive simplicity. It is given by the inquisitor Moneta,¹ as held by 'the Poor Men of Lyons.' But the want of evidence during the intermediate period, which is fatal to the claim to an apostolic origin, is also applicable to this theory, though the intermediate centuries are not quite so many. Moreover, Sylvester did not baptize Constantine. Nor had the Church preserved the primitive simplicity advocated by the Waldenses uncorrupted until the age of Sylvester, as the upholders of this theory have maintained. Thus its basal assumption is discredited by history.

3. *The time of Claude of Turin*.—Claude, bishop of Turin in the 8th cent., under Charlemagne and Louis the Pious, revived the Augustinian doctrine of predestination, but ignored the High Church side of Augustine's teaching, according to which the Church was the appointed medium of communication between God and man, resisting the papal claims, and denying that St. Peter had received power to bind and loose. He had crosses as well as images removed from his churches, in all these matters anticipating the Reformation. Accordingly Leger, Muston, and other Waldenses, understanding the churches of the Vaudois valleys to have been included in Claude's diocese, maintained that, if their separation from the Roman Catholic Church could not be traced back to primitive times, their distinctive movement should be attributed to the influence of this French bishop, who has been described as a Calvinist before the Reformation. That Claude may have had some

¹ Comba, p. 90.

influence among the mountaineers in leading them towards the freer, simpler type of religion, and so preparing for their subsequent breach with Rome, is likely enough. But there is no evidence that he was in any sense the founder of the Waldensian Church as a separate community or the originator of Protestantism in it. There is no indication of the existence of such a Church for centuries later than the time of Claude. Besides, it is very improbable that this bishop should have succeeded in originating a vigorous, independent organization in a remote corner of his diocese while he did nothing of the kind at Turin or in the more civilized towns nearer his metropolis. Champions of the antiquity of the Waldensian Church as a distinct community in separation from Rome claim a mass of Romance literature in the libraries of Geneva, Zürich, Grenoble, Paris, Cambridge, and Dublin in support of this contention, maintaining that it is (1) representative of the views of that Church, and (2) of great antiquity. But a critical examination has made it clear (1) that much of this literature is of Roman Catholic origin and not marked by characteristics peculiar to the Waldenses, and that some of it is Hussite, and (2) that none of it gives evidence of coming from an earlier date than the 14th century.

One of these documents, entitled *Nobla Laicson* ('Noble Reading'), is a poem setting forth Christian doctrine of the Waldensian type which Perrin, Leger, Muston, Monastier, and other writers declare contains a statement that 1100 years have passed since the origin of the New Testament. But in a copy of this work discovered in the Morland MSS it was seen that the tail of an Arabic 4 has left some traces, so that the original reading would have been 'mil e 4 cent anz.' Another MS in this collection has 'mil e CCCC anz.' Further, a MS of the NT at Zürich, which had been assigned to the 12th cent., is found to be dependent on Erasmus' Greek Testament. Lastly there is the 'Waldensian Confession of Faith,' for which a pre-Reformation origin had been claimed, as composed in the year 1120; but now it has been discovered that this date is not written by the original hand, and also that the MS 'copies almost word for word the utterances of the Reformer Bucer as given in Morel's report of his negotiations with that divine and Ecolampadius.'¹

The statement of Muston² that in the year 1096 Urban II. described the Vaudois as 'infected with heresy' is founded on a mistake, since no such reference to these people is to be found among his bulls.³

4. **Albigenses.**—The Albigenses, or Catharists, were near neighbours, occupying the northern and French side of the mountains, the southern and Italian valleys of which were inhabited by the Waldenses. But there does not seem to have been much intercommunication across the great Alpine barrier. The national and racial distinction between the two populations would tend to keep them apart. Moreover, there is not the slightest trace of Catharist doctrines in the Waldensian Church. That this Church should not have received any infection of the Manichæan teaching, with which the Albigenses are said to have been imbued by an emigration from Eastern Europe, and yet have received their comparatively innocent Protestant principles from this tainted source, is not at all probable. On the other hand, we have little or no first-hand information about the tenets of the Albigenses, the reports of which come to us through the suspicious channel of their enemies' accounts of confessions under torture. We may well admit that a common spirit of resistance to the dominance of Rome, and similar efforts at realizing a more spiritual type of worship than was generally seen in medieval Catholicism, may have led to mutual encouragement in these respects. What must be affirmed, however, is that certainly the Waldensian is not a direct offshoot of the Albigensian movement.

² *L'Israël des Alpes*, Paris, 1851, vol. i. p. xxxii, n. 2.

³ Comba, p. 154.

The supposed connexion between the Waldenses and the Albigenses was championed in England by several writers, of whom the most notable was G. S. Faber, *An Enquiry into the History and the Theology of the ancient Vallenses and Albigenses* (1838). But in the same year the idea was completely demolished by S. R. Maitland in *Facts and Documents illustrative of the History, Doctrine, and Wives of the ancient Albigenses and Waldenses* (1838). Lastly, Charles Schmidt of Strassburg made an exhaustive examination of the question, giving the legend, as Comba says, its *coup de grâce*.¹ See, further, art. ALBIGENSES.

5. **Various later influences.**—It may well be that various influences tended to cut off the Vaudois from continuous close Roman influence. Their isolated geographical situation would minimize intercommunication, and at the same time their life as mountaineers would foster a spirit of independence and its simplicity keep them from the materializing influence of a sumptuous ritual. Then the Gothic and Lombard invasions would associate ecclesiastical with political aloofness. For a time these people came under the wave of Arian dominance. We cannot regard the Waldensian faith as in any sense a product of Arianism, and yet the local separation produced by the heresy would tend to engender a habit of independence. Arnold of Brescia, a disciple of Abelard, executed at Rome in 1155, was a strenuous opponent of the temporal claims of the papacy. He contended that sacraments administered by priests who were not living an apostolic life were invalid. Lucius III.'s bull of excommunication (1184) shows that he left followers behind him whose influence may well have lingered in Northern history till it was merged in that of the definitely anti-papal Waldenses. But Leger, in setting his name at the head of the list of barbes, was confusing it with that of another Arnold. Then, on both sides of the Alps, those parts of France and Italy respectively which were nearest to the Waldensian valleys witnessed during the Middle Ages repeated protests against the abuse of images and materialistic forms of worship. With greater probability Peter of Bruys (1104–25) is claimed by Comba, Gay, and others as one of the precursors and originating influences of the Waldenses.

Unfortunately our knowledge of Peter's tenets is almost confined to the statements of Peter the Venerable, abbot of Cluny.² It would appear that he ascribed the highest authority to the Gospels, especially the teachings of Jesus contained in them, finding a second and lower authority in the Epistles. It is not clear how he regarded the Old Testament. He taught believers' baptism and repudiated the efficacy of infant baptism, rejected the doctrine of transubstantiation and the Mass—perhaps even going so far as to give up the observance of the Lord's Supper as a rite of the Church—repudiated the custom of prayers for the dead, denied the sanctity of church buildings, and carried out an iconoclastic crusade against the use of crosses. Döllinger's association of the Petrobrusians with the Cathari has been shown to be erroneous.³ Peter was twenty years combating what he regarded as the superstitions of the Church, especially the 'Roman idolatry.' Beginning in the obscure village of Bruys high up among the Alps, his influence spread through Narbonne, Guyenne, and Gascony, and was for a time centred at Toulouse, where he enjoyed great and growing popularity. Nevertheless, at the instigation of the monks of St. Gilles, he was seized by a mob and publicly burnt, without any legal trial, and also without any interference from the authorities. Peter of Bruys was followed as a reformer by Henry of Cluny, who was condemned at the Council of Pisa (1134), but escaped, and was again imprisoned in 1150 at Toulouse, where he died. His supposed connexion with the famous abbey of Cluny is a mistake; so is the claim that he was an Italian; he seems to have been a Swiss born at Lausanne. Henry followed Peter in protesting against corruptions in the Church, especially the degeneration of the clergy, whom he persuaded to marry their concubines. Unfortunately, as in the case of his predecessor, our knowledge of this reformer is chiefly dependent on information supplied by his enemies, according to which the result of his energetic activity was that the altars were abandoned and the sacraments of the Church despised.⁴ Farther than this we cannot go. We have no record of Henry's

¹ *Hist. et doctrine de la secte des Cathares ou Albigeois*, Strassburg, 1849, ii. 267–270.

² *Adversus Petrobrusianos hæreticos*, PL clxxxix. 719–850.

⁴ *Acta Episc. cenomanensium*, in J. Mabillon, *Vetera Analecta*, Paris, 1723.

specific doctrinal teaching and cannot say that he shared Peter of Bruys' primitive Protestantism. Apparently his protests were on moral rather than on theological grounds. Meanwhile there was a spirit of revolt in the air and a growing desire for a more spiritual religion than was commonly met with. On the other hand, the Council of Tours (1163) excommunicated both the Petrobrusians and the Henricians. The Humiliati have been claimed as precursors of the Waldenses; but they were simply workmen's guilds in Lombardy, many of whose members joined the new religious movements, but who were not themselves formative influences in them.

6. Waldo and the Poor Men of Lyons.—The Christian name Peter commonly attached to the reformer appears to be due to later tradition and usage. His name is given in French as Valdes, in Latin as Valdesius, Valdenius, Gualdensis, in Italian as Waldo. Again we have to turn to the prejudiced account of enemies for most of our information about this reformer. It is from an anonymous writer at Laon, however, that we obtain the story of his conversion.

He had been enriched by the practice of usury when in 1173, after being deeply impressed by the legend of St. Alexius, describing how the saint had given all his property to the poor and gone on a pilgrimage to the Holy Land, he was directed by a theologian to the words of Christ in Mt 19²¹. Thereupon, making over his landed possessions to his wife, and distributing the rest of his property among the poor, he first of all gave himself to the study of the Gospels, the Psalms, and other parts of Scripture as well as some patristic writings, which he got two friendly priests to translate for him into the Romance dialect.

After taking a formal vow of poverty and going through the streets begging his way and preaching his message of self-abnegation, he gathered about him a group of followers, who in turn went about with the same message and became known as the Poor Men of Lyons. They travelled in strict observance of Christ's directions to the Seventy (Lk 10¹⁻⁴), going two and two, without staff or scrip, their feet only in wooden sabots, preaching repentance and exhorting people to return to the purity and simplicity of the primitive Christians. Forbidden to preach by the archbishop, they replied with the apostolic defence in Ac 5²⁹, and later (1179) appealed to the Third Lateran Council, under Alexander III., for recognition, only to have their request scornfully denied—although the pope himself had received Waldo kindly and he is said to have been secretly ordained by one of the cardinals. Daring to persist in their preaching, they were put under the ban at the Council of Verona (1184), presided over by Pope Lucius III. They had no wish to break off from the Church, nor did they imagine that they were opposing its doctrine, ritual, or government. They claimed to be loyal sons of the Church, called to lead their erring brethren back to the ways of their ancestors, and this entirely as a practical reformation of life and conduct. Nevertheless their refusal either to recant or to be silent and their condemnation by the ecclesiastical authorities forced them into a position tantamount to open rebellion. Then this condemnation, followed by an edict of Barbarossa, drove the Poor Men of Lyons out of the city and scattered them abroad, only however to spread the seed of their message the more effectually through Southern Europe. Thus they found their way into Provence, Dauphiné, the valleys of Piedmont, Lombardy, Lorraine, Flanders, Picardy, Germany, Spain, and even as far as England. Since Waldo and his followers had not been condemned for any doctrinal heresy, but only for a breach of discipline in preaching without ecclesiastical authority, strictly speaking they should have been prosecuted as schismatics rather than as heretics. Nevertheless the determined opposition with which they were met implies that their free handling of Scripture gave offence to the theologians, and in point of fact, like the followers of Peter and Henry, they were denounced as heretics. They had their own ministers (called

ministri), chosen annually for the administration of the communion, which was only once a year. Waldo remained at the head of the community (*societas*) till his death, selected and ordained the ministers, and admitted the new members, though he did not claim to be a bishop. The conditions of membership, called 'conversion,' were renunciation of private property and an ascetic life, separation of husbands from wives, and three days' fast in the week. It is said that they repudiated indulgences, purgatory, and masses for the dead, and denied the efficacy of the sacraments administered by unworthy priests. If so, they certainly would be deemed heretics. But the question of the full contents of their preaching is obscure. A literal application of the teachings of Christ contained in the Gospels was its chief theme, as it had been that of their founder, and, they being for the most part simple folk, without any theological training, it would be pedantic to try to fix any definite theology upon them. We do not know much about the later days of Waldo; he died in Bohemia in the year 1217.

7. The fusion.—An inquiry into the origin of the Waldensian Church brings us to the result that it grew out of a fusion of the work of Waldo and the Poor Men of Lyons with the movements originated by Arnold of Brescia, Peter of Bruys, and Henry 'of Cluny.' It came to contain elements in the teaching of these four leaders, and it rounded into a definite form and ripened into a distinctly organized Church with its own specific teaching in parts where their fourfold influence had been felt, and this not till the latest and most vigorous of these movements, that of Waldo, came into contact with the earlier types. Thus, while the old Waldensian claim to primitive and even apostolic antiquity is abandoned, and it cannot be maintained that Waldo found a Church of evangelical teaching in the Vaudois valleys ready to welcome him and learnt more from it than he imparted to it, neither is it right to say that the Waldenses are simply the followers of Waldo of Lyons. It does not appear that he simply founded the community *de novo*, or that its evangelical and Protestant character is entirely due to his influence. The ideas were in the air, the spirit was alive and awake, when Waldo and his Poor Men came with apostolic fervour to embrace them and blend them with their own version of the teaching of Jesus. There were Arnoldists, Petrobrusians, and Henricians before Waldo, existing as scattered religionists. But it was his movement that gathered in the harvest of their lives and brought about the formation of a Waldensian Church.

II. MEDIEVAL PERIOD.—Disputations in 1175-76 between the barbes Olivier and Sicard and their bishop Montpeyroux having alarmed the neighbouring clergy, two or three years later the pope, Alexander III., sent the cardinal of St. Chrysogone, Henry of Cîteaux, and Reginald, bishop of Bath, then on his way to the Lateran Council, accompanied by the monk Walter Mapes and the priest Raymond of Daventry, to Toulouse to inquire into the matter. Two barbes came there with safe conducts, Bernard of Raymond and Raymond of Baimiac, to be examined by John of Bellesmains, bishop of Poitiers, and then to Narbonne to be examined by Bernard of Fontcaude, under the presidentship of the English priest Raymond of Daventry. It is this Raymond who first uses the name 'Waldenses' (*Vallenses*)—as far as it can be traced back—in his sentence of condemnation, which must be dated 1179 at latest, because, as already said, Raymond was then on his way to the Lateran Council as an attendant of the bishop of Bath. The next year Bernard of Fontcaude wrote a book entitled *Adversus Vallenses*

et Arianos.¹ It seems that these discussions arose out of the union of the Petrobrusians and Henricians with the Poor Men of Lyons in Provence. About the same time Waldo's followers united with the Arnaldists in Lombardy. Thus the Waldenses of France and Italy were united, and their union was cemented by persecution. A sentence of excommunication by the Council of Verona cleared the remaining followers of Waldo out of Lyons and drove them to Provence, Dauphiné, the valleys of Piedmont, Lombardy, and some even to Germany. So numerous had they become in Provence that Innocent III. sent his best legates to suppress them in the years 1198, 1201, and 1203, on the third occasion including in his embassy a Spanish bishop and the great St. Dominic, who conducted a succession of disputations with little result till 1207, when the legate Peter of Châteauneuf was killed. Two years later the pope had recourse to a crusade. In 1210 the emperor Otho ordered the archbishop of Turin to drive the Waldenses out of his diocese, and in 1220 the Statutes of Pignerol forbade the inhabitants to harbour them. Some fled to Picardy, and Philip Augustus drove them on to Flanders. Some came to Mayence and Bingen, where 50 were burnt in 1232. They were seen early in Spain, condemned by Church councils, and harried by three of the kings. In 1237 Pope Gregory IX. sent a bull to the archbishop of Tarragona which resulted in fifteen of the heretics being burnt, King Ferdinand himself casting wood on the fire. In course of time these Spanish Waldenses were exterminated. In this century Waldensian churches in Germany sent candidates for the ministry to study at a Waldensian college in Milan. Martyrs to their faith suffered death in Germany during the two following centuries. Bohemia, where Waldo died, became an important field of Waldensian activity. Forty years after the founder's death the inquisitor of Passau named 42 places as nests of the heresy. The king Otakar started persecution, which became most severe in 1335 under Pope Benedict XII. The rise of the Hussite movement led to a fusion of some of the two groups of reformers under the name of Taborites, the most famous of whom was the barbe Frederic Reiser, who spent 25 years in visitations among the Waldenses in Bohemia and Austria and was burnt at Strassburg in 1458. Austria had been reached as early as the 13th cent., and in 1315 the inquisitor of Krems denounced 36 localities as infected with the heresy and secured the burning of 130 martyrs, the most illustrious of whom was the bishop Neumeister, who was burnt at Vienna; he is said to have declared that there were more than 80,000 Waldenses in the duchy of Austria! The end of this century witnessed a terrible persecution in Styria. Meanwhile the movement was spreading in Italy under an organized itinerant mission, the missionaries travelling as pedlars and preaching over many districts. They prospered especially at Milan, where they had a college under John of Ronco, who was appointed to the headship for life, in spite of Waldo's disapproval, which resulted in a division into two groups, the French group and the Italian and German group. The Lombards appointed their own chief pastor (*prepositus*), and he, as well as their ministers (*ministri*), held office for life, while Waldo and the French Waldenses on his authority elected annual leaders to administer the Lord's Supper and serve as pastors. Another and more vital division between the two parties arose out of the teaching of the Italian Waldenses that the sacraments could not be efficacious if administered by priests of unworthy character, while the French Waldenses did not accept this

¹ See Gay, *Hist. des Vaudois*, p. 16, n. 1.

view. Holding the Roman Catholic priests to be morally wrong in many of their practices, because unscriptural, the Italians repudiated all their sacraments. At the same time this branch of the Waldenses insisted most strongly on close adhesion to NT teaching and practice generally and on rejection of everything in the Church which lacked that authority. Thus they were the more thoroughgoing anti-Romanists. In May 1217 six members of the two parties met at Bergamo to draw up terms of agreement, but failed (1) on the question of the salvation of Waldo, which the Lombards made conditional only on his repentance of his wrong-doing in condemning their views, while the French regarded it as absolute; (2) on the question of the validity of sacraments administered by unworthy ministers, denied by the Italians, allowed by the French. Nevertheless fraternal intercourse came to be established in course of time between these two branches of Waldenses. In the 15th cent. there was a very influential number of the Waldenses in central Italy. The Inquisition records reveal the existence of groups throughout the whole of this region. In Calabria the Waldenses from Piedmont, who had been sent for to cultivate a great estate, proved themselves most effective missionaries, winning over most of the population of the district. These converts obtained exceptional privileges of religious liberty and flourished for 250 years, after which they were almost exterminated by a wholesale persecution.

While the French Waldenses seem to have developed the episcopal form of government with the three orders—bishops, priests, and deacons—in spite of Waldo's greater simplicity of ministerial functions, the Italians worked out more of a presbyterian type of church, each church being under a pastor with whom was associated in government a consistory of laymen, and a synod met once a year composed of an equal number of ministerial and lay members.

The valleys on the Italian side of the Cottian Alps now became the centre and chief home of these Waldenses, so that in course of time their very name (in French 'Vaudois') was regarded as geographical, and it was asserted that Waldo took his surname from that of the inhabitants of this district after joining their religious movement, whereas later researches have shown that there is no justification for this view, and it must be admitted that the name of the Church is derived from that of the founder of the society of the Poor Men of Lyons. In the 15th cent. these valleys came under the rule of the duke of Savoy. Then followed a time of severe persecution. In 1434 its violence drove numbers to emigrate. The inquisitor Acquapendente visited the valley of Luserna in 1475, and, disapproving of the religious views and practices of its inhabitants, roused their overlords to compel submission to his orders, with the result that a few years later there was a rebellion which led in 1484 to the interference of Duke Charles I., who was able to bring about a peaceful arrangement between the two parties. The first serious attack with armed forces took place under Philip II., who became regent of the duchy of Savoy in 1490, and duke in 1496. It was in 1494, during his regency, that Philip launched an expedition against the Waldenses of the Luserna valley, only to meet with so disastrous a defeat that he at once made peace with them, guaranteeing them liberty for 40 years. It is not easy to be clear as to the theological views of the Waldenses during this period. The notion that, when the Reformation broke out, the Protestants were surprised to find their ideas anticipated by the inhabitants of the Alpine valleys, who had pre

served them from primitive times, proves to be a delusion. When we do meet with a Waldensian statement of belief, this is subsequent to the Reformation and characterized by doctrines and phrases distinctive of Swiss and German theologians of that movement. The earlier Protestantism was partly negative, in the rejection of Roman Catholic teachings and practices which could not be justified by the NT, and, in so far as it was positive, a return to the simplicity and spirituality of worship believed to have been characteristic of the primitive Church. Waldo and his immediate followers relied mainly on the Gospels. The ordinance of poverty thought to be required by the teachings of Christ was not universally adopted, nor did it long continue in operation. On the other hand, the Pauline theology, so emphatically and elaborately taught both by Luther and by Calvin, does not appear to have been brought forward by these earlier Protestants. There was no tendency among them to elaborate a system of theology. The barbes were drawn for the most part from the peasantry, and the college at Milan in which they were trained had to begin with the most elementary instruction in reading and writing. The great requisite was ability to read the Gospels and familiarity with their contents. Here we have the religious teaching of the mediæval Waldenses.

III. REFORMATION PERIOD.—I. First contact with the Protestants.—When the Reformation broke out the only organized opponents of the papacy on the Continent were the Waldenses and the later Hussites, who were called the Bohemian Brethren, but whom the Protestants as well as Roman Catholics designated Waldenses. In 1522 these Bohemians sent two of their ministers on a visit to Martin Luther with a message of congratulation and encouragement, and ten years later they sent a confession of faith, entitled *Apologia veræ doctrinæ eorum qui vulgo appellantur Valdenses*, with a eulogistic preface. Subsequently communications were maintained by the missions of successive deputations. In 1540 the Bohemian Brethren sent a deputation to confer with Calvin in Strassburg. Driven out of their own country in 1548, they took refuge in Poland, where they united with the Protestant churches which they found there. Calvin then wrote to the Reformed churches of Poland, 'I hope for every kind of good from your union with the Waldenses (avec les Vaudois).'¹ Meanwhile the churches of the Alpine valleys took steps to come into contact with the new reforming movement, and in 1526 the synod of Laus (Pragela), in which 140 barbes took part, having received confusing reports, sent the barbes Martin Gonin and Guido of Calabria both to Switzerland and to Germany to make inquiries and bring back some of the Protestant writings.

Their report and the literature which they circulated among the churches helped to draw them into contact with the Reformers. Four years later the synod which met at Marindol decided to consult the principal Swiss Reformers on several points of doctrine, organization, and discipline, for which purpose they sent two barbes, George Morel and Peter Masson, who visited and conferred with Farel and Haller, and at Basel received a fine response to their questions from Ecolampadius, who then sent them on to Strassburg, where they were well received by Bucer, who gave them an equally full and explicit reply. Morel published the Waldensian questions and the Reformers' replies in a work now at Dublin.² The same year the two delegates returned by way of France, when Masson was put to death at Dijon; but Morel was able to bring back their report to the Waldensian churches. This was discussed at a synod in Piedmont, held apparently in 1531. The discussion resulted in a division of opinion, and the formation of two parties, known respectively as 'Conservators' and 'Innovators,' the former holding on to their old position, the latter accepting the new Protestant teaching. This indisputable fact affords clear evidence that the pre-Reformation Waldenses were not simply hidden Protestants, cherishing the doctrine subsequently

held by the Swiss and German Reformers. On the other hand, like the Hussites, with whom they practically coalesced in Hungary, and the descendants of the Lollards still in hiding from persecution in England, they were ready to fraternize with the new opponents of the papacy, though some did not adopt all their views. Liberation from the yoke of Rome, the abandonment of mediæval ritual which was regarded as idolatrous, spirituality of worship, and the popular use of the Scriptures in the vernacular as the authoritative standard of faith and discipline were Waldensian characteristics, which found welcome support from the powerful new Protestantism that was making so great a stir in the world.

2. Association with the Swiss Reformation.—The differences of opinion among the Waldenses of the valleys and their division into two parties on the question of accepting the Protestant views which their delegates reported to them led to the desire for fuller knowledge and conference with leading Reformers. With this end in view a general synod was convoked in 1532 under the chestnuts of Chamforans at Angrogna, in which the Reformers Farel, Saunier, and Olivétan met a large assembly containing laymen as well as barbes. Three recommendations, which rose out of the previous consultations with Ecolampadius and Farel, were then read: viz. (1) the adoption of public worship by the Waldensian churches instead of secret meetings, (2) an absolute condemnation of the custom of some of the Waldenses in attending Roman Catholic services, (3) an acceptance of the Reformers' views on predestination, good works, oaths, the denial of obligatory confession, Sunday fasts, marriage of the clergy, and the two sacraments. Farel's enthusiastic eloquence carried the great majority of the assembly with him in a vote for adopting these propositions, though some of the barbes protested against them on two grounds, (1) as unnecessary, (2) as casting a reflexion on those who had hitherto led the churches happily. Olivétan remained for three years travelling among the valleys and setting up schools. Meanwhile—the next year after the synod of Chamforans—two barbes who had been conferring with their brethren in Bohemia returned with a long letter conjuring the Waldenses of the valleys to weigh well the question of adhesion to the proposals of the foreign teachers. Accordingly a synod was at once called at Prali to reconsider the question; but it adhered to the previous decision, with only a handful of dissentients. The chief differences between the Waldenses and the Swiss Protestants had been based on the question of the degree in which everything must be determined by the authority of Scripture. Both parties held, as against the Catholic position, that this was the one supreme authority; but, while the Swiss theologians would allow of nothing which was not expressly taught in the Bible, the Waldenses had held that only those tenets and practices of Catholicism which were expressly contrary to Scripture need be condemned. But now the closer adhesion to the Swiss Reformed Church tended to assimilation of views and practices and subsequently to the adoption of Calvinism.

3. Olivétan's Bible.—One important and lasting outcome of the friendly intercourse between the Waldenses and the Swiss Reformers was the production of the first Protestant French translation of the Bible. Waldo had translated some portions into the Romance vernacular dialect; but most of his publications had been destroyed by the Roman Catholic authorities. In the conference at Chamforans, Farel and Saunier urged the Waldensian barbes to bring out a new translation of the whole Bible in the French language. This work the barbes persuaded Olivétan to undertake. Olivétan was a cousin of Calvin; he had been educated at the university of Paris and at Orleans; on accepting Protestantism he had escaped to Strassburg, and later he had come to Geneva. He accepted the task, and completed it in 1535. Considered better in the OT portion than in the NT, Olivétan's version is the basis of the later French versions, or rather revisions.

4. The new order.—In course of time the Waldenses on the French side of the Alps, who for the most part consisted of Conservators, were fused into French Protestantism. Then persecu-

¹ Gay, p. 49.

² J. H. Todd, *Books of the Vaudois preserved in Trinity College, Dublin.*

tion in Bohemia and also in Southern Italy nearly exterminated the churches of this communion in those parts, leaving Piedmont and the Italian valleys of the Cottian Alps, the Vaudois country, as its only important habitat, though this very persecution scattered many of its victims among the Swiss and German Protestant states. It took some 20 or 30 years to supply adequately trained ministers and organize the worship, discipline, and teaching of the Waldensian Church in the valleys on the lines agreed upon in the conference with the Swiss Reformers. The linguistic difficulty was one cause of delay. The Swiss theologians could preach only in French, the Italian ministers, educated in the college at Milan, only in Italian. Neither knew the Romance dialect which was used in the villages of the valleys. Instead of taking the course usually adopted by missionaries and themselves learning the provincial dialect, the French- and Italian-speaking teachers induced the peasants to learn the languages of these teachers, so that they could be used in the church services. Until this curious change had been effectively completed, the movement could not make much progress. Meanwhile Piedmont came under the power of France. This was in 1536—under Francis I.; and the French domination lasted till 1559. The first governor appointed by the French king (1537) was William of Fürstenberg, a resolute Protestant, who proved friendly to the Waldenses, and, on being sent into Germany, left his secretary Farel, a brother of the Reformer, in charge of the valley of Luserna. This man set to work vigorously furthering the Reformation and abolishing the Mass which the Catholics were still celebrating at Angrogna—an act of violence which provoked reprisals on the part of René of Montejean, the governor of Turin, who sent soldiers into the valley, sacked its villages, and imprisoned the barbes. The governor, returning to the province in 1539, released them, and Francis then left the Waldenses of Piedmont in peace for seven years, while he was persecuting those on the French side of the Alps. Henry II., succeeding to the throne of France in 1547, was also severe on the northern Waldenses; but Caraciolo, his governor of Piedmont, was friendly to them, and persecution did not break out in this district till 1550, when the inquisitor Giacomelli sent for the syndic of Angrogna and imprisoned him at Turin. War put a stop to further proceedings. In 1555 a number of fully trained ministers came from Switzerland to take charge of the congregations in the valleys, together with some Swiss pastors who travelled about inducting them and regulating the new order of worship in the French language, also a colporteur who distributed the service books among the villages. Many 'temples' were built, and by 1556 the new form of worship was being conducted in all the parishes. Thereupon two commissioners were dispatched from Turin with directions to stop these services. The villagers disobeyed the edict, and an arrest of the pastors was ordered. But proceedings were stopped owing to the influence of Swiss and German authorities with the French Government. Thus another respite was secured, during which the Waldensian Church was being fully organized and equipped with capable ministers. This is a significant fact, in view of the terrible times that were to follow. The discipline and leadership now secured proved to be invaluable in arming the Waldenses to make one of the most magnificent stands for religious liberty ever recorded in the annals of history.

IV. PERIOD OF GREAT PERSECUTIONS (1540-1690).—I. Persecution of early Protestants.—Although the Waldenses had been liable to persecu-

tion as heretics from the first and had suffered from some severe outbreaks previous to the Reformation, there were times of lenient treatment—a fact which, if not logical, was indicative of the absence of rigorous lines of demarcation. But now their open co-operation with the Swiss and German Protestants allowed of no ambiguity as to their quarrel with Rome, and consequently stern measures of oppression were taken against them. The political arrangement formally adopted in Germany as a refuge from civil war and practically operative in other countries left the religion of each state to be that of its prince or other ruling authority. In democratic and republican Switzerland this worked smoothly, since it meant the dominance of the faith of the majority. But it was otherwise with a country such as France under an autocratic ruler, and accordingly in 1534 there was a wholesale destruction of the Waldensian churches of Provence. Piedmont was subject to the rule of the duke of Savoy, and therefore it depended on the will of that prince, or sometimes rather on that of his overlord, whether the practices of the Waldensian Church in that province should be sanctioned or measures taken to suppress them. Another feature of the consequent contest is the fact that it was by no means one-sided. Those sturdy mountaineers were not meek martyrs led as lambs to the slaughter. They carried the war into the enemy's camp, and the first outbreak of persecution directed against them was an act of reprisal for the suppression of the Mass at Angrogna. Then the Waldenses became in a literal sense a Church militant, taking to the field in arms and fighting valiantly for their liberty of worship, with hardy heroism and at times with brilliant success. The outstanding personality of this period is Scipione Lentolo, born at Naples, but said to have come from a Roman patrician family, who became a priest, a doctor of theology, and preacher at Venice and Ferrara, at the latter of which places he was converted to Protestantism. Accused of heresy for his preaching at Lucca, he was imprisoned and sent to Rome. Escaping first to Sicily and then to Geneva, he there came in contact with Calvin, who appointed him pastor of St. Jean in the Waldensian country. Not confining his activity to this parish, he visited other valleys, and even went down to the plain of Piedmont on an evangelizing tour. When persecution broke out, he got refuge for fugitives in the valleys and encouraged the people everywhere to stand true to their faith. Lentolo is the author of the earliest history of the Waldenses and the chief authority for that of the persecution of his own times. This history was virtually unknown till in 1897 Comba called attention to a copy of it in the Berne Library; eight years later it was reprinted and published, and thus a flood of light was thrown on the persecution with which the author was so closely connected. Expelled from the valleys in 1566, he ministered in the Engadine and carried on literary work till his death in 1599.

The principal persecution with which Lentolo was brought into contact led to 'the war of della Trinità.' Philibert, the duke of Savoy at this time, though personally averse to the molestation of his mountaineer subjects, was compelled by the papal nuncio, backed up by France and Spain, to issue an edict requiring them to attend the Mass and forbidding their holding Waldensian services. On their disobeying this order, he sent an army under the command of della Trinità to enforce it. This commander, arriving in November 1560, met with such strenuous opposition that he consented to allow a deputation of barbes to go to the duke and present their plea for religious liberty, while he went into winter quarters at La Tour. The

deputation was treacherously treated at Turin, in order to compel them to abjure their faith. Accordingly, on their return in the spring, the indignant mountaineers rose in a mass and repulsed every attack of della Trinità at Luserna, at Angrogna, at Prali, with the result that Philibert was glad to come to terms with the heretics, leaving them at peace to carry on their Protestant services (5th June 1561). At the same time a persecution to the extent of extermination was carried out by Spanish troops at the instigation of the grand inquisitor, Michele Ghislieri (later Pope Pius v.), in Calabria, where, in spite of wholesale slaughter in the 13th cent., some representatives of the early Waldenses had persisted in maintaining the faith of their fathers, and had now welcomed the new Protestant movement. Two thousand were put to death and 1600 imprisoned. In Piedmont, after this, attempts were made successively by missions of Jesuits and by Capuchin friars, sometimes with the aid of soldiers, to bring the mountain villagers back into the fold of the Church; there followed several local persecutions, exactions of fines for supposed offences, and violent seizures of churches and even a sanguinary war in the year 1624, in which both sides suffered severely. The most important Waldensian leader of this time was Peter Gilles, an inspiring preacher and vigorous polemical writer, who died in 1644.

2. **The great persecution under Louis XIV.**—The determined loyalty of the Waldenses to their faith, combined with their amazing military prowess and the reluctance of the duke of Savoy to harass his mountaineer subjects—a policy rarely undertaken excepting under pressure from France—had secured them treaties of peace with liberty of worship. For a quarter of a century they were very little molested. In 1650 Charles Emmanuel II., the young duke of Savoy (only 15 years old), came to the throne. Behind him was the real power, his mother the duchess, daughter of Henry IV. and Mary de Medici, granddaughter of the notorious Catherine de Medici, the author of the Massacre of St. Bartholomew. Thereupon a 'Council of the Propagation of the Faith,' consisting of the chief councillors of State and Church dignitaries, was established in Turin. Five years later there was issued the 'Decree of Gastado,' ordering all Waldensian families in the plain back into the mountains and the sale of their lands within 20 days, unless they would renounce their Protestantism. This was in the depth of winter, and much suffering was involved, which they endured courageously. A little later (17th April 1655) the marquis of Pianezza was dispatched with an army of 15,000 men to La Torre—the key of the valleys—although at this very time there were deputies in Turin attempting to negotiate terms of settlement. The Waldenses first retreated to the mountains. But, on their assailants offering to treat with them, they opened the passes, and some of them fraternized with the soldiers, eating at the same tables. This was the prelude to wholesale massacre throughout the valleys of Luserna and Angrogna. Jean Leger, the author of the monumental history of the Waldenses, is the leading barbe of this period and the inspirer of his people. He enumerates 1712 martyrs. A great number who had hidden in a cave at Castelluzzo, the castle-like mountain above La Torre which dominates the entrance to the valleys, were dragged out and flung down the precipice. These were the

'slaughtered saints, whose bones
Lie scattered on the Alpine mountains cold . . .
Slain by the bloody Piemontese, that rolled
Mother with infant down the rocks'

of Milton's famous sonnet. This was before the

revocation of the Edict of Nantes, and it sent a shock of horror through Europe. Cromwell proclaimed a fast and got Milton to draw up a letter to the king of France and the Protestant princes. He also sent Sir Samuel Morland to the duke of Savoy to convey his vigorous protest by word of mouth. Morland visited the valleys and brought back information together with some Waldensian books which are now deposited at Cambridge. His published results of investigations on the spot are one of our historical sources for this period.

The interference of so powerful a ruler as Cromwell had an immediate effect. Mazarin directed the duke to put an end to the persecution and grant an amnesty to the Protestants. This was settled on 18th August in the 'Patentes de grâce' of Pignerol. But it did not result in a real or lasting peace inasmuch as the Piedmontese did not respect its terms, and accordingly in 1663 they rose in rebellion. Contrary to the treaty stipulations, the duke's authorities began to restore the fort at La Torre, ordered all foreign pastors out of the province, commanded the principal heads of families to answer charges of disloyalty, and, on their failing to appear, condemned them to death in their absence, and compelled Leger to escape out of the country by ordering his execution. The governor of the fortress of La Torre, Count Burborneo di Bagnolo, repeatedly sent troops into the valley of Luserna, and their devastations drove the inhabitants into the mountains. Janavel and a body of outlaws, called banditti by the Piedmontese, took up the cause of the persecuted villagers and repeatedly attacked the duke's soldiers. On 6th August the duke issued an edict condemning all the Waldenses to death as rebels. The war continued till the end of the year, by which time Janavel had 2000 followers, who occupied a number of advantageous positions. Meanwhile the persecuted people sent messengers to Switzerland and Holland begging for help, and their great leader Leger made good use of his enforced absence from home in travelling about to urge the plea. The duke got little satisfaction from the war. At Angrogna, after his soldiers had been ravaging the neighbouring villages, he lost 600 men and the two captains Sanfront and della Trinità. This had been a dishonourable expedition, because at the very time he was pledged to a truce while conducting negotiations with some Waldensian deputies, aided by an embassy of Swiss mediators at Turin. The public conferences with these emissaries from Switzerland were followed by a month of private discussion, till at length, on 14th Feb. 1664, the ducal government issued the 'Patente of Turin.' This covenant granted an amnesty to all the Waldenses except their victorious leader Janavel, who was ordered out of the country, and liberty of worship in their own way without molestation, except at St. Jean (Leger's parish), where the Protestant worship was prohibited. It is much to the credit of Janavel that this hero of the war consented to his own exile without protest for the sake of a peaceful settlement of his people. Twenty years of liberty now followed.

3. **The exile.**—In the year after the revocation of the Edict of Nantes (*i.e.* 1686) Louis XIV. sent a demand to his cousin Victor Amadeus II., the duke of Savoy, that he would treat his Protestant subjects as the French king was treating the Huguenots. He found some ground for this interference with a foreign government in the fact that fugitives from his terrible persecution were taking refuge in the Waldensian valleys. The result was that the duke ordered the Waldenses to discontinue their religious meetings on pain of death and the confiscation of their

property; their churches were to be razed to the ground; their pastors and schoolmasters to leave within fifteen days under pain of death and confiscation, and to renounce all claim on a pension; and all their children to be educated as Roman Catholics. The Waldenses, assembling at Angrogna, dispatched two envoys to Turin to plead for their pledged rights; but they were refused an audience. On hearing of the terrible plight of their co-religionists, the Swiss Protestants held a conference at Baden, which decided to send envoys to Turin on behalf of the Waldenses. Accordingly the brothers De Muralt, selected for this mission, went to that city and obtained an audience with the duke on 13th March. The result was a proposal of Victor that his Protestant subjects should be allowed to emigrate to Switzerland. It was with the utmost difficulty that the De Muralts persuaded the mountaineers to accept this suggestion of voluntary exile (in an assembly at Serre, 4th April). On 9th April the duke signed a decree permitting the emigration. In spite of this fact, some of the Waldenses who had agreed to accept it were arrested and imprisoned. Not believing that the decree was being adhered to, the people prepared to resist the authorities to the last. Then, with the aid of soldiers sent by Louis XIV. as well as his own men, Victor sent expeditions up the Luserna and Perosa valleys. By the end of the year 9000 had been killed and 12,000 carried off as prisoners, many of them to perish in the dungeons of Piedmont. 'The valleys are deserted,' wrote Catinat, the leader of the invading troops, at the completion of his work. Among those who escaped to Switzerland was Henri Arnaud, who was to be the leader of the return from exile and whose narrative is our principal authority for this period. Victor declared all the property of the Waldenses confiscated, and he reckoned the heretics to be extirpated. But there were 200 fugitives lurking in the mountain caves, who afterwards descended at times to the terror of the immigrants from the plain who had taken possession of their homes. The duke sent messengers bidding them escape to Switzerland, but after sending these to consult Janavel and Arnaud they declared that they would resist till death. Victor had no mind to keep up the war with these brave mountaineers, and he agreed to let them go to Switzerland with their arms and baggage, to allow their imprisoned relatives to accompany them, and on their arrival there to permit all the imprisoned Waldenses, for whose liberation they had been holding out, when offered an earlier opportunity of escape, to follow them. The persistent guerilla warfare of this handful had secured the release of all the surviving Waldenses. Early in 1687 the prisons were opened, and the prisoners, now reduced to 3000, set off on their terrible journey across the Alps for Geneva, by the Mont Cenis route, a journey which occupied on an average twelve days, during which many perished in the snow. But, in spite of the protest of the Swiss against the flagrant breach of treaty, children under twelve years of age were detained to be educated as Roman Catholics. The fugitives came in dribbles, and the last detachment did not arrive till the end of August. Their reception at Geneva was very hospitable, and by degrees they were settled in various Swiss towns and generously supported by Holland, England, and Germany. But they were anxious to return to their valleys, and the duke of Savoy was so much annoyed at one or two futile attempts that he induced the Swiss authorities to have them removed farther away, and arrangements were made by which they were received in Brandenburg, Prussia, Württemberg, and the Palatinate.

4. The return.—In spite of their scattered condition in the centre and north of Europe, the Waldenses were able to creep back and gather in Noyon on the Lake of Geneva to the number of nearly 1000 fighting men with their wives and families; and on the evening of 16th Aug. 1689, eluding the vigilance of the Swiss authorities, they embarked in boats hired for the purpose and crossed to Savoy, led by Turel de Die, in the unexplained absence of their appointed captain Bourgeois, and accompanied by Arnaud and two other pastors, one of whom, however, Cyrus Chyon, was arrested at the moment of departure. Six days' travel by mountain paths brought them to Mont Cenis, and four more over and down to the valley of the Jaillon. There—to quote Arnaud's figures—they were met by 2500 French soldiers under the command of the Marquis of Larry, whom they defeated with the loss of 600 men, while the Waldenses only lost 15 killed and had 12 wounded in the battle, after as many as 116 lives had been sacrificed to the hardships of the journey. They entrenched themselves at La Balsiglia at the back of the valley of San Martino for the winter. Arnaud was now both their pastor and their commander in the field. Mountain warfare was carried on throughout the spring of 1690, and the returned exiles gradually succeeded in regaining possession of their valleys. Then a combination of England, Holland, Germany, and Spain so crippled the power of France that the duke of Savoy was glad to make overtures to the Waldenses. But no satisfactory arrangement was reached as yet. Meanwhile fresh detachments were still returning from the more remote parts of their exile, and by the end of 1690 Arnaud had succeeded in settling them in their valleys. They had to wait four years for a definite edict regularizing their position and with it recognizing their religious liberty. This was issued by Victor on 23rd May 1694. The pope, Innocent XII., denounced the edict, whereupon the senate in Turin repudiated the papal decree and forbade publication of it in the duchy under penalty of death. Though now enjoying freedom in their valleys, the returned exiles would have been in sore straits if it had not been for the relief which was sent to them from Holland and England. William and Mary, and later on Queen Anne, interested themselves warmly in their heroic fellow-Protestants, as Cromwell had done in a previous generation.

V. LATER HISTORY.—1. Policy of Victor Amadeus (1694-1730).—Although the Waldenses now had their homes and religious liberty guaranteed by a decree of the duke, they were still often tyrannically dealt with. Victor had broken with Louis XIV. and become allied with William III. of England by the treaty of the Hague. The Waldenses had then contributed soldiers to a joint military expedition, one result of which was that Val Perosa was taken over from France and incorporated in the duchy. During the war the Waldenses had enjoyed religious liberty and had been able to hold their synods without any hindrance from the Government; in 1697 they petitioned the duke to allow their co-religionists of Val Perosa to be incorporated in their Church. This was refused, and these people had to leave the country in order to obtain freedom for their religion, going to Germany, where they founded a colony at Goelshheim. The next year the duke ordered all French Protestants in his dominions to leave the country within two months under penalty of death. The consequence was the exile of 2383 persons, including seven pastors. Changeable as a weather-cock, on the outbreak of the war of the Spanish succession, Victor wrote personal letters to the Waldensian

pastors urging them to encourage recruiting in his service and even appealed to the Camisards and other French Protestants, whom he had banished five years before, to return and join his army. When the war was over, those French Protestants who had responded to his invitation were again expelled, and in 1707 he even sent back the Swiss parsons whom he had welcomed only eight years earlier. In 1708 Victor took possession of the valley of Pragela, whereupon its Protestant inhabitants were delighted to have the duke's permission for a visitation of Waldensian pastors; but he soon changed his policy and ordered these people to observe the Roman Catholic festivals. His policy all along was opportunist, with a strong leaning to the Roman Catholic side when he was free from the necessity of conciliating his Protestant subjects. There was no depending on his word. When the people of Pragela protested against his later treatment of them, the leading Waldenses in the valley were arrested and imprisoned; in 1716 the Protestant schools were closed; in 1720 the Reformed worship was absolutely forbidden in the valley. From time to time there was imprisonment of recalcitrants till the climax was reached in 1730, when, in spite of the intercession of Frederic William I. of Prussia, all the Waldenses in the valley were ordered to abjure their faith or leave the country. They elected the second course, and by the end of the year 800 exiles had gone over into Switzerland.

2. **The 18th century.**—During the remainder of the century, until Piedmont felt the effect of the French Revolution, the Waldenses had no eventful experiences. Though guaranteed rights of religious liberty, they suffered from time to time from exactions and restrictions by the Government, which showed that they were only allowed to exist on sufferance; and, when they complained against local acts of injustice, their complaints met with little consideration. Thus in 1733 a decree was issued forbidding them to leave their valleys; in 1740 a hospice was founded at Pignerol for the education of Waldensian children; in 1748 a bishop was appointed there to work for their conversion to Rome, and the *Opera dei prestiti* which exists in the present day was then founded, in order to assist Roman Catholics to buy land from the Waldenses; in 1756 they were forbidden to hold meetings outside the temples; kidnapping of children was a common and growing practice. Gay reprints an elaborate document entitled *Compendio degli edditti concernenti i Valdesi*, containing a host of vexations, enactments, and restrictions which emanated from the senate.¹ Meanwhile, in common with Protestantism throughout the rest of Europe, the religion of the Waldenses now suffered from decline of spiritual vigour. The Arian movement in England affected some of the pastors, and after that the Continental 'rationalism.' During this period they received pecuniary help from Holland and from England under encouragement from George II. and George III.

3. **Period of the Revolution.**—The Revolution brought an interval of complete religious liberty to the Waldenses owing to the French Republic being established in Piedmont in 1798. On 19th December all civil government authority over the Church was abolished; on 31st December liberty and equality were proclaimed for all kinds of religion, and early in the new year absolute liberty of the press and the abolition of the Inquisition. The Waldenses were unavoidably mixed up with the war of the Revolution when the absence of Napoleon in Egypt enabled the Russians and Austrians to invade Piedmont. After at first siding with the French, to whom

¹ *Hist. des Vaudois*, pp. 152-155.

they owed their liberty, the Protestant mountaineers, driven into a corner, gave the allies a pledge of neutrality. In spite of this agreement, the Austrians availed themselves of the military opportunity to involve the Waldenses in trouble on charges of plotting and collusion with the French and on other accusations. These vexatious proceedings, however, do not justify Gay in describing the action of the Austrians as 'a crusade' against them.¹ During the three and a half years when Lombardy and Piedmont were governed as a republic the chief grievance of the Waldenses was their pastors' loss of pecuniary aid from England owing to their association with the French. But, on receiving a petition from 'the Table'—their central governing body—for assistance, the executive commission issued a decree reducing the Roman Catholic parishes from 28 to 13 and granting the revenues of the suppressed parishes to the Waldensian pastors, and by this means half their salaries were secured. Thus the Church now obtained support from State funds. The valleys had taken over the administration of national property. But, after the establishment of the French Empire, Napoleon issued a decree sequestering this property and so depriving the pastors of the contributions which they had received from them during four years (25th March 1805). The following May, however, when the emperor was at Turin, he granted 'the Table' an audience, when he treated its members very graciously and invited them to present to him a statement of their wishes. Accordingly an open-air meeting was held at St. Jean, which drew up a petition on three points: (1) the grievance of the sequestration of the State funds out of which the pastors' salaries had been made up after the loss of aid from abroad; (2) a request for the application of the Organic law of the Reformed Churches of France to the valleys; (3) a plan or organization for grouping the parishes in five consistorials.² In reply Napoleon agreed to restore the sequestered funds and to allow three consistorials in the valleys. The cringing flattery with which the emperor was approached in this matter, and the painful anxiety shown about the recovery of money grants, do not reflect much credit on the representatives of the heroic Church of Leger and Arnauld and its stand for religious liberty. A further mark of Government favour is seen in the grant of land for the erection of the temple at St. Jean, the Waldensian cathedral, which was dedicated with great *éclat* on 1st Nov. 1806.

4. **19th cent. vicissitudes.**—During the first half of the 19th cent. the Waldensian Church passed through great vicissitudes of fortune. For 34 years, from the fall of Napoleon in 1814 till the Revolution of 1848, it was oppressed under the rule of the king of Sardinia, who actively espoused the papal cause. On Victor Emmanuel I. coming to the throne, the Waldenses of Piedmont sent to Turin a deputation, which had an audience with the king, but obtained no response at the time. Meanwhile the Jesuits had been put in charge of education. The State funds which Napoleon had allowed the pastors to resume were again withdrawn; the only mitigation of the hardship against which the Table protested was a partial remission of dues from the valleys. Charles Felix (1821-31) was much more severe. When the Table asked for an audience at his accession, he insolently answered that all they needed was to become Catholics. It was only after repeated appeals that they were allowed to hold a synod. When the Waldenses reopened their college at La Torre, they were peremptorily ordered to close it again. Charles Albert (1831-48) was also severely re-

¹ P. 164.

² Gay, p. 171.

pressive with the Waldenses till near the end of his reign. Charvay, whom the king appointed bishop of Pignerol in 1835, announced that all the old laws against them should be enforced. When the English ambassador interceded on their behalf, the king ordered them not to appeal to foreigners and forbade the coming of alien visitors among them. All along they were excluded from the universities, the learned professions, and commissions in the army. But at length, even before the Revolution of 1848, the current of European opinion was running so strongly in favour of religious liberty that Charles Albert abandoned his harsh treatment of the Waldenses. On 5th January of that year he granted an audience to the Table, which gratefully acknowledged the legislative reforms and removal of hard enactments he was granting to all his subjects, but which at the same time appealed for relief from the laws especially adverse to their Church. They were well received, and on 17th February the king issued an edict of emancipation, granting the Waldenses the full civil and religious rites enjoyed by other subjects, including access to the public schools and universities, and allowing them to give their Protestant religious teaching in their own schools. The good news was welcomed in the valleys with illuminations and bonfires. A Waldensian congregation was now formed at Turin, and it became a home for refugee Protestants from all parts of Italy. In 1854 there was a division owing to the objection of these refugees to come under the government of the Table and its old rigorous rules. The use of the French language in the services was another ground of complaint. The division spread to other congregations, in which we may regard the malcontents as liberalizers and progressives, and also as protestant Italian patriots in their desire for the use of the Italian language just when a new spirit of a united Italian patriotism was sweeping the country. The result was a split, and the formation of the 'Free Church' (*Chiesa Libera*) of which Luigi Desanctis, a learned and eloquent priest and theologian of the Inquisition at Malta, who had become a convert to Protestantism, was leader. After serving as pastor of this church for ten years he left it, owing to its adoption of J. N. Darby's views—the Plymouth Brethren position, which allows of no stated ministry—rejoined the Waldenses, and became their professor of theology at Florence and the editor of their journal, *Eco della Verità*, till his death in 1869. The chief leader of the Free Church, after Desanctis had left it, was Alessandro Gavazzi, an ex-Barnabite father from Naples, who subsequently became an eloquent hero of Italian emancipation, accompanying Garibaldi as his chaplain and also enthusiastically supporting Victor Emmanuel as 'the only saviour of Italy as Jesus Christ is the only Saviour of sinners.' In 1870 a general assembly of the Free Church was held at Milan, when a simple Biblical confession of faith was drawn up, and the next year another assembly at Florence adopted rules of a constitution recognizing the pastoral office—as against the Plymouth Brethren idea—arranging for annual assemblies, and appointing an evangelization committee. It now took the title 'Unione della chiesa libera in Italia.' Some of the congregations, still adhering to Darby's views, broke off from this body and formed themselves into a community, which they ventured to designate simply 'Chiesa Christiana.' On 1st May 1884, with the exception of these people, the various evangelical congregations in Italy inaugurated an annual evangelical conference with a view to Church unification. Owing to the Baptists and the Methodists not

VOL. XII.—43

altogether agreeing with the position taken up by the Waldenses and the Free Church, the two latter bodies took their own course for coming together on condition that the Free Church adopted the confession and Church order of the Waldenses.

5. Present condition.—The following facts concerning the present condition of the Waldensian Church have been supplied by the Moderator, Signor Ernesto Giampiccoli.

This Church holds its old position in the Alpine valleys, and since 1848 (the year of liberation) it has spread throughout the Peninsula and the Islands. There are now more than 200 towns and villages outside the original valleys where congregations, large or small, have been formed. The full membership of the whole Church amounts to about 25,000; but there is a much larger number of adherents. For their training the ministers spend three years in the theological college at Florence (which is soon to be transferred to Rome) and at least one more year in a foreign university. They are ordained at the annual Synod in Torre Pellice. The Waldensian Church is in the Alliance of Reformed Churches of the Presbyterian order. Besides its mission work in Italy, it has missionaries working in Africa in connexion with the Missions évangéliques de Paris, and also in connexion with the Swedish missions. It maintains four high schools for boys and girls—the only Protestant high schools recognized by the Government—also hospitals, orphanages, and other benevolent institutions. The Waldensian Church is absolutely independent of the State, and it enjoys complete liberty in all branches of its activity. The worship is in the main the same as in the kindred Evangelical Churches of France and Switzerland, the liturgies being almost identical; but there is a tendency to introduce congregational responses in the morning service. Neither the narrower type of Calvinism nor advanced liberalism is to be found in the present teaching of the Church, which is what is commonly known as 'Evangelical.' This Church is still progressing, though slowly. It always has been and still is hampered with financial difficulties, although it receives assistance from abroad and the contributions of its own members are increasing.

LITERATURE.—Among original sources the principal are A. Muston, *Israël des Alpes*, Paris, 1851; J. H. Todd, *The Books of the Vaudois preserved in Trinity College, Dublin*, London, 1865; J. P. Perrin, *Hist. des chrétiens Albigeois*, Geneva, 1618, *Hist. des Vaudois*, do. 1619; J. Leger, *Hist. générale des églises évangéliques de Piémont, ou Vaudoises*, Leyden, 1669; S. Morland, *The Hist. of the Evangelical Churches of the Valleys of Piedmont*, London, 1658; H. Arnaud, *Hist. de la glorieuse rentrée des Vaudois dans leur vallée*, Paris, 1710, Eng. tr., London, 1827. Among later works are W. S. Gilly, *Waldensian Researches during a Second Visit to the Vaudois of Piemont*, London, 1831; A. Blair, *A Hist. of the Waldenses*, 2 vols., Edinburgh, 1833; W. Beattie, *The Waldenses*, London, 1838; A. Monastier, *Hist. de l'église vaudoise . . . jusqu'à nos jours*, 2 vols., Paris, 1847, Eng. tr., London, 1848; J. A. Wylie, *Hist. of the Waldenses*, London, 1880 (a good popular account). But all these books belong to the pre-critical period. The critical history begins with Döllinger and Comba: J. J. I. von Döllinger, *Beiträge zur Sektengeschichte des Mittelalters*, ii., Munich, 1890; Émile Comba, *Hist. des Vaudois*, new ed., Paris, 1898; T. Gay, *Hist. des Vaudois, rejaite d'après les plus récentes recherches*, do. 1912; T. de Cauzons, *Les Vaudois et l'Inquisition*, do. 1908.

WALTER F. ADENEY.

WANG YANG-MING. — Wang Yang-ming (A.D. 1472–1529), known also as Wang Shou-jen, Wang-shen, Wang Peh-an, and Wang Wen-ch'eng, was a Chinese statesman, strategist, reformer, and scholar of note during the Ming dynasty, specifically during the reigns of Hung Chih, Cheng Te, and Chia Ching. Like many other Orientals who had posthumous honours conferred upon them, Wang has had hero-stories associated with his career. In early youth he began to exhibit unusual ability as a student. At twelve he is

reported to have made inquiry of his teacher concerning the most important thing in life. When the latter said, 'Study to become a Chinshih' (an academic degree of about the same rank as the Ph.D.), Wang replied, 'Study to become a sage: that is the first and greatest occupation.' At twenty-one he was decorated with the degree of Chüjen; at twenty-eight he was made Chinshih; and a little later he received the highest academic honour the Government could bestow, the degree of Hanlin.

Having unjustly incurred the hostility of the eunuch Liu Tsing when he was thirty-five, he was sent as a disgraced official into the Government dispatch service in the province of Kweichow. His biographer describes Lungch'ang, where he was stationed, as a resort of venomous snakes and poisonous worms, inhabited by babbling barbarians with whom he could not converse. It was a critical situation: in suspense over his own fate, realizing that at any moment a decree from the capital might order his death, he found his followers one by one falling ill. Nothing daunted, he chopped wood, carried water, and made soft-boiled rice for them, cheering them with songs and stories of home. In view of his own precarious position, he had a sarcophagus made for himself. In the midst of these adversities the chief subject of his meditation was the conduct of a sage under similar circumstances. One night at midnight the great enlightenment came, and suddenly he realized what the sage meant by 'investigating things for the sake of extending knowledge to the utmost.' Overjoyed, he unconsciously called out, and, arising from his couch, paced the floor. 'I was wrong,' he said, 'in looking for fundamental principles in things and affairs. My nature is sufficient to solve all the problems of existence.' From that time on he was a faithful defender of idealism in opposition to the realism of the philosopher Chu, whose commentaries, then as now, were esteemed the final authority.¹

At the age of thirty-nine Wang was restored to honour and promoted to the magistracy in Lulinghsien in Shansi. As time passed he held numerous positions of trust and honour in the Government. He was President of the Court of Ceremonies, Military Governor of Kiangsi, first assistant to the President of the Censorate, President of the Board of War at Nanking, Viceroy of Kwangtung, Kwangsi, Kiangsi, Hunan, and Hupeh, and was made Earl of Hsinchien with the title of 'Master of the Banqueting Office and Pillar of the Government.'

His greatest military campaign was undoubtedly conducted while he was Military Governor of Kiangsi, against the rebellious Prince Ch'en Hao (Prince Ning), who, it was feared, might utilize the down-river current and invade the capital. Wang first sent up several memorials advising the emperor of the rebellion; then by a series of subterfuges he misled the rebellious prince, finally engaging him in battle near Poyang Lake at Huangchiatu and Patzunao, and taking him prisoner of war. His success aroused the jealousy of several officials, to which we may ascribe the fact that his philosophic point of view was attacked and branded as heterodox.

It was not, however, as strategist and statesman that Wang made his largest contribution to human welfare, but rather as a great moral reformer, who may justly be ranked with Socrates in his appreciation of moral values and his emphasis upon fullness of life and moral integrity as of far more worth than fame or gain. He found himself intellectually fettered by a conventional interpretation of classic literature which was just as firmly fixed and as rigidly observed as the most hallowed

religious traditions of any other Oriental civilization. He insisted upon a rationalization of the interpretation of the Four Books and the Five Classics that would give room for progressive adjustment. The highest values of life, he held, are realized only through development; apart from developmental life must prove a miserable failure. That he lacked the modern scientific approach to the problem does not detract from the fact that he had a glimpse of the developmental character of human institutions, and that this standpoint will invariably result in moral progress, if it is thoroughly assimilated.

When, at the time of his enlightenment, he gave utterance to the dictum, 'My nature is sufficient,' he laid the foundation upon which the entire structure of his philosophy and ethics rests: man's mind holds the key to all the problems of the universe. Nature—or experience, as we would call it—is the stuff out of which the universe is made. If nature at large is the macrocosm, then human nature is the microcosm; and for Wang human nature was the human mind.

Pointing to the flowers and trees on a cliff, a friend one day said to him: 'You hold that there is nothing under heaven outside the mind. What relation exists between my mind and these flowers and trees on the high mountain?' Wang replied: 'When you cease regarding these flowers, they become quiet with your mind, and when you see them, their colours at once become clear. From this you may know that these flowers are not external to your mind.'

This is undisguised idealism in which the microcosm creates as truly as the macrocosm. In the great all-pervading unity of nature the most differentiated and highly specialized portion is the human mind. It manifests the only creative ability within the reach of man's knowledge. Wang asserted again and again that the mind is natural law, and as such is the embodiment of the principles of Heaven.

The ground-pattern of his philosophy may be summarized as follows.

(1) Every individual may understand the fundamental principles of life and of things, including moral laws, by learning to understand his own mind, and by developing his own nature. This means that it is not necessary to use the criteria of the past as present-day standards. Each individual has the solution of the problems of the universe within himself.

(2) On the practical side, every one is under obligation to keep knowledge and action, theory and practice together; for the former is so intimately related to the latter that its very existence is involved. There can be no real knowledge without action. The individual has the spring of accurate knowledge within his own nature, and should constantly carry into practice the things that his intuitive knowledge of good gives him opportunity to do.

(3) Heaven, earth, man, all things, are an all-pervading unity. The universe is the macrocosm, and each human mind is a microcosm. This naturally leads to the conceptions liberty and equality of opportunity, and serves well as the fundamental principle of social activity and reform.

Wang's philosophy is to-day held in high esteem by Japanese students and is being extensively read by the Chinese. His system is a direct product of the Oriental mind; as a rationalizing and socializing force it strikes a sympathetic chord in China and Japan.

During the last days of his life the charge of heterodoxy was frequently brought against him. At his death no hereditary honours were conferred upon him, but instead an order from the emperor prohibited the dissemination of the 'false doctrine.' However, in the first year of the emperor Lung Ch'in he was by imperial order made Marquis of Hsinchien and given the posthumous title of Wen-ch'eng ('Perfect Learning'). In the twelfth year of the emperor Wan Li an imperial order was issued to sacrifice to Wang in the Confucian temple, after sacrificing to Confucius. In the city of Yüyao, Chekiang, Wang's ancestral home, an image of the great teacher has been erected in a small temple on a hill.

WAR.—Human warfare is not merely the climax and the symbol of the strife which pervades the realm of nature: it is itself an institution which has been involved in the struggle for existence, and which has had to adapt itself to a changing environment. The institution is rooted in a deep instinct and an inveterate habit of the race; but it has also come into conflict with powerful forces, emanating from the intellectual, the moral, and the religious life of mankind, which have been bold enough to summon it to judgment, have had considerable success in regulating its violence, and have proposed and attempted various methods for its abolition. The present article will trace the impression made upon war by morality and religion, examine the spiritual issues to which it gives rise, and discuss the desirability and the possibility of the cessation of armed conflict among the nations.

I. NAME AND DEFINITION.—The term 'war' is popularly applied to any conflict between nations, communities, or other large social groups in which violence is used for the settlement of a quarrel. Cicero defines it as 'genus decertandi per vim' in distinction from the method of argumentation (*disceptatio*).¹ In ethical discussion it has been defined as 'conflictus multorum contra multos extraneos': it is not a state of general antagonism, but a conflict in which matters are forced to an issue; it is the affair of many or of masses, and the name may not lightly be used to dignify sedition.² In legal definitions the term has been limited to conflicts in which the belligerents are states, or at least combinations which can reasonably claim a higher status than bands of rioters or brigands.

'War is a contest carried on by public force between states, or between states and communities having with regard to the contest the rights of states.'³

The aspects of war on which the genius of language fixed in its coinage of words may still to some extent be recognized.

(a) *Approach and assault.*—Πόλεμος, from root *pel*, akin to πέλας, παρσίον (perh. *pellos*), seems to express the idea of going at, or 'going for.'⁴ πλῆσσω, *plango*, may be from the same root. 'Battle,' O.Fr. *bataille*, L.L. *battualia*, from root *bhā*, 'to smite,' with Celtic cognates, recalls the blows and the clash of arms.⁵

(b) *A contest between two adversaries.*—*Bellum* is commonly explained from the alternative form *duellum* as the quarrel which it takes two to make—'quod duabus partibus de victoria contententibus dimicatur.'⁶

(c) *An intense effort.*—*Krieg*, O.H.G. *Kreg*, *Kric*, *Kriec*, laid stress on the excited and strenuous exertion, and later on the gain which resulted.⁷ O.H.G. *Wic*, with derivatives, seems to have had the same primary and secondary meanings.

(d) *Confusion and tumult.*—The word 'war,' late A.S. *werre*, O.H.G. *werra*, L.L. *werra*, Fr. *guerre*, if connected (as commonly) with *wirr*, *verwirren*, may have sprung from the observation that 'every battle of the warrior is with confused noise' (Is 95 AV), or that war upsets the general order of things. The root may, however, be *ver*, preserved in *Wehr*, *wehren*, *weir*, beware, guard (cf. *vereor*), when the term would be an illustration of the habitual apologetic tendency to attribute to all wars the character of self-defence.

(e) *Organized movement.*—Heb. מלחמה, from root מלח, 'to set in order,' draws attention to the ordered action of the battle array.

(f) *The fateful plight.*—A.S. *or-lege*, O.H.G. *Or-loge*, Dan. *or-log*, may reflect the fatalistic mood which is fostered in war, or the common experience that nowhere else is man so surely in the hand of God and so little certain that he can himself

control the issue. This interpretation has been supported by connecting the verbal group with the Norms, the Moirai or Parca of the North.¹

II. THE PREVALENCE OF WAR.—War has been one of the most constant and distinctive features of human history, and it may even be thought to be a sinister peculiarity of the human species that hordes should pursue hordes of the same kind with a persistent purpose of rapine and destruction.

The pre-historic age, which extends over tens of thousands of years down to about 5000 B.C., enjoys a fairly pacific reputation. If it was usually raining, as Ratzel puts it, the age was at least free from the thunderstorm and the devastating floods of war.² Man being the *animal inerme*, furnished by nature with no more formidable weapons than fists and teeth, he was too much preoccupied by his designs on the beasts, and by theirs against himself, to meddle much with his own species except when rival claims emerged over a hunting-ground, or at a later stage over pastures and wells (Gn 13^{7f}, 26^{19f}).

'Pastoral man,' it is observed, 'hardly needs tools, or weapons either, for it is to the common interest of pastorals to range apart, and on the steppe there is room enough for all.'³ 'It is doubtful,' it is added, 'if serious war was known in Europe until the Bronze Age was established.'⁴

Historic times have their landmarks in the rise, the conquests, and the fall of great military states. In the period of Oriental antiquity martial races moulded the history of China and India. Further west, and in the central current of history, arose the powers of Egypt and Mesopotamia, which during thousands of years engaged in an ever-renewed struggle for supremacy, while in the intervals Mesopotamia was the scene of a fierce and prolonged conflict, waged with alternating success between the rival peoples of Babylonia and Assyria. From these centres of empire there also proceeded frequent campaigns against sedentary or migratory peoples which raised a threatening front in Western Asia, or which tempted warlike kings by prospects of sovereignty and spoils. In the end Assyria was overthrown by Babylonia, Babylonia by the Persians, and a Persian empire entered on its course with a similar programme of conquest and tribute that brought it into collision with Greece.

In the age of classical antiquity, when the scene shifted to the Mediterranean, and the Greeks and Romans assumed the chief rôle, war continued, notwithstanding the growing culture, to be regarded as the most honourable and almost the most urgent of human pursuits. Men had now iron weapons in their hands, and the Aryans had arrived on the central European stage to show how effectively they could be used. The Greeks made their advent as barbarian conquerors from the north, who served themselves heirs to an older civilization that had developed its powers and accumulated its treasures in the Levant. Thereafter they went on fighting with little intermission—against the Trojans, as they said, for Helen of the glorious tresses and for honour, but doubtless also with an eye to dominion and the wealth of Anatolia, against the Persians in maintenance of their racial independence, against one another from cupidity, ambition, or jealousy; while even in their exhaustion they could claim for Greek arms a considerable share in the conquests of Alexander the Great, and in the creation of his grandiose but short-lived empire. In the meantime the Romans, dug from the same pit, and similarly equipped, gradually made themselves masters of Italy, settled the long-drawn and hard-

fought issue between the Semites and the Aryans through their victory over Carthage in the Punic Wars; and by the beginning of our era, notwithstanding the distractions of civil broils, they had subjugated and embraced within their empire a great part of the known territories of the three continents. Under the Roman emperors it seemed for two or three centuries as if the curse of war had wrought its own cure, and the world had been saved by the sword from the sword, but the hope was short-lived, and the Pax Romana proved to be only a lull that heralded more furious storms.

The period of antiquity came to a catastrophic end, and the Middle Ages were ushered in by the Teutonic migrations, which reduced the Roman empire to ruins, and gave new masters, with a fresh deposit of population, to its richest and fairest provinces. The outcome was that for the next ten centuries Europe was afflicted by wars of every known kind—between imperial dynasties like the Carolingian and peoples which repudiated their sway; between the new-born nations as in the Hundred Years' War of England and France; between rival claimants to a throne, as in the English Wars of the Roses; between the central authority as represented by a king and feudal aristocracies which magnified regional and particular interests; between the governing classes and oppressed populations which sought redress or revenge in social war. Religion supplied additional motives and occasions. In the early Middle Ages the armies of Islam penetrated into the heart of Europe, and at a later date Christendom retaliated in prolonged and sanguinary Crusades for the recovery of the Holy Sepulchre.

The modern age, dating from the beginning of the 16th cent., has perhaps had more intervals of repose, but it has found evil compensation in the magnitude of the struggles and the destructiveness of the operations. Instinct and tradition disposed the European rulers to seek an extension of their dominions whenever opportunity arose, while the discovery of the new world offered to the possessors of sea-power the prospect of unlimited aggrandisement and wealth. The possibilities of effective warfare were also enormously increased, in the centuries that followed the invention of gunpowder, by the enlistment of science in the improvement of the instruments of destruction. During the last four hundred years the outstanding fact in the political history of Europe was that one great power after another—Austria, Spain, France, Germany—sought to become the master of the Continent, while at each stage the nations which felt themselves threatened formed combinations which should be strong enough to frustrate, and which also deemed it prudent to anticipate, the development of ambitious and aggressive schemes. The programme of Britain was to rule the seas, and to avert a European hegemony. The result was that almost every generation witnessed a European war of the first magnitude—among them the Thirty Years' War, the War of the Spanish Succession, the War of the Austrian Succession, the Napoleonic Wars, and finally the World War of 1914–18, which has cost Europe the lives of 10,000,000 picked men, decimated wide areas of Europe by famine and disease, swallowed up one-third of the accumulated wealth, and shaken to its foundations the moral order no less than the economic fabric of society. The peace of the modern world has also been disturbed by the ferment due to the assertion of the ideals of democracy and nationality in opposition to the arrangements of an existing order. The democratic cause has its military monuments in the English Civil War of the 17th cent., and in campaigns of the French Revolution, but for the most part it

has pursued its triumphant progress without the necessity of sanguinary, or at least of prolonged, fighting. The spirit of nationality, which developed in the 19th cent. with extraordinary fervour, promoted war in several ways. On the one hand, it claimed independent sovereignty for populations which could establish a claim to nationhood on physical or historical grounds, and thus came into collision with existing imperial structures, giving rise to wars of emancipation such as those which liberated the Greeks and the Balkan peoples from the rule of the Turks, and the convulsions which have dissolved the heterogeneous Austrian empire. On the other hand, the national spirit fosters the ideal of the consolidation of separated kinsfolk in a single state, and this aspiration dictated the mid-century policy of Prussia which achieved the desired unification of the German people through the Austro-Prussian campaign of 1866 and the Franco-German War of 1870. Imperial ambitions also proved to be a natural sequel to the fulfilment of national aspirations. Within the great realms trouble has arisen, apart from any racial antithesis, in connexion with the respective rights of a central authority and of the subordinate members: in the 18th cent. the American colonies, in assertion of colonial rights against imperial claims, fought the American War of Independence; in the 19th cent. the Southern States of the Union affirmed the indestructible rights of particular states in opposition to the prerogatives of an indestructible Federation, and the matter was brought to an arbitrament in the American Civil War. Finally, the modern world has had grave warning that, if the religious war is obsolete, religious enthusiasm has been replaced by a more violent fanaticism rooted in political and social ideals, as was evidenced in some of the phases of the French Revolution and most recently in the spirit and the efforts of Soviet Russia.

III. *THE CAUSES OF WAR.*—War is traceable to elemental desires and passions of human nature. According to Hobbes, its threefold root is the desire of gain, the fear of injury, and the love of glory.

'In the nature of man, we find three principal causes of quarrel. First, competition; secondly, diffidence; thirdly, glory.

The first, maketh men invade for gain; the second, for safety; and the third, for reputation. The first use violence, to make themselves masters of other men's persons, wives, children, and cattle; the second, to defend them; the third, . . . for any sign of undervalue, either direct in their persons, or by reflection in their kindred, their friends, their nation, their profession, or their name.'¹

This analysis is useful, but it unduly simplifies the psychological problem.

(1) The desire for gain, in the narrower sense intended by Hobbes, has doubtless supplied the principal impulse to warlike aggression. Territory, with the attendant booty of various kinds, has been the usual stake in war, coveted alike by peoples and by dynasties. At the same time cupidity in the matter of territory has often been associated with other motives involving lesser degrees of culpability, and even trenching on the realm of the virtues. Account has justly to be taken of the frequent play of fairly reputable reasons—as the pressure of famine or scarcity, resulting from drought or the increase of population, the defence and development of trading interests as vital to the subsistence of a commercial nation, the migratory impulse, the spirit of adventure, and also the consciousness of a mission to develop waste or neglected regions of the globe, and to conquer and take charge of people for their own good.

(2) The fear of injury, as well as the resentment due to actual injury, has unfailingly prompted to defensive war when resistance was possible, and

¹ *Works*, London, 1839, iii. 'Leviathan,' p. 112.

often when it might well be deemed hopeless. The interests which nations have usually been prepared to defend at all costs are, in addition to their territory, their jurisdiction and their honour. It has also been commonly accepted that a palpable and growing threat to these interests justifies a nation in seizing a propitious opportunity for an anticipatory or preventive war.

(3) The desire of glory has in the main been a dominant motive of the great conquerors and of their armies, but it has also taken possession of peoples. Apart from such ambition, indignation at a national insult has proved to be capable of evoking the utmost effort and self-sacrifice.

(4) The desire of power is an additional motive which cannot be entirely resolved into cupidity. It is true that power may be sought as the means of appropriating territory and increasing the wealth of a people, but nations as well as individuals find satisfaction in the exercise of power as an end in itself. This desire manifests itself positively in the attempt of a nation or class to acquire dominion over others. The love of power for its own sake has been an important factor in the movements which established the great empires of history, and it has been not less conspicuous in struggles for the supremacy among allied states—as illustrated in the ancient rivalry of Athens and Sparta, and in the modern contest of the German principalities which issued in the hegemony of Prussia. It has also supplied much of its energy to civil strife, and on occasion has kindled the flames of civil war. The desire of power comes into collision with the spirit of liberty. The demand for liberation is the natural response to the policy of domination, being rooted in the same appreciation of power; and, as the assertion and extension of the power of one nation or class presupposes the abridgment of the power of another, a system of imperial rule or of autocratic government involves the permanent possibility of wars directed to the achievement of national independence or of political revolution.

(5) The passions of hatred and revenge have also furnished a relatively independent motive. A nation can take up an attitude that is on a still lower plane than brutal selfishness; it can become inspired by a hatred of the diabolic kind which makes it disregard even the counsels of self-interest for the satisfaction of inflicting deadly injury on a loathed enemy. The spirit of hatred has sometimes been engendered by centuries of conflict or oppression, sometimes it has had its spring in deep-seated differences of racial character and culture.

(6) Finally, a religious zeal which can no more be resolved into self-interest than hatred has been the cause, and not merely the pretext, of many wars. Zeal for the glory of God at least co-operated with lust of booty to inspire the onslaughts of Islām, and it blended with the spirit of adventure in the Christian Crusades.

IV. *THE REACTION AGAINST WAR.*—The most general explanation of war is that men and nations have a legitimate desire for the goods of wealth, honour, and power, and that they are tempted to grasp them by force instead of earning wealth by labour, and honour and power by service. Human nature, however, embodies other principles to which this peculiar method of acquisition, with its inevitably cruel accompaniments, has constituted a challenge, and which have reacted against it in varying degrees of criticism and opposition. The complex constitution of man exhibits along with his ingrained selfishness a vigorous sense of justice and a lively capacity of sympathy; and at least one of the belligerents must usually have been conscious of a gross viola-

tion of his sense of justice, while the butchery and the atrocities attending the stricken field and the sack of a city, when reviewed in cold blood, must often have excited the commiseration even of the conquerors. The general conscience, accordingly, from an early date, pressed for a certain ethical regulation of the occasions and of the practices of war. The great religions strongly supported the ethical plea. At the animistic stage, it is true, religion was practically indifferent to moral considerations, but the faiths which captured the mind of Asia and Europe were agreed in representing it as normally a part of religion to do justly and to love mercy even in the waging of war. Philosophy, with its distinctive appeal to rational considerations, has also contributed to foster and diffuse critical and reforming opinion through its disciplines of Moral Philosophy and Jurisprudence. The theoretical work was followed up in the 19th cent. by international conventions and conferences which established a fairly authoritative code of International Law.

The moral reaction against war has culminated from time to time in the assertion that war is essentially immoral, and in the repudiation of any traffic with it, in any cause whatsoever, as an unworthy compromise. It will be convenient to deal first with this radical position, which is supported by a considerable show of moral authority, before proceeding to trace the influence of religion and morality in the discrimination of just and unjust wars and in the humanization of the conduct of war.

V. *THE LAWFULNESS OF WAR.*—There have doubtless been men in all ages who have objected to war, and refused to have any hand in fighting. They could be determined to this attitude either by sheer cowardice, or by counsels of prudence natural to a difficult or desperate situation, or again by the conviction that the shedding of human blood was a criminal outrage, and in any case a futile way of attempting to oppose and prevent wrong-doing. At the risk of their principle being mistaken for cowardice, voices have been raised on the heights of moral idealism in absolute condemnation of war and all its works.

i. *THE RELIGIOUS JUDGMENT.*—I. *The older religions.*—While the Vedas are sufficiently warlike, and Brāhmanism gives a consecration to the military caste, the mild spirit of Hindu religion tended to view war under the repugnant aspect of murder.

'Alas! we are engaged in committing a heinous sin, seeing that we are making efforts for killing our own kinsmen out of greed of the pleasures of sovereignty. If the sons of Dhritarashtra, weapon in hand, should kill me in battle, me weaponless and not defending (myself), that would be better for me.'¹

The influence of Buddhism was cast on the same side.

'If you desire to honour Buddha,' said a Brāhman who successfully mediated between two belligerents, 'follow the example of his patience and long-suffering.' 'Conquer your foe by force, you increase his enmity; conquer by love, and you will reap no after-sorrow.'²

The teaching of the OT prophets contains a decided pacifist strain. They condemned wars of aggression as magnified schemes of murder and plunder, and they were disposed to think defensive wars useless or unnecessary—useless, since a wicked nation would not escape punishment; unnecessary, since a righteous or repentant nation might safely dispense with armaments, and look for protection to the omnipotent Ruler of history (Is 31^{1, 5, 8}). It may, however, be questioned whether the prophetic attitude meant more than that non-resistance was the duty of Israel in the special circumstances of the situation and time (Jer 28^{12ff.}). The great prophets lived at a period when it was a manifest inference from the providential order of the world

¹ *Bhagavad-Gītā*, SBE vii. [1882] 42.

² *Life of Buddha*, SBE xix. [1883] 328 f.

that a pacific and submissive policy was the duty of their little border-state, and they might well have judged differently of the duty of a nation to which had been providentially entrusted a larger and more promising political mission than was open to Israel under the conditions of the 8th and 7th centuries before the Christian era.

2. The bearings of the Christian ethic.—The teaching of our Lord and of His apostles includes precepts which on a first impression appear to rule out all traffic with war as inconsistent with the moral ideal. Not only is there a law of love, which condemns the passions that incite to aggression, but there is a law of meekness, expressed in non-resistance, which suffers the aggressor to work his evil will.

'Ye have heard that it was said, An eye for an eye, and a tooth for a tooth: but I say unto you, Resist not him that is evil: but whosoever smiteth thee on thy right cheek, turn to him the other also. And if any man would go to law with thee, and take away thy coat, let him have thy cloke also' (Mt 5:38-40 RV). 'Ye have heard that it was said, Thou shalt love thy neighbour, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you' (v. 43f.).

'Avenge not yourselves, beloved, but give place unto wrath: for it is written, Vengeance belongeth unto me, I will recompense, saith the Lord' (Ro 12:19).

The precepts were enforced by the example of Jesus, who 'left an example that ye should follow his steps,' and who, 'when he was reviled, reviled not again; when he suffered, he threatened not; but committed himself to him that judgeth righteously' (1 P 2:21, 23).

As to the bearing of this teaching on the lawfulness of war, there have been two schools of Christian opinion.

(a) *The literalist interpretation.*—The view was widely prevalent in the early Church that war is an organized iniquity with which the Church and the followers of Christ can have nothing to do. This sentiment was expressed, though with varying degrees of lucidity and emphasis, by Justin Martyr, Tatian, Irenæus, Tertullian, Origen, Athanasius, Cyprian, and Lactantius.¹ The allusions to the subject are often casual, and the pacifist testimony sometimes does no more than affirm the undeniable position that the Church differed from the kingdoms of this world in that it cherished no schemes of conquest, equipped no military forces, and did not dream of propagating the faith, or even of resisting persecution, by armed rebellion. But the position was also definitely taken up that war as such was an institution of the realm of darkness, and some were quite emphatic that a professed Christian should not be mixed up with the foul and devilish thing.

'It is not lawful,' says Lactantius, 'for a just man to engage in warfare, since his warfare is justice itself.'²

The prohibition of military service was partly due to the consideration that the soldier was required to compromise his faith by participation in the pagan rites associated with Roman warfare, and to jeopardize his character by association with brutal and licentious comrades, but objection was also taken on principle to the military profession, and was supported by arguments such as these—that the military oath was inconsistent with the pledge of loyalty to Christ, that Christ had warned His disciples against taking the sword (Mt 26:52), that, if the lesser strife of litigation be forbidden, much more is the greater (1 Co 6:7), that, if it be unlawful to fight on our own behalf, it is also unlawful to fight in the quarrels of others,³ and especially that in war men fight to kill, and that intentional killing is murder.⁴ The last considera-

¹ For particular utterances and shades of opinion see J. Moffatt, art. 'War' in *DAC*, Edinburgh, 1918.

⁴ Basil of Caesarea, *Ep.* 188.

tion so impressed the general ecclesiastical mind that certain canons of the period excluded a soldier from the Lord's Table till penance had been done for the blood that had been shed.¹

The literalist view, which had its exponents throughout the Middle Ages and at the Reformation, was made a cardinal tenet of 'the people called in scorn Quakers.'

'Whoever can reconcile this, Resist not evil,' says R. Barclay, 'with, Resist evil by force; again, Give also thy other cheek, with, strike again; also, Love thine enemies, with, spoil them, make a prey of them, pursue them with fire and sword; or, Pray for those that persecute you, with, persecute them by fines, imprisonment and death itself; whoever can find a means to reconcile these things, may be supposed also to have found a way to reconcile God with the Devil, Christ with Antichrist, Light with Darkness, and good with evil.'²

The doctrine has recently been popularized by Tolstoi, who developed it in the thoroughgoing fashion which would also sweep away the whole of the machinery by which civilized states repress and punish crime. The justification offered for war, he says, is that it seeks to repair or avert injury, while the command of Christ is that we offer no resistance to injury. The practice of war is no less inconsistent with the injunction to love our enemies. It may be objected that Jesus does not prohibit war in set terms. But 'a father who exhorts his son to live honestly, never to wrong any person, and to give all that he has to others, would not forbid his son to kill people on the highway.'³

(b) *The reasoned judgment of the Church.*—The mind of the primitive Church, so far as reflected in the NT, does not join in the unqualified condemnation of war. The Church of the apostolic age found solace in apocalyptic dreams which presupposed that the final redemption of humanity would follow upon appalling conflicts between the powers of heaven and hell, of which the Christian saints, who would be collected in a camp, would at least be sympathetic spectators (Rev 20²). In any case the Epistle to the Hebrews pronounces a glowing panegyric on warrior saints of the Old Dispensation (11:32ff.), while the book of Acts welcomes Cornelius the centurion to the Christian society (10:1ff.). During the succeeding four centuries, as has been exhaustively shown by Moffatt in the article cited, the Church as a whole declined to be committed to the extreme position. From Tertullian himself we learn that there were numerous Christians in the Roman army by their own choice, and that the Church did not condemn them. Clement of Alexandria taught that the position of a soldier was governed by the Pauline principle that a man should 'abide in that calling wherein he was called.'⁴ Diocletian found so many Christians in the army that he deemed it a danger to the State, and Constantine was impressed by their importance as a military asset no less than as a political influence. When Christianity became the religion of the empire, the general tendency, exemplified by Eusebius, was to support the civil power by the benediction of military service. The Council of Arles in one of its canons appears to have visited ecclesiastical censure on those who abandoned the army even in time of peace from conscientious scruples.⁵ Some even thought that the sword might be drawn in a holy war for the extirpation of idolatry.⁶ Ambrose eulogized the warlike courage which prefers death to bondage and disgrace, and claimed the OT

warriors as spiritual ancestors. He even adopted the classical maxim that one who does not defend a friend from injury is as much at fault as he who commits the injury.¹ Augustine was forced to face the question by the havoc of the Teutonic migrations and the peril of the empire, and his active mind fully explored the subject and laid down the lines on which in the main the thought of the Churches has subsequently moved.

That war is sometimes lawful on Christian principles is maintained by Augustine on these and other grounds: (a) that it has been and may be waged by appointment of God;² (b) that the case of a wanton and rapacious attack by one nation on another falls under the same category as the crimes of murder and burglary, and should presumably be similarly dealt with;³ (c) that John the Baptist did not require the soldiers to abandon the service, but only exhorted them to do violence to no man and be content with their wages.⁴ The implications of the Sermon on the Mount are most fully discussed in the Epistle to Marcellinus, which was called forth by the pagan objection that the precepts of non-resistance were inconsistent with public policy, and would prove ruinous to the State.⁵ The precept to turn the other cheek to the smiter, Augustine says, cannot be taken literally. What it requires is an inward disposition of patient good-will towards the aggressor, and it does not prescribe any uniform manifestation of the disposition in act, as appears from the fact that Jesus Himself at least protested against violence (Jn 18²³; cf. Ac 23³). We ought always to cherish the spirit of clemency, and be willing to render good for evil, but 'many things have to be done in which we have to pay regard not to our own kindly inclinations but to the real interests of others, and their interests may require that they should be treated, much as they may dislike it, with a certain benignant asperity': 'Cui licentia iniquitatis eripitur, feliciter vincitur, quoniam nihil infelicius est felicitate peccantium, qua poenalis nutritur immunitas, et mala voluntas velut hostis interior roboratur.'⁶ At the same time war is merely a means to the end of peace.⁷ It is better and more glorious to achieve peace by peaceable means than by war.⁸

Thomas Aquinas replies as follows to objections founded on the teaching of Jesus.

(a) 'Jesus said that he who takes the sword shall perish by the sword.' But 'to take' means 'to use without warrant, and the words only prohibit unauthorized or private persons from drawing the sword. (b) 'War is inconsistent with the command that we "resist not evil" (Matt. 5: 38) and "avenge not ourselves."⁹ But these injunctions are fulfilled by the cultivation of a placable spirit, and cannot require us to do mischief by allowing wickedness to go unpunished. (c) 'If the peace-makers are blessed, war-makers are accursed.' But war may be the best or the only means of attaining the end of peace.⁹

Luther held that the gospel presupposes natural rights and duties, and vigorously defended the Christian soldier.¹⁰ Calvin argued that war is a branch of the work of retributive justice which has been entrusted by God to the civil magistrate, and that it has the same moral justification as the police measures which protect the citizens against the criminal population.

Whether it be a king who does it on a big scale, or a scoundrel who does it on a small scale, he is equally to be regarded and punished as a robber. It is no breach of the command, 'Thou shalt not kill': the slaying of the authors of the unjust war is an execution, the judge is God, and the fighting men who defend the right are merely God's instruments. If it be objected that the NT does not expressly permit Christians to fight, it is to be observed that the NT does not undertake to legislate about civil polity, and that it presupposes the OT, in which the greatest men of God, like Moses and David, were mighty men of valour in the service of God.¹¹

The topic received prominence in the leading Protestant Confessions, which found it desirable to allay any misgivings that might be felt by princes as to the political implications of evangelical religion. The modern Protestant literature of Christian Ethics¹² is in general agreement with the Roman Catholic moralists.¹³

The ultra-pacifist interpretation of Christian duty, while plausible, really rests on a superficial view of the ethical system of Christianity. It ignores an observation which is now a commonplace of the science of Comparative Religion, viz. that, in distinction from the nomistic religions which attempt to lay down hard-and-fast precepts prescribing the action to be taken or avoided in particular situations, the ethical scheme of Christianity consists essentially of a stock of principles, accompanied by some illustrations of how they are to be applied in practice. Had Christianity been a nomistic religion, it would have distinctly enacted that 'war is always sin,' or would have enumerated all the cases in which it is lawful; being a religion of the spirit, it bequeathed to the Christian Church, and to all others that claim the Christian name, the task of forming a Christian judgment upon a diversity of concrete questions and situations as they may arise. Again, the original Christian ethic, so far as elucidated in detail, was chiefly illustrated from the individual sphere. While the OT is mainly concerned with the nation, the NT is mainly concerned with God and the soul; and the consequence is that little was done to illustrate the application of Christian principles in the political departments of thought and action, which for the most part lay outside the purview of the primitive Church.

There are, now, besides non-resistance, two other principles, deeply embedded in the teaching of Jesus, which demand to be carefully weighed before a judgment is formed as to the lawfulness of war in the abstract or the sufficiency of a particular occasion of war. The doctrine of retributive justice, to begin with—that wickedness ought to be and will be punished—filled at least as large a space as the doctrine of non-resistance in the circle of Christ's thought. He pronounced upon Jerusalem an inevitable doom because of its obdurate blindness and disobedience (Mt 23^{37ff.}), and He drew the picture of a last judgment in which the wicked and impenitent would be punished according to their works (Mt 25^{31ff.}). The idea of penal retribution, moreover, is the central and inspiring thought of the apocalyptic sections of the NT, represented by eschatological discourses of Jesus (Mt 24), the Pauline Apocalypse (2 Th 2), and the book of Revelation. And, if it be a law of the universe that wickedness ought to be restrained and punished, if God Himself, while ready to forgive on condition of repentance and submission, and ever taking the initiative towards reconciliation, fights against the obdurate rebels of His dominions with all the resources of His providential order, not to speak of the menaces of apocalyptic prediction, it may well be thought incredible that Christianity has made it criminal for a nation to be a fellow-worker with God in restraining the powers of wickedness and in seeing justice done upon the earth. The ultra-pacifist school thinks fit to impose upon the nations a code of morality and a plan of procedure which, if absolutely binding, would entail grave censure on God Himself and give ground for an indictment of the methods of His government of the universe.

Further, in forming a Christian judgment as to the lawfulness of war, respect must be chiefly paid to the master-principle of the Christian ethic, which is love of man as man. It is of course evident that, if Christian charity were universal, there would be no more war, and also that, if war took place, a belligerent animated by Christian love at its highest reach would differ in vital respects from any pattern shown in history. But the essential feature of love is that it seeks the welfare of its objects, not necessarily that it seeks it by the measures suggested by easy good nature

—as is sufficiently familiar in the discipline of the family and in the social provisions of the penitentiary and the gaol. The law of love, now, has three main applications for a nation—in reference to the race as a whole, in reference to a particular enemy, and in reference to its own population; and in the face of unjust aggression the law of love may actually urge a demand for forcible resistance on a threefold ground. The interests of the race may require it: a nation is no benefactor of mankind if it does nothing to support, and even contributes to undermine, the general arrangement that the world is a realm of moral order. That the nation which checks and chastises another in a criminal enterprise is in a real sense its benefactor is supported by the contention of Plato in the *Gorgias* that it is a greater evil to commit injustice with impunity than to be punished for it, inasmuch as the wicked who go scot-free are deprived of the valuable remedial discipline of merited chastisement. Again, the Christian law of love lays special stress on what may be called duties of guardianship, which were exemplified in the attitude of Jesus towards the house of Israel, towards Jerusalem, towards little children, and towards those who were called 'his own.' And in considering the duty of a state in regard to war, it has to be remembered that, while in one point of view it is a collective personality which has to think and act as one, in another point of view it consists of those who rule and of those whose interests are committed to the trust of the rulers. It is therefore absurd to maintain that it can be a postulate of Christian morality that the rulers of a nation are under obligation, not merely to sacrifice themselves, but to take the responsibility of sacrificing others who instinctively look to them for protection, and of abandoning old men, women, and children to privations, sufferings, and moral perils. The Christian spirit was surely better interpreted in the mediæval code of chivalry.

The literalist view also overlooks a serious difficulty as to the possibility of rendering an act of national self-sacrifice of unquestionable sacrificial value. The suggestion is that, even as Christ suffered Himself to be led as a lamb to the slaughter, so a Christian people might dutifully, and with similar profit, suffer a national crucifixion; but it is forgotten that for a sacrifice there is needed a stainless as well as a willing victim, and no nation that is or has been has remotely possessed the spotless perfection, not to speak of the willing mind, which would qualify it for a literal imitation of Christ in this regard, or give promise that if attempted it would produce effects in any degree comparable with the effects of the sacrifice once offered on Calvary.

Christian thinkers have, then, to take their orders from the whole Christ and not a fragmentary Christ—from the Christ who is the expression of the complete moral purpose of God, the revelation of justice and love as well as meekness. And from this standpoint it may be maintained with a good conscience that Christianity makes room for warfare in co-operation with God in a world which teems with violence and injustice, breaks His laws, and challenges His righteous authority. But, while the principles of meekness and clemency have no title to be the sole determinant of the international relations of a Christian state, they ought to make their influence effectively felt as maxims of co-ordinate dignity and authority: they ought to have such recognition that every concession short of the impossible should be made to avert war, hatred and revenge should be ruled out from deliberation as the most dangerous and shortsighted of counsellors, magnanimity should prevail in the day of victory, and after the struggle

everything should be attempted to obliterate the evil memories and to promote sincere and lasting reconciliation.

The question as to whether a Christian may lawfully bear arms is governed by the decision as to whether a nation may lawfully engage in war. Clearly it cannot be wrong to give personal assistance towards the execution of a necessary and righteous task. The debt which a man owes to the State is even greater than that which he owes to his parents, and the desertion of parents in sickness or old age is not more discreditable than the refusal by a citizen of such service as it is in his power to render to his fatherland in its time of distress or peril. It is less easy to define his duty in the case of a war which he thinks unjust, and in which he is compelled to fight; and all that can be said is that, except in a case of manifestly flagrant injustice, the average person has reason to credit the chosen rulers of a civilized state with possessing more knowledge and wisdom than himself, and at least as great a sense of responsibility. Those who refuse to fight from a genuine conviction that it is unlawful to shed blood are wisely treated with consideration in the modern world, inasmuch as conscience, even when uninstructed, is an asset which a nation cannot disparage and flout without grave injury to its higher life.

Recent events have revived interest in the relation of ministers of religion to military service. The claim to immunity was very generally made for heathen priesthoods, and allowed by the secular power.¹ The question did not arise in the circumstances of the Christian Church in the early centuries.² The popes and bishops of the mediæval Church were often involved in war, and could even foment it in support of their worldly interests, but the official teaching was that it was unlawful for all clerics who belonged to the *ordines majores* to take a direct part in the shedding of blood. The conclusion of Thomas Aquinas is to this effect:

'Cum bellica exercitia hominem maxime a divinatorum contemplatione avertant, et ad humani sanguinis effusionem tendant, minime clericis ac spiritualibus personis bellare licet, nisi in necessitatis articulo.'³

Military service, it is added, is inconsistent with the clerical office on two grounds—it is inconsistent with the cultivation of a spiritual temper and the discharge of pastoral duties, and in particular those who are ordained to minister at the altar should rather be eager themselves to suffer as martyrs than think it seemly to spill the blood of others.⁴ The Lutheran Church has followed this tradition,⁵ and the Anglican Church re-affirmed its adherence to it during the recent war by forbidding the clergy to offer themselves for combatant service. The Reformed Churches, narrowly so called, while agreeing that in ordinary circumstances ministers have an all-important spiritual function to perform in war and should abide in their calling, have taken a broader view of what is covered by the accepted condition 'in articulo necessitatis,' and have occasionally left it to ministers, as was lately done by the Church of Scotland, to judge for themselves as to whether the necessity was such as to require them to offer their services as fighting men to the State. On the question of principle it may be observed that it is difficult to maintain the view that the clergy as representatives of Jesus Christ ought to refrain

¹ 'Druides . . . militiae vacationem, omniumque rerum habent immunitatem' (Cæsar, *de Bell. Gall.* vi. 14).

² 'Nec ad arma jam spectat usus noster' (Ambrose, *de Offic. Ministrorum*, i. 35).

⁵ H. Martensen, *Christian Ethics*, Eng. tr., Edinburgh, 1892, div. ii. p. 236.

from all violence and the shedding of blood, and at the same time to resist the Quaker contention that the same prohibition extends to persons of every class who profess and call themselves Christians. Further, while it is generally admitted that the clergy may and ought to encourage the soldiery to fight in a just cause, in the ordinary judgment of mankind a person who thinks it wrong or degrading to do a thing himself ought not to aid and abet others in doing it. The argument based on 2 Ti 2¹ can be used with equal force in support of the view that the clergy should not be distracted from their spiritual work by the cares of married life or by the discharge of the duties of any civic office. It may be added that the traditional attitude of the Church seems to have been largely determined by the interest felt in magnifying the distinction of priesthood and laity, and by the reflex influence of the mediæval sacramental doctrine.

ii. THE PHILOSOPHICAL VINDICATION. — The verdict of ethical philosophy, ancient and modern, has been that under certain conditions war is justifiable, and non-resistance blameworthy and even immoral. The Greek view was summarily expressed by the inclusion of courage among the four cardinal virtues. Justice, according to Cicero, involves for nations as for individuals the duty of preventing injury and of exacting punishment and reparation. The modern schools have their varying conceptions of the ground of obligation and of the nature and basis of natural rights,¹ but there has been practical unanimity as to the moral justification of self-defence when one nation is assailed by the ambition and cupidity of another. From the intuitionist point of view there is an eternal and immutable moral law attested by conscience, which includes the requirement that nations shall render to all their due, and, in the absence of other machinery for making the law effective, it is held to be the duty of the particular nation to do what lies in its power to enforce and safeguard this obligation. From the utilitarian standpoint repressive and punitive action is held to be called for in view of the disastrous effects which unrestrained injustice would produce for particular nations and the general life of the race. The doctrine of non-resistance, Herbert Spencer argues, is anti-social, as it involves the non-assertion, not only of one's own rights, but of those of others, while it holds out no prospect of leading to the desirable end of international peace.²

The findings of the jurists, while reflecting the varieties of ethical theory, are at one in giving an affirmative answer to the question, 'an bellare unquam justum sit.' Grotius argues that recourse to war is permitted and approved by the law of nature, by the consent of the many and of the wise, and by the law of nations, as well as by the divine law which was promulgated and attested in the Scriptures. The law of nature has two branches—the course dictated by natural instincts, and the principles approved by reason. This law intimates its permission of war through the universal instinct of self-preservation, accompanied as it is by nature's disclosure of purpose in the provision of means of defence to all creatures, and also by the voice of reason which makes it clear that the well-being of society is incompatible with the unchecked reign of violence.³

By the law of nature, says E. de Vattel, the nations are under an obligation to do justice and also have the right to be treated with justice; and 'it would be in vain that nature gave us the right of not suffering injustice, and required others to be just

towards us, if we could not legitimately use compulsion when they refuse to acquit themselves of this duty.'¹

Some recent treatises find it sufficient for their purpose that the practice of war is a human custom, and they prefer to leave to philosophy the treatment of the question of the ultimate justification.

VI. THE DISTINCTION OF JUST AND UNJUST WARS.—The primitive view was that fighting was as natural and proper as any other means of acquiring wealth and servants, and the only matter needing careful consideration was the prospect and the cost of success in a particular venture. From a comparatively early period, however, the moral consciousness drew a distinction between just and unjust wars, and procured for the distinction such recognition that almost every belligerent has been anxiously concerned to make out that he had the sanctions of morality and religion on his side.

i. The distinction in the non-Christian religions.—The distinction of just and unjust wars was impressed on the princes of China and India by the higher religions of the East. Greek religion did something to develop a conscience in regard to occasions of war, at least as carried on among the Hellenic tribes. The Romans understood that it was the will of the gods, not merely that wars should begin and end with solemn ceremonies, but that they should be waged only with a view to redress or security, and they were taught that their piety in these respects had been rewarded by the series of victories which safeguarded and extended their empire.

The general view represented in the OT was that wars of aggression, such as were waged by the insatiable and arrogant Asiatic empires, were wicked and criminal, and that wars waged for the defence or liberation of a people, like those organized by the Judges and the good kings, were in accordance with justice and the known will of God. The criminality of the heathen wars of conquest was not held to be inconsistent with the observation that they were sometimes used for the merited chastisement of other peoples: the guilt was the aggressor's, God's were the wisdom and the power that made the wrath of man to praise Him, and that in the end over-ruled the evil for good. The prohibition of the war of conquest was, however, subject to exceptions—even from the point of view of the prophetic idealism. It was an axiom of the historical writers, even of those of the prophetic school, that the conquest of Canaan by their fathers had been abundantly justified, partly on the ground of an ancient promise and of the provisional occupation by the patriarchs, partly because the conquest and even the extermination of the Canaanites had been richly deserved by their impiety, their corruption, and their cruelties (Jg 1⁵, 1 S 15²; cf. Jos 10⁴⁰). For the expedition of Cyrus against Babylon a similar moral and religious sanction was asserted (Is 45¹). The contribution of Islām was to elevate into a rule the commission given in the OT in the war against the Canaanites, and to glorify as most just and necessary the war of conquest which is waged for the conversion or the punishment of unbelievers. 'They who believe fight for the religion of God.' 'Give to those who misbelieve glad tidings of grievous woe.'² The Qur'an is full of exhortations to fight against misbelievers and hypocrites,³ with promises of Paradise to those who should fall in the holy warfare.⁴

2. The standard of the classical moralists.—The argument of Plato in the *Laws* is to the effect that rulers should organize their realms with a view to virtue and peaceful prosperity as the chief

end, and that military provisions should be relegated to a quite secondary place. At the same time he accepted the view that Greeks and barbarians were natural enemies, and that the code of justice was barely relevant to their relations. For Aristotle it was the self-evident duty of a state to defend itself, and to enrich itself by war as a legitimate way of acquiring property; and he also justified the war of conquest against outside nations on the ground that there are peoples which are destined by nature to servitude, and which are properly coerced if they do not voluntarily accept their destiny.¹ The discussion of the subject by Cicero is important as a summary of the ethical reflexions of classical antiquity which was also to serve as a useful legacy to the later guides of the Christian Church.

He condemns the common view that the use of peace was to prepare for war: peace is to be kept in view as the end, and war regarded as a means which is sometimes unhappily necessary to secure a satisfactory peace.² It is the irrational and brutal way of ending disputes. Unjust wars are those which are prompted by covetousness of the possessions of others. Just wars are of different types, according as they are required for the safety of the State, when measures are taken to ward off injury, and to secure reparation and punishment, or are prompted by the honourable motive of succouring those who have a claim to assistance on the ground of natural ties or of treaty-obligations. To fulfil the requirements of justice it was further necessary that the demand for satisfaction, and an eventual declaration of war, should be made in due religious forms.³

These principles, it may be added, made it possible to offer a tolerable moral apologia for the proceedings of the Roman empire: when a war could not be plausibly represented as defensive, it could at least be conceived as partaking to some extent of the character of a war of honour on behalf of allies, or of a war of chivalry on behalf of an oppressed and wronged population.

3. The judgment of the Church.—The need of an official Christian criterion emerged with the union of Church and Empire, and guidance was given by Augustine with considerable obligation to Cicero.

He had no difficulty in deciding that there are unjust and just wars—the unjust represented by the contemporary barbarian onslaughts on the Empire, the just by the efforts of the Empire to defend itself and the cause of civilization. 'Inferre autem bella finitimis, et inde in caetera procedere, ac populos sibi non molestos sola regni cupiditate contere et subdere, quid aliud quam grande latrocinium nominandum est?'⁴ Such wars have their spring in the worst of passions—'nocendi cupiditas, nescendi crudelitas, impacatus atque implacabilis animus, feritas rebellandi, libido dominandi, et si qua similia.'⁵ Just wars are those which are waged to inflict punishment, or to secure reparation for injury, or (as in OT) by express commandment of God.⁶ So terrible, however, are the calamities of war—veritable games in honour of the devils⁷—that it should only be entered on under stress of the direst necessity.⁸ He also laid it down that war may only be lawfully undertaken by a prince and carried on by a regular soldiery.⁹ The caveat is put in that victory in war is not necessarily to be ascribed to the deserts of a belligerent.¹⁰

Thomas Aquinas laid down three criteria of a just war: it must be waged by a prince invested with legitimate authority, against an enemy who has deserved punishment, and with the intention that good shall be promoted and evil removed.¹¹

Following on the Decrees of Gratian the subject was elaborately treated by Suarez, Ayala, Gentilis, and other Canonists. They were agreed in vindicating defensive and punitive warfare, but developed some differences of opinion in regard to the ethics of conquest, the powers of the pope in sanctioning

wars and annexations, and the lawfulness of war against infidels and heretics.¹

Protestantism generally reproduced the Augustinian criterion of just and unjust wars. The representatives of the Lutheran and Anglican schools were peculiarly emphatic in branding rebellion as one of the most criminal types of unjust war. According to Luther, the worst tyranny ought to be submissively and patiently endured, inasmuch as every nation richly deserves chastisement, and on the other hand tyrants will be adequately punished in the future state of retribution.² With still greater solemnity, even ferocity of language, is the iniquity of rebellion established in the Anglican *Homily against Disobedience and Wilful Rebellion*. The reasons given include the following in addition to the two mentioned above:

Rebellion had its prototype in the apostasy of Lucifer; monarchy is of divine right, being a copy of the divine rule; rebels will be punished with eternal damnation; history abundantly proves that it is as foolish and futile as it is wicked; subjects are no fit judges of the goodness or badness of a prince; rebellion is not a single sin, but 'the puddle and sink of all sins against God and man.'

The unjust war, according to Calvin, is one inspired by cupidity, and the just war is one in which a prince, as vice-regent of God, undertakes to coerce another nation which has embarked on a murderous and marauding enterprise.³ He urged the usual arguments against rebellion, but with a significant addition:

'When misgovernment becomes intolerable,' he says, 'deliverance may be expected from God, whose way it is either to raise up avengers from among his servants, or to use for his purpose agents who may be pursuing different purposes of their own.'

On this principle it could be contended by the Puritans that rebellion against Charles I. became lawful when God raised up a deliverer in the person of Oliver Cromwell. The Scottish Church emphasized another qualifying doctrine, that obedience to kings ceases to be a duty when they make demands inconsistent with the laws of God, and in the National Covenant the subscribers accordingly bound themselves to maintain their sacred cause with 'their best counsel, bodies, means, and whole power against all sorts of persons whatsoever.'

The modern literature of Christian ethics has in the main reproduced the ideas of Augustine, Luther, and Calvin. One of the most interesting discussions is contributed by Rothe, who justifies aggressive war against a nation whose lusts may have made it a chronic disturber of the peace, and also defends the war of conquest, at least in extraordinary times, as legitimate in order to the replacement of a lower by a higher civilization, or for the correction and improvement of a nation which has become effete and degenerate.⁴

4. Jurisprudence and philosophy.—The classic treatises on international law deal elaborately with justificatory causes and unjust occasions of war. To Hugo Grotius more than any other it was due that political realism was called to account in the name of justice and humanity, though in some matters he applied the ethical principles with a measure of timidity.

Grotius recognizes three forms of just war—in the maintenance by a nation of its own interests, in interposition on behalf of others, and in duty towards God. A nation is entitled and even bound to maintain its own interests by the defence of the life, honour, and property of the citizens, by the exaction of reparation for injuries and insistence on the fulfilment of obligations, and by the punishment of the aggressors.⁵ War may be lawfully undertaken by a nation on behalf, not only of its own subjects, but also of its allies, its friends, and of fellow-men as such.⁶ The impious creed which denies the two

fundamental articles that there is a Deity, and that He cares for human affairs, is a doctrine so dangerous to the world as well as dishonouring to God that it may well be forcibly repressed in the name of human society.¹ War may not be entered on through blind fear of another nation, or a supposed utility that is not supported by absolute necessity. It is a monstrous doctrine that war is justifiable against a neighbour on the mere ground that his power is increasing and may continue to grow.² Other insufficient pretences are the refusal of women in marriage, the desire of better lands, the purpose of imposing a more beneficent government, and imperial and ecclesiastical projects.³ Again, while atheism may justly be suppressed, war is not justified against nations on the mere ground that they refuse to embrace the Christian religion, unless the unbelievers cruelly persecute Christians on account of their faith.⁴ Rebellion is generally to be condemned although it may be justified by necessity—as when a prince invades the privileges of a free people, or abdicates, or betrays the cause of his subjects, or generally acts as their enemy.⁵ On the other hand, the fact that a population does not enjoy liberty is not sufficient ground for rebellion. If they have come into servitude in a legitimate way, they should be content with their condition.⁶

The subject is also minutely treated by Vattel, and on similar lines—the shade of difference being that he allows more justification for the anticipatory war, and that he feels less hesitancy in apologizing for rebellion in justification of natural rights.⁷

The Scottish School of Jurisprudence is so far identified with the view that 'aggression is a natural right, the extent of which is measured by the power which God has bestowed on the aggressor,' and that 'the right of aggression justifies an application of force.'⁸

The criterion of justice has likewise been applied to wars in the schools of Moral Philosophy. Kant emphatically affirmed the lawfulness of defensive wars, and specified as criminal types the war for dominion (*bellum subjugatorium*) and the war of extermination (*bellum interecinum*). He refused to concede the moral title of one state to attack another on the mere ground of its iniquities (*bellum punitivum*).⁹ Hegel affirms the paramount duty of a nation to preserve and develop its individuality, and holds that this may give a title to a great nation, as the best representative of the world-spirit for the time being, to embark upon wars of conquest. As against such an elect member of the human family, other peoples can assert no natural rights.¹⁰ W. R. Sorley has criticized the 'defensive selfish' theory no less than the 'offensive selfish' theory as unethical, and makes the criterion to be whether a war contributes to the establishment of a higher civilization.¹¹

The distinctive features of the public opinion of the 19th cent. were that the religious war is an anachronism, that a war of conquest against civilized nations is criminal, that oppressed nationalities have a sacred right of rebellion, and that there is a moral privilege, if not a duty, of chivalrous interposition on behalf of the wronged. On the other hand, the jurists were increasingly disposed to disclaim the office of directors of conscience to the nations in the matter.

'It is not possible,' says Hall, 'to frame general rules which shall be of any practical value, and the attempts in this direction which jurists are in the habit of making result in mere abstract statements of principles or perhaps of truisms, which it is unnecessary to reproduce.'¹²

What is the value of this chapter of the history of thought? It must be admitted that a review of the subject is calculated to raise misgivings as to the judicial capacity of the human mind, if not even to foster moral scepticism. The general result was that, while it was agreed both by the many and by the wise that morality should regulate the occasions of war, there was serious difference of opinion as to the prohibitions actually involved in the moral law, the parties who had

to judge of its application to particular situations were so biassed by their interests and passions as to be incapable of equitable judgment, and the enforcement of ethical demands practically depended on whether it happened to coincide with the advantage of a state or states to lend its support to a righteous cause. The lesson to be drawn is that, if the demands of morality are to be properly expounded and enforced in this sphere, the task must be proceeded with under different conditions, and the problem must be formulated in a different way. If the chaotic situation of the past were replaced by a society of nations, the problem of just and unjust wars would be simplified, inasmuch as the typical form of unlawful war would be an act of rebellion against the general body in which a particular state broke the law that prohibits aggressive military action, and defied the authority supporting the law. Under these conditions the great question for ethical reflexion would be, not what wars were just or the reverse, but what were the rights which particular nations were entitled to assert or to have safeguarded. This subject is no doubt a difficult one; and it is probable that much would have to be adjudicated upon from the point of view of equity rather than in accordance with the provisions of a cast-iron statutory code. There would, however, be a good guarantee for just judgment in the fact that the elaboration of the code of rights would be undertaken by representatives of the general mind of the race, for whom the criterion would be the greatest good of the whole, and that in the application and enforcement of the recognized law the parties directly interested would play a subordinate part.

VII. HUMANIZATION OF THE CONDUCT OF WAR.—The ancient tradition was 'Væ Victis!' The penalty of defeat was the extremity of ruin and humiliation. The invaded country was ruthlessly devastated, the captured city was commonly sacked and destroyed, neither age nor sex could count on immunity, and a whole population might be put to the sword. If the practice was commonly less thorough than the theory, this was probably due not so much to clemency as to the reflexion that a ruined and depopulated country could pay no tribute, and that the services or the ransom of slaves gave more permanent satisfaction than the slaughter of captives. Such was the general spirit of warfare at the advent of certain of the great religions, and they vindicated their claim to the title of ethical by embodying provisions which represented a real advance on the primitive ferocity of mankind.

I. The curb of the religions.—The *Laws of Manu*, while showing no scruples about aggressive and acquisitive war, make a strong plea for humane fighting.

'What the King has not (yet) gained, let him seek (to gain) by (his) army.'¹ Let him plan his undertakings (patiently meditating) like a heron; like a lion, let him put forth his strength; like a wolf, let him snatch (his prey); like a hare, let him double in retreat.'² At the same time he is to conduct war mercifully and even chivalrously. 'When he fights with his foes in battle, let him not strike with weapons concealed (in wood), nor with (such as are) barbed, poisoned, or the points of which are blazing with fire.'³ Let him not strike one who (in flight) has climbed on an eminence, nor a eunuch, nor one who joins the palms of his hands (in supplication), nor one who (flees) with flying hair, . . . nor one who is naked, . . . nor one who looks on without taking part in the fight, nor one who is fighting with another (foe). Nor one whose weapons are broken, nor one afflicted (with sorrow), nor one who has been grievously wounded, nor one who is in fear, nor one who has turned to flight, (but in all these cases let him) remember the duty (of honourable warriors).'⁴

The ethical inspiration of the religion of Israel left its mark on the regulations for the conduct of war. Israel was familiar with the ferocity of Oriental warfare, to which a religious consecration

¹ *SBE* xxv. [1856] 232.

² *Ib.* p. 233.

³ *Ib.* p. 231.

was sometimes given by the application of the doctrine of the *herem*, or ban (Nu 21²⁴, Jos 6^{17, 18}, etc.). It could imitate its neighbours in the ruthless devastation of territory (2 K 3¹⁹⁻²⁵), the massacre of conquered communities (1 K 11¹⁶), the mutilation of captives (Jg 1⁶), and the murder of pregnant women (2 K 15¹⁶). It would appear, however, that Israel had a general reputation for clemency (1 K 20²¹), and that the treatment meted out to their enemies was 'not to be compared to the Assyrian devilities.'¹ The subject of atrocities bulks largely in the prophetic invective.

Amos thunders against the nations for the cruelty and perfidy that marked their methods of warfare, and judgment is denounced against Damascus because it has thrashed Gilead with threshing-instruments of iron; against Gaza because it has sold Israelites into captivity; against Tyre because it has violated a treaty; against Edom because of its pitiless vendetta against Israel; against Ammon because it ripped up the woman with child that it might enlarge its border; against Moab because it burned the bones of the king of Edom with lime (chs. 1-2).

The Deuteronomic legislation did something in this field to sustain its general character for humanity. It provides that the inhabitants of a city which capitulates are to be treated with clemency, and that, if it be carried by assault, the non-fighting population is only to forfeit its liberty (20¹¹, 21¹⁰). It was also forbidden to cut down fruit trees during the siege of a city 'since the tree of the field is man's life' (20^{19c}).

Among the great religions Islam alone upheld the ruthless traditions of Oriental warfare. As it was a religious duty to fight for the faith, so the worst excesses of war were given the character of a righteous judgment on the infidel, and the forfeits demanded of the vanquished by the law of the savage were passed on to the faithful as their natural rights.

'O thou prophet, fight thou strenuously against the mis-believers and hypocrites, and be stern towards them, for their resort is Hell, and an evil journey shall it be.'² 'The reward of those who make war against God and His Apostle and strive after violence in the earth, is only that they shall be slaughtered or crucified, or their hands cut off and their feet on alternate sides, or that they shall be banished from the land.'³

It should be added that some Muhammadan peoples have their share of human kindness, and that they have also found it necessary to compromise with their exterminating doctrine as a condition of being allowed to retain political power and even to occupy the planet.

2. The Græco-Roman period and its spirit.—During the classical period the traditional usages of war were somewhat softened. Although vengeance was pitilessly wreaked on an enemy who had inspired deadly fear or hatred, and although the principle still held that a victorious soldiery was entitled to the compensations of pillage and outrage, there was a milder strain in the Aryan constitution, which re-asserted itself in cold blood. While the Greeks did not evolve a code of international law, there was a minimum of common morality which a common religion enjoined on all Greeks alike. The chief elements of the code were the rights of the alien (*ξενός*), the sacred immunity of the herald, pious treatment of the slain (whose corpses might not be mutilated and should not be left unburied), and merciful treatment of prisoners. Unconditional surrender, if voluntary, carried with it a right to mercy; conditional surrender, if confirmed by an oath, was to be respected; and a captive had a title to be liberated (though it was doubtful if the captor was compelled to accept it) on payment of a fixed sum. These rules were believed to be sanctioned by divine authority, and the Amphictyonic Councils, which represented unions of tribes and

cities, also lent their influence to mitigate the rancour of war.⁴

Roman warfare retained enough of the old ruthlessness and savagery, as appears from the detailed records of massacre and pillage in the campaigns of conquest. The claims of mercy, however, are stated by Cicero in terms which probably do not greatly overstate the working theory of the later period.

A distinction is drawn between wars in which a state fights for its existence and those in which it contends for power and glory, and he observes that, while the former inevitably take on a merciless and murderous character, the latter may be and often are fought out with comparative clemency. The treatment of an enemy depended on what manner of enemy he was. Those who were of evil character—arrogant, cruel, and perfidious—were properly scourged without mercy, while it was a dictate of nobility as well as of prudence to deal magnanimously with those who were decisively beaten, and who were no longer a source of danger. He lays stress on the duty of acting honourably towards the enemy, and enlarges on the magnanimity of Pyrrhus, who declined to hold his prisoners to ransom, on the ground that, if fortune had granted them their lives, the conqueror might well grant them liberty.²

3. The mediæval period.—In the fighting of the early Middle Ages there was some relapse into primitive ferocity due to the fact that the conflict was between civilization and barbarism, and the stakes were the material foundations of existence. Writing in the very throes of the world-struggle, Augustine recalls that the tradition even of heathen Rome recommended clemency and magnanimity, and urges that war be conducted in accordance with the merciful precepts of the gospel.³ When the outline of a cosmos re-emerged, Christianity was already generally professed, and it contributed, in conjunction with the nobler elements of the European character, to the formation of a chivalrous ideal, which in some particulars toned down the hideousness of war. The Church, as the moral guide of the nations, took the matter into consideration, and in its canon law framed rules which were leavened by the Christian spirit.

4. The modern advance.—In modern times regulations for the conduct of war have been humanized to an extent that has been a welcome offset to the multiplication and intensification of the horrors due to modern inventions. The forces making for this improvement were the Christian leaven working in European society and the developing moral reflexion of the civilized world, and those happily met in the personality and equipment of Hugo Grotius, theologian, moralist, and lawyer, and became widely operative through the influence of the treatise *de Jure Belli ac Pacis*.

After expounding the general theory and practice of the conduct of war, he proposes in the name of humanity a list of amendments and mitigations (*temperamenta*) in regard to the treatment of the persons and the property of the enemy.⁴ The general principle insisted on is that the right to slay, enslave, confiscate, etc., is not absolute, but is limited by consideration of what is necessary to break an enemy's resistance or to obtain reparation for injury inflicted.

During the 18th and 19th centuries there was a marked development of the cosmopolitan and humanitarian spirit, accompanied by much ethical reflexion in the departments of International Law, Moral Philosophy, and Christian Ethics. The common-sense benevolence of the 18th cent., as voiced by Benjamin Franklin, saw no reason why the law of nations, which had already discarded something of the old savagery, should not go on improving; and Franklin proposed that, when nations were at war, immunity should be granted to cultivators of the earth, fishermen, merchants and traders in unarmed ships, artists, and mechanics working in open towns, also that rapine and privateering should be abolished and that hospitals

should be respected. In the treatises on International Law, which was sedulously cultivated during the period, the humane trend was strongly accentuated, and the doctrine was even ardently developed by some continental writers that war ought to remain a conflict of states as such, in which the non-combatant citizens might rank as neutrals. While the Roman Catholic Church brought its canon law up to date, Protestant theology was prolific in systems of Christian Ethics, which at least made it clear that the spirit of Christian morality required radical reform of the usages of war. Definite and valuable practical results were achieved by the Geneva Convention of 1864 which dealt with the treatment of the wounded, the sick, and prisoners.¹ The Hague Tribunal covered practically the whole ground, except that it was only permitted to glance at the topics of arbitration and disarmament.² The chief provisions illustrating the ethical progress were as follows.

(A) *Methods and weapons of war.*—(a) In re-affirming the principle that the right to injure the enemy is not unlimited, the Hague tribunal prohibited poisoning, treacherous wounding and killing, declarations that no quarter will be given, and the improper use of flags of truce. (b) It prohibited attacks on and bombardment of defenceless towns, and unnecessary destruction of edifices devoted to religion, art, science, and charity. (c) It prohibited the sack of captured cities. (d) It laid down that prisoners are entitled to be provided for and relieved. (e) The treatment of the sick and wounded was put on a much better footing. It was provided that ambulances and military hospitals are to be respected; that persons employed in this work are to be protected and returned to their posts, that wounded and sick soldiers are to be cared for and treated, to whatever nation they belong.

(B) *Treatment of the enemy's country when occupied and of property therein.*—The rights of private property were asserted—both as against pillage by individuals and as against confiscation by the enemy state. Wanton destruction of property was forbidden. Requisitions in kind or in services were only to be demanded from communes or inhabitants for the necessities of the armies of occupation. The inhabitants could not be compelled to take part in military operations against their own country.

The two other main subjects dealt with are commerce with the enemy during hostilities, and the law of reprisals.

During the recent war there were doubtless grievous violations of these humane regulations—notably in the use of poisonous gases, the wanton destruction of property, and the occasional refusal of quarter—but that the modern world had reached a higher level of morality than antiquity was still in evidence in the fact that, in the most gigantic and desperate struggle in history, law and order were to a large extent maintained in occupied territories, prisoners were not as of old callously butchered or reserved for the slave mart or the gladiatorial spectacle, and the sick and wounded found themselves under the shelter of the Cross and tended by the ministrations of the Good Samaritan.

VIII. *THE DESIRABILITY OF ENDING WAR.*—The general judgment of mankind upon war is that it is a scourge of the nations which, along with famine and pestilence, makes up the dread trinity of human woes. This estimate rests on considerations which have certainly not lost in force in modern times.

(1) War is organized destruction of the harvest of civilization and of those who produce it. It impoverishes a country in two ways—by diverting labour from productive to unproductive tasks, and by annihilating wealth which had previously been accumulated by peaceful industry. It also sets at naught the civilized doctrine of the sanctity of human life, and replaces the beneficent efforts of science to save and husband life by measures which directly or indirectly sweep away whole masses of population. The ever-increasing efficiency of the instruments and methods of destruction has still

¹ Text in L. Oppenheim, *International Law*, London, 1906, ii. app. iii.

² *The Hague Conventions and Declarations of 1899 and 1907*, Carnegie Endowment, 1918.

more decidedly given to modern warfare an aspect of folly and clothed it with a suicidal character. The conquerors, hardly less than the vanquished, have emerged from the World War bleeding, dazed, exhausted, and doomed to shoulder almost intolerable burdens.

(2) The tragedy of the waste of life is aggravated by the circumstance that the victims are the *élite* of the nations. War, as Æschylus says, is a gold-merchant, with whom his customers do most unprofitable business.

'From each home once there went
A man forth : him it sent
Each knows ; but what are these return ?
A little dust, an urn.'¹

A Greek epitaph puts the point pithily : "*Ἀρῆς οὐκ ἀγαθῶν φείδεται ἀλλὰ κακῶν.*"² While the machinery of nature works for the survival of the fittest, the winnowing of war results in the elimination of the fittest, and the more so in latter-day warfare, which gives little advantage to the strong, the skilful, and the wise, in the carnage of the frontal attack and of the fire-swept zone.³

(3) In fighting man reverts to the sub-human plane. The badge of humanity is the possession of reason, which at least suggests that man ought to try to settle his disputes by rational methods.⁴

(4) War makes an appalling addition to the miseries of the human lot. A whole world of cruel suffering is compressed by Sallust into his list of the horrors of ancient war :

'Rapi virgines, pueros ; divelli liberos a parentum complexu ; matres familiarum pati quae victoribus collibuisse, fana atque domos expoliari ; caedem, incendia fieri, postremo armis, cadaveribus, cruore, atque luctu omnia compleri.'⁵

With more detail and colour but hardly more impressiveness, a great preacher depicts the horrors of the battle-field, the agonies of the occupied country, the ravages of want and sickness, the desolated lives, and the broken hearts.⁶ It is a service rendered by realistic fiction that it has shown how dearly purchased even by the fighting man is 'the one crowded hour of glorious life' which itself under modern conditions may be like nothing so much as the death of a poisoned rat in a hole.⁷

(5) War, when looked at as a whole, is a gigantic moral evil. The aggression which sets in motion and sustains the strife has its dynamic in lusts and passions that defy and reverse the recognized maxims of morality. Even a just war sets the heart of a nation aflame with hatred, malice, and revenge. War turns the moral world upside down and sanctions a temporary suspension of respect for life and property and truth. It is therefore probably inevitable that it should be waged with some grim accompaniment of unlicensed outrage and of unchained vice. Experience also shows that the moral chaos of war makes its influence felt later on in a certain hardening of a people's heart, and a perversion of their moral sentiments, and also in a ground-swell of unrest, licentiousness, and crime which continues to surge after the actual tempest has subsided.

To this indictment there has been opposed a eulogy of war, which has some basis in facts, but fails to establish that the blessings traced to the experiences could not otherwise be obtained, much less that it is desirable to perpetuate war

as the condition of like benefits accruing in the future.

(1) The progress of human civilization, it is said, has been due to nations which came to the front in war, were organized and steeled by war, and won through war their power and title to guide or serve the world. 'If progress stops war on one side, it makes it on another, and war is its instrument.'¹ Few indeed would so far venture to criticize the course of history as to deplore that, e.g., Rome made herself mistress of the world, or that the Anglo-Saxons conquered and settled Britain, and that their descendants took forcible possession of the greater part of North America, as well as of Australia and New Zealand. Such events have a certain ethical justification, since self-realization is a right if not a duty of nations, while under former conditions a people was practically thrown back on war as the one form of enterprise by which to supply its vital wants and in which to find scope for great native powers. At the same time it may not be forgotten that the after-world owes the most valuable elements in its spiritual heritage to the culture of the Greeks and the religion of the Jews, both of which peoples went down in the military struggle, and it is not unreasonable to expect that in the future great races will find it possible to come to their own in the leadership and service of the world without the necessity of proving their superiority and claiming their opportunities by the exercise of brute force.

(2) War is necessary, it is said, to preserve the vitality of a state and avert degeneracy. 'No Body can be healthfull,' says Bacon, 'without Exercise, neither Natural Body, nor Politique: And certainly, to a Kingdome or Estate, a Just and Honourable Warre is the true Exercise.'² One might reply that it gets sufficient exercise, if it has a mind to work, in subduing the earth and developing industry and commerce, and that in any case there are more healthful forns of exercise than gashing the body and spilling its life-blood. Probably what Bacon meant was to give discreet utterance to the maxim of statecraft that a foreign war is the best recipe for grave domestic disensions, but to this assertion the reply is that sedition is more sanely and humanely treated by measures of political and social reform. That nations become effeminate and degenerate in peace, and because of peace, has been often asserted, and no doubt it has sometimes happened that a nation, on being guaranteed peaceful security, has become idle and vicious. But the charge often amounts to no more than that a people, as the result of a long period of peace, has become unskilled in the use of the soldier's tools, and the experience of the recent war showed that peoples which according to theory should have become weak and spiritless had preserved unimpaired throughout a commercial era the strongest ancestral qualities of their stock.

(3) War, it is said, has not its equal as a school of the virtues. The modern militarists are able to collect opinions in support of this tenet from eminent moralists of all ages. And undoubtedly there are qualities, distinctive of the soldier as such, which contrast impressively with the unbridled egotism that runs rampant in times of peace and prosperity—as courage, obedience, self-discipline, endurance, comradeship, self-sacrifice. It is, however, incredible from the point of view of the moral order that the only way in which individuals can be given the opportunity to reach the heights of virtue is that nations should continue to plan and perpetrate crimes against one another. Fortunately the facts do not warrant the inference of the moral indispensableness of war. For one thing the virtues in question to a great extent are merely brought to light, not engendered, by the experiences of war. In so far as they are created and developed by war, the same end could be achieved by other means, since the world contains enough of peril, adventure, and opportunities of sacrifice to provide material for a training of youth that would yield similar ethical results, while it might guard more effectively against such concessions as are made in the school of warfare to the evil forces which are summarily comprehended under the names of the Devil and the flesh.³ German Social Democracy has undertaken to provide a disciplinary equivalent in the economic field for the advantages of military training.

(4) War, it is said, has supplied much of the inspiration and impetus which have promoted the higher developments of the life of the race. The great achievements of the nations in war have usually been followed by a golden age of spiritual achievement—in literature, in philosophic thought, and in art.⁴ Even great religions in their origins, and subsequent religious revivals, have been closely connected with the throes of the nations incident to the deadly struggles of war. It appears that the tension and excitement of war stimulate the human spirit to put forth its utmost powers, quicken its interest in the capital problems of existence, and also deepen its insight and increase its receptiveness. But it is also a tenable view that the spiritual achievements of the race would have been greater, not less, had not war made its appalling drafts from generation to generation on the best energies and material of the race, and that the gains credited to war are really due to the alchemy of the over-ruling Providence which is able to do something to turn a curse into a blessing. That religion on the whole has

profited by war is more than doubtful: the religious revival is a lesser fact in the midst of most wars than the bewilderment or eclipse of faith, the unsettlement of moral maxims, and the diffusion of a pessimistic philosophy.

IX. THE POSSIBILITY OF THE CESSATION OF WAR.—The belief that war will eventually cease has been entertained on various grounds.

(a) It is held that God's purpose with the world is to establish in it a Kingdom which will be a realm of peace, as well as of righteousness and love, and that the omnipotent and all-wise God may be depended on to carry His purpose into execution. This confidence was the ground of the OT prediction that in the Messianic age 'they shall beat their swords into plowshares, and their spears into pruninghooks; nation shall not lift up the sword against nation, neither shall they learn war any more' (Is 2¹). The prediction has naturally been accepted by the Church as a promise of God vouched for by inspired prophets, but apart from the authority of the prophets it is inevitable that those who share their faith in the divine government of the world should share their conviction that universal peace is an end worthy of God which He will eventually attain in spite of human perversity and opposition.

(b) The hope of permanent peace has been based on a belief in the essential goodness of human nature, which it is supposed has sufficient idealism to respond in the long run to the message of justice and the appeal of brotherhood. Short of this it is held that as the human race grows more humane and refined, it will turn in disgust from the wild and brutal work of war. The hope is based on thus much of fact, that human nature has deep unrecognized and unrealized possibilities of an ethical kind, but the optimism resting on this foundation is happily reinforced by other considerations.

(c) The self-interest of the nations as a whole requires them to take measures for the abolition of war. The great difficulty, says Rousseau, is not even so much the wickedness as the stupidity of the rulers of states, who would be pacifists if they understood their own interests.

'They do not need to be good, generous, disinterested, public-spirited, humane. They may be unjust, greedy, putting their own interest above everything else; we only ask that they shall not be fools, and to this they will come.'¹

The same view is taken by Kant, who says that even a race of devils, provided only they were intelligent, would be forced to find a solution other than war for their disputes. 'Nature guarantees the final establishment of peace through the mechanism of human inclinations.'² The view that the nations will eventually be driven by considerations of interest to protect themselves against war has been urged with renewed force in recent times on the ground that the civilized nations are now so intimately interdependent through trade and finance that in fighting one another they infallibly injure themselves, that as a fact the victors suffer hardly less than the vanquished,³ and that the destructiveness, not to speak of the cost, of modern armaments is so terrible that persistence in war will imperil the very existence of civilization.⁴ These arguments have been powerfully reinforced by the latest chapter of history.

(d) The eventual cessation of war, further, has been expected as the culmination of the process which has already annulled the right of the individual to take into his own hands the redress of his private wrongs. The civilized states have all succeeded in instituting machinery which checks and punishes individual wrong-doers who

may be minded to rob or murder, and it seems to be essentially the same problem with which the race has to deal in repressing crimes attempted by particular nations against other members of the human family. The same necessity, as Kant points out, 'which forced men to take steps to insure the security of individuals within the particular state will compel the nations to take similar measures for their protection against violence and robbery.'¹ In opposition to this view it has been maintained that the nations have not the same reasons for instituting a system for the maintenance of international law and order that a nation has for repressing crime within its own borders. It is not so necessary, it is said, to regulate the reciprocal relations of states as the reciprocal relations of fellow-citizens, since the former are not so inextricably bound up together as the latter, and, further, a state has no right to limit its independence to the same extent to which the individual consents when he submits to the laws of his country.² But those objections have been weakened since the 18th cent.—the first by the ever-increasing economic solidarity of the nations, the second by the demonstration afforded by the British Empire and the United States of the possibility of reconciling the rights of a central authority with the enjoyment of a satisfactory regional autonomy.

(e) An optimistic attitude is justified in view of the progress that has been made towards the pacific organization of areas and populations within which war formerly raged as part of the order of things. There has been a steady expansion of the areas within which war is regarded as illicit and even impossible. The history of Britain illustrates the evolutionary process. Time was when there were seven kingdoms in England, and at least three in Scotland, which were chronically at war among themselves; later, war between England and Scotland had the aspect of a natural necessity, while the situation was further complicated by a chronic feud between Scottish Highlands and Lowlands, and by struggles between king and barons. But the stage was eventually reached at which the interests of each part of the country and all sections of the population were entrusted to the wisdom and equity of the representatives of the whole body, and the notion of a war between north and south, or other sections of the population, would be scouted as insane and unthinkable. Similarly the territorial conflicts of former days are no longer possible between the Departments of modern France or the provinces of unified Italy. It is reasonable to believe that at no distant date the problem which was solved by particular nations will be solved by Europe as a whole, and that to future generations European war, if not impossible, will be stamped with the criminal character of civil or fratricidal war.

Some of the counter-arguments are weighty, but not unanswerable.

(1) It is said that, as war has prevailed from the beginning, so it will prevail to the end. But it has been the destiny of man to grapple with the most dire and formidable evils, and the marvellous progress he has made in knowledge, power, and skill seems to presage that he will master all ills in his domain save the menace of death.

¹ 'Eons rolled behind him with thunder of far retreat,
And still as he went he conquered and laid his foes at his feet.'³

(2) The law of the world, we are reminded, has been progress through struggle, and the nations may not expect to escape from it. But it is not necessary that the struggle should continue to be carried on by the method of violence, and it is quite conceivable—and indeed in accordance with analogies—that it should come to be confined to rational forms of emulation and competition.

(3) Human nature, it is also said, contains within itself

the permanent possibility, nay, the guarantee of war—in its ingrained selfishness, its cupidity, its ambition, and its passions of hatred and revenge. But, even if we grant a root of wickedness in human nature, it is also true that it contains traits of divine nobility, which might be mobilized with success in support of altruistic and chivalrous ideals. Moreover, as already pointed out, nations may be expected to find out, as individuals have done, that fighting is at least bad and may even be ruinous policy.

(4) Religion has contributed the arguments that the permanence of war may be expected from the justice, and even from the goodness, of God. The argument from the divine justice is that God has ever punished guilty nations, and that, racial sin being inveterate, He will needs continue to employ the scourge of war as the necessary and appropriate method of the expression of His holy wrath. It is true that national sins entail punishment, and that wars have often been used as the means of chastisement, but God has ample resources of other kinds in the providential order by which to reveal His anger against national corruptions. It has also been argued that God's goodness moves Him to send wars upon the earth to prevent mankind from fixing their affections on earthly things. 'There is hardly to be found a child of fortune,' says Campanella, 'who would desire to exchange his terrestrial paradise for a celestial one; and so God applies a salutary remedy by sending upon us wars and persecutions.'¹ Similarly Hegel observes that hussars and sabres discourse much more impressively than preachers on the edifying text of the instability and vanity of earthly things.² But surely there is enough of irremediable misery in human life to undertake the work of weaning our affections from this world. Another branch of the religious argument founds on NT predictions of the persistence of wars and rumours of wars. These, however, belong to the apocalyptic stratum, which is concerned with events expected at the end of the world, and have nothing to do with the period during which the human race is appointed to work out its destiny under the conditions of a natural development.

The immediate outlook.—While there is reason to hope for the eventual abolition of war, it is not to be forgotten that each successive generation is disposed to military adventure by its fresh energies and its youthful inexperience. Although no generation wants two great wars, every generation seems pleased to have one. Moreover, our world is full of tension which involves the possibility of manifold future conflicts. There are many antitheses which, in addition to the legacies of hatred from the past, disturb the present and menace the future. The antitheses are (a) between the unreconciled forces of autocracy and democracy, (b) between nationalities and empires, (c) between nationality and nationalism, (d) between parties representing individualistic and communistic theories of social organization, while in the distance there even loom possible conflicts (e) between continent and continent and (f) between the dominant white race and the coloured races which it has taken under its tutelage. It was therefore vitally urgent that the world should take advantage of the present revulsion of feeling to place things on a better footing, and to secure that war shall be rendered, if not impossible, at least more difficult and odious, and more dangerous to those who play with the fire.

X. *METHODS OF SECURING PERPETUAL PEACE.*—There are three ways in which war might cease: (1) there might be no more aggression; (2) there might be no more resistance; (3) there might be a political organization whose function was to preserve peace. The first and second methods have been the dreams of prophets and idealists. The third has entered in different ways into history and practical politics.

(1) Clearly there would be no more war if all nations refrained from anything of the nature of aggression. This implies, however, a moral transformation of the race such as may not be looked for in the present dispensation, and the hope of such radical conversion has chiefly been cherished as a sequel to the Second Coming and a visible reign of Christ on earth.

(2) The end, also, would obviously be attained if those whose interests were assailed consistently agreed to offer no opposition, but to show forgive-

² *Loc. cit.*

ness and goodwill. It is possible that, if this could be tried, it would have the effect of shaming hatred and aggression out of the world.¹ But it seems even more probable that, if a nation could confidently depend on immunity in wrongdoing, this would give a fresh impetus to criminal impulses. In any case the method is not practicable, as there is nothing about which human nature feels more strongly than injustice, and nothing in which men in the mass are less disposed tamely to acquiesce.

(3) Political organization might attain the end by one nation conquering the rest and compelling them to keep the peace, by nations forming themselves into two or more groups to hold one another in check, or by all the nations, or the great majority, forming a society of nations for the maintenance of peace on the basis of a recognized code of law. The last arrangement, finally, might develop into a world republic with particular countries as its provinces.

(a) *The imperialistic method.*—While the empires in one point of view have been centres of aggressive warfare, in another point of view they have made for peace within the area embraced in their dominion, and have compensated for loss of liberty by according protection and ensuring tranquillity. The great conquerors have usually quieted any compunctions of conscience by the reflexion that the end of their fighting would be peace, and that peace would be the more widely extended and the better assured the greater and more thorough their conquests. Rome gave a practical demonstration that the power strong enough to master the nations of the civilized world was able to solve the problem of preserving a general peace. The Middle Ages inherited the Roman tradition, and inclined to believe that the ideal was the unification of the world under emperor and pope as representatives of the divine sovereignty.

Dante imagined a single authority, unselfish, inflexible, irresistible, which could make all smaller tyrannies to cease, and enable every man to live in peace and liberty, so that he lived in justice. He could conceive of its accomplishment only in one form, as grand as it was impossible—a universal monarchy.²

The Holy Roman Empire was seldom, if ever, the effective master of Europe; during modern times there has been no acknowledged master; and the struggle for the hegemony among the European nations which has formed so large a part of modern history was doubtless prompted, not only by ambition and cupidity, but by the desire to give to Europe the ruler that it needed to bring its miseries, including the bloodshed, to an end. Napoleon has left it on record that he sought to conquer Europe, not only for glory, but to bless it with lasting peace. The Holy Alliance, formed after 1815, undertook to keep the peace, but unfortunately attached even more importance to its futile policy of stemming the rising tide of democracy. It was at least a tenable theory, favoured by some German historians, that, if Germany made itself master of Europe by the might of its sword, it would serve itself heir to the pacific mission of Rome. But this programme came into collision with deep-seated prepossessions—the prediction of Rousseau was twice fulfilled that no nation is strong enough to contend with the rest of Europe, and the course of events has happily shut up the world to attempting a co-operative solution.

(b) *Defensive alliances.*—For the last 400 years Europe has witnessed combinations of nearly

¹ 'Hatred does not cease by hatred at any time; hatred ceases by love, this is an old rule' (*Dhammapada*, *SBE* x. 5). 'Odium reciprocum odio augetur et amore contra deleri potest' (Spinoza, *Ethica*, iii. 43).

² R. W. Church, *Dante, an Essay, and tr. of De Monarchia*, by F. J. Church, London, 1878, p. 90.

equal strength which made it hazardous to itself for any single state, however powerful, to develop aggressive designs. The system of the balance of power was no doubt better than none in a world that was unceasingly threatened by dreams of ambition and cupidity, but it had too little of an ethical basis—naked interest being palpably dominant on both sides—and as it was deemed proper to guard against the growing strength of a possible enemy as well as to repel actual injury, the general result was, not to avert war, but to make war almost the chronic experience of Europe, and, when it occurred, to extend the area of the convulsion and to increase the horrors of the struggle.

(c) *The League of Nations.*—The third method is that the nations, and at least as a beginning the civilized nations, should form themselves into a confederation for maintaining peace on the basis of an accepted code of rights and obligations. Such an organization was adumbrated in Greek and Germanic confederations, but the idea is modern of working out a scheme to embrace the whole of Europe and the rest of the civilized world, accompanied by a recognition of moral relations with the other divisions of mankind.

The idea of a European League of Nations was conceived by Henri IV. of France, who imagined that the great powers might be persuaded by the offer of certain adjustments and compensations to renounce their special aspirations, and to bind themselves to resist any attempts to disturb the agreed settlement.¹ To the Abbé of St. Pierre belongs the honour of having opened the modern discussion in his *Projet de la paix universelle*. As fundamental articles of the League he proposed the following:

(1) 'There shall exist henceforth between the European sovereigns signing the five articles a perpetual alliance.'

(2) 'Each of the Allies shall contribute, in proportion to his actual revenues, and the charges of his state, to the expenses of the Grand Alliance.'

(3) 'The Grand Allies, for the termination of their present and future differences, have renounced and renounce for ever, for themselves and their successors, the method of arms and are agreed always to adopt henceforth the method of conciliation, through the mediation of the rest of the Allies at the meeting-place of the General Assembly, and in case of mediation being unsuccessful they agree to submit to the judgment of the Plenipotentiaries of the other Allies, a majority of votes to determine the matter provisionally, three-fourths finally after the lapse of five years.'

(4) 'If any one of the Grand Allies refuse to execute the findings and the regulations of the Grand Alliance, negotiate contrary treaties, or make warlike preparations, the Grand Alliance shall arm, and take offensive action against the power in question, until it shall have complied with the said findings and regulations, or given security for the reparation of the injuries caused by its hostile measures, and made good the military expenses as estimated by Commissioners of the Grand Alliance.'

(5) 'The Allies agree that the Plenipotentiaries, by a majority of votes, shall definitely regulate in their permanent Assembly all the articles which shall be judged necessary and important, in order to procure for the Grand Alliance more stability, security and other advantages, but the fundamental articles shall be unalterable save by unanimous consent of the Allies.'²

As regards the basis of the Concordat, it was proposed that the *status quo* should be accepted and maintained.

'To facilitate the formation of this Alliance, it is agreed to adopt as fundamental actual possession and the execution of the latest treaties, and to guarantee to each Sovereign jointly, and to his house, all the territory and the rights which he actually possesses.'³

The main features of the project were reproduced in an influential essay by Rousseau, who laid stress on the following points as essential—that such a League must include all considerable states, that it must have a judicial tribunal and an executive, and that it must have at its disposal sufficient force to prevent secession. In his final

³ P. 28.

judgment on the scheme Rousseau declared it to be hopeless to expect to convince autocratic sovereigns and self-seeking ministers that they would find it to their interests to fall in with the project. The presupposition of its success was to get rid of autocracy, and this operation might prove too painful and costly.

'A Federative League,' he concludes, 'can only be established by revolution, and who then would venture to say that its coming is more to be desired or feared?'

The subject was advanced by Kant, who, while owing much to St. Pierre and Rousseau, went somewhat deeper into the conditions of lasting peace.

'The greatest problem set to the human race,' he says, 'is the formation of a political organisation under which justice will be dispensed to all, and a branch of this is the subordination to law of the external relations of the particular states.'²

The goal of the development on the international side is a *Völkerbund*, in which every state, even the smallest, may expect the maintenance of its security and its rights, not from the exercise of its own power or from its own decisions, but from the collective power of the League, and from judicial decisions of its collective will.³ He lays down the following among other conditions of enduring peace:

(1) A treaty of peace should not contain matter provocative of future wars. (2) No existing state should be annexed by another through inheritance, barter, sale, or gift. (3) Standing armies should be abolished. (4) National debt should not be accumulated in support of foreign policy. (5) No state should interfere in another's domestic concerns.

Kant also expresses the opinion that perpetual peace has the best chance of being achieved under republican institutions, although he is careful to point out that a republic may exist in substance without democratic forms.⁴

No recent writer has done so much to commend the scheme as Léon Bourgeois, who played a leading part in the judicial discussions of the Hague Conferences.⁵ His definition of the essence of the scheme is that the nations should agree upon a code of national rights and bind themselves as a whole to enforce it. This would correspond to the conditions under which internal order is maintained by civilized states. The other presupposition of the preservation of peace is effective machinery for enforcing decisions.

(1) 'There can be no virtuous peace save under the reign of justice. To have material peace it is necessary to have first realised moral peace, and there can be no moral peace if the rights of any are felt to be, or really are menaced. Rights must be determined before they can be guaranteed.'

(2) 'The organisation of a jurisdiction which guarantees these rights is the essential condition of the establishment and the maintenance of peace.'⁶

The project was translated into a political institution by the Treaty of Versailles, which, incorporating the Covenant of the League of Nations, came into force on its ratification by Germany and Austria, and by three of the principal Allied and Associated Powers.⁷

General Scope.—(a) *Ends*.—Promotion of international co-operation and achievement of international peace and security. (b) *Means*.—Acceptance by contracting parties of obligations not to resort to war, prescription of open, just, and honourable relations between nations for the establishment of understandings of international law as rules of conduct, maintenance of justice and respect for treaty obligations (Preface).

A. Membership.—(1) *Original members*—those named as signatories and those named who shall sign within two months. (2) *Later adherents*—any named self-governing state or colony on the strength of a two-thirds vote of the Assembly, and on acceptance of the obligations of the League and special regulations of the Assembly (art. i.).

B. Organization.—*Assembly and Council* (art. ii.). 1.

¹ *Etudes*, ed. 1839, iv. 256-258.

² *Idee zu einer allgemeinen Geschichte in weltbürgerlicher Absicht (Gesammelte Schriften)*, Berlin, 1902, viii. 24).

⁴ P. 849 ff.

⁵ P. 10 ff.

⁶ *Pour la Société des nations*, Paris, 1910.

⁷ *The Covenant of the League of Nations with a Commentary thereon presented to Parliament*, June 1919.

Assembly.—*Membership*—representatives of the members of the League. *Time and place of meetings*—stated and occasional. *Competent business*—any matter within its sphere of action and affecting the peace of the world. *Voting strength*—each member to have one vote, and not more than three representatives (art. iii.).

2. Council.—*Membership*—representatives of the principal allied and associated Powers, and of four other members to be selected by the Assembly—in the first instance Belgium, Brazil, Greece, and Spain. Representatives of other members may have a permanent seat, and selective representation may also be increased. *Time and place of meetings*—stated and occasional. *Competent business*, as before. Occasional representation of members of the League when their interests are affected. *Voting power*—one member one representative only and one vote (art. iv.).

Decisions of Assembly and Council, unless otherwise provided for, to be unanimous. First meeting to be summoned by President of the United States (art. v.). A permanent Secretariat at the seat of the League. Expenses to be shared by the members and officials (art. vi.). *Seat of the League*—Geneva in the first instance. No sex disqualification for offices (art. vii.).

C. Reduction of armaments.—General aim—reduction of national armaments to the lowest point consistent with national safety and the enforcement of international obligations. Plans for reduction to be submitted by the Council to the Powers, and adhered to after acceptance. Private manufacture of munitions to be discouraged and in any case reported on (art. viii.).

D. A Watching Commission to report on diligence in the execution of provisions of art. i.-viii. (art. ix.).

E. Basis of action.—Guarantee of existing rights against external force. 'The Members of the League undertake to respect and preserve against external aggression the territorial integrity and existing political independence of all Members of the League' (art. x.).¹ The Council to advise upon the means of fulfilling this obligation (art. xi.).

F. Peaceful settlement of disputes.—Disputes likely to lead to a rupture to be submitted either to arbitration or to inquiry by the Council (art. xii.).

(1) *Arbitration.*—(a) Suitable matters—interpretation of a treaty, alleged facts constituting breach of an international obligation, extent and nature of reparation for injury, (b) court to be specially agreed on, (c) undertaking to abide by award, (d) Council to propose steps for carrying out award (art. xiii.). Court of International Justice a permanent institution. Its functions—to arbitrate as requested, and to advise the Council (art. xiv.).

(2) *Inquiry.*—(a) Failing agreement to arbitrate, members agree to submit dangerous disputes to the Council for investigation. (b) One party may effect the submission to the Council. (c) The Council will endeavour to effect a settlement. (d) If the Council does not succeed, it will publish a report of its findings (whether unanimous or by a majority); if the award is unanimous, the members agree not to go to war with the power complying with the recommendations; if there is no unanimity, members are free to take such action as they deem necessary to maintain right and justice. No report shall be made on a matter which by international law falls within the domestic jurisdiction of a party (art. xv.).

G. Sanctions.—Penalties for a resort to war in breach of art. xii., xiii., xv. (a) Economic boycott. (b) Employment of armed force contributed by the governments on the recommendation of the Council. (c) Material support, financial, economic, and military. (d) Expulsion by the covenant-keeping powers of a covenant-breaking member (art. xvi.).

H. Disputes between Powers outside the League.—Such Powers are invited to act as if subject to the obligations of members, and to be dealt with accordingly. If both parties refuse, the Council to make such recommendations as will prevent hostilities (art. xvii.).

I. Open diplomacy.—All future treaties and international agreements to be registered and published (art. xviii.).

J. Advisory and precautionary function of Council.—Advises members to reconsider inapplicable treaties and to consider threatening international conditions (art. xix.).

K. Inconsistent obligations and understandings.—Abrogation and release therefrom to be sought (art. xx.).

L. Treaties of arbitration and regional understandings directed to peace unaffected—especially Monroe Doctrine (art. xxi.).

M. The mandate.—(a) Application—to territories released by the war and to backward or immature races. (b) Mandatories—advanced nations who can best undertake the responsibility, and are willing to accept it. (c) Types of mandate—to give administrative advice and assistance (e.g., to former portions of the Turkish empire); to administer territory, subject to consideration for order and morals, and the grant to other nations of equal opportunities of trade and commerce (e.g., in S. Africa), to administer territory as an integral portion of an empire (S.W. Africa, Oceania). The mandatories to make an annual report to the Council (art. xxii.).

N. Wider aims of the League.—Improvement in the conditions of labour, just treatment of natives, control of slavery and the opium and liquor traffic, and of trade in arms, secure freedom of communication, the prevention and control of disease (art. xxiii.).

International Bureau and matters of kindred concern to be placed under the direction of the League (art. xxiv.).

¹ But cf. xi. and xix. on possible development.

Humanitarian agencies to be encouraged and promoted (art. xxv.).

O. *Amendments to the Covenant*—to take effect when ratified, a member dissenting having the remedy of withdrawing from the League (art. xxv.).

The Covenant of the League of Nations is founded on a skilful compromise between the dictates of ethico-political theory and considerations of political expediency. Of the two elements of the combination, the lower was necessary if it was to come into existence, and the development of the higher may safely be left to the future as its custodian and trustee.

The Covenant embodies provisions and regulations which involve a notable advance in the moralization of international relations. That the leading nations should form themselves into a confederation whose object is the preservation of the peace of the world on the basis of justice and right; that they should pledge themselves to refer their differences to arbitration, or at least take advice about them, and renounce the resort to arms until the resources of reason and conciliation have been exhausted; that they should agree in principle to the limitation of their armaments, and be willing to discuss with one another concrete proposals for a reduction; that they should consent to keep one another informed as to treaties and military preparations; and finally that they should arrange to call to account and punish any disturber of the peace—these provisions mark an enormous improvement upon the principles of foreign policy which have made and coloured tragic centuries of European history and which issued in the catastrophe of the World War. On the other hand, the Covenant, recognizing that a new system must gradually evolve out of the pre-existent order, adapts itself as far as possible to the conditions of the world in the first quarter of the 20th century. The states retain unchallenged possession of their sovereign rights. It is not suggested that they should resolve themselves into the constituent provinces of a world-republic.¹ Deference is shown to the natural sensibilities of sovereign states by making the functions of Council and Assembly advisory, except in cases where the action of a particular state involves a violation of the terms of the League, or involves a menace to the peace of the world. Again, it is arranged that the great Powers shall wield authority and influence in the affairs of the League in a degree that reflects their economic and military strength, since the Council consists in the main of the representatives of a group of first-class states, instead of being made to rest on the popular Assembly. The constitution in short is not democratic, but aristocratic or oligarchical. Further, possession of territory and rights as from the date of the European settlement is recognized as constituting a foundation of right which is on the whole defensible from the point of view of justice as well as of national aspirations; and an undertaking is given that possession will be defended by the League at least against the aggression of external powers. This undertaking is, however, qualified by the provision that developments threatening the peace of the world—which might well arise from internal disorder, or the uprising of a subject population against an existing fabric of empire—would be held to be a matter on which the League would properly make more or less forcible representations to the state immediately concerned. Finally, the foreign dominions embraced in empires are regarded as lawful possessions, and the title is even strengthened on the ethical side by the doctrine of the mandate which exhibits imperial rule under the ideal aspect

¹ On the different ideal of the Federal World State and reasons for thinking it Utopian see L. Oppenheim, *The League of Nations and its Problems*, London, 1919, p. 13 f.

of friendly protection, civilizing tutelage, and moral guardianship.

The tasks assigned to the League of Nations will be of no ordinary difficulty. It will have to play the part of an impartial arbiter among the nations, and the representatives of the various powers in Council and Assembly will be predisposed to work primarily for the interests of their respective countries. It will have to give decisions in accordance with justice, and it is not easy to define justice, and to work out its implications in a world occupied by peoples which differ so widely, not merely in numbers and power, but in their capacities, their deserts, and their ability to be of service to the rest of mankind. It will require sanctions—in the last resort it must be able to compel respect for its authority and to coerce covenant-breaking nations by force of arms, and, while nations will readily go to war in defence of patriotic interests, it will be less easy to procure popular support for mere police measures which are dictated by far-seeing and disinterested international policy. These difficulties, however, are not altogether novel; they have already been experienced in other spheres of political action and development, and, as the League of Nations is an institution which the world requires, there is good reason to hope that the intelligence, the public spirit, and the resolution of mankind will prove able to cope with the essential problems of the situation.

The League of Nations, founded to protect the peace of the world, will itself no doubt breed new occasions of strife. It represents the first stage of a political development; and the analogous history of other forms of political organization suggests the probability of manifold conflicts on questions of its constitution and its powers. It starts, as has been observed, with the concession of oligarchical privileges to a minority, and the commonalty of the nations—now represented, as it were, by an Assembly and tribunals—may be expected to agitate for a more democratic constitution which would give equal voting rights to each state, and arrange that the Council should grow out of and depend upon the collective will of the whole body. The League, again, will naturally develop an increasing sense of its own importance, and will be ambitious to claim for itself the larger powers which are felt to befit a central authority, while the particular states will be jealously on their guard against action which savours of encroachment upon their independence and sovereignty. It may be added that the law which forms the basis of the judgments of the League will also afford occasion for controversy, as the League starts with a somewhat meagre outfit of moral precepts in its doctrines of non-aggression and self-determination, and it will be found necessary to do further thinking in regard to the chief good of the human race and the equitable application of an accepted moral ideal to particular peoples and to concrete historical situations. But if experience leads us to anticipate such struggles, the analogies of political history, and not least of the history of Britain and of the United States, justify the hope that working solutions will be found which will be a practical satisfaction of what is legitimate in the conflicting claims of the whole and the parts. It may somewhat confidently be predicted that the constitution will become increasingly democratic, and also that the League, while treating as sacred the domestic autonomy of the peoples, will acquire a steadily-extending authority and influence over the relations of particular states to one another and to the whole.

The endeavour to end war is only the negative side of the task of the League of Nations. The

positive side is to persuade the nations to do more to bear one another's burdens, and to enrich one another's lives by reciprocal service.

*Of the constructive work we have an angury in the earnest thought which has already been given to the conditions of labour in the covenanting countries, and to the principles which have been laid down for the amelioration of the common lot. It will, moreover, obviously be the duty of the League to encourage, by every means in its power, the chief form, and one of the most beneficent forms of national co-operation, viz. the freest and fullest interchange in honest commerce of the products of the fields and the workshops of every continent and clime. Imagination may even take a wider flight, and picture a time when nation will seek to serve nation by imparting what the other may lack out of the manifold riches of a higher civilization.¹

In its spiritual aspect this idea is not novel: it is an ancient possession of the Christian Church, underlying its enterprise of Foreign Missions, but little has been done to act on the idea in other fields. There is room for philanthropic schemes through which each civilized people as such will make an adequate contribution towards the provision of the rudiments of rational knowledge, and especially of modern medical skill, for the benefit of the savage and semi-civilized races of mankind. A great philanthropic opportunity was lost in the two years following the war, when the peoples of Great Britain and America might have agreed to ration themselves so that they might be in a position to release the necessaries of life and some comforts for the starving populations of Europe. The response to the call of the Russian famine is, however, of good omen for the future. One very practical service would be to arrange that all manufacturing nations got an adequate supply of raw materials. It may be added that the success of the League in developing the positive and constructive activities will be an important factor in determining the success of its efforts to avert armed conflicts. It is a law of human nature that an evil habit is best overcome through the expulsive power of a new affection, and, if the nations are to cease to have the desire to devour and plunder one another, it is imperative that, through reciprocal offices of service, they should learn to think of one another with kindly and grateful feelings, and respect one another as fellow-workers in the common cause of humanity.

WAR-GODS (Celtic).—At the time of the migrations of the Celts a war-god, whom the Greeks identified with Ares and the Romans with Mars, seems to have been the chief god worshipped by the Celtic tribes.² Gods guide their migration and bring the army to a stop on the territory destined for it;³ to the gods they dedicate all or part of the booty in victory;⁴ to them they sacrifice victims before the combat⁵ and prisoners after victory;⁶ in their honour they raise the war-cry.⁷

⁶ Dioid. Sic. xxxi. 13; Paus. x. 22. 3.

⁷ Livy, v. 33.

The war-god to whom the Celts dedicated Roman migrations in 223 B.C. is called Vulcan by Florus;¹ the one to whom the Gauls sacrificed men is called Saturn by Varro.² The ancient Celts probably had a goddess of war; this goddess has been identified by the Greeks with Athene,³ and by the Romans with Minerva.⁴ It was in the temple of this goddess that the Insures kept their ensigns of war.⁵

Cæsar gives us no more definite information; he mentions Mars third among the five chief gods of Gaul, and adds that Mars directs wars, and, after the issue is decided, the spoils are usually dedicated

to him; when the Gauls have carried off the victory, they sacrifice all the living beings that they have taken and gather the booty to one place; in many of the tribes heaps of war booty may be seen in the sacred places.¹ We must come to the Gallo-Roman inscriptions of Gaul, Great Britain, and Central Europe—with the Celtic epithets which there accompany the name of the god Mars—to get an idea of the variety of the war-deities of the Celts. Whereas 18 epithets of Mercury have been found, 15 of Apollo, 7 of Jupiter, and 3 of Minerva, we can count 50 of Mars; and these epithets of Mars are particularly numerous in Great Britain. Some of them have a local meaning, in which cases it is not certain that we have to do with a Celtic god; we may be in presence of local cults of the Roman god Mars. But of the 40 epithets that remain after the local epithets have been deducted 8 are used alone as well as along with the name of Mars—*e.g.*, Toutatis, which is probably a variant of the name Teutates,² which scholiasts of Lucan elsewhere identify with Mars, and the god Esus, also mentioned by Lucan. They are probably, therefore, the very names of the indigenous gods assimilated to Mars. As regards the others, it is probable that at least a number of them also indicate Gaulish deities. And it is impossible to ascertain whether some epithets of Minerva do not denote war-goddesses. Further, Mars Loucetius is associated in two inscriptions with Nemetona, who is undoubtedly a war-goddess, and Mars Cicolluis is associated with Litavis, whose bellicose character is undoubted, since in an inscription she is replaced by Bellona as the consort of Mars. Dio Cassius³ mentions among the Britons of the time of Boudicca the worship of a goddess of victory, Andata or Andrasta, to whom human sacrifices are offered, and whose name presents a close resemblance to that of Andarta, a goddess of the Vocontii, on whose territory have been discovered the majority of the altars of Victory that belong to Southern Gaul.

The information that has come down to us from antiquity is so imperfect that we can merely state that the ancient Celts had numerous gods and goddesses of war, and it indicates several details of their worship. But we have no figured representations of war-deities among the numerous Gallo-Roman bas-reliefs, unless we regard as such the wheel-bearing horseman who tramples under his horse's feet the monster dragon. The characteristic symbols of the Gaulish gods—the wheel, the hammer, and the cup—can hardly be interpreted as warlike. As for the attempts to explain by means of Celtic languages the names and epithets of the Gaulish gods assimilated to Mars, they supply only vague characteristics—Albiorix, 'the king of the world,' Belatnacros, 'comely in slaughter,' Caturix, 'the king of combat,' Leucetius or Loucetius, 'the brilliant.'⁴ We have no reason to believe that the Mars of Gaul had, like the Mercurys, many famous temples in Gaul. Doubtless the Roman pacification allowed as few as possible of their cults to subsist. Nevertheless we find in an inscription of the Rhine valley mention of a temple of Mars Camulus.⁴

From the text of the Irish epic, which has preserved some details of ancient Celtic mythology, we may glean some notions of war-gods and goddesses, and etymology helps us to recover others. In Cormac's *Glossary* Nét is described as 'a battle-god of the heathen Gael.' The king of the Tuatha Dé Danann, Nuada, has been identified with the Deus M[ars] Nodons known from inscriptions from Great Britain. Neman, the name of Nét's wife,

has been connected with Nemetona, the Gallo-Roman goddess, consort of Mars; and the name of Nét has been compared to the first part of the name Nantosuelta, associated in a Gallo-Roman inscription with the god Sucellus, 'the good striker.' In the mythological cycle and in the Cúchulainn cycle three fairy warriors appear—a kind of valkyries with the power of changing into animals—the first Morrígan; wife or granddaughter of Nét, or wife of Dagda, the second Macha, granddaughter of Nét, the third Badb, wife or granddaughter of Nét, all three daughters of Ernmas, one of the Tuatha Dé Danann. The name Badb, which in Irish means a scald-crow, and which has a variant Bodb, has been compared to the second part of the name of a Gallo-Roman goddess [C]athu-bodvæ, in Irish Badb-catha, 'battle-crow.'¹

It is much more difficult to discover traces of the ancient Celtic gods in the tradition and literature of Wales than in the Irish literature of the Middle Ages. Nevertheless scholars are probably right in identifying Nudd, the father of Gwyn, in whom was 'the force of the demons of Annwn,' with the god Nodons of Romanized Great Britain.

This, then, as far as the evidence of the ancients and the epics of the Celts of the British Isles enable us to reconstruct it, is the fragmentary pantheon of the war-gods of one of the most warlike races of ancient Europe.

WAR-GODS (Chinese).—China has no god of war, if by that term we imply a belief in the existence of a divine being similar in functions, characteristics, or divine attributes to Ares or Mars. This, however, is not inconsistent with the fact that war, in China as elsewhere, has usually kept itself in close touch with religion. We read in Tso's famous Commentary on the *Ch'un-Ch'iu* of Confucius that 'the great affairs of a State are sacrifice and war';² and the latter unaccompanied by the former was a thing unheard of. A Chinese writer has recently remarked that from the earliest historic times up to the date of the Boxers (and he need not have drawn the line there) his countrymen have never ceased to regard supernatural or spiritual agencies as constituting an essential portion of the national military equipment.³

It is not surprising, then, that among the most ancient ceremonial rites mentioned in Chinese classical literature are those which were carried out during warfare by rulers of states and leaders of armies with the direct object of invoking the aid of the unseen powers and impressing the troops with the belief that those powers would protect and help them in the hour of battle. The two most solemn ceremonies in ancient China connected with war were known as the *lei* and the *ma* sacrifices.

Very few details regarding them have come down to us, and we cannot always be sure that the records we possess are altogether worthy of trust. It is clear, however, that the *lei* was a sacrifice to God (T'ien or Shang-Ti) and that it was offered on many solemn state occasions. The ceremony could be performed only by the sovereign himself, because it was the 'Son of Heaven' alone who had the prerogative of offering

sacrifices to Heaven.¹ It was not exclusively associated with war, but it was always offered when an army was about to be set in motion and seems to have been regarded as pre-eminently a military sacrifice.²

The *ma* was offered on the field of battle or at the army's halting-places. There is great uncertainty with regard to this sacrifice; the most probable view is that it was offered to T'ien or Shang-Ti, but that certain minor divinities were also invoked or associated with that high deity—namely, the local tutelary powers who might be expected to object to the intrusion of armed forces into their private spheres of activity or who might feel outraged by the shedding of blood on soil that was under their special protection.

It is highly improbable that the early Chinese ever regarded warfare abstractly, as a quasi-institution, or that they ever felt the need of nominating a deity to preside over it as 'god of war.'

1. Kuan Yü or Kuan Ti, 'god of war.'—Although it is not correct to say that the Chinese pantheon contains a Mars, there are several famous warriors who, having shown themselves to be stout fighters and unselfish patriots during their earthly lives, have been deemed worthy of having their names and 'spirit-tablets' enshrined in a kind of national Valhalla or 'Temple of Military Heroes,' just as the names and tablets of great sages and philosophers and other public benefactors have been enshrined in the 'Hall of Worthies' or the 'Temple of Confucius.' It is the most celebrated of these national heroes who has been so often described as 'god of war' and as 'the Chinese Mars';³ and, although neither term is strictly applicable, and the latter is certainly inadmissible, the former may be retained if only because it has passed into common usage among Western writers on China and because there is no very suitable term in our language by which it could be replaced. We should be careful to remember, however, that the Chinese have never lost sight of the fact that their god of war was once a man like themselves and lived at an epoch which Chinese annalists do not consider very remote. Even now his manhood is by no means altogether merged in his divinity; and, though he is regarded as a worker of miracles and has certainly been the object of much superstitious devotion, this seems hardly sufficient to justify us in regarding him as more than a very potent saint.

Though dead heroes have always been honoured in China, and the custom of 'canonizing' those who deserved well of their country either in peace or in war is a very ancient one,⁴ it was not till China had fallen into a state of military decadence that a distinct cult of great soldiers began to take a conspicuous place in the religious life of the Chinese people. Kuan Yü had been dead about eight hundred years when the Sung emperors set him up as the central figure in a national cult that has lasted to this day.

Kuan Yü, a native of the village of Ch'ang-p'ing in Hsieh-chou (Shansi province), was born A.D. 162 and died in 219. He lived during the time of disunion and strife that is commonly known as the period of the Three Kingdoms, and he is regarded as the most romantic figure in one of the most romantic epochs of Chinese history. Of abnormal size and strength, he distinguished himself above all his contemporaries by his prowess and courage and by his chivalrous sense of honour. The influence of the drama, coupled with that of a great novel known as the *Sun Kuo*—both full of fantastic details which can have had little or no foundation in fact—have raised him to a pitch of popularity which is really independent of his position in the official roll of divinities or saints and would hardly be affected by the total withdrawal of official recognition. His surname is unknown; for Kuan was merely adopted by him in order to

conceal his identity during his flight from his native place after he had entered upon his career of glory by slaying a tyrannical magistrate. Later he accidentally made the acquaintance of two other celebrated characters of the period—Liu Pei and Chang Fei. The three became devoted and lifelong friends and entered into a relationship of sworn-brotherhood by taking the famous 'oath of the peach-orchard.' The leader of the three was Liu Pei, who was or declared himself to be a descendant of the founder of the Han dynasty and eventually carved his way to the throne of one of the Three Kingdoms—that of Shu—largely through the devotion and generalship of Kuan Yü. After a brilliant career which was not too uniformly successful to be monotonous, he was captured by the forces of Sun Ch'üan and executed.² Ten years or (according to another authority) forty-one years after his death he was given the posthumous title of *Chuang Mu Hou*, 'Marquis of Martial Dignity,' and various other titles were added throughout the centuries.

There is some doubt as to the exact date upon which Kuan Yü first acquired the high-sounding title of *Ti*—a term which is usually translated 'god,' but for which the word 'emperor' is, in this and many similar cases, a more fitting equivalent. The generally accepted date is 1594, when the emperor Wan-Li bestowed the title of *Hsieh-T'ien Hu-Kuo Chung-I Ta Ti*, 'In harmony-with-Heaven Protector-of-the-State Loyal-and-Righteous Great Emperor.' For some reason not much notice seems to have been taken at first of this addition to Kuan Yü's honours, for he continued to be designated by his old title of 'Marquis.' This was brought to the notice of the emperor Hsi Tsung (T'ien-ch'i), who in 1624 issued an edict declaring that the commands of his late majesty Shên Tsung (Wan-Li) were to be carried out, and confirming the titles, including that of *Ti*, conferred upon Kuan Yü by that monarch. From that time to the present the 'god of war' has been generally known as Kuan Ti.

2. Yo Fei, hero of the Sung dynasty.—The figure of Kuan Ti looms far larger than life-size through a mist of romance created by the popular drama and by the great novel of *The Three Kingdoms*. Were it not for this fact, his place in the affections of the Chinese people might long ago have been disputed by another great national hero—Yo Fei. This high-souled patriot lived nearly a thousand years after Kuan Ti; there has been much less time, therefore, for the growth of legends. As a historical figure, however, it may be questioned whether Yo Fei should be regarded as in any way inferior to Kuan Ti either as soldier or as patriot.

Yo Fei was a native of the province of Honan. As a boy he was studious, but the natural bent of his mind soon showed itself in the fact that his favourite books were those which discussed warfare and military tactics, such as the *Ping Fa* of Sun Tzū, described by its recent English translator as 'the oldest military treatise in the world.'³ As he grew up, Yo Fei became a noted archer, and soon distinguished himself in martial exploits against the Golden Tatars, who were at that time engaged in gradually driving the Sung dynasty from the plains of Northern China. Had Yo Fei been adequately supported by the Court and Government, it is possible that the invaders would have been expelled from China. Unfortunately he incurred the active hostility of the powerful Ch'in Kuei, the emperor Kao Tsung's trusted minister.⁴ It was this minister who was mainly responsible for the cession of Northern China to the Tatars. At any rate he appears to have entered into a reasonable agreement with Wu Shu, a Tatar prince, to bring about a peace advantageous to the invaders. Yo Fei earnestly desired to continue the struggle, and stoutly opposed the purchase of peace by a disgraceful cession of territory. When compelled to retire and leave the enemy in possession of territory that he felt quite competent to defend, he made bitter complaints that the fruits of his ten years of strenuous labour had been destroyed in a single day. As a vigorous opponent of the peace policy, Yo Fei was regarded by Ch'in Kuei as a dangerous enemy. He caused charges of treachery to be trumped up against him and in 1141 succeeded in having him arrested. Shortly afterwards Ch'in Kuei personally issued a secret order for his summary execution, which was duly carried into effect; and it was falsely reported to the throne that Yo Fei had died a natural death in prison. As time went on, the true history of the events that led to Yo Fei's betrayal and death gradually came to be known among the people, and, though Ch'in Kuei lived fourteen years longer, loaded with honours and high in the good graces of his sovereign, he has earned an immortality of infamy in his country's annals. On the other hand, the name of the warrior whom he defamed and slew has gathered fame and honour with the passing of the centuries, and his temple, which is situated near the margin of the beautiful Western Lake, outside the walls of Hangchow, is

⁴ H. A. Giles, *A Chinese Biographical Dictionary*, no. 392.

a place of pilgrimage for all Chinese who love their country and wish to show their reverence for the memory of a national hero.

The gradual elevation of Yo Fei to a place among China's patron-saints and divinities began in the reign of Hsiao Tsung (1163-1189), who succeeded the weak and vacillating Kao Tsung on the throne of the Sung empire. That ruler restored the honours and titles of which Yo Fei had been deprived after his impeachment. He also ordered a re-burial of his body, and gave a large sum of money to defray the cost of an official funeral. It was further decreed that a temple should be built and dedicated to the hero, and funds were provided for the performance of periodical sacrificial rites.

3. The cult of military heroes or 'war-gods' under the Republic.—As Kuan Ti was specially venerated by the late Manchu dynasty, it would not have been surprising if the victorious revolutionaries had decided to treat that divinity with cold disdain and to abolish the official rites connected with his cult. The establishment of a nominal Republic has not had this result; but Kuan Ti's position is not precisely what it was before 1911. In the third year of the Republic (1914) it was decreed by the President (Yüan Shih-k'ai) that the 'Military Temple' was to be devoted to the cult not of Kuan Ti alone but of Kuan Ti and Yo Fei and twenty-four other celebrated military leaders and patriots. Kuan Ti and Yo Fei were to share the highest honours equally, and the twenty-four others were to be regarded as their spiritual 'associates.' Nothing was done to interfere with the existing Kuan Ti temples or their rituals; but a new temple was dedicated to Kuan Ti and Yo Fei and their associates. The temple chosen for the purpose comprises a large group of buildings immediately to the north of the palace of Prince Ch'un, ex-prince regent and father of the young emperor Hsüan Tung. It was erected by the imperial government about a quarter of a century ago and was intended for use as an ancestral temple for Prince Ch'un, but had never actually been used as such when the dynasty was deposed. When it was taken over by the Republican Government, it was speedily converted into what might be described as the 'mother-church' of the reorganized cult of military heroes. The main buildings of this temple are covered with beautiful coloured tiles and stand in spacious courtyards. The principal hall or chapel is called the *Wu Ch'eng Tien*, 'Hall of Military Perfection,' in contradistinction to the *Ta Ch'eng Tien*, or 'Hall of Great Perfection,' the principal sanctuary in the Temple of Confucius. The interior, with its magnificent timber pillars and its richly-decorated roof, is impressive in the stately simplicity of its arrangements. There are no images. The canonized heroes are represented by their 'spirit-tablets' only—*i.e.* plain oblong pieces of wood, each bearing the name of the person whom it represents. In the place of honour at the north side of the hall, facing the entrance, stand two tablets side by side, somewhat larger than the others. These are the tablets of Kuan Ti and Yo Fei. It is to be noted that Kuan Ti's tablet does not bear all his titles or the highest of them. He is merely *Kuan Chuang Mu Hou*, 'Kuan the Marquis of Martial Dignity,' the earliest of his posthumous titles. The designation on Yo Fei's tablet also consists of four characters—*Yo Chung Wu Wang*, 'Yo the Prince of Loyalty and Martial Prowess.' On the east and west sides of the hall stand the tablets of the twenty-four 'associates,' twelve on each side, all well-known historical characters.

The reorganization of the cult of heroes was based on sound considerations of practical statecraft and national expediency. The main objects were to encourage patriotic ideals among the people, to raise the public estimation of the profession of arms, and to inspire the soldiers

themselves with military zeal and professional pride. On the occasions of the periodical ceremonies appointed to be carried out in honour of the twenty-six heroes army commanders are enjoined to bring their troops to the local 'Military Temple,' so that they may be spectators of the rites and have an opportunity of showing their reverence for the memory of the great soldiers of past days. The troops are also expected to take oaths of allegiance and good conduct. The first ceremony at Peking took place in January 1915. General Yin Ch'ang, as deputy for Yüan Shih-k'ai, led his officers and soldiers to the newly-established temple, and there they took the military oaths, which may be summarized as follows: (1) to be loyal; (2) to be obedient; (3) to protect the people of China from enemies; (4) to be ready to die for their country; (5) to be diligent and zealous in their duties, to respect their superiors and comrades, and to be true and upright in speech and action; (6) to abstain from taking part in political movements and from joining political societies or parties.

The ceremony is as simple as it is impressive, and, though Christian missionaries have asserted that it fosters superstition and 'shows in a painful manner the backward strides that are being taken by the Government,'¹ such complaints show a curious lack of sympathy and understanding. The religious significance of the cult is, indeed, very slight. The soldiers are not called upon to subscribe to any dogmas or beliefs regarding the powers or functions supposed to belong to the objects of the cult, nor do they prostrate themselves before any idol. They are merely expected to bow the head as they file past a row of wooden tablets bearing the honoured names of those who fought and in many cases died for their country.² Surely no more fitting place could be chosen for administering the military oaths of loyalty, obedience, and self-sacrifice than a building which has been dedicated to the memory of the heroes who are believed to have been the highest Chinese embodiments of those ideals.

LITERATURE.—This has been indicated in the footnotes. A large proportion of the material has, however, been taken from untranslated Chinese sources. R. F. JOHNSTON.

WAR, WAR-GODS (Greek and Roman).—

I. Greek.—The importance of war in early communities must always have been such as to bring it into close relation with the worship of the gods. In fact we usually find that it is one of the chief functions of any god to help and protect his people in war; and that they regard it as a matter of the highest importance to secure his approval for any such enterprise. In civilized warfare the conventions and rules generally observed, such as the sanctity of heralds and other envoys, or the inviolability of a truce, were also under the protection of the gods. But the ritual of declaration and conclusion of war was not so highly developed among the Greeks as among the Romans.

A curious instance is recorded by the scholiast on Eur. *Phæn.* 1377, who states that before trumpets were invented torches were used as a signal at the beginning of a battle; these were borne by two priests of Ares, one from each army, who were alone inviolable.

Here we seem to see some approach to an international sanction under divine authority; another custom is the truce always allowed by the victors

¹ This sentence occurs in an account of the ceremony as held in a provincial city. See *North China Daily News* (Shanghai), 7th Oct. 1915.

² A short account of the proceedings at Peking appeared in the *North China Daily News*, 26th Jan. 1915. Similar ceremonies have been regularly carried out ever since, both in Peking and in the Provinces. The spring ceremony in 1920 took place on 31st March, and in Peking the President (Hsi Shih-ch'ang) was represented by the general who had attended the proceedings on behalf of Yüan Shih-k'ai.

to the defeated army for collecting and burying the dead.

A typical example of a truce between combatant armies occurs in the *Iliad*, where a solemn sacrifice is made, and over it a curse is invoked from the gods on whoever may break the oath; but the gods are those who preside over the oath rather than over war.

In these cases both parties alike appeal to the same gods; in them we see merely a particular application of the principle that the gods, and Zeus as the chief god, enforce honour and mutual faith in all relations between strangers.

Examples like these are not, however, concerned with gods of war as such. The function of a war-god was above all to give victory to his own people, and to preside over such preparations as were likely to lead to it. These functions are sometimes attributed to a special deity, but more often to the chief god, or to the god who takes any town or people under his particular protection. Conversely, it might be an effective measure to withdraw from the enemy the protection of their own special divinity.

A good example is the secret expedition made by Odysseus and Diomed to carry off the Palladium, or sacred image of the war-goddess of Troy, because its presence prevented the capture of the town. A clear and instructive example of the gods to whom victory is ascribed occurs in an inscription found at Delphi, in which the Selinuntians say 'they are victors by the aid of the following gods—Zeus and Phobos (Fear) and Herakles and Apollo and Poseidon and the Tyndarids (Dioscuri) and Athene and Malophoros (Demeter) and Pasikrateia (Persephone) and the other gods—but above all of Zeus.'¹

Here are to be noted the reiterated insistence on the predominance of Zeus in this capacity, and the placing next to him on the list of Phobos—here probably to be regarded, like other epithets of gods in the list, as a name for Ares himself rather than as a satellite of his. Some of the other divinities in the list are elsewhere regarded as especially givers of victory to their devotees; but the whole is probably to be regarded rather as an enumeration of the chief deities of the State cultus.

In the Homeric poems we constantly find the gods not only as givers of victory and as strong partisans of one side or the other, but also as actually mingling in the fray among mortal combatants. This, however, though it applies to all the other gods, is not true of Zeus, who decides the issue by his will and imposes it by his emissaries. So in all great national crises or deliverances due to a successful war the victory is ascribed to Zeus, especially under his title of Eleutherios ('the Liberator'). Thus at Plataea, in commemoration of the decisive victory over the Persians, games called Eleutheria were celebrated at the altar of Zeus Eleutherios, and a race between men in armour was the chief event. An emblem of this power of Zeus is the ægis (*g.v.*), which he lends to Apollo² to turn the battle against the Greeks, and which is constantly worn by Athene. It has the power of causing terror and flight among those against whom it is shaken, and is used only by these three deities. All three have a specifically warlike side. Apollo was honoured in the festival of the Boedromia at Athens and of the Karneia at Sparta, both of a warlike character; he was especially the leader and giver of victory to the Dorians. After the Persian wars all the Greeks who had participated in the struggle set up a common thank-offering to him at Delphi. The same victory was attributed by the Athenians to their patron goddess, and commemorated in offerings or statues on the Acropolis; and the Plataeans who shared in the battle of Marathon set up, from their share of the spoils, a temple and statue at Plataea to Athene Areia as goddess of war. Another epithet of

Athene which was probably of a warlike character was Nike, goddess of victory. Athene Nike had an altar and shrine on the bastion south of the entrance to the Akropolis and guarding its approach; on this bastion was erected, in the time of Perikles, the little temple which commemorated in its reliefs the victories of the Greeks over the Persians. The goddess is sometimes called 'Wingless Victory' by a misconception; as a form of Athene she was distinct from the winged figure of Victory so common in Greek art of all periods. This latter Nike is a mere impersonation of victory, whether in the games or in war. She has no separate cultus before the time of Alexander, and no place in mythology. She is placed on the hand of Zeus or of Athene in their great statues, and so is regarded as their satellite. Winged victories are often to be seen crowning victors—but usually athletic, not martial ones—making sacrifices, and decking trophies. Famous statues of Nike are set up to commemorate victories in war—the best known are that by Pæonius dedicated to Zeus by the Messenians at Olympia, and that from Samothrace, now in the Louvre, placed on a ship to record a naval victory of Demetrios Poliorketes. It has been rightly observed that she is in each case represented as the messenger rather than the giver of victory. Trophies, set up on the field of battle, were regarded as dedications—presumably to the god to whom the victory was ascribed. They were protected thus by a religious sanction, for they appear usually to have been respected even when set up in enemy territory.

The deities so far mentioned preside over war only as one side of their activities, and as a necessary part of their protection and help to their chosen people. In Ares, on the other hand, we recognize a specialized god of war. It has indeed been suggested that his functions were once of a wider character, perhaps among the Thracians or some other foreign people; but there is little trace of any such character in Greek mythology or ritual.¹ Some confusion has arisen in this matter from the misleading identification of Ares with the Roman Mars. Ares fares but poorly at the hands of the poets from Homer down. In the *Iliad* he is wounded by a mortal and overthrown by Athene; Sophocles actually calls him 'the god unhonoured among gods,'² and the aid of other deities is implored against him; and this not as the war-god of an adversary, but as representing the horror and evils of war and pestilence. He is thus essentially the destructive god, delighting in slaughter; yet his worship, so far as we can judge, does not appear to have any connexion with the ritual and belief associated with terrible 'chthonic' powers or the possible spiritual influence which could arise from such belief. On the other hand, the name of Ares often occurs in conventional expressions and epithets applied to warriors implying military prowess; but in such cases it seems to be used as an impersonation of war rather than with any mythological reference. So too in expressions like 'Ares destroyed him' in an epitaph or, in a hymn to Apollo, 'He stayed the Ares of the Gauls,' it even seems as if the name of Ares was used by preference for the power of the enemy. One of the earliest and best attested shrines of Ares in Greece, that on the Areopagus at Athens, was said to have been founded by the Amazons, terrible women warriors of foreign origin who were defeated by Theseus. Whatever the origin of Ares, he seems in all these cases to represent the brutal and barbarous or 'barbarian' side of war, which is overcome by the Greeks with the help of their gods of civilized warfare. Such an impression is confirmed by the legend that tells how Herakles,

¹ Cf. art. THRACE.

² *Æd. Tyr.* 215.

the typical Greek hero, by the aid of Athene, slew Kyknos, the son of Ares, in spite of Ares' attempt to support him. Ares indeed takes his place among the gods in their usual assemblies, and in such common exploits as the battle against the Giants; but even here he does not perform a leading rôle.

Ares is associated with a goddess Enyo (cf. his epithet or by-name Enyalios), who, however, has little mythological personality. His association with Aphrodite (which was given a scandalous turn by the poets from Homer down) is probably due to his having in some places a warrior-goddess as consort, who was identified, e.g., with the armed Aphrodite worshipped at Corinth—very probably a survival from primitive worship. Phobos, or 'Fear,' is either his satellite or another name for himself, rather in the sense of Terror, but is a mere impersonation, though sometimes represented on shields and similar objects—possibly originally with the magic intention of inspiring terror in the enemy. There are also dæmons of battle or strife who delight in slaughter, Eris (Strife) and the like; and Keres, dæmons of death, who drag away the corpses of warriors; but these belong to poetical imagination, at least in their artistic form. A curious myth about Ares is that he was bound in a pot for twelve months by the Aloadaæ.¹ Similar stories of the binding and hiding of a malevolent spirit are known to folk-lore; a similar notion is found in the binding of Satan for a thousand years (Rev 20²).

To sum up, the gods who presided over war in Greece fall into two classes: those who gave 'the civilized art of war' and 'the tempered civic courage exalted by Aristotle and other Greek moralists,' and Ares, who inspired 'the brute battle-rage,' with which 'the Greeks had little sympathy.'² With the advance of ethical feeling in religion, the latter became the representative of the spirit of destruction and of barbarian rather than Hellenic warfare, though his cult still survived in many cities.

2. Roman.—In the religious usages of war, and in the beliefs as to war-gods and the practice of their ritual, Rome differs from Greece in two respects: (1) Mars, the specialized war-god, was also in many ways the chief national god, and so differs widely from Ares, with whom the Romans identified him; and (2) the ritual and observances of war were far more elaborate and more definitely prescribed, and were to a great extent under the charge of special priestly officials.

In addition to Mars, Janus, Jupiter, and Quirinus are concerned with war, though not as their special function. Janus, as the spirit of doorways, is usually first among gods to be invoked, in connexion with every going out and coming in. His temple in Rome appears to have consisted of two doorways, with a kind of court between them. Here an image of Janus, with a head facing each way, was set up as guardian of the threshold. But this statue probably belongs to a later stratum of belief and ritual; originally the doors themselves were the symbol or even the habitation of the god. This temple was open in time of war and closed in time of peace—a custom which has puzzled mythological speculators alike in ancient and in modern times. Virgil³ seems to regard war as being shut up within the doors and released when they are opened; Horace⁴ speaks of the bars that shut in Janus, the guardian of peace. Virgil at least records the custom, common to other Latin towns as well as Rome, that the king or the consul should formally open the doors as a declaration of war. An explanation that has appeared probable to

modern mythologists, as to Ovid,¹ is that the door was left open during an expedition so that there might be no obstacle to the return of those who had gone forth. The gates are said to have been closed during the reign of Augustus for the first time but one since the reign of Numa.

The worship of Jupiter was also in many ways associated with war. The most conspicuous example is in the case of the *spolia opima*, which consisted of the spoils of an enemy leader slain in single combat by the leader of a Roman army. These are said to have been first dedicated by Romulus in a temple to Jupiter Feretrius which he established for the purpose. In this temple was kept the sacred stone, Jupiter Lapis, which was taken with them by the *fetiales* when they went out to ratify a treaty, and by which they swore on other solemn occasions. The god was probably in primitive times thought of as immanent in this stone and in the oak-tree on which Romulus hung the spoils. The rites of war connected with this primitive temple were later eclipsed by those of the great temple of Jupiter Capitolinus. This temple is especially associated with the celebration of the triumph which was the highest honour that could be given to a victorious general. The most remarkable feature of the triumph was that the general was actually invested with the insignia of the god, borrowed from the temple for the purpose, and had his face painted with vermilion, in imitation of the image of the god. He proceeded from the Campus Martius through the Forum to the temple of Jupiter Capitolinus, and there deposited the laurels from his *fascēs* and the laurel branch which he carried on the knees of the god, thus assigning to him the glory.

The worship of Jupiter Latiaris on the Alban Mount belonged to the Latins generally rather than to Rome in particular; but it was adopted into the Roman State cultus. The celebration of the *Feræ Latine* in his honour was the first duty of the consuls on their assuming office; and military disasters were attributed to its omission. A triumph was celebrated on certain occasions on the Alban Mount in honour of Jupiter Latiaris, especially by generals who had not obtained the Senate's sanction for a triumph in Rome. Other epithets of Jupiter which are obviously of a military character are Victor and Stator. There appear to have been three temples of Jupiter Victor in Rome, dedicated on various occasions; that of Jupiter Stator on the Palatine, on the spot where the flight of the Romans before the Sabines was stayed, was attributed to Romulus; it was renewed in consequence of a vow in battle against the Samnites. Jupiter was also worshipped in various forms as protector and giver of victory to the emperors on their military expeditions; and in the later imperial age the *imperator* is often portrayed with the attributes of Jupiter—an extension of the practice followed earlier in the case of a triumphing general.

The most important priestly college connected with the military side of the worship of Jupiter was that of the *fetiales*, who were concerned with questions of international faith and the sanctity of solemn pledges made in the name of the god. Their special functions were the demands for reparation in cases of international offences, the declaration of war, and the conclusion of peace and of treaties. They had the inviolable character of sacred envoys, and carried with them on their expeditions the sacred stone and the sceptre from the temple of Jupiter Feretrius, and the sacred vervain gathered on the Arx (*sagmina*). Their spokesman was the *pater patratus*. In demands for reparation (*clarigatio*) three intervals of ten days were allowed. If by the thirty-third day satisfaction was not given, war was declared. This was done by the *pater patratus* hurling a spear over the enemy's frontier. When this in later times became impracticable owing to the distance of some military expeditions, a parcel of land near the temple of Bellona in Rome was ficti-

¹ *Il.* v. 385 ff.

⁴ *Ep.* ii. i. 255.

¹ *Fasti*, i. 279 f.

tiously converted into enemy soil, its boundary being marked by the *columna bellica*; and the spear was cast into this instead. A war declared by these formalities was called a *iustum piumque bellum*, not in any moral sense, but simply in that all the ritual had been correctly followed out so as to secure divine sanction. At the conclusion of a treaty or truce at the end of a war the consul could only make a *spontio*, or agreement, which did not become binding upon the people until it was ratified by the *fetiales* with a special form of sacrifice. In all these observances Jupiter is appealed to rather as the guardian of international faith and honour than specifically as a war-god; but they are closely associated with war as supplying the religious sanction without which success could not be expected. The *fetiales* naturally acquired some knowledge of international law, and were sometimes appealed to on a question of procedure.

It has been much disputed among mythologists whether Mars should be regarded as specifically a war-god; the opinion appears now to prevail that, although this side of his functions was prominent in early times and predominant in later, it was not the most primitive or the most important. Mars appears to have been a god of the land, not only in Rome, but also in many other Italian states. It is noteworthy that he had no temple within the *pomerium* at Rome. This is explained by some authorities as indicating a notion that his presence was undesirable or a desire that civil strife should not exist within the city; but it is more probably connected by others with the notion that he was god, not of the town, but of the country both cultivated and wild, especially the latter. For this reason he was able to protect his worshippers when they ventured out on warlike expeditions. Similarly the spring and autumn ceremonies in his honour, such as the dances of the *Salii* with the sacred shields (*ancilia*), are by some associated with the beginning and end of the campaigning season, and so with the activity of the war-god. But it has been pointed out that similar dances occur among many peoples in connexion with the cult of the powers of vegetation or the processes of agriculture at the most critical seasons of the year, and were intended to arouse the sleeping forces of such powers, or to avert or exorcize malignant influences. This may well have been the original meaning of these dances in honour of Mars, though they doubtless acquired a warlike meaning in quite early times. Though Mars had no temple within the city of Rome, sacred objects connected with his worship were preserved in some of the most ancient shrines in the city. The spears of Mars (*hastæ Martis*) were kept in the *sacrarium* in the Regia, at the foot of the Palatine, and were shaken by a consul before entering on a campaign with the words: 'Mars, vigila'; these were evidently regarded as the symbol of the god, who was in early times probably thought to be immanent in them; their spontaneous shaking was regarded as a portent. In the Hall of the *Salii* on the Palatine were kept the sacred shields. These were of a very ancient pattern similar to those used in the Mycenaean age in Greece. One of them was believed to have fallen from heaven in the time of Numa; and the safety of the city was thought to be dependent on its preservation, as in the case of the Palladium at Troy. Numa had eleven other shields made to match it; and these were annually carried round various altars in the city by the *Salii* in the month of March; they were ceremonially purified and put away by the *Salii* in October. The *Salii* on their way executed a kind of war-dance and beat the shields with sticks. Another ceremony in honour of Mars which was given in later times a warlike significance was that of the October horse; the winning horse in a race was sacrificed, and his head fixed up on the Regia, though here too later investigators see a rite originally agricultural in intention. The sacrifice took place at the altar of Mars in the Campus Martius.

The identification or contamination of Mars

with the Greek Ares, and the universal tendency of poetical mythology, led to Mars being more and more regarded as the god of war, the protector of Roman armies and of soldiers in general; and he has come to be thought of only in this aspect in mediæval and modern times. His association with the first month of the year in the old Roman calendar is probably due to agricultural rather than to military influences. A remarkable custom in connexion with Mars was the *ver sacrum*, which was decreed to him in times of pestilence or disaster. In accordance with this all animals and human beings born within the succeeding spring were to be sacrificed or devoted to the service of the god. In the case of human beings this devotion took the form of being sent forth beyond the boundaries of the State. Hence arose colonies of a military character, with Mars as their leader and founder. The foundation of many Italian cities was attributed to Mars; but legends like that of Romulus, who was said to have been borne to the god by Rhea Silvia, show an anthropomorphism alien to primitive Italian religion, and are probably of Greek origin.

Another Roman or rather Italian war-god is Quirinus, who was later identified with Romulus. He seems to belong to the Sabine settlement on the Quirinal Hill, though he came to be adopted as one of the chief divinities of Rome, and even to represent the peaceful or citizen side of the god, as Mars Gradivus represents the warlike side; but he is expressly identified with Enyalios or Ares. It is significant that the three classes of *spolia opima* were offered, the first to Jupiter Feretrius, the second to Mars, and the third to Quirinus.

Other minor divinities connected with war have little mythological significance. Bellona had a temple in the Campus Martius, which was dedicated after a vow made in battle in 296 B.C.; close to it was the *columna bellica* mentioned in connexion with the *fetiales*. She seems, however, to have been little more than a personification, and her cult is of no great importance. She was later identified with an Asiatic warrior-goddess, or with the old Sabine Nerio. Nerio is by some writers regarded as the consort of Mars, but Nerio Martis is more probably to be explained as the strength or courage of Mars—an aspect, so to speak, of the god's manifestation. In later times Victoria, Virtus, and other impersonations were frequent, especially in art.

It is obvious that, in important undertakings such as military expeditions, sacrifice and divination would play a prominent part, especially among a people who, like the Romans, showed extreme anxiety to keep in right relations with divine powers. These, however, need not be more than mentioned here, since they are fully treated under their proper headings. A remarkable instance of *devotio* is that in which, at a critical moment of the battle, a general 'devotes' himself and the enemy's forces.

A well-known example is the case of P. Decius Mus in 340 B.C. Here the devotion was said to be due to a dream; but the rites and formula provided by the *pontifex maximus* seem to show that the act had official precedents. The case of Codrus at Athens is similar. Decius Mus was instructed to address in his *devotio* 'Janus, Jupiter, Mars, Quirinus, Bellona, the Lares, the gods Novensiles and Indigetes, the gods of his own people and the enemy, and the Manes.'

The formula is instructive, as giving in accepted order the divinities to whom the result of war is ascribed; it confirms what we learn from other sources as to the order assigned to war-gods in Roman religion. It is noteworthy also that the national gods both of Rome and of the enemy are invoked. The custom of *evocatio* is thus recalled, by which, as after the capture of Veii and of Carthage, the national gods of the enemy were

invited to desert his city and transfer themselves to Rome.

In all these matters, as in all other Roman religion, we find an elaborate and highly developed ritual, with every possible safeguard against unintentional oversights. The personal character of the gods concerned comes to be realized only gradually and in later times under Greek influence, but is so strongly developed in later literature that it is by no means easy to recover the primitive meaning of the various rites and of the divine powers who were invoked.

The ensigns (*signa*) of Roman troops and the eagles (*aquila*) of the legions 'were objects of religious worship to the Roman soldier.'

'The "birthday of the eagle" was celebrated as that of the legion; the "genius of the signa" is mentioned in inscriptions. We read in Livy of an oath "by the signa and the eagles," and in Tacitus of a commander who saved himself from the fury of a mutinous legion by "embracing the signa and the eagle and putting himself under the protection of their sanctity."¹

In camp they were placed in a kind of small chapel. At Rome they were kept in the *ænarium*; hence it would seem that their sanctity was due rather to military feeling than to any official recognition or early sanction.

E. A. GARDNER.

WAR, WAR-GODS (Semitic).—The earliest extant Semitic inscriptions, whether on stone, baked clay, papyrus, or parchment, whether Babylonian, Egyptian, or Hebrew, tell of wars between tribes and nations. From the time of Mesilim, before 3000 B.C., through that of Eannatum, the military genius of Lagash, of Lugal-zaggisi of Erech, the conqueror of the whole of Mesopotamia, of Sargon I., of Gudea, or of Hammurabi, to that of Ašurbanipal or of Nabonidus, wars and rumours of wars never ceased; from the time of the earliest Egyptian inscriptions to that of the latest the kings and rulers of Egypt are pictured smiting their foes; and from the time of the Exodus to the final fall of Jerusalem the Hebrews as a nation were warriors, and long before they became a nation—if tradition be trusted—they were subject to the same condition. The Babylonians, Assyrians, and Hebrews were warlike peoples, especially the Assyrians. But, although Egypt had her great military pharaohs at all periods of her history, such as Sesostris III., Thutmose III., Amenhotep II., Seti I., and Rameses II., she was not a great military nation.

I. **BABYLONIAN.**—i. **War.**—The quarrels and feuds between rulers of early Babylonian city-states were the beginnings of strife which later developed into the elaborate warfare of the Assyrians. The king or head of the city, originally the patriarch of the clan, was the centre of all public life. As priest he was the *šangu*, as representative of the god he was the *patesi*, and as war lord he was the *sarru*. Wars were begun by him and were carried on under his direction. But all wars were really the affair of the gods.²

Warlike operations were usually of a military nature. But as early as the time of Samsu-iluna wars were carried on at the head of the Persian Gulf partly on land and partly by the use of boats. The Assyrians, indeed, although not seamen themselves, built a navy with the aid of Phœnician boat-

builders, and Sennacherib employed Phœnician sailors in the pursuit of Merodach-baladan across the Persian Gulf. But the Neo-Babylonians not only had developed a great merchant fleet, but also had become a considerable naval power.

From the earliest times in Babylonia the support of warfare was considered a public obligation, and those who were unfit for actual fighting were expected to furnish money to pay for a fighting unit. The army was recruited by conscription, each district being responsible for its quota. This militia, called the *šābē* or *ummanāte*, were subject to immediate call by the king. The levy (*dikutu*) was under the direction of a special officer, called the *nāgiru*, who saw to it that no liable person escaped, and, if a man so far forgot himself as to harbour a defaulter from the levy, he was put to death.¹ All estates had to furnish troops at the command of the king, who could even impress the produce of the land and could also commandeer labourers for civilian purposes. By the time of the Ist Babylonian dynasty there is evidence of a regular standing army of professional soldiers, recruited partly from natives, but mostly from Amorites and from the inhabitants of other conquered territories. The body-guard of the king consisted of most trustworthy native soldiers. In the absence of the king the troops were led by the *turtannu*, or commander-in-chief, who often conducted the military campaigns. The armies of the Assyrians were well officered. These officers formed a semi-caste of a military character, were paid with land, a house, and a garden, were assigned sheep and cattle, and received in addition a regular salary. But they were always at the service of the king, conducting especially the works of mobilization. In case of capture every effort was made to procure their ransom. Soldiers were well paid, were rewarded with land and a cow, and good discipline was observed among them. They were divided into cavalry and foot-soldiers, and a careful register of them was kept. The whole army was divided into companies of thousands, hundreds, fifties, and sometimes tens. In Assyria the army was still more highly developed until the time of Ašurnāširpal, who had created a fighting machine such as the ancient world had never seen before. The military unit in Assyrian times was the bowman, who was accompanied by his pikeman and shield-bearer. According as Assyria became more and more a conqueror of foreign peoples, she condemned forced labour at home, as in the case of Sargon II., exempted certain cities from the obligation of the levy, as in the case of Ašurbanipal, and depended upon her vast numbers of mercenaries, hired from conquered countries. The Neo-Babylonian army was modelled on that of Assyria, making extensive use of hired troops.

The Stela of Vultures, which depicts the successful war of Eannatum of Lagash, in the name of his god Ningirsu, against Umma, gives an excellent idea of some of the materials of war in that early period. In one battle, in which 6600 (or perhaps 3600) men were slain, the troops were drawn up in a solid phalanx with long spears, protected by huge shields. The lance-bearers carried an axe, and were protected by shields which were borne by the soldiers in the front rank. Each shield protected two soldiers. The shields were probably of leather with bosses of metal, as were also the conical helmets, which extended down the neck, and were furnished with ear-pieces. A chariot is represented on the stela, but it was undoubtedly drawn by asses, for the use of the horse was not known till the Kassite period. Military standards were common in early Babylonian times. The royal weapons consisted of a long lance or spear, wielded in the left hand, and a curved mace or throwing-stick. Naram-Sin is represented armed with battle-axe, bow, and helmet. In his chariot the king carried a flat-headed axe and a number of light darts, some fitted with double points. It was Dungi of Ur who adopted the bow as a national weapon.

¹ H. Stuart Jones, *Companion to Roman History*, p. 215.

² See below, 2.

¹ *Code of Hammurabi* (hereafter cited as *CU*), ed. R. F. Harper, Chicago, 1894, § 16.

After the introduction of the horse by the Kassites¹ cavalry took the place of chariots. Chariots were still used, but only on comparatively level terrain, and even then they were more ornamental than useful. The cavalry at first used only the bow and arrow, but later the spear was used and the horseman was furnished with a complete coat-of-mail. In Assyrian times infantry was divided into light- and heavy-armed troops. The light-armed troops wore little clothing—usually only a kilt and a fillet round the head—and were armed with spears. The heavy-armed wore sandals, a coat-of-mail over the tunic, a long fringed robe (over which was a cuirass), and a peaked helmet; they carried a short sword, and were furnished with a long rectangular shield of wicker-work covered with leather. Infantry were usually divided into archers and spearmen. Sennacherib abolished the long robe of the heavy-armed infantry and substituted leather greaves and boots. He also established a corps of slingers clad in helmet and breastplate, leather drawers, and short boots; and also a company of engineers or pioneers, furnished with double-headed axes, conical helmets, greaves, and boots. The Assyrians fought with metal weapons. Their spear-heads and arrows were usually of bronze, more rarely of iron; their coat-of-mail consisted of bronze scales sewn to a leather shirt; and many shields were of metal, though others were of wicker-work covered with metal. The army was supplied with abundant wagons for transportation of baggage, food, furniture, tents, ladders, and battering-rams; and much skill was expended upon the building of canals and fortifications.

Wars were waged very often for the sake of booty and spoils, and the usual demand made by the victor of the vanquished was payment of tribute. The favourite method of attack was by surprise, but, when that was impossible, a frontal assault was made. Many inducements were offered the foe to surrender, none being more common than the proclamation of the prowess of the reigning king; but very often a third party intervened to bring about peace and conclude a treaty, as in the case of Mesilim of Kish, who was instrumental in settling a dispute between the kings of Umma and Lagash. Peace was declared and a treaty made.

2. War-gods.—The early Babylonians, like other primitive folk, peopled their world with gods. Every mysterious phenomenon—sun, moon, vegetation, storms, water, and all the forces with which men were brought into frequent contact—was the abode of gods or demons, and usually the latter were shunned and the former propitiated. Around the abode of the gods men gathered and formed a settlement, which was often called after the god, just as Shuruppak was named from the god Shuruppak. Such a deity was always a war-god, for his people depended upon him for defence. War was not incompatible with the character of a god, for did not Ea and Apsu, Enlil and Tiamat, Marduk and Tiamat, engage in deadly warfare? So, when one city made war upon another, it was because their gods were at feud, and because their gods had ordered the strife.

The war between Umma and Lagash, as told on the Stela of the Vultures, was waged by the command of the god of Umma upon the territory of Ningirsu, god of Lagash, and Ningirsu, backed up by Enlil, joined battle. It was Zamama, god of Kish, who achieved victory over the land of Khamazi, just as it was Ašur, the great Assyrian war-god, who won military fame for Assyria.

And, when peace was declared and treaties were made, it was the gods who did it, for Mesilim records the treaty of peace which the gods of Umma and Lagash themselves had drawn up. The city-gods were thus the real kings and rulers, and so the very title *patesi*, borne by early rulers of Babylonian states, designated them as representatives of their state-god, for it was a religious title. This explains how it happened that certain Babylonian kings, desiring to enhance their own power, assumed the title of *ilu*, 'god'; and, when a *patesi* felt himself powerful enough to risk the displeasure of his own god, he would appeal to the god of a city other than his own, when the petition was for something which the foreign god alone could procure.²

¹ The earliest mention of a horse in Babylonia is found on a tablet of the 1st Babylonian dynasty (*OLZ* x. [1907] 633 f.).

² E.g., Ur-Nina appealed to Enki (Ea) for a favourable oracle, when planning to build the temple of E-ninnu.

Whenever, as often happened, two or more settlements amalgamated into one city or state, the various gods sometimes amalgamated, transferring the attributes of all the gods to the strongest god, with whom all the others were identified. But sometimes the various gods remained independent, the most warlike retaining the title of war-god. Hence, while every city- or state-god was originally a war-god, yet when, by amalgamation, a state acquired a pantheon, only one of the members of that pantheon, as a rule, retained the title of war-god. Then all wars were carried on in the name of that particular god. And so it was that, while the Babylonians of the period of Hammurabi recognized many gods, Marduk was the war-god¹ *par excellence*, although Nalu was also recognized as a war-god. The following are the Babylonian and Assyrian deities who retained more or less of their warlike characteristics.

Enlil, son of Anu and chief god of Nippur, whose temple was the mighty E-kur, was primarily a storm-god, and he had his origin and home in a mountain. Although he is most commonly known as a storm- and vegetation-god, he was also, as patron deity of the mighty city of Nippur and head of an early Babylonian pantheon, 'king of the gods,' 'father of the gods,' and husband of the great goddess Ninlil. But he never lost that attribute which was ascribed to all early Babylonian gods, viz. 'warrior.' He was the 'mighty warrior,' and, as such, retained his place as supreme war-god when Nippur, his own city, became mighty. Among all the other cities that came under the sway of Nippur no one possessed a war-god as powerful as Enlil, and so Enlil, the son of Anu, and consequently solar deity, became the official war-god of Nippur. No one could hope to fight victoriously against Enlil; ² hence his fame as a great warrior-god.³ As all gods were represented by symbols, as seen on the numerous *kuddurus*, or boundary-stones, so Enlil was symbolized by his weapon, an 'ensnaring net which encircles the hostile land,'⁴ and is pictured carrying away his enemies who are entangled in his net.

Ištar, or, according to the Sumerians, Ninni or Innina, was daughter of Enzu, and 'mistress of the lands.' She was also 'mistress of heaven and earth,' and had her home in Uruk. The word 'Ištar' is Semitic, and perhaps indicates that she was a vegetation-goddess, if *iš* be from *giš*, 'tree,' 'wood.' She was considered a solar deity at a very early period, and is referred to as the 'light of heaven and earth.' But with the passage of time she assumed other attributes. She was the mother-goddess *par excellence* and the goddess of love; she was identified with Venus as the 'queen of heaven'; she was the patroness of law and order; she was the raging storm that devastates heaven and earth; and she and Tammuz were associated in a way suggesting the female and male principles of life. But more than all else she was 'mistress of battles'⁵ and 'mistress of war and battle.'⁶ She is the *muttabbilat kakkē*, 'the bearer of arms,' the 'goddess of battle and warfare, who goes by the side of the king, favourite one, the terrible one of his enemies.'⁷ Her warlike

¹ After Hammurabi's conquest of Rim-Sin, and his control of Nippur, Enlil, the chief Sumerian deity, lord of many city-states, surrendered his chief attributes to Marduk.

character is excellently brought out in Ašurbanipal's dream.¹ As a war-goddess she is frequently (and as early as 3000 B.C.) depicted on seals, where she is usually represented with clubs, scimitars, bows, and other weapons, leading captives to the king.² In the Gilgamesh epic Ištar is a war-goddess, and in the time of Hammurabi, and more especially in Assyrian times, she was 'mistress of war and of battle.' As Assyrian war-goddess she became the consort of Ašur and was the special war-protector of Assyrian kings. Ašurbanipal's description of the warlike Ištar is famous,³ and, when he founded his capital at Nineveh, he established there the cult of Ištar of battles. In fact, the goddess became so popular in warlike Assyria that she was identified with three great shrines, Nineveh, Arbela, and Kidmuru, and became sometimes three separate goddesses, although usually only two, because of the comparative unimportance of Kidmuru. There was an Ištar of the north as well as of the south—a differentiation which resulted in the belief in a male and female Ištar.⁴ As a male Ištar was the morning star, and as a female she was the evening star. To the very end of the Neo-Babylonian dynasty she was the war-goddess, who carried quiver and bow and flew to battle like a swallow.⁵ Her symbol as war-goddess was the lion and the five- or eight-pointed star Sirius, but sometimes she was symbolized by a bow.⁶

Ištar, as goddess of war, was identified with several other goddesses of war, especially Išbara,⁷ who was 'lady of conquest'⁸ and 'lady of victory over the lands';⁹ Innini, who, originally a goddess of light and the star Venus, because of warlike qualities ascribed to the stars, was regarded by the Sumerians as a conquering deity,¹⁰ the 'lady of battle,'¹¹ and was represented in a standing position leading a captive by a string inserted in his nose,¹² her symbol being the bow;¹³ Anunit, who was worshipped as a goddess of battle at Agade and Sippar, of whom Nabonidus said that he built a temple

¹ to Anunit the lady of battle, she that bears bow and quiver, who executes perfectly the command of Enlil her father, who exterminates the foe, who annihilates the evil, who walks before the gods, who at sunrise and sunset renders favourable my omens.¹⁴

She is also identified with Antu, a heavenly deity, whom Hammurabi calls the Aštar of Agade,¹⁵ and with Ajā, a goddess of light and of war; with the warlike Ninni, to whom Eannatum on the Stela of Vultures ascribes his victory; and with Nana.

Marduk, 'the first-born son of Ea,' was originally a solar deity, but his warlike character became prominent in the time of the Hammurabi dynasty, when his city, Babylon, became great. When the

creation legends were recast, during this same dynasty, Hammurabi's war-god (often addressed as such in hymns¹), Marduk, was the warrior-hero who slew Tiamāt, the spirit of chaos. He became so great that a (short-lived) custom arose of identifying all gods with him.² His greatness outlived the Assyrian empire, when he was called Bel-Marduk, having absorbed the characteristics of the old god Bel, second person of the triad, Anu, Bel, and Ea, and lived on till the end of the Neo-Babylonian period. He is often pictured as a warrior with scimitar,³ and his symbol was the flaming sun.

Nergal, son of Enlil, was originally god of the midday or scorching sun, and was often identified with Samaš. He then was associated with disease and death, and from that he developed into a war-god. As such he was called *Marduk ša ḫabli*,⁴ 'Marduk of war,' 'the lord of spears and bows,'⁵ *ur-sag karradu*, 'the warrior,' the great sword-god,⁶ and, as destruction that accompanies war, he was identified with the planet Mars. He first became known as a war-god during the Hammurabi dynasty, and continued so throughout the Assyrian and Neo-Babylonian periods.

Ninib,⁷ son of Enlil and god of Nippur, was originally a solar deity, and, as first-born of Ea, was a vegetation- and water-god. As early as the Hammurabi dynasty he was called *Marduk ša ḫalli*, 'Marduk of strength,'⁸ and in Samsuiluna's reign he was called 'the great warrior.'⁹ He is addressed as 'mighty god, warrior, ruler of the Anunnaki, controller of the Igigi.'¹⁰ In a text translated and discussed by Pinches in *PSBA* xxviii. [1906] 203-218, 270-283, Ninib is fully described as a war-god of the mountains. He is called 'the lord, the destroyer of the mountains, who hath no rival,' 'the warrior who is like a steer'; and he is said to collect his army in order to spoil the land of the enemy. In Assyrian and Neo-Babylonian times, especially the former, Ninib continued to be 'the destroyer of the king's enemies' and 'the mighty one of the gods.' He was symbolized as a wild bull, as a double-headed raven, and later as an eagle.

Nin-dar-a, husband of Išbara, was called 'the warlike king,'¹¹ and Nin-dub was compared to a warrior.¹² Ningirsu, chief god of Lagash and son of Enlil, is called the 'warrior of Enlil,'¹³ and is identified in this rôle with Ninib. On the Stela of the Vultures he is shown clubbing the enemies of Lagash, whom he has bound in a net; and he is symbolized by the divine storm-bird. Nin-gi-zida, son of Ninazu, prototype of Ninib and protective god of Gudea, was perhaps also a war-god, although no reference to him as such has been found. Nin-šakh, prototype of Ninib, and Ninsi-a, called also Nin-du-a, are also thought to have been war-deities. Ramman, whose ideogram is IM, and who is identified with Adad, Mer, and Iškur, was known as early as the time of Hammurabi as a 'warrior,'¹⁴ although he is the storm-god *par excellence*. From the time of Hammurabi, however, he was recognized as a war-god, except

in Assyria, where he played just one rôle, that of god of storms. In Babylonia he was associated—*e.g.*, by Nebuchadrezzar I.—with Ištar, as war-deity, and was pictured with a club.¹ *Samaš* (Sumerian *Babbar*), although the sun-god *par excellence*, was known as ‘the conqueror of foreign lands,’² and as such was a war-god, whose weapon was ‘the great net.’³ *Sukamuna* was a Kassite god of war, whose symbol was the midday sun, and, therefore, a destructive power like *Nergal*. *Tur-lil-en*, a Neo-Babylonian deity, was described as ‘breaking the weapons of the enemies.’ *Zamama*, patron deity of Kish, was early associated with Ištar as a war-god,⁴ and was called *Marduk ša tahazi*, ‘Marduk of battle,’⁵ as well as ‘the king of battle.’⁶

Ašur, the great god, Assyria’s war-god *par excellence*, was originally a solar deity, his symbol representing a sun-disk with protruding rays. Then he developed into a god of fertility—a corn and water-god—and finally became a war-god. According as Assyria became more and more militaristic, so *Ašur*’s attribute as war-god became more and more all-absorbing, until he became the dominating character in Assyrian religion. His divine city depended upon the location of the royal residence, and from there all warfare was carried on in his name. His popularity was due to Assyria’s military prowess. He is always associated with mighty weapons (*kakka danna*), and is he ‘who protects the troops.’ The disk as his symbol was surmounted by the figure of a warrior.⁷

II. EGYPTIAN.—I. War.—While some classical writers say that Egypt was divided among the king, priests, and warriors, others assert that from the beginning Egypt was a peaceful country. At any rate it can truly be said that the Egyptians never admired a military career, nor were the conditions under which they lived favourable to the development of a military nature; *e.g.*, Egypt was shut in geographically from the rest of the world; there were no great peoples in her neighbourhood to contend with, and no fertile lands within her reach to covet. Nevertheless, from the very first Egypt was called upon to wage war. Her literature attests this, and her earliest nome standards are, in all probability, military in character. Pre-dynastic and proto-dynastic monuments, such as the Palette of Nar-Mer, preserve evidence of warlike conflict, and *Uni*, a nobleman of the VIth dynasty, tells of important wars (although they are the only known important ones of the Old Kingdom) carried on against the *Bedawin* in the time of *Pepi I.*⁸ There were other military expeditions during this early period, and by the time of *Sesostris III.* of the XIIth dynasty rather formidable armies were mustered. Yet, when compared with the wars of later periods or with those of Assyria, these military expeditions of the Old and Middle Kingdoms must be pronounced mere *razzias*—raids for loot, slaves, cattle, gold, etc.

Nor was the period of disintegration which followed the XIIth dynasty conducive to the growth of militarism. But the conquest of Egypt by the *Hyksos* (*q.v.*) breathed a new spirit into the land. The foreigners must be ejected, and Egypt proved herself, under *Ahmose I.*, equal to the occasion. Thenceforth she began her career of conquest under the empire-builders, *Thutmose III.*, *Seti I.*, *Rameses*

II., and *Rameses III.* She became a great military power, and took up the offensive against her erstwhile Asiatic masters. *Rameses II.* even developed a military caste, and for a while the military profession ranked high. Her military character, however, was not enduring; the Egyptians lacked that gallantry and chivalry which are essential to a truly military character. There is evidence that the Egyptians were as destructive to the living and as savage to the dead—whose corpses they often mutilated—as other peoples, although *Diodorus I* seeks to excuse their conduct.

Nor were the Egyptians a naval people, although they possessed considerable fleets of merchant ships, which navigated the Mediterranean, the Red Sea, and the Nile. But the same great national crisis which developed a strong army and a short-lived liking for conquest developed also a navy. When *Ahmose I.* attacked the *Hyksos*, he did so by sea as well as by land. Of course there were warships before his time. *Uni* escorted his flotilla of merchantmen from *Elephantinê* down the Nile to *Memphis*; *Kheti II.* of the IXth dynasty had ships; and *Sesostris III.* re-made a canal in the First Cataract through which his warships could pass. By the time of the XVIIIth dynasty a real navy had developed, and was employed in connexion with the campaigns in Syria. Although *Rameses II.* had a considerable fleet, the first king to recognize the true importance of the navy was *Rameses III.*, who established a fleet in the Mediterranean and another in the Red Sea. The naval battles of this king are splendidly pictured at *Medinet Habu*. With the exception of the battle with the *Hyksos*,² the battles of *Rameses III.* are the only real naval conflicts known to Egyptian history. The navy, like the army, soon deteriorated, and never more played any important part in Egypt, not even in the time of *Cleopatra*, who is credited by *Orosius*³ with a fleet of 170 large ships.

Egyptian religion never condemned war. The most ancient of Egyptian wars were among the gods themselves or between gods and men; and so Egyptian kings in making war claimed divine example. The Egyptians named all wars revolt, because they were presumed to be against the Egyptian gods. The duty of the king was to avenge the gods of impiety, the word for ‘impiety’ (*aaditive*) being the same as for ‘enemy.’⁴ In short, all war was moral, ideal, supernatural, and sanctioned by divine precedent.

In earliest Egypt there were soldiers who were selected from all parts of the political district, and, as early as *Pepi I.*, conquered territories were compelled to contribute men in case of war. But there did not exist an army in the modern sense of the term. In the Middle Kingdom there were professional soldiers who were called ‘followers of his majesty.’ They were divided into companies of 100 men, and they garrisoned the palace and the strongholds of the royal house from Nubia to the Asiatic frontier. They were the nucleus of a standing army. In case of actual war the great nobles, or nomarchs, sent their quota of men, whom they had carefully trained, armed with bows and arrows. Then there were contingents supplied by the estates of the great temples, besides mercenaries of friendly chiefs. These armies were often called upon to do guard duty, as in the case of the army of *Sesostris I.*, which was employed in the defence of labourers. With the rise of the Empire, and as a result of the *Hyksos* overlordship, a regular army was gradually developed. It had

two grand divisions, composed of experienced troops who had learned tactics in Syria. These two grand armies were divided into divisions, each division named after a god—*e.g.*, Amen, Rā, Ptah, etc. Military schools were established and barracks abounded. In fact, military training began in childhood, when gymnastics, archery, and the use of the battle-axe and javelin were taught. The trained and disciplined troops of Egypt were often the subject of artists and sculptors, and the drilling of recruits, racing, jumping, war-dances, and sieges were often depicted.¹ Rameses II. held regular councils of war,² and Diodorus³ preserves a tradition that the military formed one of the three classes into which Egyptian society was divided. In spite of all, however, Egypt never possessed an army equal in discipline and equipment to those of Assyria.

During the height of Egypt's military power the soldier was well treated. He was allowed, free of all charge, eight acres of land, he was free from forced labour when on active service, he could not be cast into prison for debt, and he was expected to provide himself with the necessary arms and everything requisite for a campaign. If he were brave, distinctions and other signs of honour were showered upon him. As early as the VIth dynasty mercenaries were employed, and these were allowed to retain their own arms and customs. The peoples most commonly engaged to fight the wars of Egypt were the 'Nine-bow Barbarians' from Nubia, the 'Shardana' from Europe, the Libyans, and the Syrians. The last-named were so frequently employed that the term *haru-srj*, 'young Syrian,' became a common word for soldier. Most of the army of Rameses III. were mercenaries, and after his reign these men were so much accustomed to the country that they in turn as foreigners conquered and dominated Egypt—such were the Libyans, the Sudanese, the Persians, the Greeks, and the Romans.

In early Egypt some soldiers carried a large bow, had one or two ostrich feathers on their head, and a narrow band around the upper part of their body; others carried a large shield and a spear, or a small shield, over which skin was stretched, and a battle-axe; still others carried no shield but had a large axe, a lance, and a sling. During the Empire regiments of light infantry carried a javelin, a lance, and a dagger, or a short straight sword; the heavy infantry bore spears and a curved sword. The cavalry were armed with the battle-axe, and most of them carried shields made of bull's hide, while bronze helmets were worn, although a more common head-dress was a thick quilted cap, the colour of which varied with the regiment, some with fringes, others with tassels. The archers were the most important soldiers in the army. They were divided into companies of foot- and chariot-archers. They wore quilted helmets with coloured tassels. The arrows were about 34 inches long, and were of wood or reed tipped with metal. They sometimes carried an axe or boomerang.⁴ Cavalry was not known till the Hyksos period, for it was these Semites who introduced the horse into Egypt. Thenceforth chariots drawn by horses and cavalry became very popular. Sheshonk I. is reported to have had 60,000 horsemen in his army which marched into Palestine.

The weapons of the earliest Egyptians were very simple. At first they consisted of large stout sticks. But later the offensive weapons were bow, spear, javelin, sling, sword, dagger, knife, falchion, axe, and club; defensive arms were metal helmet or quilted head-piece, coat of armour, and shield.

The Egyptians fought best behind walls, and many forts were therefore built in Egypt, especially at the Second Cataract and on the north-eastern boundary of Egypt. Towns were fortified, such as Pelusium, Syene, Elephantine, Semneh in Nubia; and Thutmose I. fortified the island of Tombois at the Third Cataract. In the great campaigns of the Empire materials of all kinds for siege, such as scaling ladders and battering-rams, for transportation, such as wagons and baggage-trucks, and for convenience, such as chairs, tables, and elaborate tents, were provided. Each company had its own standard, which was held in admiration; and each regiment was furnished with musical instruments, usually trumpets and drums.

The only Egyptian campaign conducted on any definite plan was that of Rameses II. against the

¹ See, *e.g.*, J. G. Wilkinson, *The Ancient Egyptians*, London, 1878, *passim*, esp. i. 192.

² *RTr* viii. 128 f.

³ i. 54.

⁴ Excellent illustrations of Egyptian soldiery are to be seen in Lepsius, iii., and in Wilkinson.

Hittites. But there is evidence of the use of a great deal of strategy in the manoeuvres of the soldiers of Thutmose III., and especially in the way in which Joppa was taken by Thutiyi. Armies were drawn up in well-arranged battle-array, with due regard to the wings, centre, and flanks. The many Egyptian inscriptions afford an excellent idea of the way in which Egyptian battles were fought, such as those at Megiddo, Kadesh, and the early wars in the time of Pepi I. A favourite company-formation with the Egyptian was the phalanx, with the heavy infantry in the centre and light infantry and archers disposed round them. Light-armed regiments were also left free for skirmishing and for flanking movements, such as those which were so well carried out at Kadesh by Rameses II. The Egyptian phalanx became so famous that Croesus used it most effectively against Cyrus.

War at all times and especially under the Theban monarchs was a means of procuring slaves and booty. The demand for tribute does not appear before the Asiatic conquests, although ransom seems to appear as early as the civil wars which preceded the XIIth dynasty. In order to prove to the king the completeness of victory, warriors were in the habit of cutting off the hands and sometimes the heads¹ of the vanquished and placing them in heaps before him. But the Egyptian was always glad when peace came and a treaty was drawn up. The most famous treaty in Egyptian history, and the most detailed known to the ancient world, was that drawn up between Rameses II. and Hattusil II. the Hittite king.²

2. War-gods.—Originally every social group had its god, and every god was, in a sense, a war-god. When smaller groups amalgamated into larger cities and nomes, the gods of the constituent groups amalgamated into the god of the most powerful unit in the group, just as Sekhet and Hathor were absorbed into Amon of Thebes, and to him were ascribed the characteristics of the absorbed gods. If the age was warlike, one of the attributes of such a deity would be that of war-god. Whenever the age and location were not warlike, the war attribute of the deity receded into the background. Thus it is that previous to the Hyksos period there are no prominent Egyptian war-gods. As a matter of fact, the Egyptians never of themselves developed great war-gods; those deities in their pantheon who retain their warlike attributes are Asiatic, and were introduced during the Empire. Yet the idea of war-deities was well known in Egypt from earliest times. Did not Horus battle with Set, and did not every king, as son of Horus, have to fight the god's enemies? The fierceness of the wars with the Hyksos was due to the fact that Egypt's gods were at war with the hated gods of the Asiatics.

The following deities, almost all of whom are foreign, are the war-deities known to Egyptian literature. Aāsith is usually represented as a woman armed with shield and club, riding a horse into the battle-field. She is a war-goddess of Semitic origin in whom W. Max Müller sees the counterpart of Esan. A stela set up by Seti I. at Redesiye, on the road to the gold-mines of Mt. Zābarā, connects her with the desert. Amon-Rā, one of the primeval deities of Egypt, whose chief seat of worship was at Thebes, became very prominent as a war-god in the XVIIIth dynasty as a result of the victories of that period. An-hōret, or Anhur, local god of Abydos, was god of the dead, but was also represented as a man standing with a spear in his raised hand. He was a warrior-

¹ Lepsius, iii. 128.

² W. M. Müller, *Der Bündnisvertrag Rameses' II. und des Chetiterkönigs* (MGV vii. 5), Berlin, 1902.

god, and as such became identified in the Greek period with Ares. 'Anat, 'queen of heaven, mistress of the gods,' was an Asiatic goddess of war. She was the same as the Sumerian An, with Semitic feminine termination, Antu. She is represented as sitting with a spear in one hand and swinging a battle-axe. She is probably the same as the goddess referred to by Hammurabi.¹ Anthyt was a Syro-Phœnician war-goddess, represented with shield and spear in the right hand and club in the left. Her cult was associated with N. and S. Syria, where cities were named after her—*e.g.*, Bath-Anth. Antæus, probably another name of the same goddess, is known only in late sources. She was worshipped at Antaiopolis, and was represented as a warrior or hunter with a high feather on her head and clad in Roman armour. Æsthyrthet of Apollinopolis was introduced into Egypt in the XVIIIth dynasty. She is the same as Astarte, a Syrian war-goddess, and was depicted as a lion-headed human figure, driving a chariot drawn by four horses over her prostrate foe. 'Asit may be another form of Æsthyrthet. Bār, or Pa-Bār, was a Syro-Phœnician war-god, the Baal of the OT. He was introduced into Egypt in the XVIIIth dynasty. Originally he was the personification of the burning and destroying heat of the sun and of the blazing desert wind. He was worshipped in the neighbourhood of Tanis, and was a favourite of Rameses II., who compared himself with Bār. Bast, 'lady of the East,' as well as Sekhet, was a personification of heat and light, and was renowned as a destroyer of the enemies of the sun-god and of the deceased. Bes, of 'the land of Punt,' was a god of complex character, but as a god of war and slaughter he carried two knives in his hands. As a warrior he was represented wearing a short military tunic, and holding in his left hand a shield, and a short sword in his right hand. As a war-god he appears in the XVIIIth dynasty. Heru-Behutet is a form of Horus, under which he waged war with Set or Typhon. His symbol is the Sphinx at Gizeh. Another form of Horus is Heru-Sept, the smiter of the Menti, and god of battle; and still another form of Horus, who 'loved an hour of fighting more than a day of rejoicing,' is Heru-Themā, the piercer, and, as such, a god of war. Mafet is a war-goddess, whose symbol is the sign 'to follow,' *sems*. Menthu was an ancient Egyptian war-god, whose seat was at Thebes. He is represented in human form with a bull's tail and head of a hawk. His head is surmounted by a sun-disk between double plumes. Sometimes he is depicted as a hawk-headed sphinx. He is represented with bow and arrows, a club, and a knife. He is seen on the prow of the sun-boat and slays the demon with his lance. He was an old local god, a personification of the destructive heat of the sun, but in later times he became Mentu-Rā. He was Rameses II.'s patron war-god. Neith was worshipped in the Delta in pre-dynastic times. While she was, at an early period, a personification of a form of the great inert primeval watery mass, she was later represented with bow and arrows, and as such was considered a war-goddess as well as a goddess of the chase. Nephheb and her twin-sister Uatchet were destroyers of the enemies of the gods. Reshpu, or Resheph, had his centre of worship at Hēt-Reshep in the Delta, but was an imported Syrian deity. In Egyptian texts he is called 'lord of the two-fold strength among the company of the gods.' He is represented as a warrior with spear and shield in the left hand, and club in the right hand. As

his Semitic name shows, he was a personification of the burning and destruction of fire and lightning. Sekhmet, or Sekhet, 'the powerful,' is represented wearing a solar disk on her head, symbolizing the warlike attributes of the sun. She was called 'the fiery one emitting flames against the enemies' of the god, and her duty was to scorch and consume the enemies of her father. Up-Uaut, 'the opener of the way,' was originally a war-god, who opened the way for troops through the enemies' land. He is sometimes represented in the prow of the boat of Rā.

III. HEBREW.—I. War.—Although the ideal of the great prophets of the 8th and 7th centuries was peace, war was approved by the prophets of early Israel. The Hebrew people were not unwarlike, and with them, as with other Oriental peoples, war was sanctioned by the deity. From the earliest to the latest times in the history of Israel Jahweh fought for His people, and they followed Him to battle. Before battle oracles were consulted to learn Jahweh's will;¹ prophets of Jahweh were appealed to for guidance;² and prayer was offered up to Him before the attack.³ Jahweh Himself called His consecrated one to battle;⁴ priests of Jahweh sounded the alarm with trumpets;⁵ and campaigns were begun with sacrificial rites.⁶ In fact, warfare was a holy calling, with which tabu was associated,⁷ for to 'prepare' or to 'sanctify' war was to carry out initiatory religious rites.⁸ The camp was a holy place because Jahweh was there,⁹ and there were the sacred ephod¹⁰ and the ark of Jahweh.¹¹

The Hebrews did not possess an army worthy of the name till the time of the monarchy. Gideon's band numbered 300, and the Danites had a force of 600. At this early period warfare consisted of raids and forays. All males were collected by the recognized leader,¹² to whom friendly tribes allied themselves.¹³ But, besides a bodyguard,¹⁴ Saul had a standing army of 3000 men.¹⁵ Israel's army was divided into thousands, hundreds, fifties, and tens.¹⁶ As early as the time of David steps were taken to recruit a regular army, and it was placed under the command of Joab as commander-in-chief. Besides that, David himself had his own bodyguard of from 400 to 600 men. Mobilization was announced by sound of the trumpet throughout the land.¹⁷ An interesting picture of mobilization in Israel can be seen in Is 22⁹⁻⁸ and in Ezk 21^{8a}. It is described as the drawing of the sword from the sheath. Sometimes a formal declaration of war was made, as in the case of Amaziah of Judah against Jehoash of Israel,¹⁸ but more often spies were sent out,¹⁹ and hostilities began in spring.²⁰ In later times regular mercenaries were employed,²¹ and under Herod soldiers were trained in Roman fashion.

Hebrew armies up to Solomon's time consisted only of infantry, light and heavy. Heavy arms consisted of a round helmet of bronze, a coat of mail, bronze greaves, a sword of iron, a spear, and a lance. Light arms comprised bow and arrows and a small shield. Solomon introduced cavalry and chariots, and had 12,000 cavalry, 1400 chariots, and 40,000 chariot horses. The troops had ensigns, banners, and standards, and were furnished with tents or booths, but each soldier was obliged to provide his own food, though sometimes regular provision was made for him.²² Guards were placed round the

camp¹ which were changed three times during the night.² The Hebrews inherited the fortresses of the Canaanites, but Solomon built his own, such as that at Hazor, Megiddo, etc. They usually stood on hills. Special battering-rams and catapults were constructed for siege work.³

Hebrew forces were drawn up either in line or in three divisions, a centre and two wings. There was also a rearguard for protection during the march and to take care of stragglers.⁴ Sometimes, instead of a general conflict between two opposing forces, a decision was left to two opposing groups of equal but limited number,⁵ or even to two opposing individuals.⁶ There was a battle-cry to inspire courage,⁷ and the order to retreat was given by sound of the trumpet.

Strategy was not unknown to the Hebrews: Joshua made a night attack after a rapid night march to relieve Gibeon;⁸ circumvention was practised by David;⁹ Joshua surprised the Canaanites at the waters of Merom;¹⁰ David executed a flank movement against the Philistines;¹¹ the men of Israel made a successful feint against the Benjamites at Gibeon;¹² and Joshua captured Ai by ambush.¹³

The victor was hailed with song,¹⁴ and victory was celebrated with public thanksgiving;¹⁵ but prisoners were sold as slaves¹⁶ and often treated in a savage manner.¹⁷ The spoil was divided equally between those in battle and those in camp;¹⁸ a portion was reserved for the Levites and as a tribute to Jahweh;¹⁹ part was reserved for the king;²⁰ and sometimes armour was dedicated as a trophy.²¹

The ideal in prophetic Israel was peace²² brought about by Jahweh.²³ The end of hostilities was signified by the blowing of the war-horn,²⁴ and ambassadors negotiated terms.²⁵ Treaties were drawn up and signed,²⁶ and defensive and offensive alliances were made.²⁷

2. War-god.—Pre-historic Hebrews were undoubtedly polytheists, or at any rate henotheists; they recognized the existence of other gods and worshipped them; but, so far as we know, they never developed a pantheon such as we see in Babylonia and Egypt. In historic times the Hebrew people tended more and more towards monotheism, and, although they recognized the existence of other gods even as late as the 7th cent. B.C., yet they never recognized any other deity than Jahweh as their national god. So to Jahweh were ascribed all the characteristics which belonged to a pantheon. The derivation of His name is uncertain, but as good a guess as any is that it is derived from the verb *hawa*, 'to fall,' and, in the causative, 'to prostrate.' Whether his be so or not, there is abundant evidence to

prove the warlike character of Jahweh. He it was, as a warrior, who brought His people out of Egypt, and who drove out the nations before Israel; He revealed Himself to Joshua as the captain of His hosts; His angels led the hosts of Joshua and Barak, and gave David victories over Aram and the peoples round about. It is true that He was considered a mountain-god, being associated with Sinai-Horeb, and, as such, a storm-god, controlling and regulating the weather; He was *baal* of the land, and therefore a vegetation-god; He was perhaps a lion-god,¹ and an ox-god;² and He was god of heaven and of earth; but He was pre-eminently 'a man of war,'³ whose peoples' victories were His 'righteous acts,'⁴ whose exploits were recorded in the 'Book of the Wars of Jahweh,'⁵ and whose favourite servant was the warrior David, a man after Jahweh's own heart;⁶ Israel's battle-cry was 'the sword of Jahweh and of Gideon';⁷ and Meroz was cursed because it did not come to battle, 'to the help of Jahweh.'⁸

The title 'Jahweh Sebāōth,' whatever its original meaning, designates Jahweh as god of battles.⁹ The term *Sebāōth* may have referred sometimes to the hosts of heaven. But warlike qualities were ascribed to the stars not only by the Hebrews,¹⁰ but also by the Babylonians. It may have referred sometimes to Israel as a people.¹¹ But it certainly had reference to the title of Jahweh as leader of the armies of His people Israel.¹² The term as used in the OT regularly denotes armies of men, and it formed the title of Jahweh as war-god. A similar title is found applied to the Babylonian *Tišpak*, who is called *Marduk sa ummani*, 'Marduk of hosts,' and *Tišpak* was a war-god.

Jahweh's emblem, as war-god, was an ark. Eleven of the occurrences of Jahweh Sebāōth in the books of Samuel are connected with the ark. It was the symbol of the presence of Jahweh,¹³ and was perhaps a throne upon which Jahweh sat,¹⁴ when He was carried into war, just as the Babylonians carried their gods on thrones in processions. In fact, the ark was so closely associated with Jahweh, as war-god, that it was identified with Him,¹⁵ and was greeted as if it were Jahweh Himself.¹⁶

LITERATURE.—With the exception of T. G. Pinches, 'The Babylonian Gods of War and their Legends,' *PSBA* xxviii. [1906] 203-218, 270-283, a discussion of Niniḫ, there is no separate article, monograph, or book on this subject. Besides E. A. W. Budge, *The Gods of the Egyptians*, 2 vols., London and Chicago, 1904, and literature referred to in this article, the author has made full use of the original inscriptions. In the case of the Hebrews, the standard Dictionaries of the Bible have been consulted, besides Nowack and Benzinger.

from the North Sea to the Euphrates, to celebrate the summer solstice with rites which, while they differed in some things, yet agreed closely in others; that in historical times a wave of Oriental influence, starting perhaps from Babylonia, carried the Tammuz or Adonis form of the (midsummer) festival westward till it met with native forms of a similar festival; and that under pressure of the Roman civilization these different yet kindred festivals fused with each other and crystallized into a variety of shapes, which subsisted more or less separately side by side, till the Church, unable to suppress them altogether, stripped them so far as it could of their grosser features, and dexterously changing the names allowed them to pass muster as Christian.¹

In Mesopotamia the year is divided into two seasons—the rainy and the dry. The welfare of the country depends upon the abundant rains which continue uninterrupted for several months. In the earliest period to which the history of the Euphrates valley can be traced, a system of canals existed, serving the purpose both of irrigation and of avoiding disastrous floods. It is not surprising, therefore, that the early Babylonians regarded water as possessed of *mana*, and in later times that it became for them the abode of spirits and gods. Similarly, commerce, following in the wake of agriculture, would lend an additional importance to water as a means of transportation, which again would find expression in a cult of water-spirits. As notions of departmental deities arose, these spirits would assume the rôle of gods ruling over the various functions formerly controlled by lesser spirits.²

Now, we know that Tammuz was an ancient personification of the sun of the springtime, his name consisting of a Sumerian phrase *Dumu-Zi*, 'true (or faithful) son of the deep,'³ and that he was the first lover of Ishtar, the great mother-goddess. He became her consort, was slain by the goddess, and descended into the under world, whither Ishtar went in quest of him. The promise made to her by Gilgamesh to present him with a chariot of lapis-lazuli, and to shelter him in a palace of plenty, unmistakably points to the triumph of the sun when vegetation is at its height. Tammuz and Ishtar, like Gilgamesh and Ishtar, thus represent the combination of the two principles which bring about life, and upon their separation follow death and decay. It appears from the fragmentary documentary evidence that the early Babylonians supposed that every year the goddess went to 'the land of No-return,' and that during her absence man and beast alike could not discharge their sexual functions, so intimately was Ishtar associated with fertility. If Tammuz was a personification of the springtime sun, and if his return from the under world bore a direct relationship to the revivification of nature, he must have been intimately connected with fertility. But the close relation that existed between vegetation and the water supply in the Euphrates valley would inevitably lead to his association with a water cult, and to his rites being performed about midsummer.⁴

At the festival of Tammuz in Babylon the image of the god was washed with pure water, just as in the summer festival the image of Adonis was thrown into the sea at Alexandria, and in Greece 'the gardens of Adonis' were similarly treated, to secure a due supply of fertilizing rain.⁵ But originally it must have been the *mana* in the water, and not the deity, that was regarded as the means by which the desert in the springtime was suddenly made to blossom as the rose. It was not that primeval man was so overawed by the miracle

of spring, the radiance of the flowers, and the singing of the birds; it was not that his heart went out in gratitude to the High God who was the giver of all good things. Rather it was his will to live that he uttered and represented in his elaborate spring and summer ceremonies—the promotion of life and fertility in plants, animals, and man. Since water is one of the essential factors in the preservation of life and the growth of the crops, it naturally plays a conspicuous part in rain-making ceremonies and other seasonal rites among primitive people.

2. Water as a rain-charm.—Water is widely used in ceremonies for bringing rain.

In Australia, among the Arunta, a group of people have water for their totem, and the men of the totem are assembled from time to time by their *alatunja*, or leader (a celebrated rain-maker residing in the Rain Country), to make rain.¹ In the rites that ensue water does not play a part, the ceremonies, according to Frazer, representing a rising storm.² Among the Kaitish tribe of Central Australia, on the other hand, rain is made by the head man of the water totem pouring water over stones out of which the rainbow was supposed to have arisen, and over himself,³ just as in Russia a man called the 'rain-maker' sprinkled water from a vessel on all sides to produce rain.⁴ The Torajas of Central Celebes pour water over the grave of a famous chief to procure rain. After that they hang a bamboo full of water over the grave, a small hole having been pierced in the lower end of the bamboo, so that the water drips from it continually. The bamboo is kept refilled with water until rain drenches the ground. Conversely, if dry weather is desired, the rain-doctor (*sando*) assiduously avoids touching water during the performance of his functions. He does not bathe or wash himself, he drinks nothing but palm-oil, and, when crossing a stream, he is careful not to step in the water. Should rain afterwards be wanted, he has only to pour water on his fire, and immediately the rain will descend in sheets.⁵ In India the Brahman rain-maker had to bring himself into union with water by touching it three times a day as well as on various special occasions, to make himself, as it were, an ally of the water-powers, and to guard himself against their hostility.⁶ The Ba-thonga, a Bantu tribe in S. Africa, think that droughts are the result of the concealment of miscarriages by women. To procure rain they bury a pot in the ground and cause it to be filled with water by girls who have not attained the age of puberty, till it overflows into four channels which run in the direction of the cardinal points of the compass. The women then hold a rain-dance, and pour water on the graves of prematurely born infants and of twins to 'extinguish' (*timula*) them, thereby removing the cause of the drought.⁷

In S.E. Europe, at the present day, rain is made by pouring a pail of water over a boy or girl clothed from head to foot in grass, flowers, or corn.⁸ H. S. Moore records a similar practice at Poona (India). When rain is needed, the boys dress up one of their number in nothing but leaves and call him 'king of the rain' (*mriij raja*). They then visit all the houses in the village, the householder sprinkles the rain-king with water, and makes offerings of food to the party.⁹ In Rumania a clay figure is substituted for a living person in the rain-making rites. The image, which represents Drought, is placed in a coffin and carried by children in a funeral procession, with a burning candle before it. Finally, the coffin and candle are thrown into a stream or well.¹⁰ In France images of saints until recently were dipped in water to procure rain, just as the Shans drench statues of Buddha with water when the rice is perishing from drought.¹¹ In Arcadia, in the classical period, the priest of Zeus dipped an oak branch into a certain spring on Mount Lycaeus in times of drought, to cause the water to send up a misty cloud, from which rain would soon fall.¹² The Athenians sacrificed boiled, not roast, meat to the season because they imagined that the water in the pot would be transmitted to the gods, and return to them as rain.¹³

That the use of water as a rain-charm was directly connected with fertility is shown in the custom of clothing the person (or image), apparently the personification of vegetation, in leaves, corn, vines, etc., before water is poured on him. In support of this view may be quoted the European spring celebrations of St. George's Day.¹⁴ It is

difficult to avoid the conclusion that originally these rites were performed to promote vegetation, and secure an abundant food supply, just as, until quite recently, water was thrown on the last corn cut at harvest in this country to procure rain for next year's crops.

3. **Water in purification ceremonies.**—Just as water naturally suggests to the primitive mind the process of fertilization, so it appears to the savage as the normal means of washing away material or spiritual pollution. As this subject has been treated separately,¹ we shall here confine our attention to the ceremonial use of water, the universal cleanser, in ritual purification.

After childbirth and menstruation, and in fact after sickness generally, the contagion is removed by a bath, while the contagion of death and the sins of the penitent are often got rid of in the same way. It is a common belief that the effect of contact with a sacred object must be removed by washing before a man may freely mix with his fellows.

Thus the high-priest was required by the Jewish Law to wash himself and put off the garments which he had worn in the holy place before coming forth from the sanctuary after offering his burnt offering (Lv 16^{23ff.}). Likewise Greek ritual decreed that, after offering an expiatory sacrifice, the offerer must wash his body and his clothes in a river or spring before he entered a city or his own house.² In like manner, among the Jews the contact with the book of the Law or a phylactery 'defiled the hands,' and called for an ablution.³ Among the Matabele of S. Africa, before the people ate of the new fruits they went down to the river to wash,⁴ and before changing from one food to another the Eskimos must wash themselves,⁵ as a kind of 'rite de passage.'

(a) **Childbirth.**—Birth, the attainment of puberty, marriage, death are great personal events associated with the mysteries of life, and at these times the individual is especially exposed to mystic and dangerous sacred forces. A pregnant woman is, in consequence of her condition, a dangerous person and one to be avoided until all traces of her 'sacredness' have been removed. Similarly, a newly-born infant is in fullest contact with the sacred world, and, therefore, he is subject to attacks from malignant influences, from which he must be guarded by rites. Like his parents, he is unclean, and, in consequence, some form of regeneration is necessary to remove this original taint.

The mother and child among the Koragars of West India are ceremonially unclean for five days, when both are restored to purity by a tepid bath.⁶ The Hottentots considered a mother and child unclean till they had been washed and their bodies smeared with other purifying agents. Lustrations with water are common in W. Africa. The Mantras of the Malay Peninsula require their women to bathe after childbirth, and among the indigenes of India the custom also prevails.⁷ The Aztec midwife washed the infant with the prayer, 'May this water purify and whiten thy heart; may it wash away all that is evil.'⁸ The lustration speedily took definite form in the Mediterranean religions, and passed from the idea of washing away of defilement and sin to that of spiritual new birth. In the Isis rites the baptism with water was thought to raise the mortal to the divinity, although it is not clear that there was any ceremonial purification of the new-born infant with water in Greece. It appears that the rite called *ἀμφιπέρισμα*, in which the infant was carried round the domestic hearth, took the place of a baptism by water.⁹

(b) **Initiation and marriage.**—Water is sometimes substituted for other purificatory rites (such as tatuing, setting the novice on a smoking fire, scourging, etc.) in initiation ceremonies.¹⁰

(c) **The shedding of blood.**—To the primitive mind nothing is more uncanny than blood. Life

and death are the great primeval mysteries, and all the substances that are associated with the inner principle of either partake of this sacredness. For the savage what is sacred is also dangerous and a source of contagious impurity. Therefore, when a man has shed blood, he is tabu until the 'miasma' has been removed by purification rites.

In New Guinea warriors are secluded for about a week after their return from battle, during which time they may not come in contact with their wives, and they may not touch food with their hands. On the fifth day of his seclusion a man who has taken life walks solemnly down to the nearest water, after having been smeared with the spleen and liver of a kangaroo, and, standing straddle-legs in it, washes himself.¹ Among the Basutos warriors go straight from battle to a stream, where they purify themselves and their implements of war by washing away the tabu in the water, and putting themselves out of reach of the revenge of the slain.² Similar rites are performed by the Akikuyu, in which the final ablutions consist in cleansing with water.³ In the Pelew Islands the young warriors, on their return from their first fight, are shut up for three days, and then, after smearing their bodies with charmed leaves and betel, bathe together as near as possible to the spot where the killing took place.⁴ When a Pima Indian killed an enemy, he was tabu for sixteen days, and retired to the groves along the river bottom, or wandered about the adjoining hills. During this period he was forbidden to touch his head or his face, and before he might go to his home he had to bathe in the river, no matter how cold the temperature.⁵

(d) **Death.**—Contact with death and the spirit-world is a strong source of impurity in primitive society and, therefore, is the cause of tabus and purification rites. Bathing and fumigation are the most usual methods of purification. See art. **DEATH AND DISPOSAL OF THE DEAD** (Introductory), vol. iv. p. 434, § XIV.

(e) **Disease.**—Water is frequently regarded by primitive people as having the power to wash away sickness, especially if the disease is in the nature of skin eruption. The miraculous cure of Naaman (2 K 5¹⁰) reflects an ancient Semitic belief in the efficacy of water as a cure of leprosy. Of all inanimate things that which has the most marked supernatural virtues among the Semites is running (or, as the Hebrews said, 'living') water (cf. Nu 21^{17f.}, Ezk 47^{9, 12}). It is, therefore, not surprising that certain wells and rivers were credited with the power of healing.

In Babylonia a sick person was sprinkled with water while the priest pronounced certain sacred formulae, having the power of 'cleansing' a patient from sickness. The water was specially sanctified for this purpose, and drawn from such sacred streams as the Tigris and Euphrates. One or more springs, and a *bit rimqi*, or 'bath-house,' were attached to every large temple, where purification rites were performed. Details of the rites varied in different cities, and there are indications that, even in later times, they were performed on the banks of running streams—perhaps a survival of the period when the incantation ritual did not form part of the official cult.⁶ To this day a 'bath-house' is sometimes attached to synagogues, whither women resort monthly to cleanse themselves—a reminiscence, perhaps, of the old Semitic purification ritual, now restricted to women.⁷

The importance of water as a means of healing must have been greatly reinforced by the growth of Baal-worship, in which the deity as the giver of life was specially connected with life-giving waters. The indignation of Naaman when he was told to wash in Jordan, and his confidence that the rivers of Damascus were better than all the waters of Israel, probably arose from the idea that the Jordan was a sacred healing stream of the Hebrews, just as Abana and Pharpar were the sacred rivers of the Syrians, and not from any astonishment at being asked to perform a purification rite with which he must have been well acquainted. In the time of Antoninus Martyr⁸ patients frequently bathed ceremonially by night

in the thermal waters of Gadara, and in the Middle Ages it was still believed that he who bathed in the springtime in the source of the Euphrates would be free from sickness for the whole year.¹

In Europe water figures conspicuously in folklore as a means of preventing and curing disease.

Thus at Vitrolles in the south of France, during the Midsummer rites, the young people bathed in a pond in order that they might not suffer from fever during the year, and at Saintes-Maries they watered the horses to protect them from the itch.² Similarly, in Sweden, certain holy springs are supposed to be endowed with wonderful medicinal virtues on St. John's Eve, and many sick people resort to them for the healing of their infirmities.³ At Stoodle, near Downpatrick, in Ireland, on Midsummer Eve three wells, to which extraordinary virtues are attributed, are 'thronged by crowds of halt, maimed and blind, pressing to wash away their infirmities with water consecrated by their patron saint, and so powerful is its efficacy on their minds, that many of those who go to be healed, and who are not totally blind, or altogether crippled, really believe for a time that they are by means of its miraculous virtues perfectly restored.'⁴ At Marsala in Sicily the sick resort to a spring in a subterranean grotto, called the Grotto of the Sibyl, to be cured of their diseases by bathing in the water,⁵ just as on the same day the people of Copenhagen used to go on a pilgrimage to a neighbouring spring to heal and strengthen themselves in the water.⁶ The famous grotto at Lourdes, which has been the reputed source of so many miracles since the alleged appearance of the Blessed Virgin to Bernadette Soubirous on 11th Feb. 1858, belongs, perhaps, to a different category, since the existence of the spring was unknown to the inhabitants prior to the apparitions.⁷

4. Water as a means of divination.—The use of water in divination has been common both in ancient and in modern times among people in a primitive state of culture.

Thus the Tahiti seek to discover the identity of a thief by digging a hole in the floor of the house in which the robbery occurred, and filling it with water; a priest then invokes the aid of his god to conduct the spirit of the thief to the water, so that his image may be reflected in it and perceived by the diviner.⁸ In S.E. New Guinea a criminal's face is thought to be seen in a pool of water into which coco-nut oil has been squeezed.⁹ The Malays discover a thief by two people holding a bowl of water between their fingers and presenting to it in writing the names of the suspected persons; at that of the guilty man it twists around and falls to the ground.¹⁰ Among the Bahima of Central Africa a medicine-man puts herbs and coffee-berries into a pot of water and ascertains the wishes of the gods according to the direction in which the berries lie.¹¹ The Eskimos determine the fate of a man who has not returned from a voyage by causing a wizard to gaze into a tub of water.¹² In Greece the favourable or unfavourable disposition of the gods was declared by casting offerings into holy wells. If the gift was accepted, it sank; if it was unacceptable, it was cast forth.¹³ At Delphi, to the east of Apollo's temple, there was a sacred spring which proceeded from a narrow gorge shut in by rocky walls, the waters of which were supposed to be oracular. The priestess of Apollo therefore drank of the sacred spring and chewed the sacred laurel before she prophesied.¹⁴

In Babylonia as early as the reign of Urukagina, king of Lagash (c. 2300 B.C.), there is evidence of divination by oil, and from the texts of a later period (c. 2000 B.C.) it appears that the method adopted consisted in pouring oil on the surface of water in a bowl, and determining future events by the behaviour of the bubbles when the water was struck.¹⁵ In one of the texts the method is traced back to the legendary founder of the *bārū* priesthood.¹⁶ Two of the texts, dating from the Hammurabi period, describe the signs to be observed in the mingling of oil and water, together with the interpretation thereof.¹⁷ On the early monuments there is also an interesting allusion to the use of this method of divination by a ruler of the Cassite period (c. 1700 B.C.), before undertaking an expedition to a distant land

to bring back the statues of Marduk and his consort, which had been carried off by an enemy.¹ In ancient Egypt divination did not play so conspicuous a part as in Babylonia and in the Hellenic world. The Egyptian texts do not mention hydro-mancy, although we know from the classics that Anubis was invoked by a vase full of liquid or a flame.² In the story of the homeward journey of Joseph's brethren (Gn 44¹⁻¹⁵) from Egypt to Palestine mention is made of a divining cup (vv. 6, 15), the purpose of which would seem to have been that of detecting a thief. 'Know ye not that such a man as I can indeed divine?' There is good reason to believe, however, that the episode connected with Joseph belongs to the Hyksos period,³ and that the custom of divination by water was introduced into the valley of the Nile from the east by the invading 'shepherd kings.'

In modern times among the Slavs at Ceklinj, in Crnagora, maidens gaze into a well at daybreak on St. George's Day, till their eyes fill with tears and they think they see the image of their future husbands reflected in the water.⁴ In the Highlands of Scotland apples and a sixpence were put in a tub of water at Hallowe'en for oracular purposes. The person who could extract either of these articles from the water with his mouth without using his teeth was regarded as likely to be very lucky. Similarly three plates were placed on the hearth, one filled with clean water, another with dirty water, and the third empty. A blindfold youth then knelt in front of the hearth and groped about till he put his finger in one of them. 'If he lighted on the plate with the clean water, he would wed a maid; if on the plate with the dirty water, he would marry a widow; and if on the empty plate, he would remain a bachelor. For a girl the answer of the oracle was analogous. . . . But to make sure, the operation had to be repeated thrice, the position of the plates being changed each time. If the enquirer put his or her finger into the same plate thrice or even twice, it was quite conclusive.'⁵

An oracle may very readily pass into an ordeal, where the person accused of a crime is tested by being subjected to a process which would normally prove fatal, or at least injurious to him. People accused of witchcraft and other offences are frequently tested by being compelled to drink water into which a poisonous substance has been placed. If the stomach rejects the draught, the accused is declared innocent and released; if, on the other hand, it is retained or evacuated by purging, he is pronounced guilty.⁶

5. Water-spirits and water-gods.—To say with Tylor that a 'belief in the existence of spiritual beings' constitutes the 'minimum definition of religion' is to forget that the outlook of primitive man is towards the sacred and mysterious rather than in the direction of the spiritual. Psychologically the religious sense manifests itself on the emotional side before the mind is capable of forming definite notions like spirits or gods. Primitive man sees around him certain phenomena which puzzle him, and, long before he has evolved a 'belief in spiritual beings,' he has come to explain mysterious objects in terms of the supernatural. Now, water is most certainly calculated to arouse in the primeval consciousness the animatistic attitude of mind dictated by awe of the mysterious. Upon it man depends for his very existence, through its agency he sees the desert made to blossom as the rose, and in it he beholds the manifestation of life and movement, and even the power of death and destruction. He regards it therefore as possessed of *mana*, and, in consequence, sacred. But there is always a tendency to personify the sacred. The mysterious roll of thunder becomes associated with the voice of the tribal All-Father, and the magic downfall of rain is explained as the work of spirits or gods. So with water. Originally the Trojans regarded their sacred river, Skamandros, as containing *mana*, and by way of oblations cast live bulls and horses into its depths. In later times, when they had reached an animistic or theistic stage, Homer speaks of altars or shrines being erected on the river-bank, on which a bull was sacrificed, the belief being that the spirit in

the water, or the god of the stream, was capable of departing from his element to consume the essence of the offerings in the holy place on the shore.¹ We do not suggest, in quoting this example, that a stratigraphical evolution took place in early times. On the contrary, we regard the assumption of strata in the evolution of religion as the fundamental error in the universalistic form of the comparative method as adopted by Frazer.² The conception of the sacred river is undoubtedly psychologically a more rudimentary notion than the more complex animistic and theistic beliefs. But it can hardly be said that there was a pre-animistic era in the history of religion, when animism was not and nevertheless religion of a kind existed.³ Some sort of animism may have been a primary condition of the most primitive religion of mankind, but it would seem that the vaguer and more comprehensive animistic conception surrounded such objects as water from the beginning.

Among people in a more developed state of culture water-spirits and water-gods are of frequent occurrence. Stories of the Perseus and Andromeda type have been found from Japan and Annam to Scandinavia and Scotland, and, although the details vary with the locality, the central feature is always connected with the sacrifice of a human victim (generally a virgin) to a water-demon. It is, therefore, highly probable that these legends reflect a real custom of sacrificing girls to be the wives of water-spirits, since we know that girls are frequently married to river-gods, etc., in primitive society.⁴ The custom may have arisen from the belief that water-spirits are the bestowers of life and fertility, whose kindly gifts of rain from above and springs from below produce pasture for the cattle and fruits for the service of man. In Syria the life-giving operation of Baal was connected with springs, streams, and underground water, and therefore the Baalim had their seats on the banks of rivers and by deep water-courses, in spots of natural fertility.⁵ As authors of fertility in general, it is in accordance with the working of the primitive mind that these water-spirits should come to be regarded as the bestowers of offspring. Accordingly we find that barren women frequently betake themselves to a stream known to be inhabited by a water-spirit, and bathe in the waters.⁶ Down to classical times girls bathed in the Skamandros before their marriage, praying as they did so, 'Skamander, take my virginity.'⁷

Sometimes, however, human beings are cast into water simply as a propitiatory sacrifice to appease the wrath of the indwelling spirit. The frequency with which maritime people are reminded of the dangers of the sea would naturally lead to a belief that water-spirits are dangerous and malignant beings capable of assuming monstrous forms.

Thus the Warramunga of Central Australia perform elaborate ceremonies to coerce a gigantic but purely mythical water-snake who is said to have destroyed a number of people.⁸ The Tarahumares place their houses at a distance from the water, and never sleep near it when on a journey lest they should be molested by the indwelling spirit. Whenever they make weirs to catch fish, they are careful to offer fish to the water-serpent of the river.⁹ To ensure a good catch of fish the fishermen of Efat throw a human victim into the water at the mouth of the

river,¹ and in the St. George's Day rites in England the Green George was thrown into the water to secure the favour of the water-spirits, as well as to make the meadows green in summer.² The idea of propitiating a malignant water-spirit is undoubtedly the underlying motive in the legend of Perseus and Andromeda, and in its mediæval counterpart of St. George and the Dragon.

E. O. JAMES.

WATER, WATER-GODS (Babylonian).—

1. **Water.**—The Babylonians divided their universe into three parts—the heavens, the earth, and the sea—which they personified as the gods Anu, Enlil, and Ea respectively. Each element was considered divine. But more emphasis was placed upon the divinity of the sea, because the water of 'the great deep' was considered the element out of which all things were generated. This 'great deep,' or Apsu, encircled the earth, was the source of all irrigation, and was the home of Ea, the god of waters. The Euphrates and the Tigris as children of the great deep were 'the soul of the land' and 'the bestower of blessings' respectively. But there was a sense in which the waters were regarded as an agent of destruction, viz. in their appearance in the form of violent rains and floods. Under this aspect they were personified as Tiamat, the Têhôm of Gn I, an aspect which is much emphasized in the Old Testament. There Têhôm is opposed to Jahweh, and is the cause of much dread to the people.³ In Babylonia, however, the beneficent aspect of water comes more to the front. It was not only one of the commonest of natural phenomena, appearing as rivers, streams, seas, lakes, ponds, brooks, springs, fountains, wells, mist, dew, rain, hail, snow, ice, vapour, fog, and clouds, but also indispensable to men, animals, and vegetables. Water was divine and holy, and as such was worshipped as a god. It played a very important part in omens and oracles and all kinds of magic. It could dispel demons, wash away disease, and purge from sin. It acted as a divine power in decisions by ordeal, and in it flowed the blood of the gods.

The Babylonians believed that all waters were peopled by living creatures, actual and mythical, some of which were beneficent and others harmful. The *anunnaki* (a, 'water,' and *nun*, 'strength') were probably beneficent water-spirits, and the seven⁴ *utukku* were demons of the sea. Both spirits and demons were controlled by Ea, or by the ferryman who kept watch over the river of death, who was called Arad-Ea, 'servant of Ea.' Water, being thus associated with divine beings, was usually considered the source of life, and at Eridu there was a sacred spring which figured in early Babylonian mythology and incantation rituals.

Because of its sacred properties, water played the chief rôle in incantations. Ea, by virtue of his being a water-god, was the most prominent figure in the ritual of incantations, being called the great physician. But Marduk, in later times, usurped much of his power, and always acted as mediator between the patient and Ea. The Eari-ritual in incantations involved washing and sprinkling of the body of the patient with water from the Euphrates or Tigris or from some bubbling source coming directly out of the earth. Then an image was made of the demon or sorcerer who controlled the victim, and it was placed in a boat. The image was drowned in sacred water, and the patient was relieved.⁵

2. **Water-gods.**—Babylonia was always sorely dependent upon her streams and canals, and this partly accounts for her numerous water-gods. But

more important in the minds of the people were the waters of the Euphrates and the Tigris and the Persian Gulf. Being mysterious, often beneficent, frequently destructive, never subject to control, they were considered from the very earliest times as manifestations of divine beings. They were worshipped, propitiated, and supplicated. All things, good and bad, came from them, and from them was no escape.

The source of all water was thought to be situated at the head of the Persian Gulf, or to be the head of the Persian Gulf. At a very early period this was personified and called Ea,¹ 'the house of water.'² Ea's home was at Eridu on the shore of the Persian Gulf. He was called *šar apsi*, 'king of the abyss,' but more especially, perhaps, he was god of the sweet waters which were believed to be under the earth and to fill streams, canals, and rivers. Tiamāt personified the salt waters. Ea and his consort, Damkina, are often represented as dwelling in the great deep, and hence it is that he was often worshipped as Dagan, the fish-god. As a water-god, all fountains and streams were sacred to him. Water, being a sacred, healing, and fertilizing agency, became the symbol of life, and Ea was the great physician. Because of the universal utility of water, Ea was claimed by all Babylonia as its champion, and, according to the Legend of Creation, when the gods decided to destroy mankind, Ea interceded. He befriended the Babylonian Noah, Ut-napištim, advising him to build a vessel so as to be prepared for the approaching deluge. He thus became the wise one, who taught men all the arts, and who even created mankind. Ea's consort was sometimes called Dam-gal-nun-na, 'great wife of the deep,' her Sumerian name being Nin-ki, 'lady of the earth'; but she was also called 'queen of the deep.' The god himself sometimes appeared under the name Nin-a-gal, 'god of great strength.' Ea is represented on a seal cylinder as sitting on his throne, while Damkina is leading a worshipper into his presence. The great fish or capricorn under the seat is the symbol of the god.³ Sometimes he is seen carrying a vase of water with flowing streams and fish, and standing on a capricorn.⁴ He is very often represented in the form of a fish, or of a man covered by the skin of a fish. In Assyria Ea appears as 'king of the ocean,' 'opener of fountains,' 'creator,' and god of wisdom. He is described by Berossus, under the name Oannes, as 'a creature endowed with reason, with a body like that of a fish, with feet below like those of a man, with a fish's tail.' When Babylon became prominent in the time of Hammurabi, Marduk was classified as son of Ea, and collaborated with him in incantations, being associated, as Ea was, with waters of life.

Adad (Sumerian, ⁴Im), or Ramman, was a god of rain and lord of subterranean waters. He was never associated with any particular city, nor was he a very early Sumerian deity. He came from the west-lands, where he was a solar deity. In Babylonia he was usually associated with the destructive aspect of rain when accompanied by thunder and lightning, although sometimes he was considered a vegetation-god. Hammurabi, in the epilogue to his Code, calls upon Adad to deprive his enemy 'of the rain from heaven and the water-floods from the springs.' Nebuchadrezzar I. calls him 'the lord of springs and rains,'⁵ and Meli-

¹ His Sumerian name was En-ki, 'lord of the earth.'

Shipak beseeches him to bestow 'abundant streams.'¹ Adad was symbolized by a thunderbolt, was associated with the sky-god, Anu, at Ašur, and often appeared under the name Numušda. Although Enlil was known as a rain-god² and was supposed to have brought on the flood, he was not very prominent as a water-deity. In like manner Ašur, the great Assyrian war-god, was associated with water as a corn- and water-deity and as a god of fertility, but his rôle as such was not very important. Innini, primarily the heavenly queen, was a water-goddess. She is represented with serpents and blades of grass, which in Oriental art are associated with water and vegetation. She bore the title *azag-sug*, 'sacred laborer,' and, like Ašnan, a grain-goddess, was described as goddess of the 'holy meal water.'³ Ištar, the great mother-goddess and goddess of love, was also prominently associated with water. She referred to herself as 'daughter of the ocean stream';⁴ she was connected with the cleansing power of water; she was patroness of streams and canals, without whom 'no stream is opened, no stream is closed, which brings life,' without whom 'no canal is opened, no canal is closed, which gives the wide-dwelling peoples to drink';⁵ and she is addressed as 'thou that rulest over springs and mountains and seas.'⁶ She is represented in art with a vase of water. Besides being identified with Kir-gi-lu, or Nin-kir-gi-lu, a rain-goddess,⁷ she appears as Ninā, Ea's daughter, who was originally a water-deity, and quite distinct from Ištar. But from time to time the goddesses Ištar, Ninā, Innini, and Anunit were confused one with another. Ninā was the goddess who rode upon the sea in a boat, was at one time known as Geštinanna, 'queen of waters,' and was a fish-goddess. In fact, her name is written with the ideogram which means 'goddess of the fish-house.' In time she became sister of Ningirsu, lord of the freshets. She was also called Nin-en and Nin-en-na-ge, 'lady of incantation.'⁸ Ninā was also identified with Išhara, goddess of water-animals, whose symbol was the scorpion,⁹ and who bore the title, *tiamāt* (dragon) of the primeval waters (*uatiš-ḥa-ra ti-amaš*).¹⁰ Išhara appeared at an earlier period as Išhana, 'heavenly goddess of the fish-house,' and daughter of Ea, and still earlier as Ešha. Ur-Bau built a temple to KU-anna in Girsu. He says that she deluges the land with water, and it would thus seem that she was a storm-goddess. Marduk, who became the mighty god of Babylon, absorbed the attributes of many inferior deities. He succeeded Ninā as god of incantation by water; he was made a water-god, being Ea's son; and his consort was Zer-panitum, 'the lady of the abyss.' He became all-powerful, and was called 'king of the abyss.' A hymn says of him: 'Command the sea and the sea obeyeth';¹¹ he was addressed as 'lord of the mountain stream and of water, opener of sources and cisterns, controller of streams';¹² and he is represented in company with a water-dragon, and standing above the watery deep. His cult has been traced to Eridu. Nabu, a patron deity of Borsippa and son of Marduk, was a

counterpart of Ea. He was therefore a water-god and god of vegetation. He was also a god of wisdom, and as such was associated with the watery deep. In later times his character as a water-god was overshadowed by that of wisdom, and he became secretary of the gods and inspirer of mankind. His symbol was the stylus with which he recorded the decisions of fate. Nāru was a water-deity, but his or her character is otherwise unknown. Langdon says he was 'probably a male deity,'¹ although he also refers to her as a river-goddess.² Nidaba, a grain-goddess, was closely connected with the water-goddess Ninā-Išhara, one of her titles being *nu-maš-se-gin-nu*, which Langdon connects with *numasse*, a title of Ninā. J. Krauss³ likewise identifies Lugalki-si-a, a consort of Ninā, with Lugul-ki-sa-a, a consort of Nidaba. Ninā refers to Nidaba as her sister,⁴ and is called the 'holy reed-Nidaba';⁵ and, on a seal dedicated to Naram-Sin, Nidaba is connected with the water-goddess Ninā.⁶ Ninakha-kuddu, also known as Nin-karrak and Gula, was a goddess of purification, and was connected with Ea and Eridu. In incantation texts she is associated with Ea and is called 'the lady of incantation.' In like manner Ninhabursildu, goddess of pure fountain-water, was queen of incantations. She was symbolized by a jar of holy water (*egubbū*). The war-god Ninib preserved water attributes. As the first-born of Ea, he was known as 'lord of wells and of the sea' and 'opener of wells.' He was therefore also a vegetation-god. According to a hymn to Enmešarra,⁷ Ningirsu, brother of Ninā, was connected with irrigation. It is there said, 'Great lord, without whom Ningirsu does not direct the water-course and canal.' He was also associated with Scorpio and the scorpion of Išhara. The Sumerian name of Tammuz is Dumu-zi-abzu, 'the faithful child of the deep.'⁸ Tammuz was called 'the real son of the deep,' and belonged to the family of Ea.⁹ Of course he is well known as the Babylonian corn-spirit, who dies and comes to life again every year. He was one of Sumeria's oldest gods, and, when the Sumerians moved into the Tigris-Euphrates valley, Tammuz became a god of the fertilizing waters. He was then called *bēl girsū*, 'lord of the flood,'¹⁰ and under this name or its equivalent, Nin-girsu, he became the local lord of Lagash. Belonging to the Eridu circle, he employed the holy water of the great basin, *pašiš apšī*, in incantations, and as the youthful god *par excellence* he represented the beneficent waters which flooded the valley of the Tigris and Euphrates in winter and which died away in summer. He bore the title 'Niba-alam, 'image of Ea.' Many hymns were sung to Tammuz as vegetation-god, but in them there is frequent reference to his water attributes. The death of Tammuz was said to have been marked by the cessation of libating the waters of Eridu, but drowning in the waters was meant to induce Tammuz to send refreshing floods.¹¹

WATER, WATER-GODS (Egyptian). — 1. Water.—The Egyptians believed in a primeval watery mass, deep and boundless, out of which had come into existence the heavens, the earth, and everything that is in them. The germs of all life, human and divine, were in the watery mass, which was personified and received the name Nu. It was eternal, and part male and part female. The lowest circle of the watery mass was described as 'Osiris who encircles the under world'; but the whole watery realm was frequently identified or summarized as the ocean or the Nile. It was believed that the Nile sprang from the great watery abyss and divided into two rivers—the one the Nile of Egypt, and the other that of which it was said, 'Great and mighty is the river of the sky, flowing across the heavens and through the Duat, the world of night and thick darkness, and on that river floats the boat of Rā.' In other words, there were two rivers which sprang out of the watery abyss—an earthly and a heavenly. Water was sacred to the Egyptians and possessed all the qualities of a divine being. In all lakes, rivers, fountains, wells, and streams the divine essence was resident. For this reason all fish¹ were sacred, and were venerated from the earliest to the latest dynastic times. Those fish venerated at Latopolis and Oxyrhynchus were eaten sacramentally on the ninth day of the month Thoth. Some water-animals were even given names as deities—*e.g.*, the hippopotamus (Taurt) and the crocodile (Sebek). Fish were thus considered the abode of the gods.

Because of the divine character of water, it was considered fortunate to be drowned, a drowned person being sometimes regarded as a deity. Osiris was drowned,² just as Ino of Greece and Bhairwanand in India. The greatest service one could render a god was to be drowned, and thus be united with him. The word for 'drown,' *hsy*, originally meant 'praise.'³ Gods and great men loved to be associated with sacred water; thus the 'mother of Mendes' is depicted carrying a fish upon her head, and Rameses II. was credited with powers as a rain-maker. To control divine water was greatly desired. Chapters lvii. and lviii. of the *Book of the Dead* are called 'The Chapter . . . of having the Mastery over the Water in the Underworld,' and the suppliant prays: 'Grant that I may have dominion over the water.' Water is not only a fertilizing and destroying force, to which offerings are made, but also a means of warding off demons. It played a great rôle in lustrations and incantations.

As a deity water was worshipped. The water-worship of Canopus and its cult in Egypt are well known.⁴ There were many instances of sacrifice to water, the victims being usually bulls, horses, or human beings. Even as men were sacrificed to the Tiber in Rome, and to the Ganges in India, so in Egypt human beings, especially girls, were sacrificed to the Nile. A favourite place for an altar, therefore, was on the banks of the Nile. But all streams and fountains, lakes and rivers, were the abode of spirits, which had to be propitiated.⁵

Even as Egypt was the gift of the Nile, so all life was sustained by the Nile, and the Nile was the water of life; and, as the inhabitants of Egypt depended upon the waters of the Nile for daily life, so the departed are represented as drinking the water of life from the celestial Nile. In this world sacred water was used for purification, and in pre-

¹ E. Mahler, 'Das Fischsymbol auf ägypt. Denkmälern,' *ZDMG* lxvii. [1913] 37-48.

paration for the next world it was used in an interesting ceremony called the 'Opening of the Mouth,' which consisted of sprinkling or pouring water over the statue of the departed to make it a pure abode for the *ka*. This ceremony not only purified and sanctified the person represented by the statue, but also removed from him all possibility of decay and death in the world to come.¹

2. **Water-gods.**—At a time which antedates the earliest records Egyptians had deified the Nile and worshipped it under the name *Hāpi*.² In the Pyramid Texts his name occurs³ as that of a well-established god. It was natural that such should be the case, for Egypt's welfare depended more upon the Nile than upon any other one thing. Because of the two great divisions of Egypt, *Hāpi* was worshipped with some distinctions in both north and south. In the north he was *Hāp-Meht* and in the south he was *Hāp-Reset*. But there were not two gods, for *Hāpi* is represented holding two plants, the papyrus and the lotus, or two vases from which the North and South Nile poured. He is usually depicted in the form of a man, with hanging breasts from which water streams, wearing the sign of water and holding lotus-flowers. *Hāpi* was at an early time identified with the primeval watery mass, personified as the god *Nu*, or, at least, he absorbed *Nu*'s attributes. Because of the mystery to the Egyptians of the cause of the Nile's inundations, *Hāpi*'s being was always shrouded in mystery.

In a hymn to the Nile it is said of him that he 'cannot be figured in stone, he is not to be seen in the image on which are set the crown of the South and the North with their uraei, offerings cannot be made to him, he cannot be brought forth from his secret places, his dwelling-place is not to be found out, he is not to be found in the shrines which are inscribed with texts, there is no habitation which is sufficiently large for him to dwell in, and the heart [of man] is unable to depict him.'⁴

Because of his great reputation, he was called 'father of the gods,' 'creator of things which exist,' 'vivifier,' 'the lord of fishes,' was identified with *Osiris*, *Amon*, and *Ptah*, and was considered greater than *Rā*. In later times a festival of the annual rise of the Nile was celebrated with great solemnity throughout Egypt—an event mentioned by *Heliodorus*.⁵ *Hekateus*⁶ speaks of a sanctuary of the Nile, and the early Church Fathers bear witness to his worship.⁷ During the Nile festivals⁸ hymns were sung to *Hāpi* in which the worshippers said:

'Offerings are made, oxen are slain to thee, great festivals are kept for thee, fowls are sacrificed to thee, beasts of the field are caught for thee, pure flames are offered to thee.'

Even the Nile's inundations were personified and called *Bāh*, and the waters of the Nile were sometimes deified as *Anket*, a goddess, usually represented in the form of a woman with a crown of feathers on her head, arranged in such a way as to suggest a savage origin. Originally she was a goddess of some island in the first Cataract, but she was later identified with *Nephtys*. She personified the waters of the Nile which embrace and fructify the fields. She is sometimes pictured in a boat, seated in a shrine, with a table of offerings before her. *Set*, the personification of the

forces of water which were supposed to resist light and order, was symbolized by the serpent *Apep*, the great monster of the deep, whose four heads represent the four sources of the Nile. *Ageb* is mentioned in the Pyramid Texts as a god of the deep. *Hathor*, the cow-goddess and personification of the house in which *Horus* dwelt, was one of the oldest of Egypt's goddesses. She was the principal counterpart of *Rā*, and became the great mother-goddess. She was identified astronomically with the star *Sept*, and was thereby connected with the rise of the Nile preparatory to its inundation. Being the mother of all, she was easily identified with phases of the Nile. There were supposed to be seven *Hathors*, but this is not surprising, since her popularity as mother-goddess caused many secondary deities to be identified with her and gave rise to a *Hathor* cult in many localities. She is represented in many forms and attitudes, but none is more interesting than a picture in a Theban tomb which depicts her in a persea-tree giving drink to a soul in *Amentet*. *Hekes*, 'lord of the mouth of the rivers,' is a rarely met god with stellar characteristics.¹ *Isis*, or *Ast*, was in pre-dynastic times a water-spirit or river-goddess, probably Libyan in origin. From the earliest to the latest times she was Egypt's greatest goddess, the beneficent goddess and mother, the highest type of the faithful, a loving wife and mother, the mother of *Horus*, the giver of food and life to the dead, 'wife of the lord of the abyss,' 'wife of the lord of the inundation,' and 'creatix of the Nile flood.' As the power of the Nile, she was called *Sati* and *Sept*, and, as the embracer of the land and producer of fertility by means of water, she was called *Anket*. She was the female counterpart of the primeval abyss from which all life sprang, and she was so popular that at an early period she absorbed all characteristics of other goddesses. She was not only a water-deity, but also an earth-, corn-, and star-goddess. She is usually depicted as a woman with vulture head-dress and with a papyrus-sceptre in her hand. Sometimes she is crowned with a pair of horns, between which is a solar disk, surmounted by the sign for 'seat,' the symbol of her name. With the horns and disk are often two plumes; and sometimes she wears the double crown of Egypt, to the back of which is attached the feather *maat*. Her symbol was the star *Sept*, which announced the inundation of the Nile. In the Roman period elaborate ceremonies, related by *Apuleius* and *Pausanias*, were conducted in connexion with the use of a vessel of Nile water in the *Isis* festival, which took place at the time of the Nile's inundation. *Khnemu*, the first member of the great triad, *Khnemu*, *Satet*, and *Anket*, at *Abu*, or *Elephantinē*, was originally a river- or water-god, as were the other members of the triad. He was often identified with *Nu* and *Hāpi*. He was one of the oldest of Egypt's gods, being mentioned in the text of *Uni*. He was without doubt a pre-dynastic god, symbolized by the flat-horned ram from the East. At a very early period he became god of the Nile and of the annual Nile flood, and as such bore the name *Keḫb*. He was called 'maker of heaven and earth, and *Duat*, the waters, and the mountains.' He says of himself, 'I am the primeval watery abyss, and I am the Nile who riseth at his will.' As a water-god, he became almost universal in Egypt, uniting in himself the attributes of *Rā*, *Geb*, and *Osiris*, and with his four rams' heads represented the four elements—earth, air, fire, and water—and perhaps also the four sources of the Nile. He is depicted in the form of a ram-headed man, and, as a water-god, he is seen with outstretched hands over which

flows water. He is sometimes represented with a jug above his horns. His worship was especially common in that part of Egypt extending from Philæ to Thebes. Meht-wrt, the emblem of the primeval female creative principle, and the name of the celestial cow, was originally a female personification of the watery matter which formed the substance out of which the world proceeded. She is a pre-dynastic goddess, and is mentioned in the texts of Uni. Meret, depicted with an aquatic plant on her head, and therefore a water-goddess, was associated with Mut. Her name occurs in a dual form, Merti, and as such represented the Southern and Northern Nile. Mut, the great mother-goddess, 'who giveth birth, but was herself not born of any,' was an ancient water-goddess. She was called 'the watery one,' 'the watery flood,' and as such was called the wife of the Nile. Her principal temple was in Asher, a quarter of Thebes, which probably derived its name from the sacred lake which existed there. Neit, one of the oldest of Egyptian goddesses, was the personification of a form of the great primeval watery mass. At a later period she was represented with bow and arrows as a goddess of war and of the chase. Nu, in pre-dynastic Egypt, was the personification of the watery mass of heaven, whose counterpart was Nut. He was called 'the great god whose dwelling is in the waters of the sky,' and was sometimes identified with Kheper, the self-created one. He was ordinarily represented as an obese man, like the Nile, with whom he was often identified. Nut was the personification of the female aspect of the great watery mass out of which all things came. She was the daughter of Shu and Tefnut, the wife of Geb, and mother of Osiris, Isis, Nephthys, and Set. She is usually represented as a woman with a vase of water on her head. She sometimes wears the horns and disk of Hathor, and holds a papyrus-sceptre and sign of life in her hand. She is also depicted as a woman standing in a sycamore-tree pouring out water from a vase. In the *Book of the Dead* a suppliant prays, 'Grant thou to me of the water and of the air which dwell in thee.' Her attributes were many, because, like all water-deities, she absorbed the characteristics of many minor deities, and was recognized and worshipped in many different places in Egypt. Osiris was the god of the dead *par excellence*. He may have originally been a human being who was deified. When such transformation was made cannot be decided. But from the earliest dynastic period till the latest he was worshipped. He became the most popular, best known, and most powerful Egyptian deity. But what interests us is that he was originally a water-spirit or god of some portion of the waters of the Nile, and with the passage of time he became a great water-god, representing in general the creative and nutritive powers of the Nile, and particularly the inundation.¹ As a Nile-god he naturally became a creative and generative power. And, just as the Nile sank and rose, so Osiris died and rose again, becoming thus the god of resurrection. Osiris was depicted in many forms, the most usual being that of a mummy with a beard and wearing the white crown and a *menat*. He was from time to time identified with most of the greatest gods until he attained a position which made him appear as the natural god of Egypt. As a water-deity he was identified with Hâpi, and later with Nu, representing water as a life-giving element. As there were thought to be four sources of the Nile, so Osiris had four birth-genii, for he was the Nile personified. Plutarch records the belief of the Egypt of his day when he says that Osiris was looked upon as not only the Nile but also the ocean. Osorkon II.,

¹ E. A. W. Budge, *ad loc.*

as an embodiment of Osiris, was represented with streams of water pouring from his hands.¹ In the Nebseni papyrus of the *Book of the Dead* Osiris himself says, 'I flood the land with water and Great Black One is my name'; and in the papyrus of Nu he says, 'I am the god of inundation and Great Black One of the Lake is my name'; and in a hymn to Osiris it is said of him, 'Thou drawest thy waters from the abyss of heaven.' Ptaḥ, sometimes considered the oldest of gods, was a co-worker with Khnemu in creation. He was identified with many other gods as well as with Nu, the primeval abyss, and with Hâpi, and he was called 'lord of fish.' Rem was perhaps the personification of Ra's tears. He may have been the same as Remi,² who was probably a fish-god, and associated with Sebek, a personification of Nu. Sati, originally connected with the chase, was worshipped at the First Cataract, where she was associated with Khnemu. Her name probably refers to the falling waters of the Cataract. She thus became a goddess of inundation, who pours out and spreads over the land the life-giving waters of the Nile. She is usually represented in human form with a high conical crown. Sebek, as lord of the Fayyum and deified crocodile, was most probably a water-god. Selḥet was a scorpion-deity, and one of the four goddesses who assisted Nu and protected the four sources of the Nile. Tetenet was usually identified with Ptaḥ, and sometimes with Nu. Tefnut was a rain-goddess whose male counterpart was Shu. She was the personification of the moisture of the sky. They were both born of the great watery mass. The cult of Tefnut does not seem to have been associated with any special city.

LITERATURE.—On this subject there exist no separate articles, monographs, or books. Besides original texts, the literature used has been mentioned in the course of the article. Special mention should be made of E. A. W. Budge's great work, *The Gods of the Egyptians*, 2 vols., London and Chicago, 1904.

S. A. B. MERCER.

WATER, WATER-GODS (Greek and Roman).—I. Greek.—The account given in art. NATURE (Greek) includes much information on this subject which need not be repeated here, especially as to the cult of river-gods, nymphs, and similar divinities. There are, however, certain aspects of the subject which require some addition.

The worship of rivers or of water generally as the origin of life was one expression of a belief which is also found in early speculation and philosophy. Thus Homer³ speaks of Ὠκεανόν τε, θεῶν γένεσιν, καὶ μητέρα Τηθύον, and says⁴ that Ocean is the origin of all things. Hesiod fits Oceanus and Tethys into his *Theogony*⁵ as children of Earth and Heaven. Ocean, according to the Homeric conception, was regarded as a river flowing round and bounding the earth; thus it was set around the rim of the shield of Achilles.⁶ It is personified in art as an elderly man with flowing locks and beard, but has little importance in religious cult.

The gods of the sea may be divided into two classes: (1) the elemental beings who constantly occur in folk-lore and popular belief, and (2) the clearly defined and personal Olympian gods who rule over the sea. The former had as a rule little importance in the official worship, though we hear of a public cult of the Old Man of the Sea ("Ἄλιος Γέρον") at Byzantium. Triton, Proteus, Glaucus, Nereus, and the Nereids have many of the qualities attributed to sea-divinities or demons

¹ E. Naville, *The Festival-Hall of Osorkon II. in the Great Temple of Bubastis* (EEM x.), London, 1892, pl. xi.

³ *Ib.* xiv. 201.

⁴ *Ib.* 246.

⁵ 133-136.

⁶ *Ib.* xviii. 607.

in the folk-lore of various nations, such as the gift of soothsaying or foretelling the future, and the power of transforming themselves into various shapes. Thus Proteus, when seized by Menelaus, changed into various beasts, and into water, and could change into fire; but, if bound, he could be compelled to impart his knowledge. Similarly Thetis, the Nereid, changed into various forms when seized by the mortal Pelens. In the systematized religion of Greece all these were regarded as subordinate to Poseidon as supreme god of the sea. In this capacity Poseidon was associated with Amphitrite, possibly an old goddess or impersonation of the sea, though in later mythology sometimes regarded as one of the Nereids. She is often represented in art as the consort of Poseidon, both in the assembly of the gods on Olympus and in her bridal procession, which is escorted by Tritons and Nereids on hippocamps and other sea-monsters; but she has no important place in official worship. Poseidon, on the other hand, is one of the chief gods of the State worship of many Greek cities, and was regarded as the ancestor of many leading families, especially among the Ionians and Minyans. The tale of his contest with Athene for the land of Attica is familiar, and was the subject of the western pediment of the Parthenon. The Isthmian games at Corinth were celebrated in his honour. As god of the sea, Poseidon can arouse and pacify storms, and so is appealed to by seafarers; but it is noteworthy that, in the greatest of sea-poems, the *Odyssey*, he appears as a malignant, rather than a beneficent, god. He has little or nothing to do with ships. The Argo was built under the direction of Athene, and mariners often attribute their safety to Aphrodite Euploia or to the Dioscuri rather than to him. Odysseus owed his safety to Ino Leucothea, who was often appealed to by sailors.

As sea-god Poseidon is the sender of earthquakes (*Ἐννοσίγαιος*). He split the mountains to make the ravine of Tempe, and hurled about or submerged islands. Salt springs inland are also attributed to him. By a symbolism which is common and easy to understand, waves are often compared to sea-horses; and either the origin of the horse or its training to human service is attributed to Poseidon Hippios. Horses were sacrificed to him, sometimes by being thrown into the sea. The bull also was especially sacred to him, and bull-taming exhibitions were held in his honour. In connexion with this we are reminded of the mixed human and bull form often taken by river-gods.

We might naturally expect Poseidon, as the chief sea-god, to give victory in sea-fights; and in fact Persian galleys were dedicated to him at the Isthmus and at Sunium after the great naval victory at Salamis. But other gods often received thank-offerings for such victories.

A characteristic of all water-divinities and dæmons, from Poseidon down, in later Greek art is an expression of restless and passionate yearning, which is attributed to them as impersonating the restlessness of their element and its desire to embrace and engulf the land and its creatures. Apart from representations of sea-gods, the sea itself is often represented in art by conventional wave-patterns and by dolphins, fishes, and other sea-creatures.

2. Roman.—Here also the art. NATURE (Roman) gives most of the information required. The Romans were not a seafaring people, and their god Neptunus was not originally a sea-god, though he came later to be identified with the Greek Poseidon; but he may have been a *numen* associated with water, though very little is known as to his primitive worship. He appears, however, to be a god of springs, and so associated in

worship with the nymphs. The worship of the nymphs in connexion with springs was very widespread in Italy and throughout the Roman empire, though it is not easy to distinguish how much was merely borrowed from Greece. Their frequent representations in art, like those of river-gods, evidently follow Greek models. The Camena, associated with soothsaying and poetry, appear to have been spring-goddesses in origin; and the nymph Egeria, Numa's counsellor, also had a similar character. River-gods, nymphs (often holding shells), and similar representations of water-deities are very common in Græco-Roman art, but they do not, as a rule, bear any distinctively Italian character. A more original conception is that of the famous figure of Jupiter Pluvius, the rain-god, on the Antonine Column,¹ who is represented hovering over the armies with outspread wings, and pouring down rain in torrents from his beard and outstretched arms. Such a naturalistic personification is alien to Greek anthropomorphism, and much more akin to mediæval and modern symbolism.

LITERATURE.—In addition to works quoted in art. NATURE (Greek) and (Roman), articles in Roscher on 'Okeanos,' 'Poseidon,' 'Neptunus,' etc.; O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, 2 vols., Munich, 1897-1906; G. Wissowa, *Religion und Cultus der Römer*, do. 1902, 21912; L. R. Farnell, *Cults of the Greek States*, 5 vols., Oxford, 1896-1910, iv. 1-97. E. A. GARDNER.

WATER (Hebrew and Jewish).—The importance attached to water in Jewish belief and practice is so great that it embraces almost every manifestation of life, and can best be studied in the following subdivisions: (1) cosmogony, in its widest sense, (2) lustration, (3) rain.

1. Cosmogony.—According to the record of the Bible, the primordial element of creation was water. Only by the separation between the waters above and the waters below could the earth appear, but the waters above the firmament were not entirely separated from those that were gathering below, first into a great sea and then into rivers and fountains of the deep. On the contrary, an intimate connexion between the two was continually kept up.² A connexion was believed to exist between the upper and lower waters in the form of pipes which led from the heavens above to the sea below, and through the medium of such pipes the waters that had come down from above, and which slowly gathered into the sea, were sucked up into the heavens, thence to descend again upon earth.³

The primeval sea surrounds the earth like a snake; so it is seen by Alexander the Great in his attempted ascent to heaven.⁴ This view is found often repeated in Rabbinical writings. The sea stands under the rule of a special prince or spirit (Sar), who opposes Moses when he tries to cleave the waters of the Red Sea. He refuses to obey a being created on the sixth day, whilst the sea was created on the second.⁵ He is conjured by the sages to cast up the strength of a man thrown into the sea by a witch.⁶

The sea is the counterpart of the earth, and it contains every creature that is found upon the earth, save the fox, which by a stratagem escapes the fate of being cast into the sea.⁷ The waves of the sea can be appeased by magical formulas.⁸ On the other hand, the waves and storm are messengers sent to carry out divine ordinances, and cast up on land a man from a foundered boat whom divine providence wishes to save. Thus Aqiba is saved.⁹ But ever since the flood, which in a supreme

form carried out the divine decree of universal destruction, boundaries have been set to the sea which it cannot overthrow, especially the boundary of sand (Jer 52²).¹ The waters of the deep are also part of the cosmogonic process. They are kept under ground; and, since they broke out in the time of the flood, they are now kept in check by the Eben Shetiyah, or 'the stone of foundation,' which, according to legend, is the centre of the earth and the corner-stone of the Temple in Jerusalem, or the stone upon which the Ark of the Covenant rested. When digging the foundations of the Temple, David came upon the floods of the deep; they started surging up, threatening to flood the world. David receded slowly step by step, and, whilst receding, he recited the seventeen Songs of Degrees (or Steps), until at last, writing the ineffable name of God upon a stone, he closed with it the mouth of the abyss, and, when the waters saw the divine name, they withdrew in terror, and thus the world was saved from a second flood.²

The waters under ground are flowing close to the fires of hell, hence the hot springs; and the waters of the flood which surged up from the deep were boiling and helped in the destruction of the wicked world, from which Og, king of Bashan, alone escaped through his gigantic stature. (He had boasted that he and the other giants could stop up with their heels the openings of the fountains.)

There are also miraculous wells and rivers. The well in the desert, created on the sixth day, accompanied the Israelites in their wanderings through the desert and ceased to flow with the death of Miriam.³ There is then the famous Sabbath river Sambatyon (*q.v.*), which plays a great rôle in the history of the portents previous to the advent of the Messiah.

Just as Moses, Joshua, and Elijah divided the waters, so did also sages of a later period. Jesus walked upon the waters, and in another connexion we are told that the waters of the river flowed backwards when appealed to by a sage as a proof of the correctness of his interpretation of the Law.⁴

On the other hand, wells and rain-pipes were considered to be haunted by demons.

On one occasion a man who rested on one of the gutters was hurt by a demon because he trod upon his toe. Abbaye helped one demon to fight another who was trying to drive him from his own habitation. At the end of the fight some drops of blood of the slain demon were seen floating on the surface of the water in the well. On another occasion a many-headed monster came out from the well and was slain by Abbaye.

It was therefore forbidden to drink water from any vessel that was left open overnight, more especially over Wednesday or Saturday night,⁵ for it might have become defiled or poisoned by a demon; and the only protection in such cases was to blow upon the water and to pour a few drops of it on the ground before drinking—a kind of libation. During the winter solstice (Tekufa) it is said that three drops of blood fall from heaven and contaminate all the water found in vessels in houses, and that water must be poured away.⁶ This, by the way, is of a purely Egyptian origin, and belongs to the cycle of the Isis legends. The Angel of Death is said to dip the sword by which he has taken the life of man in the water found in the house. All the vessels must therefore be emptied. This, however, is a popular interpretation of the ancient law of purity, according to which death defiles all food and drink found under the same roof as a dead body.

2. Lustration.—Water is the great purifier and cleanser.⁷ Practically and symbolically, just as water is identified with the spirit and the Law is described as the water of life, water cleanses man from all kinds of physical contaminations, mostly after contact either with dead bodies or with anything described by the Law as impure.⁸ The degree of levitical purity claimed for service in the Temple was sometimes transferred to private life,

¹ So also in *Enoch*, lxxxix. 3ff.; and, as shown by the present writer, the same chapter is incorporated into the Greek magical papyrus of Paris under the name of *Logos Ebraicos*, i.e. 'Jewish conjuration,' *JRAS*, 1901, p. 109ff.

and the sect of the Essenes obtained their name in all probability from their habit of constant lustration and purification, refraining as they did from mixing with the common people or touching any food or object not properly purified. The only means for such purification were bathing and ablution—complete immersion in a sufficient quantity of water, more especially running water, or the pouring of a quantity of water over the naked body. The spiritual significance attached to a ritual bath is of later origin; for bathing was never understood in Judaism to mean also washing of the soul. Physical contamination could be eliminated by immersion or by ablution, but the spiritual contamination remained the same; for, as one of the sages puts it, 'a man who sins and confesses his sin and yet continues to live in sin is like a man who takes the bath of purification and holds an unclean animal in his hand.'¹

The question whether both immersion and ablution were required for purification from defilement seems to have been interpreted differently by Jews, Samaritans, and Karaites. The two last hold that ablution (pouring of the water over the body without immersion) is sufficient. How far this practice has prevailed in pre-Christian times is a question which lies outside the scope of this article and may have some importance for the history of baptism.² In later times the washing of hands alone was considered sufficient to eliminate the charge of defilement,³ although, as no ashes of the red heifer are to be found—which were an indispensable adjunct to religious purification—all the people in modern times must be considered as living in a state of levitical impurity attenuated by this constant washing of hands and by occasional immersions in properly constructed baths. The priests, the descendants of the *kōhanim*, even now have their hands washed by the Levites present in the synagogue before they ascend the rostrum to recite in a special cantillation the priestly benediction. Moreover, no dead person is shriven without being specially washed,⁴ and the mourners when leaving the cemetery are also expected to wash their hands, for they have been in a place considered impure by the Law.

Water, again, was used for purification or as a token of innocence by the elders when a dead body was found and the murderer could not be traced; they went to the banks of a roaring stream and, washing their hands, declared publicly and solemnly their innocence of the murder (Dt 21^{6ff.}). In the ceremony for testing the purity of a suspected wife she had to drink bitter waters (or rather 'waters of curse'), prepared by the priest.⁵

It is not unimportant to explain the words used in connexion with this kind of water. It is called 'holy water' (Nu 5¹⁷), whilst in connexion with the purification of the leprous the priest used 'living water' or, according to the RV, 'running water' (Lv 14^{5, 50}), but the same word occurs in Genesis to denote the well digged by Isaac's servants where they found 'living water.' It is difficult to imagine how running water could be in a vessel. The operation in each case is of a symbolical and magical character, and the designation of the water as 'holy' can best be understood by comparing the use of water in other mystical processes. The vessel or the bowl must be filled with water which no one else has touched, and of which no one else has drunk. It is kept intact and sanctified for the purpose to which it is to be put. The moment it has been touched or some of it drunk, it becomes defiled or dead.

Bowls for water with magical inscriptions have

often been used for such purposes in the well-known Lekanomaty.¹

3. Rain.—It was natural that in an agricultural land like Palestine rain should be considered a blessing and drought a curse. In Dt 11² the early and the latter rains are promised as a blessing for obedience to God's commandments. Palestine does not depend, like Egypt, on the water supplied by the overflow from the river, but 'drinketh water of the rain of heaven' (Dt 11²).² The sources of rain were believed to be treasuries in the heavens. The 'waters above' are mentioned in Gn 1⁷, and at the flood the 'windows of heaven were opened' (7¹¹). They are described in greater detail in *Enoch*, xli. 4, and in the *Revelation of Moses*.³ According to the legend, the key which locks and unlocks this treasury was one of the three keys which God kept, and He only once delivered it up to man when He handed it over to the prophet Elijah, upon whose 'word' alone depended the drought or rainfall (1 K 17¹). The rainfall was therefore regarded as a divine gift and a blessing which followed the fulfilment of the Law, and drought was caused by sin; a moral connexion was established between the phenomena of nature and man's moral actions. It was thus natural that the action of the pious and the sinner should have a direct bearing upon obtaining rain or causing the withholding of it, and, furthermore, that the intercession of the pious could under certain conditions counteract the consequences of evil deeds.

According to the teaching of the Rabbis, rain fell only for the sake of the righteous, and was withheld when the Israelites deserved punishment. Drought was the consequence of remissness in paying tithes and heave-offerings, or of slander, impudence, and neglect of study of the Law.⁴ Collective action no less than individual intercession would also have the desired effect of breaking up the drought. Prayers for rain and symbolical ceremonies would then become efficacious. The prophet, through his action on Mt. Carmel, brings back rain (1 K 18⁴²⁷). In later times the high-priest prayed especially for rain on the Day of Atonement, when he performed the service in the Temple. He not only prayed for rain in due season, but went out of his way to pray that God should not heed the prayers of the wayfarers who might be greatly inconvenienced through the rain.

There was a special festival held in the Temple, the Day of the Water-Libation, which was the occasion of rather boisterous rejoicings. The Mishnah⁵ and Talmud⁶ contain a graphic description of it. It was called *Simhath beth hashoebah*, 'the rejoicing at the place of the drawing' (i.e. of the water), and was kept on the 21st day of Tishri, the 7th day of the Feast of Tabernacles, the day of the Great Hosha-a-na. No explanation has hitherto been given for the use of water as a libation on that day instead of the regular wine-libation. It is, no doubt, of a propitiatory and symbolical character. It is an offering of the element which the people prayed to be blessed with during the year at the threshold of which they were standing. There may have been another reason for the libation as well as for the season chosen. According to the Bible narrative (Gn 7¹¹), the flood began and terminated about this time (it began on the 17th and ended on the 27th of the second month). There is now a difference of about a month between the two dates. Probably the coincidence of time was considered sufficient to celebrate the anniversary of the flood by a water-libation, and by such an act to obviate the recur-

⁶ *Sukk.* 50a.

rence of a flood and to show gratitude for the promise that henceforth the rain would come only as a blessing. There may also have been a closer correspondence of the time in the intercalary year, if the intercalation was made at the close of the civil year, at the end of what is now reckoned as the sixth month, but is really the twelfth month. Thus the seventh would become the eighth (second) and on the 17th of the second (eighth) the sluices of the heavens were opened (Gn 7¹¹). With the destruction of the Temple a special prayer for rain had been added to the service of the eighth day of Tabernacles.¹ Though the ceremony ceased in the Temple, the remembrance has been kept in the service of the seventh day of the Great Hosha-a-na, which is modelled on the service arranged for the occasion of drought.² A special significance has been given in later times to the service of the seventh day, for people seem to have forgotten the real meaning and origin of these supplementary prayers and ceremonies. Moreover, since Temple times special prayers are recited in the additional (*musaf*) *amidah* for the Day of Festive Assembly. Corresponding to the change of season, similar prayers for dew form an integral part of the liturgy for the first day of Passover.³ The month of Tishri was also considered most propitious for prognosticating the weather.⁴

A most elaborate description has been preserved of the ceremonies instituted and the service arranged for the occasion of drought. It is, in fact, the most complete description found in the Talmud. The solemnity was increased by the strewing of ashes on the head, the blowing of trumpets, the insertion of supplicatory prayers, and the extension of a rigorous fast for young and old, strong and infirm, male and female. It was made the occasion of general mourning also by performing that service in the open market-place. The severity of the penance and the multiplication of prayers increased with the fear that the rain might fail. Such a service could not be performed anywhere except in the Holy Land.⁵ Great men enjoyed the reputation of having obtained rain by their own merits.

Outside of Palestine no special service could be arranged on the lines of the Talmudic prescription. As far as possible, fasting and special prayers were used on the occasion of severe drought, but there is no fixed form. Each community may arrange it in its own way, and either use older compositions or compose its own prayers. They do not form part of the regular service, and are not included in the recognized standard forms of the Prayer-Book. Such prayers may be met with in collections of Occasional Prayers both in MS and in print.

The most important feature of that service has been introduced in a reduced form into that of the seventh day of Tabernacles, the exact day of the water-libation. It has been invested with the solemnity and character of a second Day of Atonement. In order to explain the supplicatory prayers and the other ceremonies which now form part of the additional service, it must also be remembered that the trumpets are blown exactly as prescribed in the Talmud for the day of solemn prayer for rain. The attributes of God are recited;

⁵ This ceremony is described in the first chapter of the *Mishnah Ta'anith* and the treatise of that name. It is still more fully described afterwards by Asheri (1250-1328) in his *Tur Orah Hayyim*. A fuller, though not complete, MS of this service, with the poems and supplicatory prayers, etc., has come from the Holy Land into the possession of the present writer. It must be anterior to the 16th century.

the procession of the palm-leaf and the willow takes place, just as in the time of the Temple; and prayers are offered up almost exclusively for rain in its due season. They are, in fact, the very prayers found in the Mishnâh and the treatise *Ta'anith*, and also in the description of Asheri. Curiously enough, similar prayers have also been arranged for the cessation of rain. In fact, all the supplicatory services for grave occasions like plague, etc., follow the lines of this liturgy for rain.¹ In addition to these special services, a regular change takes place in the form of the daily prayer (*amidhah*), or eighteen benedictions, in the special blessing for rain and dew. It is connected with the change of the equinox. It begins approximately sixty days after the winter solstice. This is also a season which is not free from superstitious beliefs and practices.²

A Talmudic legend³ tells of a certain Nicodemus (Nakdimon), son of Gorion, who had obtained from the Hegemon a number of pits filled with water, which he distributed among the poor at the time of a great drought. He promised to pay a heavy fine if before a certain date the rain did not fill the pits. In the afternoon of the appointed day the sun was still shining brightly, and no sign of rain was visible. Nicodemus went up to the Temple and prayed, and the sun, which was sinking, rose up again and thus prolonged the day, before the close of which a heavy downpour of rain freed Nicodemus from his obligation. Honi,⁴ another pious man, drew a circle, and, standing within it, prayed to God, and the rain came down in heavy drops. In another legend it is through the merit of the wife that drought is broken, the clouds gathering first in the corner where she was praying.⁵

The drought, according to a legend, is also broken up by the cry of the raven. It is said that it was granted to him as his reward for showing Adam how to bury Abel, by digging a grave and burying a dead raven.⁶

A new element has been added to these prayers for rain, in the processions to the cemetery and in the prayers to the pious and illustrious dead for their intercession. No man is found in the later generations so worthy of appealing to God as were those of old times; they therefore pray that those who 'slumber in the dust' may intercede with God in favour of the suffering people. Such processions are headed, as a rule, by the Rabbi, who is accompanied by the elders and the children. Sometimes—but rarely—the scrolls of the Law are carried in the procession. Litanies are sung and recited, and prayers are said over the graves.⁷ It is the Jewish counterpart to the Christian procession, notably of the Eastern Church, in times of severe drought, when the relics of a saint are carried on the shoulders of the clergy in a solemn procession through the town, headed by the bishop or the metropolitan of the place.⁸

A local legend in Salonica heard by the present writer tells that the Jews who fled from the Inquisition in Spain at the end of the 15th cent. were admitted into Turkey on condition that they would bring rain in time of drought. The people of that town, especially the children, used to gather under the window of the *Haham* asking for rain. It is told that on such an occasion the late *Haham* Kovo, going out in procession to the cemetery, warned his people to prepare themselves with coverings for the rain, and they returned under such a downpour that the streets were turned into rivers.

The rain thus plays a very important part in the Jewish service. The prayer which is recited daily, and the introduction of special prayers on important occasions into the liturgy, as well as other ceremonies and practices, testify to the belief that a divine gift such as rain can be obtained only through piety and uprightness and by means of supplication and self-chastisement.

WATER, WATER-GODS (Indian).—The special conditions of the Indian climate, producing, as in the western desert, a scanty and irregular rainfall, in other places excessive downpour resulting in loss of life and property from inundations, and the constant risk of failure or irregularity of the monsoon, promote the popular animistic beliefs and that of special deities ruling the ocean, rivers, tanks, and wells.

Water runs up this whole gamut or scale of religious expression. The honours paid to the running brook, a hot spring or to a river that alternately floods and falls—causing famine or abundance, bringing riches or ruin—are intended for the living water itself by a large class of votaries; and this notion of material identity seems preserved by the custom of bathing in sacred streams, of self-drowning, and of witch-dipping, which last custom resembles exactly that of England. Suicide and witch-dipping in rivers present both sides of the same conception, acceptance or rejection by the divine element. Further on, the water-power is no longer deified Nature, but controlled by a supernatural spirit we have the kelpie who inhabits rivers under the form of a buffalo, and personifies their effects. His name is *Mahisoba*; he has no image, but a buffalo's head is cut off and deposited on his altar. After this we ascend to mythological fictions about the origin and descent of the greater rivers from the Hindu heaven, and to legends of streams turned, stopped, or otherwise engineered by interposition of the divine energy incarnate.¹

In Mirzapur a pool in which some buffaloes were once drowned is now inhabited by the buffalo demon, Bhainsāsura, who in company with the *nāgās*, or serpent deities, is so malignant that no one dares to fish there until he has propitiated these powers by an offering; another form of demon attacks fishermen, appearing in the shape of a turban which fixes itself to his hook and increases in length as he tries to drag it ashore.² Sometimes the demon, as in the case of the Zalgur of Kashmir, takes the shape of a horse, the foamed waves breaking on the bank naturally assuming this shape in the popular fancy.³ Such sea-horses in the Hindu legend are provided by Varuna, the sea-god.⁴ The custom of taking oaths on water conceived as a spirit is common among the Karens and other primitive tribes.⁵

1. Water-gods in the Veda and later literature.—Much controversy has arisen on the question of the amount of knowledge of the sea possessed by the Indo-Aryans. On the one hand, writers like H. H. Wilson⁶ assert that they were a maritime and mercantile people, familiar with the ocean and its phenomena; and references in the Veda are quoted of merchants making expeditions to some foreign continent or island. Other writers represent them as living far from the coast and unfamiliar with the sea. The evidence quoted by Bühler of voyages in the Indian Ocean seems inadequate, and the use of the word Samudra for the ocean implies a knowledge of the sea which needs not to be confined to the estuary of the Indus.

This is to circumscribe too narrowly the Vedic knowledge of the ocean which was almost inevitable to people who knew the Indus.⁷

In later times this knowledge gradually increased. There seems to be no proof of sea trade with Babylon in Vedic times; this probably developed about A.D. 700.⁸

The extensive and long-continued emigration from India to the East—including Pegu, Siam and Cambodia on the main-

land, with Java, Sumatra, Bali and Borneo among the islands of the Malay Peninsula—and the consequent establishment of Indian institutions and art in the countries named, constitute one of the darkest mysteries of history.¹

The deification of the great rivers by the Vedic Indo-Aryans was highly developed.²

2. **Varuṇa.**—The imperfect knowledge of the ocean possessed by the Indo-Aryans explains why Varuṇa, whose name probably corresponds with the Greek *Ὠκεανός*, 'though the identification presents some phonetic difficulties,'³ does not clearly rank as a sea-god in the Veda.

'Though Varuṇa is not generally regarded in the Rig-veda as the god of the ocean, he is yet in the following passages (l. 161. 14, vii. 49. 2, viii. 64. 2) connected with the element of water, both in the atmosphere and on the earth, in such a way as may have led to the conception of his character and functions which is fully established in the later mythology.'⁴ 'With the growth of the conception of Prajāpati as a supreme deity, the characteristics of Varuṇa as a sovereign god naturally faded away, and the domain of the waters, only a part of his original sphere, alone remained to him. Thus he ultimately became in post-Vedic mythology an Indian Neptune, god of the sea.'⁵

In more recent times Varuṇa has lost the dignified position which he once occupied,⁶ but he still retains some of the functions of a sea- or water-deity. The most famous festival in E. Bengal is held in his honour at the full moon of the month Kārttik (Oct.-Nov.), when devout Hindus bathe at a famous bathing-place.⁷ In other parts of Bengal no image of Varuṇa is made, nor is he honoured at any festival or temple; but he is worshipped as one of the guardian-deities of the earth, and by fishermen before they start their work, or in time of drought to secure the needed rain.⁸ In Gujārāt he is believed to live in the waters, or, by another account, he has five abodes—the sea, the river, the pond, the spring, and the well.⁹ In ancient times, he received human sacrifices, as in the story of Śunaśepa, the prototype of the offering of infants to the water-goddess Gaṅgā at the confluence of that river with the sea.¹⁰ He is invoked in daily worship as 'king of waters, who curbs the wicked, who made a road in the heavens to receive the rays of the Sun. I therefore follow that route.'¹¹ Like many water-gods, he is commemorated as a fertility-deity at marriages.¹²

3. **Kṛṣṇa and Śiva; and the Apsaras.**—The place of Varuṇa as a sea-god was at a later period to some extent assumed by Kṛṣṇa and Śiva.

'Kṛṣṇa, a god who is the hero of many solar myths, the slayer of the demons, who dives under the sea and slays Kāmsa and Kesi and Madhu, this semi-agricultural, semi-solar or atmospheric god is evidently connected with the dark sun and the storms of the rainy season, and his shrine is at Dwārakā on the sea shore, where the sun dips into the boundless western ocean.'¹³

During the 5th and 6th centuries A.D., on the arrival of the white Hūnas in Gujārāt and Kāthiāwār, the sea began to influence these new-comers, as is shown by the fame which gathered round the new or revived gods, Śiva in his form as Somanātha or Someśvara ('lord of the moon'), with his shrine at Somnāth (*q.v.*), and Kṛṣṇa, the Apollo or St.

Nicholas of Dwārakā (*q.v.*), to whom sailors pray to save them from shipwreck. Śiva, an inland god, is worshipped at river junctions.¹ But the place of the primitive rain-gods has been gradually assumed by figures drawn from the local animism. In Madras in time of drought, instead of worshipping Varuṇa, men pray to the spirit Kodumpāvi ('the wicked one'), or to some other local spirit, to send the rain.² The Apsaras (Skr. *ap*, *āpas*, 'water,' *sri*, 'going,' in the sense of moving in the waters or between the waters of the clouds), a kind of nymphs who even in the *Rigveda* appear completely separated from any physical basis, in the *Atharvaveda* have their abode in the waters, and in post-Vedic literature frequent lakes and rivers, especially the Ganges, were in later times believed by the Rājputs to convey the souls of dead warriors from the battlefield to the mansion of the sun, and have now little influence over the waters or on the rain.³

4. **Modern ocean-worship.**—The sea, known to modern Hindus as Ratnagarbha ('filled with jewels'), is revered by the pious, and at the Anāvas, or new moon, a sea bath is considered cleansing, as on that day the waters of 999 rivers are supposed to be brought into the sea by the spring tides. Bathing is also efficacious during the whole of the Laund, or intercalary month, and in parts of Kāthiāwār on the bright second of every month people light a fire on the shore, throw butter into the fire, and on the day when the fleet puts to sea fishermen pour milk, sugar, and liquor into the water and throw in flowers and coco-nuts.⁴ In W. India Coconut Day (*nāriyā* or *nāral purnimā*) is held at the full moon of the month Śrāvan (July-August) in the height of the annual monsoon, when flowers and coco-nuts are thrown into the water to secure the favour of the sea, or as a thank-offering, because by this time the most serious storms are supposed to have ceased; and even as far inland as Poona clerks go to the riverside and fling coco-nuts into the water, and, when they return, the women of the house wave lighted lamps round their heads to disperse evil influences.⁵ The Vāda fishermen on the east coast worship the sea-goddess Orusandiammā, who roams over the sea at night with a male deity, her brother Rāmasondi, and is worshipped with special rites.⁶ On the west coast the Koli fishermen wear glass bangles only on the left wrist, because on their wedding-day the right arm bangles are thrown into the sea to win its favour.⁷ In the *Purāṇas* we find a belief, which still survives, that the seven continents of the world are surrounded by seven great seas: Lavana, or salt water; Ikshu, sugarcane juice; Sura, wine; Ghrīta, clarified butter; Dadhi, curds; Dugdha, milk; Jala, fresh water; and this idea also appears in Musalmān traditions.⁸

5. **Muhammadan sea-saints.**—The objection felt by Hindus to travelling by sea resulted in the Arabs and Persians monopolizing the trade of India. Hence Musalmān saints became the guardians of the sea. One of the most important of these sea- or river-saints is Khwāja Khidr.

'Abd al-Qādir al-Jilānī (*q.v.*), who takes his name from Gilan or Jilan in W. Persia (A.D. 1078-1166), rules the Arabian Sea, as Māmā Salmā watches the Persian Gulf and Zulaimah the Red Sea.¹ Qādirwalī Sāhib on the Coromandel coast helps sailors, and he is said to have done many strange miracles.² Daryā Pir, the 'sea-saint,' sometimes identified with Khwāja Khidr, is in Gujārāt patron of the Lavānā merchants and lives in the sea, and offerings are made to him by pouring a little water on the ground through a sieve dedicated to him.³

6. Water-sprites or spirits.—Besides the greater water-gods a host of spirits or sprites are worshipped. This cult is specially prominent in the Buddhist *Jātaka*. Some of them are malevolent; in a bas-relief at the *stūpa* of Bharhut a sea-monster devours a ship and its crew.⁴ Others, again, are kindly and are worshipped in conjunction with the *nāgās*, or serpent-gods.⁵ Among spirits of this class at the present day in the Konkan, Bombay, the *asurās*, or *asrās*, are ghosts of young women who, after giving birth to one or more children, committed suicide by drowning; they live in the water, attack any one who approaches them, and go about in groups of seven; their victims are young women, and, when a girl is attacked, an exorcist is summoned, who makes an offering of food, red powder, and green clothes to the sprites.⁶ Another Konkan sprite of the same kind is Hadal, the ghost of a drowned woman, who wears yellow clothes, lets her hair flow loose, and is plump in front and a skeleton behind; when women are attacked by her, they let their hair flow loose, shake all over, and scream.⁷ The *gīrhā* entices men into deep water.⁸ In Gujārāt the *mātā*, or 'mother,' and the *śankhinī*, or 'ogress,' haunt springs and pools and drown or enter the persons of those who venture near their haunts; an exorcist effects a cure by giving a charmed thread to the patient.⁹ In Mysore the *akkagāru*, or 'seven sisters,' attack women, and in such cases the village washerman performs a rite of propitiation by setting up seven stones near the water and making an offering.¹⁰ In the Salem District, Madras, the *āśakanigal* are female sprites who occupy tanks and cause the embankments to burst as they tread on them while they are quarrelling.¹¹ In N. India the *ghātābhāi*, or 'ferry brother,' must be propitiated in rites of black magic.¹² In the United Provinces within the bed of the Jumnā 'was the fearful pool of the serpent Kāliya ("the black one") boiling with the fires of poison, from the fumes of which large trees on the bank were blighted, and by whose waters, when raised by a gale into the air, birds were scorched'; the demon was conquered by Kṛṣṇa and driven into the ocean.¹³ In the Panjāb District of Kulu the *jalparī*, or water-fairy, can be conciliated by offering a lamb and flowers on the bank of a watercourse; if she

catches a man, she compels him to cohabit with her, and kills him if he refuses.¹ In the Panjāb plains the *yoginī*, or *joginī*, haunts waterfalls, while the *jaljoginī* occupies wells and streams and casts spells on women and children, causing sickness and even death.² In Assam the Garos believe that still pools in rivers are the abode of the *bugarik*, a lovely siren, whose hair floats on the current; she has the body and arms of a woman, but no legs; some say that she is well disposed, but others allege that she kills women to add their lives to her own, and will kill men if she can catch them.³

Among the Mikirs 'localities of an impressive kind, such as mountains, waterfalls, great boulders, have each their Anan, who is concerned in the affairs of men, and has to be placated by sacrifices; all waterfalls, in particular, are haunted by them.'⁴

Sometimes these sprites demand human sacrifice, like that of the Pennār river, who, when the Mālas were escaping from their Musalmān enemies, demanded the sacrifice of a first-born child before she would allow them to cross.⁵ The Kaivarta fishermen of Bengal at the rite for guarding their nets fling a live kid into the water.⁶ The Gaddi shepherds of the Panjāb offer food, water, or a sheep made of flour to the Batal water-spirits.⁷ The Khasis of Assam offer a goat to the river-goddess before a fisherman can cast his net; in old days she used to block the passage in the form of a crocodile until she was appeased.⁸ In Burma a Kachin boy was accidentally drowned in a river, and for some years after the parents and other villagers used to come and hack the water with their knives.⁹ The floods in the Pin river are so violent that it is said to eat people every three years.¹⁰ Persons drowned being thus regarded as victims offered to the flood-spirit, the saving of a life from drowning is fraught with danger.¹¹ In Gujārāt and the Konkan the water-nymphs drown a person who tries to save a drowning man.¹²

The presence of such malignant water-spirits renders it dangerous to cross rivers, especially in the case of those who are unclean or under tabu.

The Nāyars and Vellālas of Madras impose stringent rules against crossing certain streams; for fear of arousing the wrath of the water-god, a Toda woman will not cross the sacred river of the tribe, the men will not use the water for any purpose; they will not touch it unless they are obliged to ford it, and then they make a bow when they reach the opposite bank.¹³ The Nayādis, the lowest caste in Malabar, are not allowed to cross a bridge, and in the Central Provinces Pardi women in their menses must not cross a river or sit on its bank, and the bar of pregnancy is also recognized.¹⁴ At a wedding in the Magh tribe of Bengal the pair 'eat some curry and rice from the same dish, and what they leave is kept in a covered earthen vessel for seven days, during which time the married couple may not leave the village or cross running water'; at a wedding among the Kandhs there is a mock fight between the clans of bride and bridegroom, and, 'after the struggle is over, the priest attends the bride and bridegroom home, in order to avert by a charm the evil which would threaten their married life in case their path should cross a running brook.'¹⁵

The wide-spread belief that a ghost cannot cross running water prevails in India;¹ a thread is passed over a stream to help the soul to return to its home, a belief developing into the Bridge of Death and Charon, the ferryman.²

7. Wells, tanks, lakes.—All over the country sacred wells, tanks, and lakes, and their indwelling spirits are revered. Their sanctity arises in various ways: they have been made, discovered, or occupied by some god or saint; hot water flows in them, a special mark of divine power;³ their waters periodically increase or decrease; they possess curative power (especially in cases of leprosy); bathing in them may cause a change of sex.⁴ No well is considered lucky until its spirit is solemnly wedded to that of the garden which it is intended to water, the former being represented by the *sālagrāma*, or ammonite, sacred to Viṣṇu, and the latter by the holy *tulasī*, or basil plant (*ocimum sanctum*).⁵ In the same way, every tank should have a wooden pole in its centre to which the water-spirit is married; until this is done, the water will increase and not allay thirst and may cause disease; the pole also protects the tank-spirit from the attacks of demons.⁶ The prince of Jaisalmer goes annually in state to the lake Gharsisar to perform the sacred act of cleansing it from the accumulated mud and sand; first he takes out a handful, and then rich and poor follow his example.⁷

LITERATURE.—This is quoted in the footnotes.

W. CROOKE.

WEALTH.—Wealth is variously defined according to the standpoint from which it is regarded. But, in whatever aspect it may be viewed, its significance lies in its relation to life as a whole, and it can only be adequately understood when treated as a part of the larger study of man. It cannot be dissociated from the social and moral development of the race. It obtains its ultimate meaning from its place in the scale of values which determine the worth of life. Ethical considerations must therefore be dominant throughout the entire treatment of the subject. 'It is man's "good," or rather his goodness, that endows wealth with all its value.'⁸ While the various phases of the question shade into each other, for the purposes of this article it will be convenient to consider the theme under three aspects—economic, ethical, and Christian.

I. **ECONOMIC ASPECT.**—I. Historical sketch of the rise and progress of the science of wealth.—Man alone among the denizens of the earth is the conscious possessor of its resources. Though he has many primary instincts in common with the lower animals, he differs from the brute creation in that he has the faculty of unifying his desires, postponing the present to the future, and making the accumulations of past labour the basis of fresh endeavour. In the growth of his needs and the methods of satisfying them we can trace the economic development of the human race. Very early in history questions of the right of property arose. In the patriarchate period, as depicted in the OT, there is evidence of the existence of private possessions. In early Greek philosophy investigations into the nature and extent of economic law occur. By Plato and Aristotle the

industrial aspect of social life is treated as a part of politics. The Roman jurists, while recognizing the sacredness of property, direct their attention chiefly to questions of its tenure and transmission. The asceticism of the early and mediæval Church cast suspicion upon all forms of wealth and tended to check individual enterprise and private possession. The Renaissance gradually broke down the feudal system; and, with the enfranchisement of spirit which the Reformation brought, trade and adventure awoke and the possibilities of the physical world came within the vision of man. The search for unity and law underlying economic facts was greatly stimulated by the researches of Bacon and Newton, while the investigations of Grotius and Leibniz on the Continent and of Hobbes, Locke, and Hume in England aroused the thinking world to the bearing of industrial questions upon the progress of mankind. With the exception of the writings of French physiocrats, of whom Quesnay was the leader,¹ there was no really scientific treatment of the nature and functions of wealth till the appearance of Adam Smith's treatise on *The Wealth of Nations* in 1776.

This book marks an epoch in industrial thought and enterprise. Political economy for the first time becomes a science. Following Smith's work there appeared in quick succession Malthus's *Essay on Population* (1778), Ricardo's *Principles of Political Economy and Taxation* (1817), and J. S. Mill's *Principles of Political Economy* (1848). Smith dealt with the causes of wealth, Malthus with the causes of poverty, while Ricardo and Mill treated mainly of the ways and means of distribution. *The Wealth of Nations* appeared at a propitious hour.

During the Middle Ages the successive phases of social disability which feudalism and serfdom had bequeathed tended to hinder the free life and development of man; and it was not till the individualistic gospel of Rousseau found a response among thinkers that a new sense of human right and freedom awoke. Adam Smith claimed to be the champion of popular liberties. He exposed several traditional fallacies in regard to property and its rights and uses. He showed that the progress of society depended upon individual initiative, division of labour, freedom of contract, and unrestricted interchange of goods. Money, he maintained, was not in itself wealth, but only a medium of exchanging commodities which constitute wealth; and the riches of a nation consisted not in the amount of gold hoarded in its coffers, but in the quantity, variety, and facility of its exports and imports. Unrestrained and widely distributed industry, he held, was the prime and dominant factor of a country's prosperity.

The historical treatment of economics generally adopted in recent years by French and German writers owes its inception largely to the historical insight and philosophical grasp of Adam Smith. But, though he was in advance of his times, many facts have emerged since his day which necessitate a reconstruction of economic science. The new historical instinct which was just awakening and has since been applied so effectively to many departments of inquiry; the general acceptance of the 'evolution theory,' with the light it has thrown upon the conflict and co-operation of man in the development of the race; the industrial reaction caused by the progress of science and the substitution of machinery for hand labour; the growth of democracy, with the spread of new ideas of liberty following in the wake of the French Revolution—these are among the factors which have greatly

modified economic study and made the problem of wealth a theme of vastly wider implication than its early investigators dreamt. Later writers, such as Spencer, Fawcett, Bagehot, Toynbee, and Marshall, have shown that political economy must be subservient to human progress in the highest sense and that the moral element cannot be eliminated.

2. **Meaning of wealth.**—We are now in a position to state generally what economists mean by wealth. The 'good' in the economic sense is every natural product which serves the satisfaction of man. By universal consent the word is applied to things which are material and exchangeable. Four attributes are usually comprehended in its definition: (1) materiality, (2) transferability, (3) limitation in quantity, (4) utility.¹ Of these the first is now regarded as doubtful, since wealth may embrace things not entirely material, such as some forms of service. The last is essential, but a larger meaning must be given to 'utility.' Shortly, wealth is said to consist of things that can be bought and sold, the amount they represent being measured by the quantity of money that they would fetch in the market. The definition, however, is defective on the side of both inclusion and exclusion. On the one hand, a large trade exists in supplying certain satisfactions of a sensual nature which cannot be regarded as economically good or useful; and traffic of this kind, though involving exchange of money, does not contribute in any sense to the weal of man. On the other hand, light, air, even water, unless involving conveyance, have apparently no exchange value; but indirectly they are considerable elements in the wealth of nations. Further, 'potentiality of being bought and sold' excludes many goods, such as health, integrity of character, parental affection, which, though not saleable, have undoubted value, since they render their possessors more fit for the battle of life and more capable members of the national organism.

In protesting against the crude conception that wealth consists in the amount of gold or silver a nation possesses, Adam Smith deliberately describes the wealth of a country as 'the annual produce of its land and labour,' or 'the necessaries and conveniences of life which it annually consumes.' The important point in this statement is that wealth is not land, cattle, machinery, etc., possessed at a particular point of time, but rather the annual produce or fruits derived from these in active use. The English statisticians of the 17th cent. regarded the wealth of the country with the eyes of a farmer, and, like the French physiocratic school, denied the quality of productivity to all labour not employed immediately on the land. Hence a second important point to be noted is that Adam Smith rightly included in 'productive labour' not only labour employed on the land, but all kinds of work which improved material objects. The French economist, J. B. Say, extended the idea of productive labour to cover 'non-material products.' And from his time the annual produce has been conceived as including 'services' as well as commodities. Economically, wealth may be summed up as the product of what in modern life is termed 'the economic or industrial system,' meaning by industry 'all those articles which go to make any sort of wealth including the services of the judge, the clergyman, the acrobat';² not material goods alone, but 'the work of government, the learned professions, the fine arts, all gainful recreations, must be brought under the "industrial system."'

3. **The factors of wealth.**—In the production of

wealth economists enumerate three factors: land, labour, capital. Land and labour are obviously requisite at all times and places; and, though in primitive societies capital existed only in very rudimentary forms, it also becomes essential in any community which is organized on a large scale.

(a) **Land.**—The two primary sources of wealth are material for work and work for material—Nature and man. The starting-point is found in the original needs which stimulate men to engage in labour for their satisfaction. But labour of itself produces nothing. It can exercise itself only upon the given. In one sense Nature is the mother of all wealth. We are rich when she gives, poor when she withholds. Yet Nature yields nothing for nothing. Her gifts are available only as man brings the toil of hand and brain to bear upon them. As economists put it (though not quite accurately), it is the land—including not its surface fruits only, but all that is contained in the bowels of the earth, coal, iron ore, minerals of all kinds, and even the sea with its manifold treasures—that is the prime source or factor of potential wealth.

(b) **Labour.**—It is the function of labour not to create but to extract, transform, and shape to the uses of man the potencies and raw material of the earth. The supreme service which labour renders to society is defined by J. S. Mill as 'putting things in fit places.'

'Labour in the physical world,' he says, 'is always and solely employed in putting objects in motion; the properties of matter, the laws of nature, do the rest.'¹

Though no wealth can be produced without labour, there are some kinds of labour which may be very useful though not actually productive of material wealth. Hence a distinction has been drawn between 'productive' and 'non-productive' labour. But this distinction can hardly be sustained. Can it be said, e.g., that the work of a miner is productive, that of a teacher, a poet, or a statesman unproductive? Men who do not work with their hands may be really contributing to the material well-being of man. And what seems at first sight to be fruitless or even wasted activity may in the highest sense be conducive to life. Indeed there are some things which, though not computable in money, greatly tend to increase the productive power of even physical labour. Three elements at least may be mentioned: division of labour, combination in effort, invention and application of tools and machinery. 'All tools and engines of the earth,' says Emerson, 'are only extensions of man's limbs and senses.'² But machines can only second; they cannot supply his unaided faculties. To these means must be added what, after all, is of most importance—the moral and intellectual elements—the skill, intelligence, character, and fidelity of the worker himself. A man is more than a machine; and, without the personality behind, physical and mechanical appliances, however complete, would fail of their results. In the production of wealth the economist is apt to overlook spiritual values. Education, the discipline and training of the home, the school, the college, the hardships and hazards of life, and all the moulding and informing institutions of society may appear to have no immediate monetary worth, but they are inestimable forces in the making of the workman, rendering him to himself and the community a more fit and effective agent of productive service.

(c) **Capital.**—It is difficult to define this element or designate precisely its functions. The term has become the storm-centre of modern industrial con-

¹ See *Diet. of Political Economy*, s.v. 'Wealth.'

² J. A. Hobson, *Science of Wealth*, p. 13.

¹ *Principles of Political Economy*, bk. i. ch. i. § 2.

² R. W. Emerson, *Society and Solitude*, 'Works and Days,' p. 1.

flict. Capital has unfortunately been regarded by labour as the instrument by which owners of property and possessors of money can make their own terms and manipulate work in their own interests. Capitalism has undoubtedly been a stern taskmaster in the past. The owners of capital may be said to have been, and to be still, the controlling power of our industrial system. They have taken the place formerly held by the landed aristocracy as the pivot of the social and industrial order. As the holders of power they have offered a stubborn opposition to all encroachments upon their privileges; and during the last quarter of a century all advancement of wages and improvement of environment on behalf of labour have been secured only by the pressure of trade unionism and the employment of the strike weapon. Hence the interests of employers and workmen have come to be regarded as inimical; and embitterment and class hatred have ensued which have led to conflicts costly alike to masters and to men. An impartial judgment is bound to recognize faults on both sides. At bottom of the perversity there has prevailed a materialistic philosophy involving a false exaltation of money and a vulgar conception of life which, as a result of the spell of commercial prosperity at the close of last century, has pervaded all classes of society. It is the pride of riches, the indifference, the cruelty, and the vulgarity—in a word, the selfishness of wealth that has roused jealousy and suspicion and become a danger to the community. The working classes have been too apt pupils of their masters and have indulged in habits of laxity and improvidence which are a menace to the true weal of the nation. But, whatever may have been its abuses, and however it may have tended to exploit labour for its own ends, absorbing within itself the legitimate fruits of toil, capital is an indispensable element in the production of wealth and an instrument of incalculable service in the development of the resources of civilization. In the economic sense, capital is wealth appropriated to productive employment. It may be defined as the aggregation of the surplus which has been saved from immediate use and is available for the further development of industry. It is of two kinds, circulating and fixed. Circulating capital consists of the wages paid to the workmen and of the raw material which is being actually used in the process of work. Fixed capital consists of buildings, machinery, tools, railway plant, shipping, etc. Circulating capital is being constantly used up, while fixed capital is permanent, more or less. Capital generally is the result of the industry of past generations used to promote and facilitate the industry of the present and the future. In every form of capital we trace the labour, ingenuity, and foresight of men who have built up the trade of the present. For the development of capital it is necessary that production should exceed consumption, leaving a margin for future increase and development of trade. It cannot be denied that labour has contributed to the making of capital and ought to have a share in its possession and employment. It is the duty and task of the capitalist to organize, direct, and supervise the labour of the country, so that it shall adequately meet the needs of the community. These services have been rendered in the past principally by private individuals. It has been argued that they might be equally well, if not better, supplied by the State, in which all have a stake and in the prosperity of which all have a claim to participate. But, whatever may be said in favour of collectivism, it must be noted that, whether controlled by the nation and supervised by State officials or possessed by private individuals, capital in the

VOL. XII.—46

form of liquid assets is absolutely necessary for the organization and development of commerce; and without it labour would be practically incapable of producing its maximum results or obtaining for itself an assured or adequate return for its efforts. It is evident that the interests of capital and labour are mutual, and the success of their common enterprise depends upon their harmonious co-agency. But, to attain this unity of aim, both labour and capital will have to revise their ideas. Instead of an unending strife, by which each tries to secure as much and give as little as possible, a wider outlook must be sought in which each party shall realize that industry is only a means to an end and that life has more to offer than the things which can be estimated in terms of money alone.

II. *ETHICAL ASPECT.*—From the foregoing sketch of the economic aspects of wealth it will be seen that all industrial questions lead up inevitably to ethical issues. Economic proposals for the readjustment of society assert a principle the neglect of which was the great failure of the 19th century and is still the source of much of our avoidable social unrest.

‘That principle is simply that industrial prosperity is not to be measured solely in terms of material wealth; or, in other words, that industry must be regulated by reference to supra-economic ends. Its profit and loss account must show human as well as material values; and that industry is neither prosperous nor healthy which shows a great output of material goods at the cost of a great deterioration of health, the character and the human capacity of the worker.’¹

1. *Relation of economics and ethics.*—If economic science is designed for the advancement of life itself (and this is its tacit claim), then human considerations cannot be ignored. Work must serve man, not man work. Our starting-point must be that life is the principal thing and that every human being has a right to live and work; and that in giving his services to the good of the community he ought to have some share in the common weal. Even if a living wage be conceded, a living wage must be interpreted not as that which gives a mere subsistence, but as that which affords to each the opportunity of human self-expression.

It has been truly said that ‘life without the means of living, personal gifts or skill that have no outlet, liberty that is only an inner consciousness and has no sphere of exercise, are all alike meaningless.’²

Considerations like these have led many to be suspicious of the doctrines of political economy and especially doubtful whether the conception of wealth as usually assumed in scientific works can be accepted as ultimate. The common fallacy of confounding wealth and money is not yet obsolete. The idea that wealth consists solely in material things of utility dies hard and continues to exert considerable influence upon economic thought.

‘Property is meaningless, not wealth at all, apart from its purpose, or apart from its possible or actual practical use. . . . We have fallen into the error of regarding material wealth as having intrinsic value, and we tend not uncommonly to devote our energies to gaining possession of it, irrespective, or with the slightest consideration, of what is to be done with it. . . . Wealth is not wealth, but only its unrealized possibility, apart from the spending of it.’³

Hoarded wealth is not really wealth; and even less is misused or wasted wealth. Even the phrase ‘satisfaction of wants’ is ambiguous. ‘What we want’ may mean either what a particular individual or class desires at the moment or what is an essential need of our whole nature as men. In other words, in order to decide what constitutes wealth in its largest sense, it is necessary to know what is the true good of man—an inquiry with which political economy must reckon if its results are to be of vital import for mankind. But, while the

¹ H. J. W. Hetherington and J. H. Muirhead, *Social Purpose*, London, 1918, p. 191.

² H. Jones, *Principles of Citizenship*, p. 105.

³ *Ib.* p. 161.

economist defines his subject as one of 'the sciences of man,' the conception of the human value of wealth does not rule either his thought or our practice in dealing with it. But it is only from this point of view that the problems of capital and labour, profit and wages, free trade and protection, or the respective rights and limits of production by the State and the individual are to be considered. It is the personal element that brings the science of economics into closest touch with ethics. Both have to do with the 'good'; but the economic 'good' is mostly regarded as material, whereas the 'goods' with which ethics is concerned are those acts which are the conditions of the attainment of the highest end of life. While it is perfectly legitimate to consider what will increase or diminish the material side of human happiness, it must never be forgotten that neither an individual's nor a nation's life consists in the abundance of the things which it possesses. If we are rightly to estimate the worth of economic goods, we must consider them ultimately in their relation to the highest good—the good of life itself. Social reform has been not a little retarded by writers who so exalt material prosperity as to encourage the belief that the possession of riches is the secret of happiness and the only reasonable motive of human endeavour.

2. **Doctrine of values.**—The conception of values, which has become a dominant idea of modern thought, has been applied with considerable effect by some recent writers to economic subjects. A distinction is drawn between 'intrinsic' and 'instrumental' values. A thing has intrinsic value when it is an end in itself or is valued for its own sake apart from anything else to which it leads. A thing has instrumental value when it is merely a means to something else that follows from it as an effect, when it does not exist for itself but only for the sake of a further good. The value of any economic good is determined by its relation to other things which can be got in exchange for it. Thus, to use the technical phrase of economists, 'a thing's price is its value.' It is its 'value in exchange.' Its worth depends on what at the moment it can bring. It is relative, not absolute. It may be said that nearly everything in the world, the whole apparatus of living, has, in this sense, merely an instrumental or relative value. Things are nothing in themselves and would be useless in other conditions. Money, jewels, etc., would mean nothing on a desert island. But there are some things that must always retain their value in every world. If life has any meaning at all, there are objects, ideals, such as honour, purity, truth, belonging to life itself, and of the essence of man, which cannot be bought or sold, and are incomparable, unexchangeable, absolute. In the last resort it may be said that intrinsic value belongs to personalities rather than things—to things of the soul rather than things of the sense. All other values are relative and obtain such worth as they have from their power to minister to the highest enrichment of man.¹

3. **Real wealth.**—Along this line of thought we are led to the absolute and all-inclusive conception of wealth as embracing everything that contributes to the fullness of life. 'There is no wealth but life,' says Ruskin, 'including all its powers of love, joy, and admiration.'² It is true that merely instrumental objects may be transmuted by their use into more than means and may partake of the character of the values to which they contribute. Objects of natural beauty, works of art, the affec-

tions and sympathies of life, intellectual knowledge and pursuits—everything, in short, that enlarges human vision and enriches heart and mind—are more than instruments: they are the constituents of real wealth. Things even that might be regarded as of themselves worthless, mean, or trivial may be elevated by becoming the vehicles of higher ends. The material world is the environment of the spiritual. Ideals require for their realization physical things. The soul must build its city of God of earthly materials, and the ordinary experiences and facts of life—man's common toil and trial, his instincts and passions—may be elevated and transfigured into assets of the spirit. Thus we see that money and all material possessions, like every other gift, may be consecrated to the highest service and be made a channel of enrichment and blessing to mankind.

The question of the place of luxury in life and the justification of expenditure upon things which go beyond the mere necessities of existence naturally arises here. The manner of spending wealth from both an economic and an ethical point of view is not less important than the method of acquiring it. Yet it is hardly an injustice to say that the modern world is more given to the production of riches than the art of using them. But obviously the object for which an individual or a people uses its wealth is a decisive test of character and an index of worth. Before calling a man rich or poor, therefore, we must know to what uses he puts his possessions, whether they be broad or narrow. Are luxuries justifiable? Or must money be expended only on such objects as contribute to the bare support of life and the attainment of the simple decencies and moderate comforts of existence? Are we, as moral beings, to be ruled by the strictly ascetic view of life? Or can we vindicate a place for desires which, though not immediately useful or necessary, do in an indirect way help to enrich life and raise it to a higher level? It has been truly said that some objects, such as pictures, books, and even recreations, are so essential to the higher development of mankind that it may be fairly affirmed of them that 'the necessities of life could be better spared than the superfluities.' Many objects which seem at first only to yield a momentary gratification are yet of considerable importance in so far as they 'serve to oil the wheels of existence and add a bloom to life.'¹

If we take the word 'wealth' in its strictly etymological sense, as allied to 'weal' (as 'health' is related to 'heal' and means 'wholeness' or soundness of body), things which can be used as a means of contributing to a man's or nation's true well-being, to the fullest development and expression of the intellectual and spiritual life, are, in the last resort, the elements of wealth in its highest sense. That country is richest which nourishes the greatest number of efficient and happy human beings; that man is richest who uses his gifts to the utmost in perfecting the functions of his own life and in exerting his influence for the enrichment of the lives of others.²

III. **THE CHRISTIAN ASPECT.**—It does not lie within the scope of this article to discuss the remedies which have been proposed to overcome the most prominent evils accompanying a highly industrial state. In general the most radical of these proposals fall under the head of what may be described as a form of socialism (*q.v.*), or at least State control or collective ownership of all monopolies. It is urged by many, on the other hand, that the ultimate hope of a better order

¹ See W. R. Sorley, *Moral Values and the Idea of God* (*Gifford Lectures*), Cambridge, 1913, pp. 37 ff., 75 ff., 124 ff., 134 ff., 508 ff.

² *Unto this Last*, § 77.

¹ J. S. Mackenzie, *Introd. to Social Philosophy*, Glasgow, 1890, p. 305; see also some remarks on this subject, in Marshall, *Economies*, pp. 124, 151.

² See Ruskin, *op. cit.*

rests not in change of outward condition, but in the regeneration of inward character. And an honest application of the teaching of Christ to the practical affairs of life is, it is held, the secret of social and industrial betterment. It seems fitting here to give a rapid review of Christ's teaching in reference to wealth.

Jesus has much to say concerning wealth. The subject bulks largely in His teaching and enters prominently into the frame-work of nearly all His parables.

1. The teaching of Jesus.—Though Jesus dwells frequently on the perils of wealth, He does not condemn the possession of property or denounce ownership in land, goods, or money. There is no depreciation of riches in themselves. He lays emphasis on their deceitfulness (Mt 13²²); He warns His disciples against covetousness (Lk 12¹³⁻¹⁵); and especially does He point out the danger of accumulating earthly treasures (Mt 6¹⁹) and the impossibility of serving God and mammon (6²⁴). He lays down the principle that 'a man's life consisteth not in the abundance of the things which he possesseth' (Lk 12¹⁵). Yet these sayings and warnings, so far from implying disapproval, imply rather that property and trading are the indispensable bases upon which the outward fabric of the social order is built. He shows no trace of belief that temporal possessions are evils in themselves. His parables constantly assume the right, and indeed the responsibility, of the individual to hold and administer wealth (Mt 25¹⁴, Lk 19¹² 16¹). Many of His sayings would be devoid of meaning if His attitude to the industrial system of His day had been one of uncompromising hostility. He could not, e.g., have justly advised the young ruler to sell what was not really his, or have suggested that he should induce another to accept for money what it was unlawful for him to retain. Many of His parables deal with the use of money, without indicating a single reproof on account of its possession (Mt 25¹⁴⁻³⁰, Lk 19¹³⁻²⁷ 16¹⁻¹³ 12¹³⁻²¹). Christ does not demand withdrawal from the activities of the world. The asceticism of the early Church and the renunciation practised by those sects which make a profession of poverty find no countenance in the Gospels. Jesus and His disciples honour work and recognize trade. Christ acknowledges the rights of the wage-earner. Within the circle of His followers were men and women who were possessed of worldly substance (Mt 27⁵⁷, Lk 8³ 19³). His disciples had a common purse, and one of their number acted as treasurer.

2. Wealth and the supreme end of life.—The one and only aim of our Lord was the establishment of the rule of God in the hearts of men.¹ The Kingdom of God is first; all else is secondary and subsidiary. This is the test of all earthly things. Possessions and occupations have validity only in relation to the supreme end of life. His calls to renunciation were made not because He deemed wealth to be inherently evil, but because in each case the required act of denial would remove the special hindrance to the realization of the spiritual life (Mt 19²⁴, Mk 4⁹, Lk 6²⁴). In Mk 10²¹ it is to be noticed that it is a deficiency of character that necessitates the repudiation of earthly possessions. Christ thus raises the whole question of material wealth to a spiritual plane. What He really condemns in connexion with riches is the spirit which holds them falsely, by non-use, misuse, or abuse.

3. Wealth a trust and a test.—Finally, wealth is everywhere regarded in reference to man's relation to God. It has thus a twofold significance. It is a trust and a test. There is no such thing as

absolute ownership. All things belong to God our Father. We are but the pensioners on His bounty and the trustees for what He lends to us. No one can say, 'I can do what I like with my own' (Mt 20¹⁵, Lk 12¹⁹). The Gospels indicate three ways in which the stewardship of wealth may be exercised.

(a) *Almsgiving* (Lk 18²²).—The beauty of charity may be marred by ostentation (Mt 6²⁻⁴) or consciousness of merit. A man's gift of money has no value except as the expression of himself (Lk 11⁴¹ 21⁸, Mk 12⁴⁸).

(b) *Fidelity to one's daily work*.—Those who receive Christ's severest condemnation are the persons who have been unfaithful in the task entrusted to them (Mk 12¹⁻¹¹, Mt 25²⁴, Mk 13³⁴, Lk 19²⁰⁻²⁴); while those most highly commended are such as conscientiously discharge their duties in the appointed spheres of life.

(c) *Ministry of joy and beauty*.—A third form of stewardship is indicated in the employment of gifts in ministering to the joy and beauty of life. The most impressive instance of this use of private means is exhibited in the story of the woman who anointed the head and feet of Jesus with precious ointment. In answer to the reproachful question, 'To what purpose is this waste?' Jesus defends the act and appreciates the beauty and symbolism which it embodied. Here is the charter of all undertakings which propose in the name of Christ to feed the mind, to stir the imagination, to make life less meagre and dull, and more rich, beautiful, and spiritual.¹ Expenditure of wealth on art and music, on the graces which enrich the emotional and intellectual life, is justified not only by its elevating and enlarging effect, but also by the explicit authority of Christ's example and teaching.

From the standpoint of Christian ethics possessions of all kinds are subject to the law of conscience. What makes them right or wrong is their influence on character, and thus they become a test of life. Every gift is bestowed for purposes of service. God has no room for parasites or idlers. Every one, be he rich or poor, is a trustee for the Creator. There is no such thing as mere money. It is always a symbol or a measure. Property is but the expression and instrument of personality. We have only what we use. Hoarded wealth is barren. And only as we give forth our life in service and sacrifice is it fruitful.

LITERATURE.—All the larger works on political economy deal with the subject on its economic side. Alfred Marshall, *Principles of Political Economy*, London, 1907, and the older works of Adam Smith and J. S. Mill ought to be consulted. Edwin Cannon, *Wealth: a Brief Explanation of the Causes of Economic Welfare*, London, 1914; J. A. Hobson, *The Science of Wealth* (Home University Library), do. 1911; D. H. Macgregor, *The Evolution of Industry*, do. 1911, and S. J. Chapman, *Elements of Political Economy* (in same series), do. 1912, deserve mention.

On the ethical and religious side see T. von Haering, *The Ethics of the Christian Life*, Eng. tr., London, 1909; F. G. Peabody, *Jesus Christ and the Social Question*, New York, 1901; Oliver Lodge, *Modern Problems*, London, 1912; J. MacCunn, *The Ethics of Citizenship*, Glasgow, 1894, and *The Making of Character*, Cambridge, 1900; Henry Jones, *The Principles of Citizenship*, London, 1919; J. Clark Murray, *A Handbook of Christian Ethics*, Edinburgh, 1908; J. Wilson Harper, *Christian Ethics and Social Progress*, London, 1912; Walter Rauschenbusch, *Christianity and the Social Crisis*, New York, 1907; W. N. Clarke, *The Ideal of Jesus*, Edinburgh, 1911; R. L. Ottley, *Christian Ideas and Ideals*, Edinburgh, 1910; H. C. King, *The Ethics of Jesus*, New York, 1910; J. Price, *Political Economy in England from Adam Smith to Arnold Toynbee*, do. 1891.

A. B. D. ALEXANDER.

WELFARE.—(1) By the ethical term 'welfare' is meant the highest human good, the faring well or properly, the desirable human experience. In this formal use of the term nothing is implied as to the nature or constituents of this good. Aristotle notes this as the accepted usage in his day of the term εὐδαιμονία.²

(2) The term usually implies the highest human good conceived as consisting in certain objective conditions rather than in subjective feelings. In this sense it is opposed to pleasure as the supreme good. The term 'perfection' is nearly its equivalent.

¹ F. G. Peabody, *Jesus Christ and the Social Question*, p. 218 ff.

² *Nicom. Ethics*, i.

¹ See W. M. Clow, *Christ and the Social Order*, London, 1913, p. 81.

lent, but has usually a somewhat narrower significance, exclusion of pleasure, whereas welfare, though not in its essence pleasure, involves pleasure as its completion. As the supreme end perfection and happiness are usually conjoined, while welfare involves this conjunction.

Aristotle's usage is typical, but not without difficulties of interpretation. Human welfare is not pleasure, or practical activity, or the scientific life, but is the activity proper to man as man. This is reason, and human welfare consists in the excellence of rational activity. This rational activity is both theoretic and practical; in the former man is akin to the divine, but in the latter he is more specifically human. Outward goods, wealth, health, children, fame—these are good in so far as they are conditions of, or illustrations of, man's rational activity, but have no independent value. They exist for the sake of the rational life and not the life for them.¹ The position of pleasure relative to welfare is not wholly clear in the details of Aristotle's treatment, yet his fundamental principles seem certain. Pleasure is not the end of human action;² yet it is the universal concomitant of perfect activity and that which serves to mark and consummate this perfection.³ If the two could be separated, the wise man would choose the activity without the pleasure rather than the pleasure without the activity,⁴ but, as a matter of fact, this separation is not possible.⁵ Yet, in all cases, it is the objective nature of the activity that determines the value of a pleasure, and not the amount of the pleasure itself. The emphasis in Aristotle's treatment is upon the idea of welfare as the right condition of the *whole* man. It consists in rational activity because this is not a specific and exclusive form of activity, but is one which includes and harmonizes all others. In reason all human activities find their interpretation and completion and hence their well-being.

So also Paulsen :

'The goal at which the will of every living creature aims [welfare] is the normal exercise of the vital functions which constitute its nature.' Man 'desires to live a human life and all that is implied in it; that is, a mental, historical life, in which there is room for the exercise of all human, mental powers and virtues.'⁶

WERWOLF.—See LYCANTHROPY.

WESLEY.—i. Early life.—John Wesley was born on 17th June (O.S.) 1703, at the rectory of Epworth, being the son of Samuel and Susannah Wesley. Both his grandfathers were among the ejected ministers of 1662, so there was a strong Puritan strain in him. His father, Samuel, was rector, poet, scholar: he spent ten years in preparing his work on the *Book of Job*. The mother, Susannah, trained her children in the great truths of the Christian faith. There is something singularly beautiful in the way in which this mother brought her many children into the audience chamber of God. On 28th Jan. 1714, John Wesley was nominated a pupil at Charterhouse, London. The treatment meted out to the boys of those days was Spartan, but Wesley always felt a true love for his school. As we read his *Journal*, and see him lovingly wander each year about the grounds, we note that Wesley never forgot his boyhood, and

that age could not wither his affection for Charterhouse. On 24th June, 1720, he was elected to Christ Church, Oxford, and remained there until 1725, when he was ordained deacon by Bishop Potter. About this time the *Imitatio Christi* and *The Rules for Holy Living and Dying* became his frequent companions. The *Imitatio* taught him that 'true religion was seated in the heart, and that God's law extended to all our thoughts as well as words and actions.'¹ It is of the *Rules* that Wesley writes :

'In reading several parts of this book, I was exceedingly affected with that part in particular which relates to purity of intention. Instantly I resolved to dedicate all my life to God: all my thoughts, and words, and actions.'² Wesley was now a determined seeker, there was a great hunger within him for something beyond the experience which he had—for thirteen years he sought peace by prayer, tears, and through difficult and tragic experience, and on 24th May, 1738, entered into a true evangelical experience of Divine love.

In March, 1726, he was elected Fellow of Lincoln College, Oxford. It is with this College, rather than Christ Church, that Wesley's name is so closely linked; for, though the great hall of Christ Church is adorned by the Romney painting of Wesley, Lincoln College has a greater treasure in the room in which the Holy Club met, and where the movement began which was to give new life to the Churches of this and other lands.

Much help came to Wesley by the reading of William Law's *Serious Call* and his *Christian Perfection*. Although some parts of Law's work offended him, he tells us: 'The light flowed in so mightily upon my soul, that everything appeared in a new view.'³ Readers of the *Journal*, and especially of the diary, remember the strenuous efforts of Wesley to be accounted worthy; his early rising, his mastery over himself, his methodically planned day, with a task for every hour, his thoughtful care for his pupils, his ejaculations which sob forth even now after the lapse of so many years, his passionate and unceasing quest for a deeper experience—all these things are clearly recorded there. The Castle and the Bocardo at Oxford were both visited by him; for to the prisoners he must preach the message of Divine grace—even though he had not yet entered consciously into it. In August, 1727, Samuel Wesley being infirm, John Wesley went to his help, and remained in his parish for about two years. He then returned to Oxford. Later (1734) his father pleaded with great insistence that he should take his work and rectory. The reply of Wesley is elaborately wrought, and is a strong plea that his sphere is in Oxford, and not in Epworth. There is in it no splendid disregard of self such as we see in his later days; he seems more anxious to have circumstances conducive to his own soul's culture than to save the souls of others. On his return to Oxford he found that his brother Charles, who was then at Christ Church, had gathered round him a small group of men to read the New Testament. John Wesley joined this company, and soon became its leader. It is well to remember that the Holy Club showed a much greater diligence with regard to Holy Communion than the Church of those times, a tendency to guide their life by early Church practice, a passion for prisoners and outcasts, and a diligent and careful apportionment of time. As the members went with regularity to take the sacrament, they received much taunting from the undergraduates. It was at this time that they were called 'Sacramentarians.'

² *Wesley's Works*, 14 vols., London, 1829-31, xi. 366.

³ *Journal*, i. 467.

'Bible Moths,' and Methodists (a double reference—both to a medical sect and to their 'method' in all religious practices). John Wesley was now, it seems, rooted in Oxford. A band of keen undergraduates gathered round him; he believed that he had found his work. Owing to the insistence of his family, however, he applied for the living of Epworth, but without success. His dying father spoke prophetic words; to John he said: 'The inward witness, son—the inward witness, that is the proof, the strongest proof of Christianity'; to Charles he said: 'Be steady. The Christian faith will surely revive in this Kingdom; you shall see it, though I shall not.'

2. The Georgia ministry.—In 1735 Wesley was invited to go on a mission to the colony of Georgia. His father now being dead, he with some diffidence mentioned the fact of the offer to his mother, who said: 'If I had twenty sons, I should rejoice if they were all so employed, though I should never see them more.' John and Charles Wesley embarked at Gravesend on 14th Oct. 1735. He tells a friend the motives which sent him forth as a missionary.

'My chief motive is to save my own soul. . . I hope to learn the true sense of the Gospel of Christ by preaching it to the heathen.'¹

In later years he was not so anxious about his own salvation, but rather about that of others.² On the voyage, as at Oxford, he showed meticulous strictness in the apportioning of time: he learned German and studied his Greek Testament, and held services even amidst the storms. He was greatly impressed by a party of Moravians on board, especially by their conduct in the tempest. Amidst the storm they were quite unalarmed and went on singing. Wesley asked one of them, 'Were you not afraid?' He replied, 'I thank God, no.' 'But were not your women and children?' 'No, our women and children are not afraid to die.' Wesley landed at Savannah on 6th Feb. 1736. He soon met Spangenberg, the Moravian, who asked him, 'Do you know Jesus Christ?' 'I know He is the Saviour of the world.' 'True, but do you know that He has saved you?' 'I hope He has died to save me.' Spangenberg then asked, 'Do you know yourself?' Wesley answered, 'I do,' but, in telling the story of this conversation, says, 'I fear they were vain words.' Wesley's main purpose in going to Georgia was to become a missionary to the Indians. This was frustrated by the governor of the colony, General Oglethorpe, who desired his presence in the European settlement. Denied his chief end in coming, he nevertheless found work for each moment in the day; he taught the children, visited the sick, reproved the sinner, and gathered a few folk together for mutual conversation. He encouraged, he rebuked, he prepared communicants, and repelled those whom he thought not worthy. He was a rigorous High Churchman, and a most earnest seeker of the Light. In summing up the matter in his *Journal* Wesley tells us that he 'was a child of wrath, an heir of hell,' but in later years, when he revised his writings, he says, 'I believe not. . . I had even then the faith of a servant, though not of a son.'³ Grave misunderstandings arose between Oglethorpe and the Wesleys; but they were later reconciled. Suspicions and misunderstandings grew like weeds in the garden of this colony. As we now know from the standard edition of the *Journal*, Wesley fell in love with Sophy Hopkey, the niece of the chief magistrate

¹ *Works*, xii. 23.

² Cf. 'The Twelve Rules of a Helper,' rule xi.: 'You have nothing to do but to save souls. Therefore spend and be spent in this work. And go always, not only to those who want you, but to those who want you most.'

³ *Journal*, i. 421.

of Savannah, Mr. Causton. A change, however, came in her affection, and she swiftly married Mr. Williamson. Soon after Wesley repelled her from Holy Communion—no doubt because he thought that she was not in a fit state of heart to receive it; but on the surface it appeared like the act of a disappointed man. Her uncle brought a charge against John Wesley, who refused to acknowledge the power of a civil court in ecclesiastical affairs. Wesley, realizing that no further good would come from his ministry there, left the colony, and sailed for England on 22nd Dec. 1737.

3. His evangelical conversion.—Wesley's comment on his Georgia ministry was:

'I went to America to convert the Indians; but oh, who shall convert me? . . . I have a fair summer religion. I can talk well; nay, and believe myself, while no danger is near. But let death look me in the face, and my spirit is troubled. . . Oh, who will deliver me from this fear of death?'

Eager and hungry, on his return to England he met Peter Böhler, who told him, 'My brother, my brother, that philosophy of yours must be purged away.' 'Preach faith till you have it, and then because you have it you will preach faith.' He gathered with the members of the little society in Fetter Lane. On 24th May, 1738, there came to Wesley his *Magna Dies*—the day of his evangelical conversion. No one had ever sought the haven of peace with more passionate devotion—it was a day never to be forgotten. He describes every part of it:

'I think,' he says, 'it was about five this morning, that I opened my Testament on those words, "There are given unto us exceeding great and precious promises." He writes that, just as he went out, he opened the New Testament again on those words, "Thou art not far from the kingdom of God." He tells of his afternoon visit to St. Paul's, and notes that the anthem was "Out of the deep have I called unto Thee, O Lord." We now come to the *locus classicus* of the life of Wesley. "In the evening I went very unwillingly to a society in Aldersgate Street, where one was reading Luther's preface to the *Epistle to the Romans*. About a quarter before nine, while he was describing the change which God works in the heart through faith in Christ, I felt my heart strangely warmed. I felt I did trust in Christ, Christ alone for salvation; and an assurance was given me that He had taken away my sins, even mine, and saved me from the law of sin and death. I began to pray with all my might for those who had in a more especial manner despitely used me and persecuted me. I then testified openly to all there what I now first felt in my heart.'²

Wesley had now received the gift of life; and what he did in Aldersgate Street—'I then testified openly to all there what I now first felt in my heart'—he continued to do until the end of his life. It was with him an appeal no longer to the practices and customs of the early Church, but to the experience of the Living Christ within his own heart. For fifty-two years he offered to all through Christ the grace of forgiving love. For the wonder of Wesley's life is not to be found in the fact that on a certain evening about a quarter before nine he felt his heart strangely warmed, but that the fires of that love never died down. His eye was indeed single, and thus his whole body was full of light.

4. The great offensive.—From 1738 to 1791 Wesley led the great offensive—he attacked sin in its strongholds, and everywhere proclaimed the free grace of Christ. He seized every opportunity: if he were in a coach, he spoke to his fellow-travellers; if he were staying at an inn, he told his fellow-guests of the love of Jesus; even when crossing to Ireland, when the ship was tossed by the storm, he held a service for the passengers. Driven out of the Churches, he, through necessity and quite against his taste, followed the example of Whitefield, and took his stand in the open air, and preached to the crowds at Kingswood, Bristol, and Moorfields. His greatest help came from his brother Charles, whose hymns were sung by the miners of Kingswood, the labourers of Lincoln-

¹ *Journal*, i. 418.

² *Ib.* i. 475.

shire and Cornwall and throughout the land. The Evangelical Revival spread by song as well as by sermon. There was much of the great military commander about Wesley; he chose three main strategic points—London, Bristol, and Newcastle-on-Tyne—and for the conquest of Ireland he made Dublin his base. When others were deaf to the calls of America he sent out a band of preachers to capture that continent for Christ. He moved constantly from place to place, riding on horseback until his later years, a sort of *avant-courier* of the Kingdom, the tireless rider, the invincible fighter, and the herald of the grace of God. J. Hampson, one of Wesley's preachers, who left with a grudge against him, published in 1791 a *Life of Wesley*. In its admissions it is of immense value, for he writes critically, and is a contemporary of the man of whom he writes. He thus sums up Wesley's life of toil:

'His public administrations were but a part of his labours, but from these we may form some conception of the rest. During fifty-two years he generally preached two sermons a day: very frequently four or five. Calculating, therefore, at twice a day, and allowing fifty sermons annually for extraordinary occasions, which is the lowest computation that can be made, the whole number in fifty-two years will be 40,462. To these may be added an infinite number of exhortations to societies. Of his travels, the lowest calculation we can make is 4000 miles annually, which, in fifty-two years, will give 208,000 miles. An almost incredible degree of labour: and which nothing but the best constitution, informed by the most active spirit, could have enabled him to support.'

Augustine Birrell epitomizes his labours, and mingles with the telling of them his peculiar piquancy:

'John Wesley contested the whole kingdom in the cause of Christ during a campaign which lasted forty years. He did it for the most part on horseback. He paid more turnpikes than any man who ever bestrode a beast. Had he but preserved his scores at all the inns where he lodged, they would have made by themselves a history of prices. And throughout it all he never knew what depression of spirits meant, though he had much to try him—suits in Chancery and a jealous wife.'

There is no other story of a life so crowded with toil, yet over which there broods so steadily the spirit of rest.³ This man, like the Apostle Paul, could have drawn up his catalogue of sufferings; for he was stoned, enemies rose up against him on all sides, and besides there rested upon him the care of all his societies which were stationed from Land's End to Newcastle-on-Tyne, beyond the border, and across the Irish Sea. All this is written in Wesley's *Journal*.

'From which we can learn better than from anywhere else what manner of man he was, and the character of the times during which he lived and moved, and had his being.'

This leads us to one of the most wonderful of his gifts. For fifty-two years he preached, visited his societies, entered prisons, galloped along the high-ways of England, the programme varying but little, and yet he never became stale; each day called him to a new adventure and was a fresh gift from God. His work never became to him a commonplace; he thrilled to it, he hailed it ever with a song. A comparison of the early years after his evangelical conversion and the later years of his life reveals that his enthusiasm never waned, but rather waxed stronger and stronger. Here is the record of 11th Sept. 1789.

'I went over to Kingswood. Sweet recess! where everything is now just as I wish. But—

'Man was not born in shades to lie!'

Let us work now; we shall rest by-and-by.'

In March, 1790, he began a great preaching tour through England and Scotland, which lasted five months. Here is another entry—1st Jan. 1790:

'I am now an old man, decayed from head to foot. My eyes are dim; my right hand shakes much; my mouth is hot and

dry every morning. I have a lingering fever almost every day. . . . However, blessed be God, I do not slack my labour. I can preach and write still.'

He died on 2nd March, 1791.

5. His controversies.—As we have seen, Wesley owed a great deal to the Moravians. He was for a short time a great admirer of Zinzendorf. At first he hailed Herrnhut as a new city of God. But the breach between Wesley and the Moravians came soon after Wesley launched his great offensive. A section of them had a tendency towards a mistaken kind of pietism; they preached that there was no need for Bible or sacraments, that there was nothing to be done, and that the soul must wait in silence. These 'still-men,' as they were styled, roused his ire, and the break between the Methodist Societies and the Moravians was soon complete. The indictment of Wesley could only have referred to a small section, for in that Moravian band there were men and women of real saintliness. It was, however, an unfortunate happening, for it gave Wesley a somewhat violent antipathy to mysticism.

He speaks of 'the poison of mysticism,' and refers to 'Ralph Mather, a devoted young man, but almost driven out of his senses by Mystic Divinity. If he escapes out of this specious snare of the devil he will be an instrument of much good.'

Wesley was right in speaking strongly against that which was mysticism falsely so called, but he was a mystic himself. The man who translated with such passion Tersteegen's hymn, 'Thou hidden love of God,' could not have been anything else. His controversy with William Law is surely due to a misunderstanding on the part of Wesley. Wesley wrote when he was perplexed, and his soul was strangely restless, and the honours are chiefly on the side of his teacher, Law. His greater and most fundamental controversy was with the Calvinists—and with logic and passionate love he claimed that Christ died for all. The battle was fought and won, but the victory came not through the strident notes of controversy, but rather through the rousing strains of song—

'For all, my Lord was crucified,
For all, for all my Saviour died.'

One of the most beautiful things in the history of this controversy is the fact that such vital theological disagreements as there were between Wesley and Whitefield never broke their friendship, but seemed rather to deepen and strengthen it.

6. Wesley and the Church of England.—The Church of England never had a more loving son than John Wesley, and never one who strove more strenuously to be loyal to her. He was driven out of the Church, yet in 1789 he wrote:

'I declare once more that I live and die a member of the Church of England; and that none who regard my judgment or advice will separate from it.'

But he did things which show that in another sense he did not belong to her. He believed in her, but he saw with his quick eye the needs of his age, and the organization of the Church of England was not flexible enough to meet the changing conditions of the time. He saw the great needs of America, and, realizing the urgency of its claims, in 1784 consecrated Coke as bishop and Whatcoat and Vasey as presbyters for that continent. In 1786 Wesley ordained preachers for Scotland. His loyalty was of that higher kind which would not allow rules to interfere with the advance to which he believed Christ was calling His people. This is seen early in the encounter with Joseph Butler, when bishop of Bristol. The great writer of *The Analogy* said that Wesley had no right to preach in that diocese. Wesley said, 'I can do

most good here, so here I stay.' That was his one test. He was at heart a Catholic and like the scribe who brought out of his treasure things new and old. We see this in his 'Christian Library,' in which he included writings from men of all Christian communities, the only requirement being that each reprint should give spiritual strength to its readers.

7. Wesley and humanism.—It was the boast of Wesley that he was 'homo unius libri,' and so he was, though few men of his age read more books. His final appeal was to the Scriptures illumined by the living spirit. The variety and amount of his reading leaves us breathless. It was Hampson who wrote: 'With a book in his hand, he frequently rode from fifty to sixty or seventy miles a day.'¹ His *Primitive Physic* shows his quaint and practical knowledge; and the quotation he places at the beginning, 'Homo sum: humani nihil a me alienum puto,' reveals his keen interest in human affairs. The *Journal* could have been written only by a man who had read enthusiastically the book of life. There may be little charm of style, but there is a conciseness, a forthrightness of writing, a perspicuity, that is hard to excel. He had not studied his Addison for nothing; the references in his early diary—'Read Addison'—are illuminating. He had much humour,² and we must not forget that Alexander Knox writes that his 'sportive sallies of innocent mirth delighted even the young and the thoughtless,' and Thomas Walsh writes of his 'witty proverbs.'³ Hampson says: 'It was impossible to be long in his company without partaking his hilarity.'⁴ This man, who could have chosen the company of the great, lived and loved to live with the unknown. There are many parallels between St. Francis and Wesley, and one is to be found in this, that both went to the people—what the Little Brothers were to Francis that wonderful band of men, the early Methodist preachers, were to Wesley. It is interesting to note that two men command the 18th cent., and one (Dr. Johnson) said of the other, 'He can talk well on any subject.' Johnson would fain have seen more of Wesley.

'John Wesley's conversation is good, but he is never at leisure. He is always obliged to go at a certain hour. This is very disagreeable to a man who loves to fold his legs, and have out his talk as I do.'⁵ Southey says:

'His manners were always irresistibly winning, and his cheerfulness was like perpetual sunshine.'⁶

It is true that his printed sermons do not best reveal his humanism; but they are treatises. A study of the *Journal* teaches us that the texts upon which he preached most were those which reveal his tenderness and his love of the doctrines of grace. The text 'When they had nothing to pay, he frankly forgave them both' is met again and again in the *Journal*, and is the *motif* of his ministry. Horace Walpole informs us of his vivid way of preaching.

'I have been at one opera—Mr. Wesley's. . . Wondrous clever, but as evidently an actor as Garrick. . . he told stories like Latimer, of the fool of his college who said "I thank God for everything."⁷

John Nelson, one of his early helpers, describes the power of Wesley's preaching:

'But I was like a wandering bird, cast out of the nest, till

John Wesley came to preach his first sermon in Moorfields. O that was a blessed morning to my soul! He stroked back his hair, and turned his face towards where I stood, and I thought fixed his eyes upon me. When he had done I said, "This man can tell the secrets of my heart; he hath not left me there; he hath shewed me the remedy, even the blood of Jesus."¹

Sir Walter Scott tells us that he heard Wesley preach more than once in the churchyard at Kelso.

'He was a most venerable figure, but his sermons were vastly too colloquial for the taste of Saunders. He told many excellent stories.'²

This man, of five feet three inches, of weight eight stone ten, 'an eye the brightest and most piercing that can be conceived,'³ with his finely chiselled face which came to view again in that of the Iron Duke,⁴ loved men and women not for what they were but for what they might be: he loved colliers, drunkards, cock-fighters, prisoners, because he saw in them the children of the One Father. He gave first his love to God, and that exalted his love for men—that is why it never grew cold. He commands the 18th cent. on the religious side as much as Johnson on the literary. Lecky has told us that Wesley saved England from a revolution, but we must remember that he brought about another revolution which has done more to break down social barriers than men realize—for he taught men and women the essential oneness of us all, that One is our Father and we are all brethren. His doctrine of faith stripped off the superficial disguises of life and revealed the divine possibilities of all men. Wesley was always ahead of his century; he was a great forerunner with regard to social reform; he lived on as little as possible, and gave the rest away. Hampson says, 'Perhaps the most liberal man in England was Mr. Wesley. His liberality to the poor knew no bounds.'⁵ He gave the people cheap literature, founded schools and orphanages, wrote numerous pamphlets on public questions, and his last letter was one in which he encouraged Wilberforce in his great fight against slavery—that traffic which he termed 'that execrable villainy, which is the scandal of England, of religion, and of human nature.' This 'brand plucked from the burning' broke up the frost of the 18th cent. by the glow of his flaming message. He formed a society which has become a world-wide Church; he brought inspiration to all the Churches, and his message still rings down the years—'The best of all is God is with us.'

⁴ The following is a most interesting reminiscence of Dr. George Osborn: 'Henry Moore, in whose house at City Road, as a young preacher, I lived, once took me to see a review by the Duke of Wellington in Hyde Park. During an interval the Duke, dismounting, stood by his horse near Mr. Moore and myself. Pointing to the Duke (for he was short of stature), Henry Moore said, "That is John Wesley as I knew him" (*Journal*, vii. 462, footnote). Wesley and the Duke of Wellington sprang from collateral branches of the same family.'

tion between these two branches of the Holy Catholic Church arose from the interaction of many causes, geographical, political, and theological, but ultimately it may be traced to an event of supreme importance in the historic evolution of the Christian faith.

1. Introduction: schism of East and West.—Up to A.D. 330, when Constantine the Great chose the ancient Byzantium as the new capital of the Roman Empire and gave it the name of Constantinople, the Catholic Church of Christendom had remained one and undivided; and, though the final schism was to be delayed for centuries, the rivalry between the old and the new Rome at once introduced a divisive factor into the ecclesiastical relationships of the empire. Constantinople, already a Greek city with a large Greek population, was destined to become a second metropolis of the faith, representing Christian life and thought of a distinctively Greek type. Indeed, it may be said that imperial Christianity had shifted its centre of gravity to the Ægean world of Hellenistic culture, intellectual and spiritual. It is significant that, when it was found necessary to formulate the terms of the orthodox creed in order to finish the desolating heresy of Arius,¹ Nicæa and not Rome had been chosen in A.D. 325 as the place of assembly for the historic council which, so far from pacifying the Christian world, was the forerunner of other councils—Ephesus, Chalcedon, and Constantinople²—where the various phases of the seemingly perpetual Christological problem received discussion and authoritative settlement. Christianity had spread with a relatively greater rapidity over the Eastern empire than in the provinces of the West. The Greek language known as ‘common’ Greek—the *lingua franca* in which the early records of the faith were written—was naturally the medium by which the symbols of the Christian faith found their most logical and accurate expression. It is true that the patriarch of Constantinople, who was always under the control of the emperor, was never to achieve a position like that of the pope, who, left free from civil control, became the undisputed pontiff and vicar of Christ upon earth; but by the 5th and 6th centuries he had secured a commanding influence and bore the title of ‘oecumenical patriarch’—a designation which, in spite of papal protests, has continued till to-day. The relations of emperor and pope were severely strained during the period of the Christological heresies, and in 680 the Council of Constantinople, when it condemned the Monothelete position, did not hesitate to anathematize the memory of Pope Honorius I. In A.D. 725 the opposition of Pope Gregory II. to Leo the Isaurian, who on the outbreak of the Iconoclastic controversy³ had vehemently condemned, and commended a crusade against, the use of images, led to a fatal separation between East and West; for Leo transferred Sicily, Southern Italy, and Illyricum from the ecclesiastical jurisdiction of the pope to that of Constantinople. A reaction in favour of images took place in the reign of Constantine VI., and in 786 the so-called Second Council of Nicæa gave a decision in favour of image-worship, which the pope approved. But this reconciliation was temporary and in effect was nullified in 800 on the coronation of Charlemagne by the pope; for, while in the West the pope became the religious head and the emperor the secular head of the Church, the process was reversed in the East, the emperor becoming head of the same Christian Church with a patriarch subordinate to him. Still, though the

separation between East and West was complete in secular matters, the final breach did not occur for two centuries. The rejection of the *Filioque* clause,¹ which had been added by the Spanish Church to the Nicene creed in the 5th cent., and which was subsequently inserted in the Roman creed, was definitely decreed by the Council of Constantinople (A.D. 867), which excommunicated the pope. But, though this was significant of the steadily widening breach between the two sections of Catholicism, it was not till a century and a half later that the last blow was struck. The patriarch of Constantinople, Michael Cerularius, closed the Latin churches and convents of the city in 1054, and this drastic act was followed by the written attacks of his clergy on the Latin religion and its observances, and especially the practice of celibacy on the part of its clergy. The pope’s legate, Cardinal Humbert, entered St. Sophia on 16th July during divine service and laid on the altar a decree of excommunication against the patriarch and his adherents. This act rent the Catholic world in twain, and it was the climax of the long-continued and deep-rooted misunderstanding between the two great geographical sections of Christendom. The massacre of the Latins by the Greek populace in 1182 and the sack and capture of the city by the forces (chiefly Venetian) of the Fourth Crusade in 1204 were events which revealed and confirmed the hopeless fissure in the unity of the Church and led up to the fateful capture of Constantinople by Muhammad II. in 1453. Western Europe had left the Christian capital of the East to its fate: divided Christendom had enabled Muhammadanism to enshrine itself in Europe, and a sultan sat on the throne which Christian emperors had occupied since the days of Constantine.

The following survey is limited (1) to the general development in history of the polity, organization, and secular relationships of the Western Church, and (2) to its dogmatic history and its position in Christian thought, leaving the reader to study in other articles (to which reference is made) the more specialized treatment of the inner life of the Church, its observances and sacraments, its ritual and its liturgies, its canon law and discipline, its orders and congregations, the history of its movements in their religious, intellectual, and social aspects, and finally the biographies of its outstanding personalities in the annals of its government, sainthood, and scholarship.

Both sections of the survey are conveniently treated in chronological order under the following heads: (a) the early period (from Constantine to Charlemagne [A.D. 312–800]); (b) the mediæval period (from Charlemagne to Boniface VIII. [A.D. 800–1303]); (c) the modern period (from the later Middle Ages to the present time [A.D. 1303–1920]).

In the first period, the period of *expansion*, we have the rise of the papacy² with the conversion of the Teutonic races to Christianity; in the second, the period of *consolidation*, we have the papacy supreme in Europe, having attained the zenith of its influence and prosperity; in the third period—the period of *decline*—we have the waning power of the papacy and the rise of Protestantism, which eventually led up to the distinction between religions of authority and a religion of the spirit, and their conflicting ideals of ecclesiastical unity and catholicism.

2. Ecclesiastical polity and organization.—(a) *Early period.*—With the accession of Constantine in 323, Christianity became the imperial religion, and henceforth its destiny was to be closely associated with that of the empire. The vicissitudes through which the empire passed during the three

¹ See art. **CONFESSIONS, CREEDS (Ecumenical).**

² See art. **PAPACY.**

succeeding centuries under the attacks of the barbarians of Northern and Eastern Europe left an enduring mark on the constitution and organization of the Church. The monarchical episcopate, which was recognized by Ignatius and accepted by Cyprian as the basis of Church government, was the germ from which the primacy of the bishop of Rome was evolved. The doctrine of apostolic succession (*q.v.*) laid down by Irenæus ascribed a spiritual pre-eminence to the Church of Rome as founded by the two greatest apostles, St. Peter and St. Paul, and Tertullian in his early pre-Montanist treatise, the *Prescription of Heresy*—always a favourite with the Roman Church—eloquently adopted the same line of argument, proclaiming the transmission of the apostolic 'deposit' through the succession of bishops. Established in 'the Eternal City,' which was the visible focus of imperial greatness and might, the bishopric of Rome was invested with a dignity which far surpassed that of the rival sees of Alexandria and Antioch. Moreover, the Latin conception of the Church as an external institution, moulded indeed on the type of the empire, but controlled by bishops who were the vicars of an absent Christ and depositaries of saving grace, led up to the papacy as a logical conclusion. No salvation outside the Church, the Church built on St. Peter as chief of the apostolic college, a hierarchy which traced its lineal descent by due succession from the first of apostles—these are the principles upon which the supremacy of the Roman see was established by Augustine, the greatest of the Latin theologians. In the 4th and 5th centuries the Church as it developed its organization on the new political divisions of the empire—especially Gaul and Spain, following the conquest by Christianity of the nations of the Franks and the Spaniards or Iberians—rose, by its beauty of ritual, its succession of distinguished Christian leaders, bishops, and kings, and its moral influence, to a position of great splendour. A generation after Augustine, Leo the Great, bishop of Rome (440–461), put forth a claim¹ for the authority of the Roman see which was never afterwards relaxed, and which saw its realization in the imperial authority over Christendom wielded by Hildebrand and Innocent III.

In 445 the emperor Valentinian III. issued a law declaring the bishop of Rome the supreme head of the Western Church on the three grounds of the primacy of St. Peter, the dignity of the city, and the decree of a holy synod. Resistance to the authority of St. Peter's successors in the Roman see was thus constituted a State offence.

The title 'papa' (pope), which was applied in the West to all the bishops, became in the 6th cent. the exclusive designation of the bishop of Rome. Gregory VII. was responsible for the decree which thenceforth limited the title to the occupant of the Roman see.²

Although for a short time Justinian the Great (527–565) held sway over Italy and placed the Roman bishops on a level with those of Constantinople, the Lombards finally broke the power of the Byzantine emperor in Italy and by their conquest practically assured the independence of the bishops of Rome. The decretals of the popes were codified in the year 500 by Dionysius Exiguus, who included in his collection the decrees of the councils and the chief canons of the provincial synods. The Donatist position,³ which made holiness of life the test of catholicity, was defeated by

¹ Cf. *Serm.* iv. 2: 'De toto mundo unus Petrus eligitur, qui et universarum gentium vocacioni, et omnibus apostolis, cunctisque ecclesie patribus præponatur: ut quamvis in populo Dei multi sacerdotes sint multique pastores, omnes tamen proprie regat Petrus, quos principaliter regit et Christus.'

² See *EBR*¹, s.v. 'Pope'; Ducange, *Gloss. Mediæ et Infimæ Latinitatis*, s.v. 'Papa.'

³ See art. DONATISTS.

the influence of Augustine, and the Donatists were in the end repressed by force of arms. The supremacy of the hierarchy and the efficacy of baptism and the Lord's Supper were maintained to be independent of the personal character of individual officials and members of a Church which was founded on the 'rock' Peter and owed its catholic authority as a visible holy community to its apostolic descent. On the other hand, the rise of monasticism in this period¹—first in the form of hermit colonies under the inspiration of St. Antony, then in the form of religious communities with a *regula*, or rule, of common-life discipline under Cassian at Marseilles, Benedict of Nursia (480–545) at Monte Cassino, and his disciple Maurus (St. Maur) in Gaul and Sicily—was a movement within the Church towards a higher type of spirituality, though it tended to fix the orthodox separation between things sacred and profane or secular. From 590 to 800 Christianity spread over Western Europe, Anglo-Saxon England, Germany, and the new nations along the Danube, the missionary movement owing much to the inspiring zeal of Gregory I., known as 'the Great.' That the papal power not only survived the political and ecclesiastical fluctuations and unrest of the times, but emerged with added prestige, is due to the personality of this powerful leader who founded the Church in England, consolidated the Church in Spain, brought the Church of Gaul into close connexion with Rome, and checked the abuses which had crept into his own diocese. In contradistinction to the Eastern title of oecumenical patriarch, he assumed as pope (590–604) the title of 'servus servorum,' which his successors have always maintained. After Gregory's death the outstanding event is the anointing of Pepin, king of the Franks, in 751, probably by Boniface, Archbishop of Mainz, with the sanction of Pope Zacharias. A second coronation by Stephen II. of the same king at St. Denys in 754 was the price which a grateful papacy paid to him for his help against the Lombards and his presentation of the lost lands to the Roman Church. Here is a sequence of events which marks a beginning of the long-coveted temporal dominion of the papacy. But the political troubles were not at an end, and Pope Leo III., owing to the disaffection of the Roman nobles, had to flee for his life to the court of Charlemagne, king of the Franks. The result was that, when Charlemagne came to Rome to re-establish order, Leo crowned him at St. Peter's on Christmas Day 800 as emperor of Rome. This event, the significance of which can be paralleled only by Constantine's establishment of Christianity as the religion of the Roman Empire, revealed the fact that the majestic traditions of that empire—for three centuries merely *magni nominis umbra* in the West—still swayed the minds of men. Church and State were once more united, and the Holy Roman Empire became a compelling ideal, if not as yet a historic reality.

(b) *Mediæval period.*—In this period the papacy held undisputed sway over Western Europe. Missionary enterprise widened the scope of its influence. If to Eastern Christianity is due the credit of the conversion of Russia under Vladimir, Scandinavia, the Slavic nations, the Moravians, Bohemia and Hungary, the Wends of the north and east of Germany were Christianized by the Church of the West. When warring factions broke up the empire on the death of Charlemagne, the popes took advantage of political changes to secure greater independence and strove to establish the ascendancy of the papal see over the State as the one solution of the European problem. The pseudo-Isidorian decretals (c. 850) proclaimed the
